Coal or Wood Heater We have lots of these. You'll have no trouble finding the one you want. We also have several wood stoves in new and second hand cooks and heaters.

Harness—Ever compare prices to see how much you can save by buying your harness here? Ever enquire from someone who knows whether or not it isn't just a little better than you've been buying? Ever look through our harness department and see the kind of stock and workmanship in them? Do it now. We guarantee every strap and buckle we sell, we sell everything in harness that you might want.

Sewing Machines—You can see the most up to date sewing machine on the market here. The White Sewing Machine has some points about it you will find in no other. You may have one on trial. Guaranteed for 5 years.

Coal—You ought to have your bin full. We have Scranton Coal. The clean kind.

Crockery—Have you looked through our crockery, yet? You are welcome whether you buy or not. Most ladies are interested in nice crockery. You can see it here. Everything in crockery at the lowest prices you ever heard of.

General Hardware—You can find as complete and as well assorted a stock of hardware as can be seen in Ontario. Everything that is usually found in a hardware store is here. We invite comparison of prices. Quality is our first consideration always.

Ready-to-Wear Clothing—There is nothing in the shape of mens ready-to wear clothing you cannot find here. You can save from 5 to 8 dollars on a suit, proportionately on an overcoat. Why not see it. Every person is pleased who bought. Everything in Mens furnishings.

D. Brocklebank & Son

Every young matron wants a sewing machine. She wants to know "the points" about this particular machine—wherein it differs from other makes and if these points will make it a more useful instrument than Mrs. Smith's machine is to her. And she wants to know the price before she'll ready your descriptive matter—because she has a handsome catalogue at home which states the prices quite fearlessly and describes several good machines so thoroughly and interestingly that she feels like borrowing the money to secure one of these catalogue machines right away.

* * *

The dealer must fight the catalogue house through the publicity columns of his local papers. And he must use the same kind of ammunition as the mail order men, if he wants to exist at all. That ammunition is—money-talking, descriptive advertising. "Brocklebank's Store News" is effective advertising! but I am convinced that a man with Mr. Brocklebank's apparent grip of the subject he can make it about ten times more effective.

Advertising Schemes.

Another dealer has sent in several ads. for criticism. The ads. are deliberately printed with typographical errors and a prize of $3 worth of goods is offered to the one sending in the largest list of errors occurring "in this space between now and August 21st."

Who do you suppose is going to pick out mistakes in your ads. for several months, all for the sum of $3, or $2, which is the amount of the second prize?

However, it is not a bad scheme, even if it isn't advertising. Why not offer a handsome study lamp, a set of knives and forks, or some useful present or presents for Christmas?

This dealer can accomplish better advertising. The brilliancy of his scheme does not eclipse the fact that ninety-nine schemes out of every hundred are the poorest kind of advertising and always bad business policy.

* * *

Now, Mr. Hardwareman, send along your ads. for criticism. You'll get my honest opinion, and that's just exactly what you want—isn't it?

T. J. STEWART.

A FRIENDLY CHAT.

Every storekeeper ought to occasionally call his clerks together and talk to them somewhat as follows:

"You and I want to make more money in this store, but in order to do this, we must do more busines. Now I want suggestions from all of you about anything you think we can do to increase trade and gain new customers. Or if you see any waste going on that we might save I want you to tell me. I want each one of you to keep your eyes open, use your brains and think of something that will improve this business. If there is anyone who does not care to try to improve this business we don't want him here. I would rather get rid of him and divide his salary among those who do care. Now, as soon as a suggestion comes to your mind, let us have it, and we will see if all of us cannot make more money this year than we did last."

CURB PARTY BIAS.

It is invigorating to have a man like Peleg Howland come out boldly and say what he thinks about measures passed by the Government, of which he is a recognized supporter. He says, plump and plain, that the Railway Commission has helped to increase freight rates by recognizing the traffic associations. He thinks and says the anti-dumping clause of the tariff is a mistake, because it interferes with the merchant's inherent right to buy in the cheapest market. Too many men in this country have put political clamps on their independence and if they can't praise their leaders and their works, sit silent. If the commercial leaders would curb their party bias and give vent occasionally to their honest views, it would be a fine thing for Canada. What this Dominion needs most is men to speak out, regardless of what party idol is blasphemed.

A SUBSERVIENT DAILY PRESS.

Over in Chicago there is a serious epidemic of scarlet fever and hundreds of children are dying. A milk company brought in supplies from an infected district and the daily papers suppressed the name of the company. Finally fever was discovered in one of the sweatshops where clothing is made for one of the leading departmental stores. So bad did the epidemic become that in spite of powerful influence, the city officials had to act.

It was decreed that crowds should not be allowed to congregate anywhere, in order to stop the spread of the disease. That hit the big stores, whose proprietors control the daily papers, and the latter at once announced that the fever was decreasing in spite of overwhelming figures to the contrary. The crowds are allowed to gather in the stores, but small handfuls of people skating in the parks have been moved on by the police.

As in Chicago, so in Canada. There is legislation under consideration at Ottawa which, if adopted, will strike a hard blow at every branch of retail trade, the chief beneficiaries being the mail order concerns, which own and control Canada's leading daily papers. Have the papers come out in opposition to the proposed legislation, or have they advised their retail subscribers of their danger? On the contrary, they have remained silent, the few words they have printed being in support of the measures.

Retailers who are subscribers to the big daily papers should let them know that their actions are being watched.

MERCHANTS' EXCURSIONS.

The Inter-State Commerce Commission has issued a ruling that merchants' excursions are legal under the new rate law recently put in operation across the border, and these excursions, which have been so popular with both jobbers and retailers in the States will, therefore, be continued.

This week a circular was received from the Merchants' Association of New York, announcing that merchants' rates from the central west, which is designated by the railroads as Central Passenger Association Territory, will be in effect to New York City on February 9th-13th, inclusive, and March 2nd-5th, inclusive, with a thirty-day return limit. The special rate is a fare and one-third for the round trip, the reduction being granted under the certificate plan. The association will follow this circular up with maps and street directories of New York City and invitations to make the Merchants' Association building a headquarters while in the metropolis. These arrangements are of great advantage to thousands of merchants who desire to visit jobbing and manufacturing houses in order to get in touch with the most up-to-date lines on the market.

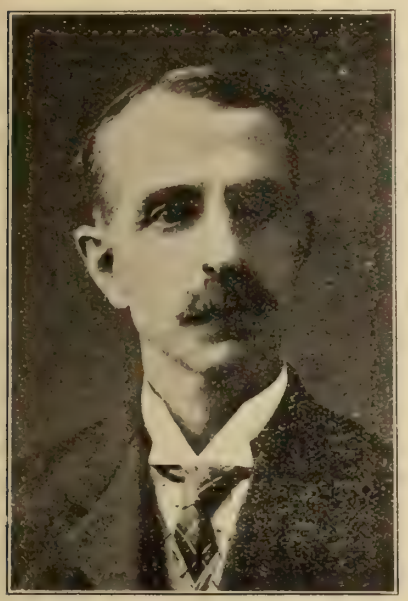
A year or so ago an effort was made to establish similar merchants' excursions to Toronto and other Canadian centres, but the plan was blocked by the railway companies. The semi-annual conventions of the Retail Hardware Associations are, therefore, the only organized movements encouraging the retail trade to visit the jobbing centres but they do not provide sufficient time for the two branches of trade to get together and become thoroughly acquainted.

The matter of merchants' excursions along the lines in operation across the border might to advantage be taken up again by the Boards of Trade as well as the wholesale and retail associations.

COBALT—A DISEASE.

The United States Consul in the Transvaal in a report to the Department of Trade and Commerce, Washington, says: "Stock speculation on the part of everybody and wild cat gold and diamond mines have taken away money from everything save the barest necessities and in many instances reduced men to bankruptcy and poverty who two years ago counted their sterling in many thousands." Canada has a similar trouble. The gambling disease seems latent in the blood everywhere and a year or two hence many men will be cursing Cobalt as the cause of their troubles. It isn't the man who can count his sterling by thousands one need worry about; their case is sad, but they are comparatively few. The men to be pitied are the hundreds and thousands whose small savings or business go the way of speculation. Many a good business has been consumed by the disease and families in comparative independence because of a paying business are swept into the street. Of course here and there someone starts with a few hundred dollars and makes a fortune; but look at the losses that go to make his gains.

FARMERS' BOARDS OF TRADE.



Farmers' Boards of Trade are institutions the merchants should encourage. Organization will benefit agriculture and the improvement of agriculture means more merchandizing and better returns for the merchants. The first farmers' Board of Trade in Canada was organized in King's county, N.S., twelve years ago. It has done excellent work. At its meetings the farmers from all over the county get together and talk things over. It keeps them informed. The informed man is the progressive, the successful man in any line of endeavor. The merchant who looks beyond the bounds of his own business and takes a patriotic interest in the betterment of his community is, other things being equal, the best merchant.

PUBLIC SPIRITED HARDWARE MERCHANTS

NO. 8

At the present time no town in Ontario is attracting more attention from an industrial standpoint than Welland. The past couple of years has seen a remarkable awakening, and with the wonderful possibilities of electrical power from Niagara Falls, combined with the shipping facilities of the town at the head of deep water navigation and the foot of transportation on the Great Lakes, the future of Welland is bound to be one of marked industrial expansion and prominence.

It is fitting that at this stage in the development of the town, when questions of building restrictions, sanitary improvement, concessions to new enterprises, etc., are to be decided, that a level-headed and successful hardware dealer and plumber should be at the helm. For 21 years J. H. Crow has been in the hardware business in Welland, and in the recent municipal elections was chosen by a decisive majority

J. H. CROW
Recently elected Mayor of Welland Ont.

over two rivals, as the mayor of the town for 1907.

Mr. Crow was born in Pelham Township, Welland County in 1856, and after receiving his education in the public, high and normal schools, spent eight years as a teacher in Welland and Lincoln Counties. In 1886 he entered into the hardware business at Welland with A. E. Taylor and ten years later bought out his partner, the business, which included plumbing and gasfitting, steadily increasing until 1906, which, on account of the extensive building, industrial and natural gas operations, was a banner year. Mr. Crow qualified for the mayoralty by sitting for five years in the town council. He is also prominent in Masonic and Methodist church work.

In a letter to Hardware and Metal, the new mayor says Welland will boom again in 1907 as the Plymouth Cordage Company intend to duplicate their plant at a probable cost of half a million dollars, besides erecting forty additional houses for their employes. There is not a vacant house in town, and those in course of erection have been secured by the employes of the Ontario Iron and Steel Company.

CHANGE FOR THE GOOD.

The Ontario Government's proposal to employ prison labor on farm work in future instead of having the convicts make binder twine, brooms, woodenware, etc., is a step in the right direction. It will temporarily affect the various manufacturers who have been utilizing the facilities of the central prison to secure stocks of these goods, but this will be easily offset by the removal of this class of competition which other manufacturers have had to meet.

To remove the prison out into the country and have the convicts get next to nature by learning how to cultivate the soil while enjoying the wholesome air and surroundings of the country, should have excellent results in the way of reforming many first offenders. City life is more productive of crime than farm life and anything which would tend to make it possible for the unfortunates to begin life again as farm laborers or homesteaders, should be encouraged.

One problem which will have to be considered, of course, is the guarding of the prisoners. The old system of confinement within brick walls paced by armed guards could hardly be made to work satisfactorily if the prison was removed to the country. But could not the prisoners be made to guard themselves? It is said that in the State of Oregon the convicts are put to work on the farms practically unguarded. If a prisoner escapes the term of the remaining prisoners is lengthened while, on the other hand, if all work faithfully an allowance for good service is made.

Criminals as a rule are the creatures of their surroundings. If born under degraded circumstances or forced to live surrounded by temptation the weak can hardly be blamed for falling. Society is largely at fault and it is the duty of our Governments to endeavor to overcome this fault both in the way of removing the cause and in remedying the effects. The suggested removal of the Central Prison from Toronto appears to be in line with a recognition of this duty and all thinking citizens will hope to hear of good results following the adoption of the proposal.

MONTREAL AGENT MARRIES.

A wedding of considerable interest to the Montreal trade took place Thursday afternoon when J. Sophus, Canadian representative of Schuchardt & Schutte of New York and Berlin, was married to Miss Jennie Colquhoun of Manchester, England. The ceremony took place at St. Thomas' Church, and was performed by the Rev. Canon Renaud. While distinctly private, a large number of immediate friends attended, and many handsome gifts were received. The young couple left on a short tour to the Southern States and on their return will take up their residence in Montreal.

J. Sophus has been in Montreal a little more than a year and a half during which time he has made steady progress. Formerly he was superintendent of large works in Manchester, England, and before that again had been engaged as a traveler for machinery and metals in Europe, visiting Germany and Russia as well as other countries. Gifted as a linguist he has exceptional advantages, and as Canadian representative of Schuchardt & Schutte he deserves congratulations. This firm have branches in China, Japan, Russia, France, India, and other places, having also immense headquarters in New York City. They have confidence in the Canadian market and are spending large sums this year to promote their interests. Hardware and Metal supplements the many good wishes extended to Mr. Sophus on his new step.

OPPOSE PARCEL POST.

At a meeting of the council of the Portage la Prairie board of trade, held last week it was decided to protest

J. SOPHUS
An Enterprising Young Montreal Manufacturers' Agent who was married a few days ago.

against the Dominion Government's new arrangement re the parcel post, which it proposed to bring in, and the secretary wired the local member, J. Crawford, to this effect.

It is maintained that the regulation will discriminate against smaller and local merchants in favor of the departmental stores, as it would facilitate the latter's shipments of goods through the mails.

NERVOUS PROSTRATION AMONG CLERKS.

Nervous prostration comes from letting the work chase you. When you chase the work, you eat, sleep and laugh, and the man who can do these three things is immune from everything from jiggers to paresis.

HARDWARE TRADE GOSSIP

Ontario.

R. N. Youmans, plumber, Parliament street, Toronto, has put in a stock of hardware.

M. R. Summerfeldt, hardware merchant of Mt. Albert, called on Toronto jobbers this week.

J. Henry & Son, Orono, have bought out their opposition, D. H. Walsh, and have taken over the stock.

W. S. Piper, hardware, stove and furniture dealer of Fort William, has advertised his business for sale.

James Johnston, manager of the retail department of Rice Lewis & Son, Toronto, has been away ill for the past week.

Slimman Bros. have taken over the business of Messrs. McLaughlin, Sturtbridge & Company, hardware merchants, of Drayton.

O. B. Manville, hardware merchant of Prince Albert, Sask., was a visitor in Toronto this week calling on the hardware jobbers.

John Armstrong & Company, hardware merchants of Brigden, will enlarge their store to meet with the requirements of the business.

Louis Payette, of Warden King & Son, and R. J. Cluff, of Cluff Bros., Toronto, returned on Tuesday from a ten days' trip to Winnipeg.

McMaster's hardware store at Ridgetown, was destroyed by fire on Thursday. The loss will be over $13,000, with only $7,000 insurance.

James D. Smith, Baysville, is remodelling his store. Mr. Smith was elected to the municipal council last month, being second in the poll.

H. N. Joy, malleable range manufacturer, Toronto, has returned to his office after six weeks' illness following a blow on his head received while skating.

James Thomson, saleman in E. J. Torrens' hardware store, Tillsonburg, has taken a position as traveler. Mr. Willings, of Niagara Falls, has taken the vacancy with Mr. Torrens.

The police are after William Roach, a cashier in Bond and Co.'s hardware store, Guelph, who is alleged to have left for Uncle Sam's domains with some $700 of the firm's money. It is said that there is a woman or two in the case.

George James, of James & Reid, Perth, joined the army of benedicts last week. When asked as to where he was going for his honeymon he replied that he is too busy to take on now but expected to take a good one in the summer time.

F. A. Howard, for many years a member of the firm of Turnbull, Howard & Company, hardware merchants, Brantford, has severed his connection with the firm, which will in future be conducted by W. R. Turnbull and E. B. Cutcliffe.

F. Y. W. Braithwaite, Blind River, was a caller at the Toronto office of Hardware and Metal on Thursday. Mr. Braithwaite is making a semi-annual buying trip and reports conditions on the north shore of Georgian Bay to be excellent.

The annual meeting of the Peterborough Lock Manufacturing Company was held on Monday last. The following directors were reelected: Hon. J. R. Stratton, W. T. Morrow, T. H. Fortye, A. L. Davis and Wm. Irwin. The Hon. J. R. Stratton was reelected president and W. T. Morrow vice-president. The company commenced business in Peterborough 21 years ago and have made steady and satisfactory progress and at present pay out in wages to employes $45,000 per annum.

Quebec.

J. Paquin, St. Eustache, was in Montreal on business this week.

C. O. Gervais, St. John, Que., was in Montreal this week on business.

Mr. Aubin, Glen Robertson, called on some of the Montreal wholesalers this week.

R. H. Cowan of the Traders Company, Buckingham, was in Montreal this week buying goods.

A. Ault, of Ault Bros., Montreal, is in the Royal Victoria Hospital at present, with typhoid fever.

The Standard Paint Co., of Montreal, have opened up nice quarters in the Board of Trade Building.

J. B. Campbell, president of the Acme Can Co., Montreal, is in Buffalo attending the canners' convention.

Cunin Bros., stovepipe elbow manufacturers, of Montreal, suffered loss by fire last week, damaged to the extent of $2,000.

J. S. McLernan, Montreal representative of John Round & Son, cutlery manufacturers, Sheffield, England, has returned from a business trip to the Old Country.

Lewis Bros., Montreal, are making some changes in their warehouse, which, when completed, will bring the "Buyers' Office" from the fourth floor, where it is now located, up to the seventh, with the offices and counting rooms.

The annual general meeting of the shareholders of Frothingham & Workman was held on Tuesday, and a satisfactory report and statement of the business for 1906 laid before the meeting. The following were re-elected directors for the ensuing year: Messrs. E. Archibald, C. D. Monk, W. G. Lemesuriet, E. C. Eaton and W. C. Davis.

J. S. Laurier, hardware merchant, of Montreal, died at the General Hospital this week. An attack of appendicitis necessitated an operation, which was performed on February 2. A complication of peritonitis carried him off. Mr. Laurier was born at Joliette, Que., in 1861. He opened his commercial career with a course at the commercial college of his native town. Coming to Montreal a short time after, he became a clerk in the hardware store of Mr. Lallemand and later entered the J. L. Lafleur hardware store. After a few years' service there, he opened the hardware store at the corner of St. James and Inspector Streets, where by his energy and activity he built up a prosperous business.

J. Sophus, Canadian representative of Schuchardt & Schutte, formerly with headquarters at 13 St. John St., has decided to move to 102 St. Antoine St., where commodious warerooms will be employed. The company have made rapid strides in this country under the direction of Mr. Sophus, and to meet the expansion they have given over the sales end of the heavy machinery department for the province of Quebec to Baxter, Paterson & Co., an enterprising firm, who have many other large agencies and whose headquarters are at the same address. This will give Mr. Sophus greater scope, and at the same time will be a valuable supplementary force for the Schuchardt & Schutte Co., who have branches in all parts of the world. Large stocks will be kept on hand, both of tools and hardware lines.

Western.

W. H. Sparling, Minnedosa, was in Winnipeg last week on business.

J. W. Bacon, Enderby, B.C., has secured a Canadian patent on a new baking pan.

Stockwell and Perry, hardware merchants, Estevan, Sask., have dissolved partnership.

W. Stewart Plum, Coulee, Man., called at several of the Winnipeg wholesale houses last week.

The Marshall-Wells Hardware Co. expect to move into their new warehouse about March 1st.

It was Thomas Dallas and not Thos. Wallace, as misprinted, who recently established a hardware store at Lamont, Alta .

A. J. Falconer, Deloraine, president of the Western Retail Hardware Association, was in Winnipeg last week on business.

The firm of Anderson and Thomas, hardware merchants, Winnipeg, Man., has been dissolved by mutual consent. The business will be continued by J. E. Thomas.

Alf. Kelley, of the firm of Hislop, Kelley and Younge, hardware merchants, High River Alberta, is at present in Toronto visiting paint, oil, and hardware jobbers.

Edgar G. Powell, of J. W. Harris Co., Montreal, is in Winnipeg at present on business for his firm. He called at the Winnipeg office of Hardware and Metal on Monday of last week.

W. A. Kenning has resigned his position as sales manager of the Miller-Morse Hardware Co., Winnipeg, and he has been succeeded by Louis J. Blackwood, who was formerly with Merrick, Anderson & Co.

J. A. Lindsay, former president of the Western Retail Hardware and Store Dealers' Association has returned to Winnipeg from an extended holiday tour in Scotland. Mr. Lindsay's health is much improved.

The following merchants of Cartright, Man., are amalgamated under style of the Merchants, Limited: Moore & Hills, general store; J. A. McKenzie, F. & F. M. Macklin, hardware; Cannon & Pickle, general store; L. H. Phillips, hardware, and Wm. Gemmell, grocer.

Markets and Market Notes

(For detailed prices see Current Market Quotations, page 66.)

THE WEEK'S MARKETS IN BRIEF.

MONTREAL.

Plumbers' Brass Goods—Advanced 10 to 15 per cent., and in some cases more.

TORONTO.

Plumbers' Brass Goods—Valves advanced.

Cast Iron Fittings—Last week's advance now general.

Linseed Oil—Advanced one cent.

Turpentine—Declined, owing to change in tariff.

Coil Chain—Advancing.

Coil Spring Wire—Advanced 5c. per cwt.

Paris Green—One cent. higher.

Montreal Hardware Markets

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, Feb 15, 1907.

Trade still remains good in hardware circles, and although collections at present are not all they might be, jobbers in general are very well satisfied with their year's business, and express wonder at the way things have kept going.

Owing to the low temperature and biting wind experienced here during the week, many city salesmen have been remaining indoors as much as possible and have taken this opportunity to get their inside work up to date. The severe storms in Western Ontario have also held many travelers back a day or two.

Although there are no changes to record in prices at present, it is expected that owing to the recent advances in raw material entering into the manufacture of ammunition, prices in this line will be higher than last season.

Axes are reported to be moving very well, but the sales of lanterns have fallen off slightly. Cow ties and sleigh bells are very quiet. Rivets and burrs, hay wire, horseshoes and horse nails are moving very well. There is a heavy demand for bolts and nuts, and some sizes of machine screws are still scarce.

AXES.—Moving very well. We still quote: $7.60 to $9.50 per dozen; double bitt axes, $9.50 to $12 a dozen; handled axes, $7.50 to $9.50; Canadian pattern axes, $7.50 a dozen.

LANTERNS.—Sales have fallen off slightly. Our prices remain: "Prism" globes, $1.20; Cold blast, $6.50; No. 0, Safety, $4.

COW TIES AND STALL FIXTURES—Very quiet. We are still quoting: Cow ties, discount 40 per cent. off list; stall fixtures, discount 35 per cent. off list.

RIVETS AND BURRS.—Our prices are: Best iron rivets, section carriage, and wagon-box black rivets, tinned do., copper rivets and tin swede rivets, 60, 10 and 10 per cent.; swede iron burrs are quoted at 60 and 10 and 10 per cent. off new lists; copper rivets with the usual proportion of burrs, 25 per cent. off, and coppered iron rivets and burrs in 5 lb. carton boxes at 60 and 10 and 10 per cent.; copper burrs alone, 15 per cent., subject to usual charge for half-pound boxes.

HAY WIRE.—Beginning to move faster. Prices remain: No. 13, $2.60; No. 14, $2.70; No. 15, $2.85; f.o.b. Montreal.

MACHINE SCREWS.—Some sizes still short. Prices remain same as last week: Flat head, iron, 35 per cent., flat head brass, 35 per cent., Felisterhead, iron, 30 per cent., Felisterhead, brass, 25 per cent.

BOLTS AND NUTS.—Demand is very heavy. Discounts remain: Carriage bolts, 3 and under, 60 and 10; 7-16 and larger, 55 per cent.; fancy carriage bolts 50 per cent.; sleigh shoe bolts, ⅜ and under, 60 per cent.; 7-16 and over, 50 per cent.; machine bolts, ⅜ and under, 60 per cent.; 7-16 and larger, 55 per cent.

HORSE NAILS.—Good demand at present. Discounts remain: C brand, 40, 10 and 7 per cent.; M.R.M. Co., 55 per cent.

WIRE NAILS.—We still quote: $2.45 per keg, f.o.b. Montreal.

CUT NAILS.—Prices remain: $2.30 per keg, base, f.o.b. Montreal.

HORSESHOES.—Sales increasing. We still quote: P.B. new pattern, base price, $3.50 per 100 lbs.; M.R.M. Co., latest improved pattern iron shoes, light and medium pattern, No. 2 and larger, $3.65; No. 1 and smaller, $3.90; snow pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15. Light steel shoes, No. 2 and larger, $4; No. 1 and smaller, $4.25; featherweigh, all sizes, No. 0 to 4, $5.60. Toeweight, all sizes, No. 1 to 4, $6.85. Packing up to three sizes in a keg, 10c. per 100 lbs. More than three sizes, 25c. per 100 lbs. extra.

BUILDING PAPER.—No change in prices.

CEMENT AND FIREBRICK.—Prices remain: "Lehigh" Portland in wood, $2.54, in cotton sacks, $2.39; in paper sacks, $2.31. Lefarge (non-staining) in wood, $3.40; Belgium, $1.60 to $1.90 per barrel; ex-store, American, $2 to $2.10, ex-cars; Canadian Portland, $2 to $2.05. Firebrick, English and Scotch $17 to $21, American $30 to $35; White Bros.' English cement, $1.80 in bags, $2.05 in barrels in round lots.

COIL CHAIN.—Our quotations remain: 5-16 inch, $4.40; ¾ inch, $3.90; 7-16 inch, $3.70; ½ inch, $3.50; 9-16 inch $3.45; 5-8 inch, $3.35; ¾ inch, $3.20; ⅞ inch, $3.10; 1 inch, $3.10.

SHOT.—We are still quoting: Shot packed in 25-lb. bags, ordinary drop AAA to dust, $7 per 100 lbs.; chilled, No. 1—10, $7.50 per 100 lbs.; brick and seal, $8 per 100 lbs.; ball, $8.50 per 100 lbs. Net list. Bags less than 25 lbs., ½c. per lb. extra, net; f.o.b. Montreal, Toronto, Hamilton, London, St. John, Halifax.

AMMUNITION.—Owing to the recent advances in raw material, prices are likely to be higher this season than last, but our prices still remain: Slow. last, but our prices still remain: Loaded with black powder, 12 and 16 gauge, per 1,000, $15; 10 gauge, per 1,000, $18; loaded with smokeless powder, 12 and 16 gauge, per 1,000, $20,50; 10 gauge, $23.50.

GREEN WIRE CLOTH.—We continue to quote: In 100-foot rolls, $1.62½ per hundred square feet, in 50-feet rolls, $1.67½ per hundred square feet.

Toronto Hardware Markets

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, February 15, 1907

While business is not as brisk as formerly it remains fairly steady, with numerous orders for small staple lines being received daily. All other lines for spring and summer, having been ordered some time ago, are being shipped with these small orders, so as to make up a shipment.

Very few changes have to be made this week, the most important being the 5 per cent. advance duty on American steel chain, which will naturally increase the price on the Canadian market.

An advance of 5 cents per cwt. has been made on coil spring wire. No doubt this advance has been expected, as the high price of rods, and of raw material has warranted it, but this will not materially effect the hardware merchant, as all these lines will be ordered in the fall, and will soon be shipped to the purchaser.

Paint brushes and utensils for spring housecleaning are meeting with good demand. Graniteware is selling very rapidly at present, with a view of an advance in the near future, as the ever-increasing cost of raw material makes this likely.

AXES AND HANDLES—All the business for the season is practically over in this line for wholesale merchants. But retailers continue doing a brisk business. Many display full lines of these articles, accompanied by saws, in their windows.

WASHING MACHINES—These articles, along with various appliances for housecleaning, are meeting with great demand. All orders which have been taken, are being rapidly filled.

SPORTING GOODS—Many marchants have been buying large quantities of fishing poles, tackle, etc.

CHAIN—The 5 per cent advance on the duty will naturally cause an advance on chain. We, however, continue to quote ¼ in., $3.50; 9-16 in., $3.55; ½ in., $3.60; 7-16 in., $3.85; 3-8 in., $4.10; 5-16 in., $4.70; 1-4 in., $5.10.

RIVETS AND BURRS—Remain firm at the advanced price with great numbers being sold.

SCREWS—Quite a large number are being sold at present, with stocks in a very good condition.

BOLTS AND NUTS—The demand for these articles has eased off somewhat, allowing stocks to be repleted.

TOOLS—Still continue selling very freely, merchants stocking up and arranging their windows with displays of various kinds of tools.

SHOVELS—The demand still continues good for all lines. All book orders are being rapidly sent forward, as the demand will increase with the opening of spring.

EXTENSION AND STEP LADDERS—The sale continues very brisk, as larger numbers of these will be used for spring work. We continue to quote: 11 cents per foot for 3 to 6 feet, and 12 cents per foot for 7 to 10-foot ladders. Waggoner extension ladders 10 per cent.

POULTRY NETTING—Orders which have been booked are being sent forward. We continue to quote: 2-inch mesh, 19 w.g., discount 50 and 10 per cent., all others 50 per cent.

WIRE FENCING—Coiled spring wire has advanced 5 cents per cwt., which will likely have an influence towards advancing woven wire fencing.

OILED AND ANNEALED WIRE—(Canadian)—Gauge 10, $2.41; gauge 11, $2.47; gauge 12, $2.55, per 100 lbs.

WIRE NAILS—No further advance is quoted on wire nails, but the feeling is that the market has not yet reached its highest point. We continue to quote $2.40 base.

CUT NAILS—We quote $2.30 base f.o.b. Montreal; Toronto, 20c. higher.

HORSENAILS—"C" brand 40, 10 and 7½ off list; "M.R.M." brand 60 per cent. off.

HORSESHOES—The demand still continues good, the scarcity of snow, and slippery roads, aiding greatly in ordering of shoes. Quotations remain at former prices. P. B. base, $3.65; "M. R.M. Co., latest improved pattern" iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1, and smaller, $4.05; snow, No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $4.15; No. 1 and smaller, $4.40; featherweight, all sizes, 0 to 4, $5.75; toeweight, all sizes, 1 to 4, $7. Packing, up to three sizes in a keg, 10c. per 100 lbs. extra; more than three sizes in a keg, 25c. per 100 lbs. extra.

BUILDING PAPER—The opening of spring will see this line revived, but very little is doing at present.

CEMENT—For carload orders, f.o.b. Toronto, we quote: Canadian Portland, $1.95. For smaller orders ex warehouse, Canadian Portland, $2.05 upwards.

FIREBRICK—English and Scotch firebrick, $27 to $30; American low-grade, $23 to $25; high-grade, $27.50 to $35.

HIDES, WOOL AND FURS — Prices are unchanged. Trade is quiet.

Montreal Metal Markets

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, February 15, 1907

One of Montreal's foremost metal brokers, who is in the Old Country at present, cables that the markets there are exceedingly strong and although there have been several temporary fluctuations lately, the outlook is for higher prices in the near future.

About the same condition prevails here this week as in the past fortnight, that is, there are no changes of any consequence to report. Zinc eased off slightly during the week, but this is only temporary as orders are already in for spring delivery, and prices are sure to be very firm when that season arives.

Pig lead is a little weaker in tone with a tendency to lower prices. Copper remains the same with the market stronger than ever. Spelter remains firm at last weeks' price. Pig iron is firming up.

COPPER—Prices remain the same with market stronger than ever. We still quote: Ingot copper, 26½ to 27c.; sheet copper, base sizes, 34c.

INGOT TIN — Remains firm. Our prices remain: 45½ to 46c. per pound.

ZINC SPELTER — Eased off temporarily during the week. We still quote: $7.50 to $7.75 per 100 pounds.

PIG LEAD — A little weaker in tone, with a tendency to lower prices. We still quote: $5.50 to $5.60 per 100 lbs.

ANTIMONY — We still quote: 27½ to 28c. per pound.

PIG IRON — Firming up. We still quote: Londonderry, $24.50; Carron, No. 1, $27; Carron, special, $25.50; Summerlee, No. 2, selected, $25; Summerlee, No. 3, soft, $23.50.

BOILER TUBES—Remain very firm. Our prices are: 1½ to 2 in., $9.50; 2½ in., $10.35; 2½ in., $11.50; 3 in., $13; 3½ in., $17; 4 in., $21.50; 5 in., $45.

TOOL STEEL — Our prices remain: Colonial Black Diamond, 8c. to 9c.; Sanderson's, 8c. to 45c., according to grade; Jessop's, 13c.; "Air Hardening," 65c. per pound; Conqueror, 7½c.; Conqueror, high speed steel, 60c.; Jewitt's Diamond J., 6¾c. to 7c.; Jowitt's best, 11c. to 11½c.

COLD ROLLED SHAFTING—Present prices are: 3-16 inch to ¼ inch, $7.25; 5-16 inch to 11-32 inch, $6.20; ⅜ inch to 17-32 inch, $5.15; 9-16 inch to 47-64 inch, $4.45; ¾ inch to 17-16 inch, $4.10; 1⅛ inch to 3 inch, $3.75; 3⅛ inch to 3 7-16 inch $3.92; 3½ inch to 3 15-16 inch, $4.10; 4 inch to 4 7-16 inch, $4.45; 4½ inch to 4 15-16 inch, $4.80. This is equivalent to 30 per cent. off list.

GALVANIZED IRON — Market strong, with no changes to report.

OLD MATERIAL — We still quote: Heavy copper, 20c. per pound; light copper, 17c. per pound; heavy red brass, 17c. per pound; heavy yellow brass, 14c. per pound; light brass, 10 to 10½c. per pound; tea lead, 4¾c. per pound; heavy lead, 4½c. per pound; scrap zinc, 4¼c. per pound; No. 1 wrought, $17 per ton; No. 2 wrought, $6 per ton; No. 1 machinery, $18 per ton; stove plate, $13 per ton; old rubber, 10½c. per pound; mixed rags, 1 to 1¼c. per pound.

Toronto Metal Markets

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, Feb. 15, 1907

Sheet copper shows the only advance for the week, it being marked up to 35 cents per pound in response to an advance on the other side, where the market is governed by an association. Stocks are very low everywhere and the demand is increasing from electrical and other quarters. Production is also being hampered in the lake region by the unprecedented cold weather. With producers sold for months ahead, the continued unsatisfied daily inquiry for copper shows demand is in excess of supply. It is only by refusing to quote at present on far futures that the market is kept quiet, steady and at the present basis. We are confident, says the Metal Market Report, that if the large producers would agree to sell May, June and July at ½c. per pound over the supposed nominal market price, it would quickly be taken, and an immediate advance made on spot and all down the line. This advance might be a great mistake, hence we congratulate producers on their present attitude of keeping out of the market and keeping control of some of their supplies.

Locally the important topic is the revised tariff, the tendency of which is to make matters easier for the trade. Boiler tubes will be even better than before, but boiler plates are left far from satisfactory, as merchants will be forced to

carry two separate stocks in order to do business with manufacturers and general buyers. For the former there is no duty while for the latter $3 per ton is charged. The cutting out of the duty of 5 per cent. on tubes will not affect the price, as the price advanced the same amount last week in the producing market. All sizes of plates will now be rated at the same quotation.

Business has been very lively and one firm which does business in all parts of Canada reports a 20 per cent. gain in January over the same month last year.

In reviewing the statistics of pig iron production in the U. S. for 1906, which show a ten per cent. increase and a total of over 25 million tons, the Metal Market Report says: "When will this rapid increase in pig iron production halt? Certainly not this year; we shall certainly break the record again, as we are making at the rate of more than 27,000,000 tons a year at the present time, with new furnaces to come in, and the iron is sold, either in the form of pig iron or of finished steel products, for more than half the remainder of the year."

PIG IRON—In foreign markets conditions have been easier but locally things are unchanged with prices the same. Buying continues brisk. Hamilton, Midland and Londonderry are off the market, and Radnor is quoted at $53 at furnace. Middlesborough No. 1 is quoted at $24.50, and Summerlee No. 1 at $26 f.o.b., Toronto.

BAR IRON — Stocks are picking up but buying is active. Steady prices rule and we still quote: $2.30 f.o.b., Toronto, with 2 per cent. discount.

TIN — Both ingots and plates have been fluctuating in foreign markets but locally ingots are firm at 45c. and charcoal plates, base, at $6.50. Prices are again firm at 45c. with more asked in some cases. Plates are firm and unchanged.

SHEETS AND PLATES—No further advances have been made on black sheets or Canada plates, although there is talk of higher prices. Galvanized sheets are in good demand.

BRASS—Conditions are not improving and stocks continue light. We still quote 30 cents per pound on sheets.

COPPER—Sheets have advanced in response to higher prices on the other side. We now quote: Ingot copper, $26.50 per 100 lbs., and sheet copper, $35 per 100 lbs.

LEAD—Stocks continue low. Buying is fair with prices unchanged. We quote: $5.40 for imported pig and $5.75 to $6.00 for bar lead. For sheet lead $7 is asked.

ZINC SPELTER—A fair business is doing but stocks are short. We quote 7½c. per lb. for foreign and 7c. per lb. for domestic. Sheet zinc is quoted at 8 1-4c. in casks, and 8 1-2c. in part casks.

BOILER PLATES AND TUBES.—An advance is looked for, but we still quote: Plates, per 100 lbs., ¼ in. to ½ in., $2.50; heads, per 100 lbs., $2.75; tank plates, 3-16 in., $2.65; tubes, per 100 feet, 1¼ in., $8.50; 2, $9; 2 1-2, $11.30; 3, $12.50; 3 1-2, $16; 4, $20.00. Terms, 2 per cent. off.

ANTIMONY—The market continues lively with prices unchanged at 27c. per pound.

OLD MATERIAL—Dealers report a good demand with prices continuing on the upward trend. Their buying prices are: Heavy copper and wire, 20c. per lb.; light copper, 18c per lb.; heavy red brass, 18c per lb.; heavy yellow brass, 15c. per lb.; light brass, 11c. per lb.; tea lead, $4.25 per 100 lbs.; heavy lead, $4.50 per 100 lbs.; scrap zinc, 4½c. per lb.; No. 1 wrought iron, $15; No. 2 wrought, $8; machinery cast scrap, $18; stove plate, $14; malleable and steel, $9; old rubbers, 10½c. per pound; country mixed rags, $1 to $1.25 per 100 lbs., according to quality.

COAL—While there is plenty of soft coal, small sizes of anthracite are very short in all parts of Ontario. We still quote: Standard Hocking soft coal f.o.b. at mines, lump, $1.50, ¾ inch, $1.40; run of mine, $1.30; nut, $1.25; N. & S., $1; P. & S. 85c. Youghiogheny soft coal in cars, bonder at bridges: lump, $2.60; ¾ inch, $2.50; mine run, $2.40; slack, $2.15.

United States Metal Markets

From the Iron Age, Feb. 14, 1907.

The blast furnaces have not been working well lately and the output has not been as large as it should be. During January the production of coke and anthracite pig iron amounted to 2,205,107 gross tons, as compared with 2,235,306 tons in December, the production of the steel works stacks having been 1,166,397 and 1,445,528 tons, respectively. The decrease in output was therefore due entirely to the latter. The merchant furnaces held their own. It is interesting to note that three new stacks were added to their number during January, the Josephine, Federal and second Toledo having made their first iron in that month. We entered February with an active furnace capacity of 492,359 tons per week, as compared with 507,322 tons per week on January 1.

The announcement has just been made that the contract for 38,000 tons of water pipe for New Orleans has been let on the basis of $33 per net ton for the 1907 and $32 for the 1908 delivery. This shows that the fears were not justified, that present high prices for material might cause the closing of contracts for next year's part of the work to be postponed.

In the steel rail trade an interesting event has been the sale for export, of a lot of 50,000 tons of 80-lb. rails, for delivery during the second half of this year. It is worthy of special mention that the price realized for these rails nets the mill more than is being obtained for domestic business.

From the plate, bar, sheet, tin plate, tube and wire mills comes the story of a rush of specifications on old orders and of new orders. Among the larger contracts recently closed with tube mills is one for 400 miles of pipe for the Southern Pacific, for a new oil line in California.

From the Iron Trade Review, Feb. 14, 1907.

The pig iron market shows indication of lower prices this week in nearly all parts of the country. The United Stases Steel Corporation and other large interests are of the opinion that if the prices of finished products are further advanced, consumption will be decreased and the continuance of prosperity will be imperilled. Hence, strong influences are being exerted in favor of conservatism. Steel makers are declining to buy pig iron at the present prices, saying that they cannot dispose of their own products if they must pay such high prices for the crude material. Buyers of foundry iron are also making a determined effort to obtain lower prices. Although some furnace interests are very firm, and are declining to make any concessions, the general disposition is to quote lower prices for future delivery. Furnace interests in the Mahoning and Shenango valleys have sold practically no steel, making iron for the last half of the year, but are not disposed to sell at $20, which is being offered by some steelmakers. At present it is a waiting game, and it will be extremely interesting to discover whether the buyers or the sellers will win. The present probability seems to be that the price on Bessemer iron for last half delivery will be pounded down to $20.

The freight situation in the South does not improve. When the railroads decided to postpone the advance in freight rates 30 days, it was hoped that there would be a heavy movement of pig iron from the south during February, but with nearly half of the present month past, there is no indication that the situation will be relieved to any great extent. It will not be surprising if the shippers renew the agitation in opposition to the advance in freight rates.

N.B. Hardware Trade News

St. John, Feb 11.—The annual dinners of the St. John Iron and Hardware Association are always most enjoyable but none of the thirteen so far held has equalled for pleasure that of a few days' ago. It was held at the Union Club, forty sitting down to prettily decorated tables. During the evening banjo numbers and vocal solos added to the enjoyment. After dinner came the customary round of toasts. The King was proposed by the president, W. S. Fisher. Our Association, proposed by J. H. McAvity, was responded to by John Keeffe and M. E. Agar. The City and Board of Trade, proposed by the president, was responded to by Mayor Sears, J. H. McRobbie and Ald. Rowan. The Iron and Hardware Manufacturers, proposed by M. E. Agar, was responded to by C. McDonald, S. E. Elkin, J. A. McAvity and T. Stewart. Our Guests, proposed by John Keeffe, was responded to by F. W. Sumner, of Moncton, S. H. White, of Sussex, Wm. Kerr and H. N. Stevens. The Ladies, proposed by G. McDonald,

was replied to by J. G. Harrison and Fred Foster.

The menu card was novel and attractive. It was well printed and closed about with a nickeled horse shoe.

* * *

J. F. Wilson is preparing to make noteworthy advances in his business. At the present time he and his foreman, Walter Thompson, are visiting Upper Canadian and United States foundries, inspecting the latest improved machinery and seeking new ideas in the manufacture of stoves, stovefitting, etc. On their return men will begin the erection of an addition to the Brussels St. foundry. The new structure will be one hundred by forty feet. Here much new machinery will be installed as soon as posible. Thus the capacity of the Wilson foundry will be considerably increased. In the rear of the Sydney street store Mr. Wilson will also put up a large brick building of three stories. Here will be found needed room for the carrying on of his sheet metal and other business.

* * *

A factory for the manufacture of the Security Placket Fastener is shortly to be opened here. The man behind this scheme is H. R. McLellan, who has already ordered the machinery needed for the factory. Mr. McLellan plans on putting nearly a thousand of the fasteners on the market every year. The plan is to sell them wherever an opening is to be seen or can be made. The factory will be located on Queen street.

* * *

The markets are continuing strong. The metal advances, however, have not been quite so marked of late as a few weeks ago. All previous advances have been maintained. The stove men have given notice of another advance. Roofing papers have gone up slightly. The paper has gone up five cents per roll, sheathing five cents per hundred pounds.

B.C. Hardware Trade News

Vancouver, B.C., Feb. 8, 07.

Action officially has not yet been made public by the B.C. Lumbermen's Association, or by the Mountain Lumbermen's Association, regarding the investigation to be held before a select committee of the House of Commons into the allegation that the lumbermen are operating an illegal combine. Individuals, however, have made some emphatic protests against the assertions which have been made by members of the Dominion House. G. P. Wells, secretary of the Mountain Lumbermen's Association, denies most emphatically that such a combine exists. He asserts that the millmen will welcome the investigation and the sooner the committee is appointed the better it will suit the lumbermen of the Province.

Mr. Wells describes the association as a body which meets at intervals to discuss matters relative to the industry. In so far as the accepted meaning of trust or combine goes, Mr. Wells says, the association is far removed from any such character.

Discussing actual conditions and how the lumbermen deal with them, Mr. Wells instances the recent annual meeting of the association. They found, he said, that stocks in the Northwest retail yards were very light at present, and that at most of the big mills the stocks on hand were also small. At the present moment orders which would absorb every foot of lumber now in stock have been placed, so that practically a lumber famine may be looked for when the season opens. Notwithstanding this acute condition, the Mountain Lumbermen in the recent convention made no general advances, and no changes of any great importance. On the contrary, they evinced a desire to hold the present prices without further increases. This, too, in face of large increase of cost, from higher priced logs and higher cost of milling. The restricting of output is not even thought of. In fact the output increases from year to year, 1906 being 20 per cent. greater than 1905.

* * *

Vancouver Island is to be developed company has been formulating plans ever since purchasing the E. & N. Railway from the Dunsmuir interests. The huge land grant, comprising some of the best parts of the island, which went with the railway, is to be cleared in districts and put on the market by the C.P.R. and some of this work goes on at once. The climate of Vancouver Island is very mild and salubrious and many districts are admirably adapted to fruit-growing. The company expects to secure a large influx of settlers by means of advertising its cleared lands for sale.

Another important undertaking which the railway has announced its intention of going on with at once, is a branch of the island railway to go from the east coast at or near Nanaimo, to Alberni on the west coast. Whether this foreshadows the establishment of a port on the west coast for the Japan-China line of steamers, is not yet known. But it will in any event open up a large district, and also bring into imediate touch, the isolated areas of the west coast of the island, which have heretofore depended on a steamer service at weekly intervals.

* * *

Discussing coal mining and that industry generally, Thos. R. Stockett, recently expressed the opinion that the hardships in the Northwest would result in good to the people themselves and to the coal mining companies. Mr. Stockett, who is now manager of the Western Fuel Co.'s mines at Nanaimo, was formerly in charge of the Crow's Nest Pass Coal Co.'s mines at Fernie, so that he is in a position to know conditions as they are. He points out that even now, the mines of which he is manager, are slackening off in orders. And that in the summer season it is almost a case of shut-down because the demand is so light. This is even more emphatically the case with the mines of the Crow's Nest. Then when winter comes on, with the extremely doubtful conditions of transportation, everyone is rushing in orders. If consumers, especially in the prairie provinces, where the winter needs are accurately known always, would fill up their coal cellars and coal sheds in the summer and fall months, when railway transportation was good, and before the grain rush begins and bad weather stops transportation, there would be no trouble.

Speaking of conditions at Nanaimo, Mr. Stockett said that his company was now producing as much coal as ever the New Vancouver Coal Co., its predecessor in the Nanaimo mines, ever did in its palmiest days. Three years ago Nanaimo was considered at its lowest ebb, but now there was solid prosperity and quiet progress, exciting not the least comment, though, as he said, the amount of coal being raised equalled that of the best boom days of the island coal city.

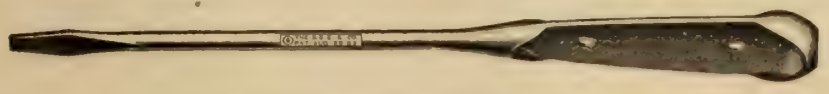
* * *

The unprecedented winter conditions still prevail across the Northwest and in the mountains, interrupting even mail service. For days at a time no trains arrive at the coast, and mails are not received at regular intervals. Shipments of lumber have practically ceased until the weather across the continent moderates. Cars are hard to get, impossible almost, and once loaded there is no surety that they will be moved.

QUEBEC MAN HONORED.

W. H. Wiggs, of the Mechanics Supply Co., Quebec, has been in Toronto this week attending the 35th annual convention of the Ontario and Quebec Young Men's Christian Associations. Mr. Wiggs is one of the most ardent workers in Y.M.C.A. work in Canada, and was honored by being elected president of the Ontario and Quebec Associations at the convention.

PRESENTATIONS TO W. C. GURNEY



On Saturday morning last the staffs of the Gurney Foundry Co., at Toronto and the Junction, assembled at the head office to show their appreciation of their vice-president, William Cromwell Gurney, who for many years has been active in the work of the company, and who was married on Tuesday to Miss Meyer, of Toronto. First vice-president Carrick, on behalf of the joint staffs of the head office and the branches at Montreal, Winnipeg, Calgary and Vancouver, in a few fitting and well chosen words tendered their good wishes for Mr. Gurney's life as a benedict along with a substantial reminder in the form of a cabinet of silverware, comprising over 300 pieces. The superintendents and foremen, representing the mechanical staffs, also joined in the good wishes, accompanied by a Morris reclining chair upholstered in leather as well as several others to match for hall and library use. The presentations are an indication of the excellent good feeling existing between employers and employes in this old established and steadily growing business.

NOVELTIES FOR HARDWAREMEN

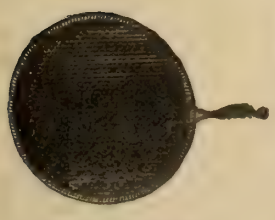
Readers desiring the addresses of the manufacturers or jobbers of the articles described, or any additional information, can secure the same from the Editor of HARDWARE & METAL.

PERFECT HANDLE SCREW DRIVER.

H. D. Smith & Co., Plantsville, Conn., have recently introduced to the Canadian trade their perfect handle screwdrivers, illustrated herewith. The wooden handle is pocketed in each side of the drop forging in such a manner, and so securely, that by test, a handle split with a cold chisel had to be further split to splinters and pried out before it could be removed.

Pocket for Wooden Handle in Screw Driver.

The handles are treated with a proofing process, which renders them impervious to water. They are finished in their natural color—a rich red. The handle of the driver may be used as a hammer to force the point of the screw into the wood, owing to its partial metal construction. It may also be used with a monkey wrench for tightening or loosening cap screws, set screws, etc. The user may put all the power he wishes back of the wrench, and the manufacturer assures him of an unqualified guarantee back of the screwdriver.



The blade, bolster, handle flat and hammer head are drop forged of one piece of steel. The oval shaped handle gives greater leverage and fits the hand better. The screwdriver is well balanced and this means much to one who uses screwdrivers extensively.

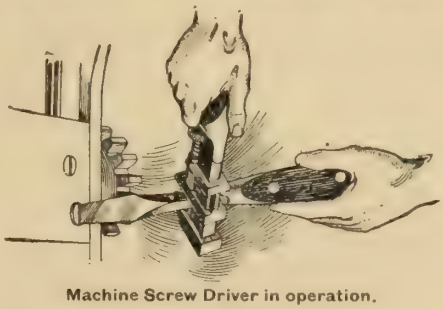
The company will forward catalogues on application.

HOUSEHOLD CONVENIENCES.

The H. W. Johns-Manville Co., N.Y., represented in Canada by A. E. Patton, 54 Columbia Ave., Westmount, Montreal, are placing on the market a number of asbestos household conveniences, two of which are illustrated.

The "Milwaukee" iron holder is a soft, heat-resisting pad, doubly faced with asbestos cloth which is so fastened to the back that a pocket is made for the hand, which makes possible a more secure hold on the iron and prevents the possibility of scorching the hands. This holder is thickly padded, positively resists heat, and is inodorous.

Asbestos Toaster.



"Milwaukee" Iron Holder.

The Asbestos Toaster No. 1 consists of a heavy asbestos mat, backed with backed with sheet steel, covered with a fine wire mesh and fitted with a cold handle. It is especially designed for toasting, since it diffuses the heat over the entire surface, thereby rendering the article equally brown all over.

FLUID LEVEL INDICATOR.

The Turner Brass Works, Franklin and Michigan Sts., Chicago, Ill., are manufacturing the "Ross" Fluid Level Indicator, which is especially designed for gasoline tanks on automobiles and launches. It is a combined indicator and filler cap, and it is rigid and simple in construction. A brass socket is fitted with six screw holes for fastening on to the tank. The filler cap contains the brass dial casting and indicator, which screws on to the brass socket. A leather washer intervenes between the brass socket and filler cap to make the same air tight. The filler cap contains a magnifying glass which makes it easy at all times to read the dial. Into the dial casting are screwed two rigid steel guide rods on which the float slides up and down, the centre screw revolving the pointer over the dial plate. The dial used is of special composition and is not affected by gasoline. It is secured in a groove at the bottom of the dial casting, and is easily removed to change the style of dial. The makers furnish dials marked E (empty), ¼, ½, ¾, and F (full); or 1, 2, 3, etc., in inches or in gallons when a large number of indicators is wanted for a certain size and style of tank, in which case the depth of the fluid at each gallon is to be specified by the purchaser. The device lists at $6 for a 14-inch indicator and filler socket for flat top tank, and $5 for indicator alone. For each additional 2-inch depth of a tank over 14 inches deep, an extra charge of 50 cents is added. For a cylindrical tank an extra charge of $1 is made for the larger and heavier brass tank socket.

Machine Screw Driver in operation.

For boat type indicators of small size an extra charge of $2 is made for a 6-inch tube, which runs from the deck to the tank, and 30 cents for each additional inch thereof. The device is made for all styles of tanks, whether cylindrical, square, oblong or otherwise.

FRUIT AND VEGETABLE PARER.

The fruit and vegetable parer shown in the accompanying cut is stamped from a single piece of steel firmly held in a substantial wooden handle. The curved blade fits the circular fruit and takes off a thin, wide paring twice as wide and twice as thin as a paring made with a knife, it is said. The parer is very economical of the fruit or vegetables, as it is made on the principle of a safety razor. The knife on the front edge can be used when necessary. The parer is pulled straight down with the right hand, turning the fruit with the left. To remove eyes, the thumb is placed on the point of the parer and by a twist of the wrist the eye is taken out. The parer is put on the market by Phoenix Hardware Mfg. Company, Homer, N.Y.

Guest's Patent Fruit and Vegetable Parer.

WHAT ASBESTOS REALLY IS.

In the important work of protecting life and property from fire and heat there is a growing appreciation of the value of asbestos, and a constant increase in its use. It has a combination of properties unlike that of any other substance found in nature. No other product as yet discovered could take its place. It has been called mineral wool, and also the connecting link between the mineral and the vegetable kingdoms. After the fibres of asbestos have been separated from their mother rock they have a fluffy softness and whiteness much like that of wool or cotton, and by a process very similar to that of ordinary weaving, they are converted into cloth. It is a cloth, however, which, owing to its mineral origin, is impervious to fire, and herein lies its value.

The clerk who believes that he is not being paid as much as he deserves, generally deserves less than he is getting. The other kind either get an advance or look elsewhere for a position.

There is Twenty Years of Experience in this Can

Doesn't this point the way for you? Stephen's Pure Paint has now a proven record of over twenty years' hard use, under many difficult conditions.

Every gallon is made with Manitoba Linseed Oil—properly aged—this increases not only the body, but also the wearing qualities of the paint.

MANITOBA HARDWARE AND METAL MARKETS

Market quotations corrected by telegraph up to 12 a.m. Friday, Feb. 15, 1907.)

Room 511, Union Bank Building, Office of HARDWARE AND METAL, Winnipeg, Man.

Milder weather and the attractions of the Bonspiel have combined to bring a good number of hardware merchants to town. The wholesale houses are busy entertaining their customers and selling them spring hardware. Travelers are able now to reach points on the branch lines which had been cut off for some time and business is showing a marked improvement in consequence.

Wire nails have been advanced to $2.40 f.o.b. Fort William and $2.85 f.o.b. Winnipeg. Turpentine has been advanced to $1.10 in Winnipeg. A few other minor changes will be noted.

LANTERNS.—Quotations are as follows: Cold blast, per dozen, $6.50; coppered, cold blast, per dozen, $8.50; cold blast dash, per dozen, $8.50.

WIRE — New prices on soft copper wire and brass spring wire have just been announced. Quotations are as follows. Barbed wire, 100 lbs., $3.22½; plain galvanized, 6, 7 and 8, $3.70; No. 9, $3.25; No. 10, $3.70; No. 11, $3.80; No. 12, $3.45; No. 13, $3.55; No. 14, $4.00; No. 15, $4.25; No. 16, $4.40; plain twist, $3.45; staples, $3.50; oiled annealed wire, 10, $2.96; 11, $3.02; 12, $3.10; 13, $3.20; 14, $3.30; 15, $3.45. Annealed wires (unoiled) 10c. less; soft copper wire, base, 36c.; brass spring wire, base, 30c.

HORSESHOES — Quotations are as follows: Iron, No. 0 to No. 1, $4.65; No. 2 and larger, $4.40; snowshoes, No. 0 to No. 1, $4.90; No. 2 and larger, $4.65; steel, No. 0 to No. 1, $5; No. 2 and larger, $4.75.

HORSENAILS — Lists and discounts are quoted as follows: Capewell brand, list, per lb., Nos. 5, 15c., 6, 14c.; 7 and 8, 13c.; 9 to 12 12c.; f.o.b. Winnipeg. Discounts on application. No. 10, 20c.; No. 9, 22c.; No. 8, 24c.; No. 7, 26c.; No. 6, 28c.; No. 5, 32c.; No. 4, 40c., per pound. Discounts are quoted as follows: "C" brand, 40, 10 and 7½ per cent., "M" brand and other brands, 55 and 60 per cent. Add 15c. per box.

WIRE NAILS—Quoted now at $2.85 f.o.b. Winnipeg, and $2.40 f.o.b. Fort William.

CUT NAILS.—Recently advanced to $2.90 per keg.

PRESSED SPIKES — Prices are quoted as follows since the recent advance: ¼ x 5 and 6, $4.75; 5-6 x 5, 6 and 7, $4.40; ⅜ x 6, 7 and 8, $4.25; 7-16 x 7 and 9, $4.15; ½ x 8, 9, 10 and 12, $4.05; ⅝ x 10 and 12, $3.90. All other lengths 25c. extra net.

SCREWS—Discounts are as follows: Flat head, iron, bright, 85 and 10 p.c.; round head, iron, 80 p.c.; flat head, brass, 75 and 10 p.c.; round head, brass 70 and 10 p.c.; coach, 70 p.c.

NUTS AND BOLTS — Discounts are unchanged and continue as follows: Bolts, carriage, ⅜ or smaller, 60 and 5; bolts, carriage, 7-16 and up, 55; bolts, machine, ⅜ and under, 55 and 5; bolts, machine, 7-16 and over, 55; bolts, tire, 65; bolt ends, 55; sleigh shoe bolts, 65 and 10; machine screws, 70; plough bolts, 55; square nuts, case lots, 3; square nuts, small lots, 2½; hex nuts, case lots, 3; hex nuts, smaller lots, 2½ p.c.

RIVETS—Since the recent advance in copper rivets prices are quoted as follows: Iron, discounts, 60 and 10 p.c.; copper, No. 7, 43c; No. 8, 43½c; No. 9, 45½c.; copper, No. 10, 47c.; copper, No. 12, 50½c.; assorted, No. 8, 44½c., and No. 10, 48c.

COIL CHAIN.—Prices have been revised, the general effect being an advance. Quotations now are: ¼ inch $7.00; 5-16, $5.35; ⅜, $4.75; 7-16, $4.50; ½, $4.25; 9-16, $4.20; ⅝, $4.25; ¾, $4.10.

SHOVELS—List has advanced $1 per dozen on all spades, shovels and scoops.

HARVEST TOOLS — Discounts continue as before, 60 and 5 per cent.

AXE HANDLES—Quoted as follows: Turned, s.g. hickory, doz., $3.15; No. 1, $1.90; No. 2, $1.60; octagon, extra, $2.30; No. 1, $1.60.

AXES.—Quotations are: Bench axes, 40; broad axes, 25 p.c. dis. off list; Royal Oak, per dozen, $6.25; Maple Leaf, $8.25; Model, $8.50; Black Prince, $7.25; Black Diamond, $9.25; Standard flint edge, $8.75; Copper King, $8.25; Columbian, $9.50; handled axes, North Star, $7.75; Black Prince, $9.25; Standard flint edge, $10.75; Copper King, $11 per dozen.

BUTTS—The discount on wrought iron butts is 65 and 5 p.c.

CHURNS — The discounts from list continue as before: 45 and 5 per cent.; but the list has been advanced and is now as follows: No. 0, $9; No. 1, $9; No. 2, $10; No. 3, $11; No. 4, $13; No. 5, $16.

CHISELS— uoted at 70 p.c. off list prices.

AUGER BITS—Discount on "Irwin" bits is 47½ per cent., and on other lines 70 per cent.

BLOCKS—Discount on steel blocks is 35 p.c. off list prices; on wood, 55 p.c.

FITTINGS—Discounts continue as follows: Wrought couplings, 60; nipples, 65 and 10; T's and elbows, 10; malleable bushings, 50; malleable unions, 55 p.c.

GRINDSTONES.—Quoted now at 1½c. per lb.

FORK HANDLES—The discount is 40 p.c. from list prices.

HINGES—The discount on light "T" and strap hinges is 65 p.c. off list prices.

HOOKS—Prices are quoted as follows: Brush hooks, heavy, per doz., $8.75; grass hooks, $1.70.

CLEVISES—Price is now 6½c. per lb.

STOVE PIPES—Quotations are as follows: 6-inch, per 100 feet length, $9; 7-inch, $9.75.

DRAW KNIVES—The discount is 70 per cent. from list prices.

RULES—Discount is 50 per cent.

WASHERS—On small quantities the discount is 35 p.c.; on full boxes it is 40 p.c.

WRINGERS — Prices have been ad-

SUPERB EMPIRE
The Perfect Cooker

We draw the attention of the Western Trade to the Superb Empire Planished Steel Range. The oven door is not only braced but also spring balanced. A lever is attached to the front key-plate to raise it as desired, and contrived also to hold it up if necessary. The Superb throughout is substantial, its nickel dress alone making it a ready seller, besides, it is made by a Western stove factory for Western people only.

BEST OF REFERENCES

IRON AND STEEL.—Quotations are: Bar iron basis, $2.70. Swedish iron basis, $4.95; sleigh shoe steel, $2.75; spring steel, $3.25; machinery steel, $3.50; tool steel, Black Diamond, 10c. lbs., $9.50. Jessop, $13.

SHEET ZINC — The price is now $8.50 for cask lots, and $9 for broken lots.

PIG LEAD.— The price is advancing and the range of quotations among Winnipeg houses makes it difficult to quote with exactitude. The average price is about $6.00.

AXLE GREASE—"Mica" axle grease is quoted at $2.75 per case, and "Diamond" at $1.60.

IRON PIPE AND FITTINGS— Revised prices are as follows:—Black pipe, ¼ inch, $2.65; ⅜, $2.80; ½, $3.50; ¾, $4.40; 1, $6.35; 1¼, $8.65; 1½, $10.40; 2, 13.85; 2½, $19.00; 3, $25.00. Galvanized iron pipe, ⅜ inch, $3.75; ½, $4.35; ¾, $5.65; 1, $8.10; 1¼, $11.00; 1½, $13.25; 2, inch, $17.65. Nipples, discounts 70 and 10 per cent.; Unions, couplings, bushings and plugs, 60 per cent.

LEAD PIPE—The price, $7.80, is firmly maintained in view of the advancing lead market.

GALVANIZED IRON—Quoted as follows:—Apollo, 16 gauge, $3.90; 18 and 20, $4.10; 22 and 24, $4.45; 26, $4.40; 28, $4.65, 30 gauge or 10¾ oz., $4.95; Queen's Head, 24, $4.50; 26, $4.65; 28, $5.00.

TIN PLATES—We now quote as follows: IC charcoal, 20 x 28, box, $9.50; IX charcoal, 20 x 28, $11.50; XXI charcoal, 20 x 28, $13.50.

TERNE PLATES—Quoted at $9.

CANADA PLATES—Quoted as follows: Canada plate, 18 x 21, 18 x 24, $3.40; 20 x 28, $3.65; full polished, $4.15.

BLACK SHEETS—Prices are: 10 to 16 gauge, 100 lbs., $3.50; 18 to 22, $3.75; 24, $3.90; 26, $4; 28, $4.10.

PETROLEUM AND GASOLINE.—Silver Star in brls. per gal., 20c.; Sunlight in brls, per gal., 21c.; per case, $2.30; Eocene in brls, per gal., 23c.; per case, $2.50; Pennoline in brls., per gal., 24c.; Crystal Spray, 23c.; Silver Light, 21c.; Engine gasoline in barrels, per gal., 28c., f.o.b. Winnipeg in cases, $2.75.

PAINTS, OILS AND TURPENTINE—Turpentine has been advanced to $1.10. We quote: White lead, pure, $6.50 to $7.50, according to brand; bladder putty in barrels, 2½c.; in kegs, 3¾c.; turpentine, barrel lots, Winnipeg, $1.01; Calgary, $1.08; Lethbridge, $1.08; Edmonton, $1.09. Less than barrel lots 5c. per gallon advance. Linseed oil, raw, Winnipeg, 67c.; Calgary, 74c.; Lethbridge, 74c.; Edmonton, 75c.; boiled oil, 3c. per gal. advance on these prices.

WINDOW GLASS—We quote: 16-oz. O.G., single, in 50-ft. boxes—16 to 25 united inches, $2.25; 26 to 40, $2.40; 16-oz. O.G., single, in 100-ft. cases — 16 to 25 united inches, $4; 26 to 40, $4.52; 41 to 50, $4.75; 50 to 60, $5.25; 61 to 70, $5.75. 21-oz. C.S., double, in 100-ft. cases—26 to 40 united inches, $7.35; 41 to 50, $8.40; 51 to 60, $9.45; 61 to 70, $10.50; 71 to 80, $11.55; 81 to 85, $12.60; 86 to 90, $14.75; 91 to 95, $17.30.

STOVES AND TINWARE

CHANCES OF THE STOVE TRADE.

For some time both the stove manufacturer and the stove dealer have shared the disadvantages resulting from tradesmen in other lines taking up stoves as a side-line, and selling them to the great annoyance of the manufacturer; and to make inroads on the profits of the stove dealer. Some stove manufacturers, on whom responsibility rest lightly, have shown little insight as to the effect new methods of marketing their product would have upon the regular stove dealer.

Stoves sold by these parties are never properly set up or intelligently connected, and in numerous instances the final purchaser suffers no small discomfort and irritation from the ignorance on the part of those from whom the stove was purchased. Manufacturers should protect the stove dealer, who has his establishment open every day in the week to give assistance to a cuctomer for some manufacturer's stove.

In the course of a year stove dealers receive many visits from prospective buyers, who ask a great many questions about different lines of stoves, the answer in all cases is gladly given, and when the stove is purchased from the dealer, any little wrong has to be adjusted. Stoves which have been purchased from department stores, furniture dealers, installment houses, and mail order concerns, are too often the cheapest goods that the stove manufacturers of the country have to offer. What they lack in meritorious construction is, to deceive the buyer, covered up with gorgeous nickel trimmings, and it is a matter of common knowledge that this class of goods seldom includes in its line of samples the goods made by those stove manufacturers who are best known to the legitimate stove dealers.

There are some who are close observers of the conditions who express the opinion that this demoralizing method of marketing the stove product has reached the zenith, and that a change for the better is at hand.

Stove dealers should handle a good reliable line, also carrying all the accessories, and complete line of repairs. Nothing discourages a customer so much as having to wait until repairs are ordered from the factory. It will also give customers the opinion that either you are selling very few stoves, or are very slack in your methods, by not having all repairs parts on hand.

PROTECT THE CUSTOMER.

"If I was a hardware dealer," grumbled a disappointed customer, recently, "I would try and keep the commoner repairs for the goods I handled. Last month I purchased an expensive hard coal stove and yesterday by accident got a hole punched through the door. To-day I came in here on purpose for the necessary repairs and was met by the calm assurance that 'we do not keep mica.' For my part I would either keep it or quit selling stoves that require it. It's too much like telling a man to go to thunder as soon as you have made a sale and taken his money," says Hardware.

There is a good deal of justice in the camplaint and a good suggestion, for every retailer; keep in stock a reasonable supply of repairs for your own line of goods and do not fail to include in that list the parts most likely to become broken that would most effectively disable the article sold. In the case of stoves the necessary repairs would be a few sheets of mica, an assortment of stove bolts, pipe, including elbows; dampers, knobs and hinges, with a supply of furnace cement; these will give your customers a reasonable protection against unreasonable inconvenience from break-downs, whether caused by defects in the stove or by some accident. Such an outfit will be found to cost little and will render almost any stove usable until the heavier and more expensive repairs can be ordered for it from the factory. Because a fire-pot happens to crack is no reason why the purchaser must suffer the inconvenience of changing stoves or the chills of inclement weather while a new one is in transit. More than likely a few cents worth of furnace cement will run him until the new piece comes.

Of course the principle holds in other lines; so far as possible protect the customer against break-downs and when a break-down does occur protect him as effectually from serious loss and inconvenience by having at hand something to tide him over until the new piece can be obtained. The effort will be appreciated, though you may be told it through continued patronage rather than by words.

THE STOVE DEPARTMENT.

"The stove department in the hardware business does not," insists a retailer in an exchange, "pay a cent of profit to the average dealer, though it certainly should. A stock of stoves runs into money, and large expense is incurred in handling them, and how often sales are made at 10 per cent. margin when the actual expense is more. In my opinion a stove should never be sold at less than 25 per cent. margin, and the custom of throwing in this and that article should be stopped.

"Bazaar and department stores do not usually handle stoves because of the investment and labor involved. They want us to handle all the undesirable lines and they pirate upon our shelf and case goods, where the investment and labor are less and the profits more. Do you think we should stand with out neighbor hardwareman in maintaining satisfactory prices on all these goods which we only keep, thus enabling us to meet their price cutting on shelf and other goods? How often we pay a man $10 per week to black and set up stoves and our charge for doing so is so small that the dry goods clerk, getting $5 per week, feels he cannot afford to soil his hands in blacking a stove when he can get the hardwareman to do it for perhaps the cost of the blacking material. I speak of this to illustrate the many things we do at a less margin than we can afford to, and no one to blame but ourselves, competition not forcing us to do so—simply one hardwareman cutting the other's throat, and the chickens always come home to roost."

CHANGE FOR THE BETTER.

Stove manufacturers are going back 25 years to the plain and more sensible ornamentation of stoves, which is more in keeping with the use and intent of a cooking stove. Nickel is not used so much, and it is hoped will not be revived. Plain goods are the innovation.

With the prosperity that this country has been blessed with during the past year, there is no doubt that the tendency has been for everyone to buy a better grade, and higher priced articles of every kind, and this certainly applied to the stove business.

The tendency of the trade is in the direction of buying good goods, not necessarily the highest grades, but honestly made stoves, that have the reputation of an experienced manufacturer behind them. Stove dealers are more inclined to connect their reputation with goods that give the best of satisfaction, and are most highly commended by those who use them. They consider that it is more important to make a sale that lays the foundation for future business, than to make a sale that will prevent future business.

Consequently the many stove manufacturers who are devoting themselves to improve the quality of their goods are experiencing the most satisfactory to improve the quality of their goods is ever becoming more pronounced, although the low-grade meets with large demand in some sections of the country.

GET AFTER STOVE TRADE.

Now when business is slack is the time to get out and hustle. There are many lines which offer good returns for such enterprise. Among these, stoves are worthy of considerable attention. Many householders need to be convinced that they should get a new stove, that an old, out of date one is a cause of loss, using much more fuel to do the same work than does a new stove of good pattern.

How can these people be reached? Many hardwaremen content themselves with drawing the attention of buyers by advertising. Some try window displays to interest the public. Others again issue circulars for distribution to their customers. An increasing number of stove dealers are however more insistent. They make a point of personally interviewing everyone whom they feel might possibly be persuaded to get a new stove. The latter plan is well worth trying.

NEW ONTARIO PROSPEROUS.

James Purvis, of Purvis Bros., Sudbury, who was one of the big Algoma delegation which waited on the Ontario Government this week, called at the Toronto office of Hardware and Metal on Thursday. Mr. Purvis says last year was a splendid one for all New Ontario hardwaremen, but 1907 bids fair to be even better. If the lumbermen had called a convention and prevailed upon the weather man to allow them to run his business this winter, they could not have made a better job of it and conditions could not have been more favorable. All winter and lumber supply lines have sold in large quantities, and with the selection of Sudbury as a new district judicial centre much new building would result, in addition to the natural development of the town.

Western Canada Factory, 797 Notre Dame Ave., Winnipeg, Man.

LETTER BOX.

The Ontario Nickel Company, Worthington, Ont., writes: "Please inform us who makes the Spooner Babbit Metal?"

Answer.—Alonzo W. Spooner, Port Hope, Ont.

Taylor Brosf, Carleton Place, ask: "Can you get us a quotation in Toronto on slate blackboards 3 x 15 feet?"

Answer.—Steinberger & Hendry Company, 37 Richmond Street West, Toronto, have supplied the information by letter.

Gordon Ritchie has just returned from his initial trip for the McClary Manufacturing Co. One well known French Canadian merchant in the eastern townships greeted him with: "Bon jour Monsieur Reechay, I seed your picture in Hardware and Mettall. I hexpec you since long taaime."

FOUNDRY AND METAL INDUSTRIES

The production of copper in the United States has increased from 27,000 tons in 1880 to 450,000 in 1906, and the United States now furnishes over 57 per cent. of the world's supply.

The railway construction works and rolling mills, which have been proposed for Sydney, C. B., will be erected in the Spring, as sufficient capital for the financing of the scheme is available.

A $10,000,000 corporation is in process of formation with a view to entering into competition with the Pittsburg Reduction Co., the heaviest producer of aluminum in the United States. It is reported that the enterprise will erect a plant along the Cumberland River, in Kentucky, at a cost approximating $3,500,000.

A delegation composed chiefly of members of the legal profession waited on the Hon. Frank Cochrane, Minister of Lands, Forests and Mines, on behalf of their clients, to disapprove of a plan to impose a tax per acre on mining lands. He intimated that at least part of the revenue derived from taxation of the mines of the province would be applied to encourage the smelting and refining of ores in Ontario, as it would increase in the value of mining properties, besides allowing their owners to work deposits of ore of lower grade than was profitable at present.

The Canadian branch of the American Locomotive Works at Montreal, is largely extending its structural steel plant, and has so many orders booked for this kind of steel that even the enlarged plant will be kept running to its fullest capacity throughout the year.

The Ottawa Car Company has in view an extensive expansion of its business. It will conduct steam and freight cars and railway rolling stock generally, in addition to its present business in electric, as well as carriage work of all kinds, including ordnance and other wagons required for the army service. New works, covering several acres, will be built.

A branch establishment of the Campagnie des Metaux Unital will likely be located in Toronto. Two of the Jacques, of Paris, France, sons of the proprietor of the company, are at present in Toronto. They intend to exploit their product, a metal for the manufacture of mining drills and for tools of all kinds. The claim is made that by a patent process in connection with a special ore secured in Algeria, it is far superior to steel, wearing a great deal longer, and being much more easily handled by blacksmiths. It is so hard that it will cut glass like a diamond, yet will batter out without breaking. The durability of this product will be tested at the Cobalt mines. Should the factory locate in Toronto, employment will be provided for 2,000 or more men.

—

CRANE COMPANY'S ANNUAL GIFT.

The close of 1906 rounded another successful year for the Crane Company, Chicago, and, following a custom adopted in 1900, the company generously shared the fruits of their success with its employes. On a basis of 10 per cent. of the earnings of employes for the year, there was distributed as a Christmas present, in round numbers, $330,000. This was $25,000 more than the distribution of 1905, and makes a total of $1,500,000 thus distributed to date. Every employe, irrespective of his position or length of service, received 10 per cent. of his year's earnings in a lump sum, accompanied by a card bearing the good wishes of the company and a bit of wholesome advice as to the wisdom of preparing for the inevitable "rainy day." Six thousand employes were beneficiaries of the latest gift of the Crane Company.

—

STEAM ECONOMY IN ROLLING MILLS.

A Rateau exhaust steam accumulator and turbine has been installed at the Hallside Works of the Steel Company of Scotland to use the exhaust steam from one high pressure cogging machine with two cylinders, each 40 x 60 in., one finishing train engine with two cylinders, each 42 x 60 in., two small mill engines and four steam hammers, delivering a total of about 41,000 lb. of steam per hour. The power is used for lighting and to drive rolls, saws, sand blast apparatus and machine tools. The accumulator, which has two compartments, separates from the water any oil carried over, and maintains the water in energetic circulation. It has a diameter of 11 ft. 6 in. and a length of 34 in. The turbine is rated at 700 h.p. and has 11 sets of blades, with wheels 40 in. in diameter. It develops its full power at a speed of 1,500 revolutions per minute, and when working at an overload of 10 per cent. the inlet pressure is never over 12 lb. absolute. The vacuum is 28 in. The generator was designed to deliver 2,000 amperes, and has carbon brushes and a commutator provided with special ventilating ducts through the centre. The ventilation is set up by means of a fan blade attached to each bar. Tests of the unit have shown a consumption of 66.4 lb. of steam per kilowatt hour at one-tenth load, and with an absolute inlet pressure under 3 lb. per square inch. At 200 k.w. load and an absolute admission pressure of 5.35 lb., the consumption was 42 lb. per unit. A half load and an admission pressure of 8.25 lb. absolute, the steam used was 37 lb. per unit. With a load of 450 k.w. and an admission pressure of 11.4 lb. absolute, the figure was 36.6 lb. The vacuum fell during these tests from 28.7 in. to 27.9 in., as the load increased.

THE selection of flax seed is of first importance in the manufacture of pure linseed oil. Without the best seed the highest quality oil cannot be made. We buy the choicest No. 1 Manitoba seed, cleaned, and reclean it to make absolutely sure that no foreign substances remain. This choice flax seed and our exclusive "screw press process" of manufacture produces a much superior quality of *pure* linseed oil. We are now making linseed oils for our own uses and the trade, and shall be glad to give you prices and detailed information about

S-W. Strictly Pure Screw Press Raw Linseed Oil.
S-W. Strictly Pure Screw Press Kettle Boiled Linseed Oil.
S-W. Strictly Pure Screw Press Bleached or Refined Linseed Oil.

BUILDING AND INDUSTRIAL NEWS

HARDWARE AND METAL would be pleased to receive from any authoritative source building and industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

Universal Systems, Toronto, have decided to erect a plant in Montreal.

A new Baptist church will be built on Pape Avenue, Toronto, at a cost of $4,500.

A new hotel and depot will be built by the Grand Trunk Railway in Ottawa, to cost from a million to a million and a quarter dollars.

A company has been formed in Kingston for the manufacture of brick. It will be called the Perfect Brick and Tile Company, having a capital of $50,000.

The contract for the erection of the Peterborough armouries has been let. The successful tenderer is Geo. H. Proctor, Sarnia, and the figure of the contract signed is $125.190.

The Ottawa Car Company will extend their plant and branch out into the manufacture of steam railway rolling stock construction. The new shops will cover several acres of land.

Permits have been issued in Toronto for the erection of a grand stand and horticultural buildings at the Exhibition grounds. The former will cost $216,465 and the horticultural building $90,000.

The A. Workman and Company has been incorporated with a share capital of $60,000 for the purpose of manufacturing and dealing in hardware. The head office will be at Ottawa, the directors being T. Workman, A. Workman, and A. A. Whillians, of Ottawa.

M. McKenzie & Company have been incorporated with a capital of $75,000 for the purpose of manufacturing railway, marine and contractors' supplies. The head office will be at Montreal, the directors being, W. D. Hamilton, A. A. Lunan, A. Dunn, L. Lahaye and A. Lunan of Montreal.

The King Edward Hotel, Toronto, is to be enlarged this spring when a two-storey addition will be added. This will provide 200 more rooms, 100 on each flat. A lot of new machinery will be installed for lighting and other purposes, and for power to run a number of up-to-date labor-saving machines.

The Dominion Smelters, Limited, has been incorporated with a share capital of $1,000,000 for the purpose of carrying on business as miners and refiners. The head office will be in Sault Ste. Marie, Ont., the provisional directors being H. H. Muggley, W. S. Peters and T. J. MacCune, of Oshkosh, Wisconsin.

The Manitoba and Saskatchewan Coal Company has been incorporated with a capital stock of $1,000,000. for the purpose of carrying on a mining business, also to manufacture brick, tile, pipe, pottery, earthenware, etc. The head office will be at Winnipeg, the directors being W. W. McMillan, E. Thomson, A. S. Swinford and J. C. Thomson, of Winnipeg, Man.

The Manitoba Linseed Oil Mills has been incorporated with a capital of $200,000 and the company has a site in Winnipeg. They will commence building operations in the Spring and intend erecting a thoroughly well equipped and up-to-date plant for the manufacture of raw and boiled linseed oil and refined varnish oils. It is intended to have the plant in operation to handle the crop of 1907.

The Theodore Lefebvre and Company has been incorporated with a capital stock of $80,000. for the purpose of manufacturing all kinds of paints, oils, chemicals and drugs. The head office will be at Montreal, the directors being C. A. M. Lefebvre, L. M. T. Lefebvre, R. B. Lefebvre, and L. S. Lefebvre, of Montreal.

The Foreign Rail Joint Company has been incorporated with a share capital of $50,000 for the purpose of manufacturing rails, rail joints, angle bars, and all kinds of railway supplies and railway contractors' supplies. The head office will be at Toronto, the provisional directors being J. S. Lovell, W. Bain, R. Gowans, and E. W. McNeill.

The Georgian Bay Oil Company has been incorporated with a share capital of $1,000,000 for the purpose of carrying on business as gas producers and petroleum oil refiners. The head office will be in Fort Erie, the provisional directors being S. Johnston, F. B. Johnston, F. R. MacKelcan, A. J. Thomson, and R. H. Parmenter, of Toronto.

The Canada Arms and Rifle Sights Company has been incorporated with a share capital of $200,000 for the purpose of manufacturing guns, rifles, and other small arms; also to acquire the business of the Mitchell Rifle Sight Company. The head office will be at Toronto, the provisional directors being H. Dixon, T. Cocking, and R. Staite, of Toronto.

Building this coming spring will be much more expensive than was the case last season. The reason for this is mainly owing to an advance in the prices of woodwork materials, which have rapidly increased in every branch, lumber having advanced from $2 to $3 on each 1,000 feet. Laths and shingles are also away in advance of former prices.

The Sanderson-Harold Company, of Paris, manufacturers of refrigerators, screen doors, etc., contemplate building a large addition to their factory, making it double the capacity of the present one. The move is compulsory in order to keep pace with the growth of business. 70 hands are now employed and the factory has been running day and night for months.

The Brockville Cement Pressed Brick and Concrete Company has been incorporated with a share capital of $10,000, to manufacture cement bricks, cement blocks, cement tile, and all building ma-

terial made from cement. The head office will be at Brockville, the provisional directors being B. Dillon, A. T. Wilgress, R. N. Horton, J. C. Yanwood, and H. A. Stewart, of Brockville.

"Warden King, Limited," has been incorporated with a capital stock of $1,000,000 for the purpose of manufacturing all kinds of heating apparatus, soil pipes, steam fittings, builders', plumbers', and steamfitters' supplies. The head office will be in Montreal, the directors being J. C. King, L. A. Payette, R. C. McMichael, of Montreal, and W. Grieg and F. G. Bush, of Westmount, Que.

The Canadian Rand Company has been incorporated with a capital stock of $500,000, for the purpose of taking over the Canadian Rand Drill Company and continue in the manufacture of air compressors, rock drills, pumps, pneumatic tools, etc. The head office will be at Sherbrooke, Que., the directors being, G. Doubleday, New York; E. Webber, of Montreal; S. W. Jenckes, W. Fanwell and H. D. Lawrence, of Sherbrooke, Que.

The Starke-Seybold Company, Montreal, has been incorporated with a capital stock of $400,000, having amalgamated the Starke Hardware Company, composed of W. Starke, G. R. Starke, and R. Starke, and the Seybold and Sons Company, composed of J. P. Seybold, G. C. Seybold and H. B. Seybold, to carry on business as importers, manufacturers and dealers in hardware, metals, paints, oils, etc.

Ham and Nott, manufacturers of refrigerators and screen doors, Brantford, will likely build another plant, double the size of present one. Owing to being unable to make satisfactory arrangements with Ottawa it is probable they will not go there. The company at present employ 125 hands and are working day and night. In the event of the management maintaining their head plant at Brantford, the number of employees will be doubled.

It is said that the cement works at Longue Point, near Montreal, operated by James Morgan, have been sold to the Fordwick Co., of Virginia, which has decided to establish a second plant in the vicinity of Montreal, costing in the neighborhood of $2,000,000 with a capacity of 6,000 barrels per day. The Fordwick Co. will also build large docks to store coal from Sydney. The engineering firm of W. S. Barstow & Co., of New York, are preparing the plans and specifications, and have given the building contract to the Canadian White Co., of Montreal. The new plant will employ from 1,000 to 2,000 men.

A meeting of the Starr Manufacturing Company, of Dartmouth, was held last Thursday in Halifax, N.S., when several important changes were contemplated and decided on. The capital stock was increased to $1,000,000 and it was also decided to amalgamate the Dartmouth Rolling Mills Company with the Starr Manufacturing Company. The works of the combined companies will be enlarged. The skate business of the Starr factory has been gratifying during the past year and the orders already booked for the year 1907 from the western provinces are largely in excess of any preceding year in the history of the company.

The commerce through the Canadian and American canals at Sault Ste. Marie in the navigation season of 1906 aggregated 51,751,080 net tons, an increase of approximately 7,500,000 tons over the preceding season, and of nearly 20,000,000 over that of 1904. The United States canal cared for 45,180,292 tons, and the canal in Canadian territory for 6,570,788, while of the entire movement, 41,584,905 tons moved in an easterly and 10,166,175 in a westerly direction. The principal items in the former movement were 138,607,764 bushels of grain, 6,484,754 barrels of flour, and 35,357,042 net tons of iron ore, while of the latter, 8,739,630 net net tons of coal and 984,265 net tons of general merchandise composed the bulk of the tonnage. As comnared with like like shipments in 1905, grain gained over 30,000,000 bushels, flour more than 700,000 barrels, iron ore approximately 4,000,000 tons, and coal over 2,000,000 tons.

The recent declaration of an extra dividend of 1 per cent. by the directors of the International Silver Co., of Niagara Falls, N.Y., on the preferred stock, is considered by many financial interests as equivalent to placing the stock on a 5 per cent. dividend basis, as it is believed that the corporation will continue to pay such an extra dividend of 1 per cent. every year in addition to its regular 4 per cent. per annum, payable quarterly. The last quarterly dividend of 1 per cent. was paid on Jan. 1, and the next is due on April 1. The extra dividend of 1 per cent. will be paid on March 1. There is now outstanding $6,607,500 of preferred stock, upon which the directors of the company eventually intend to pay 7 per cent. yearly. On Jan. 1, 1903, the company issued scrip for 21¼ per cent. unpaid dividends on the preferred stock, and it is now estimated that the corporation is in arrears to the extent of 36¼ per cent. on unpaid preferred dividends.

READY FOR BUSINESS.

The new silverware factory at Niagara Falls of the McGlashan, Clark Co., is now in full running order. It consists of a two-storey solid concrete building, floors and all, inside dimensions, 300x70. It is situated on Palmer avenue and extends to the main line of the Michigan Central Railway.

This factory has been fitted out with all the latest machinery and new devices for producing the latest designs in cutlery, electro-plate, and solid nickel-silver flatware, and no expense has been spared in completing this modern factory.

Lee McGlashan, the manager, who has had many years' experience in the silverware business, is a son of the late Leonard McGlashan, well-known to the trade throughout Canada in connection with this line of business. A number of skilled workmen, who were trained by him, have assumed charge of the different departments in connection with the new factory. An invitation is extended to the trade to visit this factory when at the Falls.

CATALOGUES AND BOOKLETS

When sending catalogues for review, manufacturers would confer a favor by pointing out the new articles that they contain. It would assist the editor in writing the review.

By mentioning HARDWARE and METAL to show that the writer is in the trade, a copy of these catalogues or other printed matter will be sent by the firms whose addresses are given.

Paterson Roofing Calendar.

The Paterson Company, manufacturers of felt paper, tarred felt, wire edge ready roofing, etc., of Toronto and Montreal have issued a beautiful calendar for 1907 practically devoid of advertising, but drawing attention to the different lines of goods manufactured by them.

Electric Conveniences.

Electric heating is the title of the book which the Canadian General Electric Company, Toronto, are sending to the trade. This book contains cuts of many useful articles which are used for traveling and can be attached to electric lights. In the many articles illustrated some will be found very useful for the hardware stock. Mention this paper when writing.

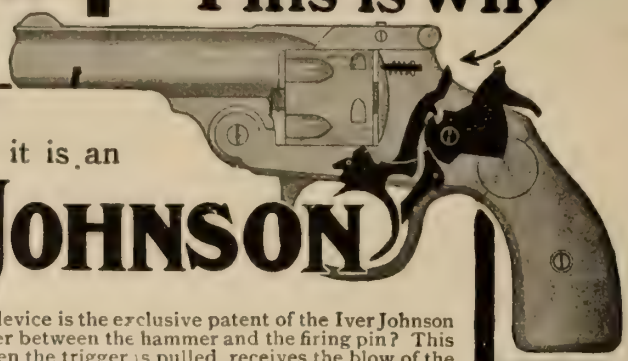
Carriage Trimmings.

H. D. Smith & Company, of Plantsville, Conn., will send to the trade their etxtensive catalogue, fully illustrated with carriage trimmings manufactured by them. They also make the perfect handle screwdriver, double screwdriver bits and lineman's climbers, all good lines for hardware merchants.

Sprayers.

The Barnes Manufacturing Company, of Mansfield, Ohio, have issued their spray pump catalogue illustrating their many different lines of pumps for various uses. A few handy formulas are quoted in the back of the book for the making of different solutions, for spraying trees, potato plants, etc., also a very handy calendar telling when to use different solutions, and for what purpose intended. This catalogue will be found very instructive by the hardware merchants.

Electric Fixtures.



R. E. T. Pringle & Company, Montreal and Toronto, are sending several pamphlets, containing cuts and descriptions af new electrical lines manufactured by them. Greenwood's Safety Guard, for electric lamps, is constructed of bars of flat steel, making it very rigid and strong. A very strong feature of this guard is the arrangement of inner guard wires, with coil springs at the top, which, when the bulb is enclosed in the guard, keep the bulb in a central position, greatly reducing the possibility of breaking. Copies can be secured on application by mentioning this paper.

1866-1906.

Forty Years' Record is the title of the book issued by A. C. Leslie & Co., Montreal, giving a very interesting account of the life of the late Alex. C. Leslie, founder of the firm. Likenesses of the present members, and sales staff of the firm, and views of their enlarged premises, which they have been continually adding to., are also given. Copies will be sent to all dealers in metals who write, mentioning Hardware and Metal.

Accidental Discharge Impossible—

This is why

True only if it is an

IVER JOHNSON

The positive safety device is the exclusive patent of the Iver Johnson Revolver. See the lever between the hammer and the firing pin? This lever is raised only when the trigger is pulled, receives the blow of the hammer and transmits it to the firing pin. **That's why** you can throw a loaded Iver Johnson against a stone wall without fear—no discharge can possibly follow, as the hammer **never** touches the firing pin. An Iver Johnson never fails when you **pull the trigger** and never "goes off" when you don't.

Iver Johnson Safety Automatic

Prices—Hammer $6.50, Hammerless $7.50.

Iver Johnsons are sold by dealers the world over, or direct from us if your dealer won't supply

Please send for descriptive catalogue, free upon request. It tells all about it.

IVER JOHNSON'S ARMS AND CYCLE WORKS, FITCHBURG, MASS.

Refrigerator Catalogue.

We have received from C. P. Fabien, 3167-3169 Notre Dame St., Montreal, a very handsome little catalogue, about 6 x 9 inches in size. This book is printed on very fine glazed paper, and the handsome half tone cuts show a complete line of refrigerators, from the small article used in every house, to the largest hotel refrigerator. The catalogue also gives the sizes, ice capacity, shipping weights and prices of the different lines. Mr. Fabien will be pleased to forward one of his booklets to any person who will mention Hardware and Metal when writing.

Fine Gas Range Catalogue.

The McClary Manufacturing Company of London have just issued their first complete catalogue of gas ranges, having decided to go into the gas range business extensively. The general get-up of the book is striking, the cover being particularly attractive, "Caloric Gas Ranges, Catalogue 68," standing out clearly in white letters on a green background. The gas stove business is steadily increasing in importance, and if gas is available in the district, no dealer should neglect this branch of the trade. In the cities, gas is steadily pushing coal into the background as a fuel for cooking both in summer and winter, although as yet it is not an important factor in heating.

The catalogue comprises 32 pages and cover, innumerable illustrations being given showing the construction of the "Caloric," the many styles in which it is made, as well as a fairly complete line of utensils specially serviceable for use on gas stoves. List prices are also quoted.

Regular customers have been supplied with the book, but its utility is such as to warrant everyone in the trade who handles heating or lighting goods to send for a copy. Use the firm's letterhead and mention this paper when writing.

WORLD-WIDE TRADE.

A very interesting advertisement appeared in the special merchant shippers' edition of "The Ironmonger" of Jan. 19th. This was a double page display illustrating this company saying, "The sun never sets on Lysaght's galvanized iron." It showed twenty steamers on which shipments has recently been made from English ports to merchants in Asia, Africa, Australia, North and South America, and many islands of the seas. The idea of having an illustration of a steamer in each case making two lines of ten each, made a most striking way of showing what a firm hold on the world's trade Britain has in this line.

CONDENSED OR "WANT" ADVERTISEMENTS.

SITUATIONS VACANT.

MONTREAL *TORONTO* *WINNIPEG*

Paint, Oil and Brush Trades

BLANCHITE SELLING AGENTS.

The Blanchite Process Paint Company, which, for a young concern, has started business in Canada with a vigor which presages success, has arranged as follows for the placing of their paints and enamels with the retail trade:

Central Ontario will be handled by H. Lyn Hudson; Western Ontario will be handled by G. W. Pinkerton; Eastern Ontario, including Ottawa, will be handled by the General Supply Company of Canada, who will have representatives in the city of Ottawa and two travelers on the road; the city of Montreal will be handled by Kenelm M. Trigge, of the General Supply Company of Canada; the city of Winnipeg and the Province of Manitoba will be handled by H. W. Glassco, who has been for years connected with the firms of J. H. Ashdown & Company, and Geo. D. Wood & Company.

Rice Lewis & Son, Toronto, are now handling Blanchite paints exclusively, and their traveling representatives will also sell the paints throughout Ontario.

NEW WINNIPEG COMPANY.

The Manitoba Linseed Oil Mills has been incorporated with a capital of $200,000, and have purchased a site in Winnipeg. They will commence building operations in the early spring, and intend erecting a thoroughly well equipped and up to date plant for the manufacture of raw and boiled linseed oil and refined varnish oils. It is intended to have the plant in operation to handle the crop of 1907.

MONTREAL FIRM ENLARGES.

The Canadian Economic Lubricant Company, of Montreal, manufacturers of oils and grease, have recently enlarged their premises by taking up the entire block on Wellington street, their numbers now being from 23 to 29. W. B. Converse, formerly of the Consumers' Cordage Company, and now managing director of the Colonial Cordage Company, Toronto, is largely interested in the lubricant company.

USES FOR TURPENTINE.

There are few housekeepers that are not familiar with some of the numerous uses of turpentine, says the Drug Review, and as its odor is clean and wholesome it has the advantage of many remedies whose odors are offensive.

Turpentine and soap will remove ink stains from linen.

A few drops added to water in which clothes are boiled will whiten them.

It will exterminate roaches if sprinkled about.

Moths will leave if it is sprinkled about.

from furniture cause by water.

Turpentine will remove wheel grease, pitch and tar stains.

Clean gilt frames with a sponge moistened in turpentine.

Ivory knife handles that have become yellow can be restored to their former whiteness by rubbing with turpentine.

Carpets can be cleaned and colors restored by going over occasionally with a broom dipped in warm water to which a little turpentine is added.

An equal mixture of turpentine and linseed oil will remove white marks

AN OILY CUSTOMER.

"Please, sir," piped the tiny customer, whose head scarcely reached the counter, "father wants some oak varnish."

"How much does your father want, my little man?" asked the shopman.

"Father says, will you fill this?" said the little fellow, handing him over a half-gallon can.

It was duly filled and handed over.

"Father will pay you on Saturday," said the recipient, casually. And then the face of the shopman grew dark.

"We don't give credit here," he said. "Gimme back the can."

Meekly the little lad handed back the can, which was emptied, and handed back to him with a scowl.

"Thank you, sir," he said. "Father said you'd be sure to leave enough in the can, round the sides, for him to finish the job he wants to do, and I think you 'ave, sir."

ARGENTINA'S SEED SUPPLY.

Argentina, as a source for the supply of linseed, has not lately been doing well. The coming yield is put at 50,000 tons less than the quantity forecasted by the Government Agricultural Department. The exports up to now—about 350,000 tons—are 150,000 tons less than the quantity for the same period last year. Touching the next harvest, prospects happily were better, as the drought, which had lasted in the linseed areas almost six months, had come to an end with a copious rainfall.

Wm. O. Greenway, representing a number of British color and other manufactures, has opened an office at 13 St. John St., Montreal. Mr. Greenway is up-to-date, and a hustler, and although he has only been established here for a couple of weeks, he has already called on most of the important men in the trade.

You Know

a second sale depends largely on the satisfaction your customer obtains from the first.

MAKE SURE of the SECOND which means the 3rd, 4th, 5th, and so on by selling your new customers ELASTILITE.

It is that old reliable varnish, equally good for outside or inside, that never fails to please.

In tins only, ½ pts. to 1-gallon.

See trade Catalogue page 3.

BRANDRAM BROS & CO
BRANDRAM'S B. B. WHITE LEAD
MANUFACTURERS LONDON ENGLAND

An Important Announcement regarding "Anchor" and "English" Liquid House Paints.

FOR some time we have been supplying the trade with Paints put up under both brands, but for various reasons we find it advisable to sell hereafter only **"ENGLISH" LIQUID HOUSE PAINTS.** The two brands were identical in quality, the only White Lead used in their manufacture being Brandram's B. B. Genuine White Lead, the world's standard for close on to two centuries. So when we sell you **"ENGLISH" LIQUID HOUSE PAINTS** in place of "ANCHOR," you will know that you are getting the same Paints as you ordered under "ANCHOR," and we would ask you to get into the way of specifying **"ENGLISH"** in your orders in place of "ANCHOR." We would also ask you to tell your cnstomers that **"ANCHOR"** Liquid House Paints are now called **"ENGLISH,"** and so assist us to familiarize consumers with the name **"ENGLISH"** as the name of the leading brand of **LIQUID HOUSE PAINTS.**

We maintain the **"ANCHOR"** trade mark on all our other Specialties.

PAINT AND OIL MARKETS

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, February 15, 1907

Not a change to report this week in paints or oils. All prices are reported very firm. Owing to the extremely severe weather experienced here at present, orders have fallen off slightly, but this is only thought to be a temporary lull, and from present indications, the spring will bring at least a good business in all lines.

Linseed oil and turpentine remain very firm, and a good flow of orders are coming in for Paris green.

LINSEED OIL—Very firm. We still quote: Raw, 1 to 4 barrels, 55c; 5 to 9 barrels, 54c.; boiled, 1 to 4 barrels, 58c.; 5 to 9 barrels, 57c.

TURPENTINE — Prices remain at: Single barrel, 98c. per gal.; for smaller quantities than barrels, 5c. extra per gal. is charged. Standard gallon is 8.40 lbs., f.o.b. point of shipment, net 30 days.

GROUND WHITE LEAD — We still quote: Best brands, Government standard, $7.25 to $7.50; No. 1, $6.90 to $7.15; No. 2, $6.55 to $6.90; No. 3, $6.30 to $6.55, all f.o.b., Montreal.

DRY WHITE ZINC—Still firm. We quote; V.M., Red Seal, 7½c. to 8c.; Red Seal, 7c. to 8c.; French V.M., 6c. to 7c.; Lehigh, 5c. to 6c.

White ZINC—Our quotations are: Pure, 8½c. to 9½c.; No. 1, 7c. to 8c.; No. 2, 5¾c. to 6¾c.

PUTTY—Our prices are: Pure linseed oil, $1.75 to $1.85; bulk in barrels, $1.50; in 25-lb. irons, $1.80; in tins, $1.90; bladder putty in barrels, $1.75.

ORANGE MINERAL—The following prices still hold: Casks, 8c.; 100-lb. kegs, 8½c.

RED LEAD—The following quotations are firm: Genuine red lead, in casks, $6; in 100-lb. kegs, $6.25; in less quantities at the rate of $7 per 100 lbs.; No. 1 red lead, casks, $5.75; kegs, $6, and smaller quantities, $6.75.

PARIS GREEN — We continue to quote: In barrels, about 600 lbs., 23¼c. per lb.; in arsenic kegs, 250 lbs., 23½c.; in 50-lb. drums, 24c.; in 25-lb. drums, 24½c.; in 1-lb packets, 100 lbs. in case, 27c.; in 14lb. packets, 50 lbs. in case, 27c.; in ½-lb. packets, 100 lbs. in case, 27c.; in 1-lb. tins, 26c. f.o.b. Montreal. Terms, three months net or 2 per cent. 30 days.

SHELLAC—Prices remain; Bleached, in bars or ground, 46c. per lb., f.o.b Eastern Canadian points; bone dry, 57c. per lb., f.o.b. Eastern Canadian points; T.N. orange, etc., 48c. per lb. f.o.b. New York.

SHELLAC VARNISH—Very firm. We still quote: Pure white, $2.90 to $2.95; pure orange, $2.70 to $2.75; No. 1 orange, $2.50 to $2.55.

MIXED PAINTS — No change in prices. We still quote; $1.20 to $1.50 per gallon.

PETROLEUM — (In barrels) — Our prices are: American prime white coal, 15½c. per gallon., American water, 17c. per gallon; Pratt's Astral, 19½c. per gallon.

WINDOW GLASS—Prices remain firm. We still quote: First break, 50 feet, $1.85; second break, 50 feet, $1.95; first break, 100 feet, $3.20; second break, 100 feet, $3.40; third break, 100 feet, $3.95; fourth break, 100 feet, $4.15; fifth break, 100 feet, $4.40; sixth break, 100 feet, $4.95. Diamond Star: First break, 50 feet, $2.30; second break, 50 feet, $2.50; first break, 100 feet, $4.40; second break, $4.80; third break, 100 feet, $5.75; fourth break, 100 feet, $6.50; fifth break, 100 feet, $7.50; sixth break, 100 feet, $7.50; seventh break, 100 feet, $8; eight break, 100 feet, $9. Double Diamond: First break, 50 feet, $3.45; second break, 50 feet, $3.75; first break, 100 feet, $6.75; second break, 100 feet, $7.25; third break, 100 feet, $8.75; fourth break, 100 feet, $10; fifth break, 100 feet, $11.50; sixth break, 100 feet, $12.50; seventh break, 100 feet, $14; eighth break, 100 feet, $16.50; ninth break, 100 feet, $18; tenth break, 100 feet, $20; eleventh break, 100 feet, $24; twelfth break, 100 feet, $28.50. Discount on Diamond Star, 20 per cent.; on Double Diamond, 40 per cent.

TORONTO.

Office of HARDWARE AND METAL
10 Front Street East,
Toronto, Feb. 15, 1907.

Orders continue very brisk with spring business starting to move, turpentine and linseed oil selling very briskly.

Owing to the five per cent. duty being removed from turpentine, it is now being quoted at a lower price. The Savannah prices are higher, however, and the forest fires which have been raging in the turpentine district for the last few weeks and have destroyed many thousand trees boxed for turpentine, will prevent any decrease in price. Barrel quantities are now quoted at 99 cents per gallon, and small lots at $1.04 per gallon.

Linseed Oil has been advanced 2c. per gal. in England, and an advance of 1c. has been made here. The high price of flax seed in all countries is the general cause of the advance.

No change is made on white lead, which remains at former quotations.

Paris Green has experienced a further advance of 1c. per lb., this being the second advance which has been made this year. It is expected it will continue to advance with every further order of any quantity which the manufacturer receives, as practically all the output is ordered in advance. The base price is now 27¼.

WHITE LEAD—Ex Toronto pure white, $7.40; No. 1, $6.65; No. 2, $6.25; No. 3, $5.90; No. 4, $5.65 in pack-

RAMSAY'S PAINTS

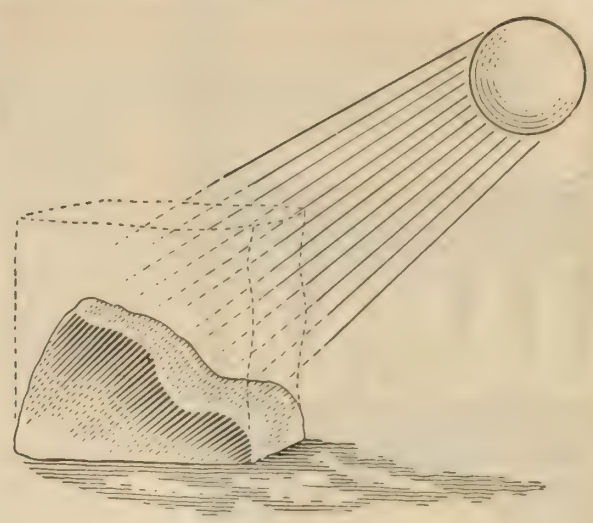
Keep the grade well up. You can easily build up a paint trade, but unless you have quality behind it, the trade will tumble down again. With Ramsay's Paints you get quality—the best quality, studied out, well conceived. High grade paints bring you business that stays with you. Then your profits are sure, and trade satisfactory. Ramsay's Paints are made for high grade dealers, the price is made for the same kind, but it is kept as low as it is possible to keep it to bring the proper results to dealers who have ideas in keeping with quality.

Let us tell you what we can do for you

A. RAMSAY & SON COMPANY

Est. 1842 MONTREAL PAINT MAKERS

Just try some ordinary green paint on a panel of wood, see how hard it works,—don't cover, lacks body. Then try on another panel



LUCAS IMPERIAL FRENCH GREEN

notice how easy it spreads, how well it covers,—that's body. Makes the cost less for this reason alone, and stays fresh and brilliant. It preserves the wood, keeps the weather out and the color in. It is the **ONE** Green that is free from arsenic or verdigris.

FINE
GOLD SIZE

JAPAN

Care should be taken to mix this Japan a little at a time when used with Paint. It is of amber color. Stir slowly and thoroughly so that the Japan will become well incorporated with the color. A fair proportion is about one in ten, that is to say one part Japan to ten of Paint, but the painter must largely be guided by his own judgment. This will be found a very satisfactory Dryer.

The contents of package, when not in use, must be carefully corked or sealed, to prevent evaporation. Keep from excessive cold or heat. Do not expose to the sun's rays in window. Brushes should be clean and soft and the paint applied with an even light coat.

THE
CANADA
PAINT CO.
LIMITED
MANUFACTURERS
MONTREAL-TORONTO
WINNIPEG

ages of 25 pounds and upwards; ½c. per pound extra will be charged for 12½ pound packages; genuine dry white lead in casks, $7.

RED LEAD.—Genuine in casks of 500 lbs., $6; ditto, in kegs of 100 lbs., $6.50; No. 1 in casks of 500 lbs., $5.75; ditto, in kegs of 100 lbs., $6.25.

DRY WHITE ZINC.—In casks, 7½c.; in 100 lbs., 8c.; No. 1, in casks 6½c. in 100 lbs., 7c. Ground in oil—In 25 lb. irons, 8c.; in 12½ lbs., 8½c.

SHELLAC VARNISH.—Pure orange in barrels, $2.70; white, $2.82½ per barrel; No. 1 (orange) $2.50; gum shellac, bone dry, 63c. Toronto. T. N. (orange) 51c. net Toronto.

LINSEED OIL.—Starting to move very freely, and quoted at a 1c. advance over last week's price, and now quote: Raw, 1 to 3 barrels, 59c.; 4 to 7 barrels, 58; 8 and over, 57c.; add 3c. to this price for boiled oil, f.o.b. Toronto, Hamilton, London and Guelph, net 30 days.

TURPENTINE.—Owing to the 5 per cent. duty being removed from turps., we now quote: Single barrels at 99c. per gal., f.o.b., point of shipment, net 30 days; less than barrels, $1.04 per gallon.

PARIS GREEN.—Another advance of 1c. per lb. is now quoted, and the demand still continues very brisk. The last advance is caused largely owing to the jobbers having to replete their stock and the general high price of raw materials from which it is manufactured. We now quote base price on both English and Canadian, 27¼c. per lb.

PETROLEUM.—For refined we still quote: Canadian prime white, 14c.; water white, 16c.; American water white, 16c. to 18c. ex. warehouse. On crude the prices are: Canadian, $1.32; Pennsylvania, $1.58; Ohio, 96c.

For additional quotations, and revised list on Paris Green, see current prices at back of paper.

BOILED LINSEED OIL.

There is a general distrust of boiled oil. It is seen in the directions for the use of mixed paints, which say: "Thin only with raw linseed oil," or "Use no boiled oil." The reason, of course, is that much of the modern so-called "boiled oil" is not boiled at all, but has been treated with chemicals or litharge. Many decorators scarcely use it at all, pinning their faith to a pure raw oil, and the addition, when necessary, of driers to the paint mixed therewith.

It may be asked whether the decline of the use of boiled oil amongst decorators is not connected with the question of quality, says the Oil and Color Trades Journal. Many articles in the paint trade vary a good deal in quality, partly by the very nature of the article, though more often by sophistication; but the point is whether or not the quality of boiled oil varies more than is absolutely necessary. Of course, we are putting aside the adulterated boiled oils and the innumerable substitutes for the moment, and merely considering whether honest, straightforward manufacturers of the article need vary so much in the quality of the oil they turn out. It is a matter of very considerable importance, for in all probability a uniform fine quality in boiled oil would lead to an increased use, which would far more than repay the trouble taken to ensure a standard of high excellence.

The enormous practical difference to a painter between a badly boiled oil and a well boiled oil is, perhaps, only recognized by those engaged in the decorator's business; but manufacturers may rest assured that it is very great indeed. As all the paint world knows, there is little satisfaction in supplying raw linseed oil, for the business has been so cut that no living profit can be obtained from it; but in boiled oil there is usually a margin of profit for the manufacturer, and a substantial increase in the trade is worth some trouble to obtain. The number of drying ingredients used in the different makes of boiled oil is very considerable, and no authority has yet arisen to tell us which is the absolute best. It is not in the nature of things that they should all be alike the best, and there is no doubt that some oils are inferior by reason of the character of the driers used. Boiled oils were certainly better and more reliable in quality in the older days, when litharge was the recognized drier incorporated with the oil; but this fact does not, of course, prove that litharge is now the best drier, because at that time fire-boiled oils were the usual thing, whereas now the steam boiled is more frequently made.

It may be that the transition from fire-boiling has damaged the quality of the oil, or at any rate made it subject to variations; but probably the more specific cause for variation in the quality of boiled oil is difference in the practice of manufacturers with regard to the age or maturity of the linseed oil used for boiling purposes. Any carelessness in this respect is sure to result in an inferior article. A fine boiled oil is almost equal to a varnish in its effect upon the paint, whereas some oils that we have seen are merely brown liquids having a diluent effect—and that only—upon the stiff paints with which they are mixed.

The question arises whether it would be possible to establish some standard of quality in boiled oils upon which the user might rely; say that the drier should be fixed and openly stated, the raw oil used to be of a certain definite maturity, and the temperature and time of boiling to be guaranteed, says our contemporary. There would remain only the question of packing, and this is not unimportant, for we have known the finest boiled oil practically ruined by careless packing in damp casks. The packing of any boiled oil in casks or barrels is indeed of questionable wisdom, although it is so prevalent in the trade. Probably the adoption of the system of packing in drums would in the end soon pay for itself, for the convenience of handling would be greatly increased, and in many cases the retailer who sells to the painter, could then sell his oil without breaking bulk. Thousands of working painters could buy a five or ten-gallon drum of boiled oil who cannot in any case take a barrel of forty-two gallons. In India oil is always sold in these small drums, and if the Indian painter can afford the expense it seems reasonable to believe that the British painter could do the same. The boiled oil business certainly needs some reform if it is not to decline still further, and eventually to become quite worthless to the manufacturer.

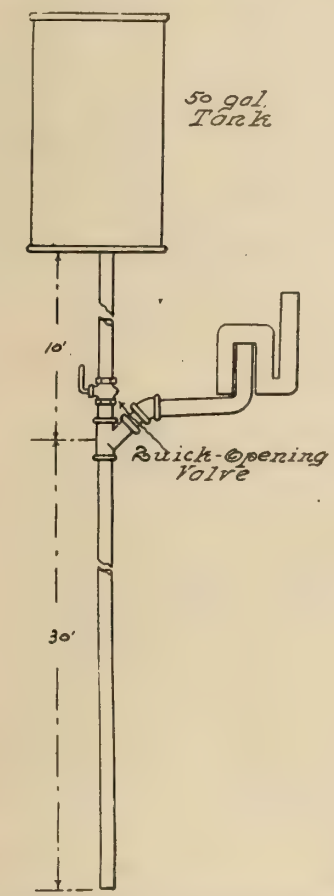
Plumbing and Steamfitting

RE-SEALING AND ANTI-SYPHON TRAPS VERSUS BACK VENTING *

As the American Society of Inspectors of Plumbing and Sanitary Engineers is organized primarily to bring about uniform laws governing the installation and maintenance of plumbing and house drainage, and methods of their enforcement, the question of re-sealing and anti-syphon traps should be studied by them in their relation to their legitimate permissible or compulsory use in a code of building sanitation.



First of all, it should be borne in mind that a code of building sanitation to stand the test of its legality in the courts, must be drawn so as to require only the minimum of safety ; otherwise it is likely to be declared illegal, should any one be disposed to attack it. It should be possible to give a valid and consistent reason for every requirement contained therein. The requirement that every fixture directly connected with the drainage system should be trapped, and a safe method of maintaining the trap seal against syphonage, and evaporation, for a reasonable length of time is unquestioned. But there is a decided difference of opinion as to which method of maintaining the trap seal is the most reliable—back venting or re-sealing and anti-syphonic trap construction—and also a difference of opinion as to the volume of water necessary to guard against complete evaporation of the trap seal, during the average length of absence in the summer months.

I propose to demonstrate that venting of fixture traps is not absolutely reliable, as to its first installation, and that after it has been used for a period of a few years it is absolutely unreliable ; also to demonstrate that the vertical soil and waste pipe stack with the lateral branches extending not to exceed ten feet with waste pipe undiminished in size, so as to admit of the greatest self-cleaning action, with the use of re-sealing and anti-syphon traps, is a safer method of construction than plain traps back vented.

Back Venting Insufficient.

First, back venting, though the greatest care may be taken to make the connection to the waste pipe in the most approved manner, viz.: taken off at an angle of 45 degrees beyond the crown of the trap, in its installation, it is liable to be rendered non-efficient from the following causes : Where galvanized iron pipe is used the galvanizing may form a film which would completely stop the pipe. In the use of lead or cast iron, the molten metal may enter the pipe through the joint when it is being made, and partially or completely fill it. Oakum placed in the pipe to prevent building material from falling into it may be forgotten and allowed to remain, thus completely stopping the pipe, and if the ends of the vents are not protected during construction, building material may fall into them, and lodging in the elbows completely stop them. All this presupposes carelessness on the part of the plumber, but constitute a factor which cannot be ignored, as it often exists.

After the vent pipes have been installed, there are conditions over which the plumber has no control that operate to render the vent pipe non-efficient, viz.: the freezing of the roof outlets in protracted cold weather, the building of nests by the birds, and the falling of leaves into the roof outlets. The greasy vapor from the discharge of kitchen

50 Gallon Tank Placed 10 feet Above Trap Connection

sink waste rising in the vent pipe, and the discharge of greasy sink waste where the waste pipe is partially or entirely clogged rising in the vent pipe to the height of the water in the sink leaves a deposit of grease on the cold vent pipe, gradually stops it up entirely.

There is also the proposition of the average plumber clearing the sink waste pipe by means of an opening into the waste pipe and leaving the vent untouched, or of trying to force the obstruction from the waste pipe and forcing what might be in the vent pipe up against an elbow beyond the point of accessibility, or of using a blind washer on the back vent union and forgetting to take it out. Then there is the added danger of pro ng through which no water passes to indicate a leak should one exist, and those of us who have made smoke tests of buildings that have been in use for a few years know to what an alarming extent this danger exists; and it is the part of wisdom to reduce it to a minimum.

As the fixture outlet is an open end plus the trap seal, and the back vent pipe cannot be relied upon, it naturally follows that to be on the safe side every trap ought to be a re sealing trap, if placed where the discharge of fixtures above it does not exceed more than two-thirds of the area of stack into which it discharges, and the vertical discharge is only of sufficient length to permit of a re-seal to a standard depth and volume ; or, an anti-syphon tray where the discharge of fixtures above it exceeds more than two-thirds of the area of the stack.

Standard Trap Construction.

It has been very gratifying to me in discussing this proposition with intelligent, up-to-date plumbers throughout the country, to find so many who believe that properly constructed and tested re-sealing and anti-syphon traps at a limit of ten feet from the stack, without back vent, is a much better construction than other traps back vented. This leads us up to the proposition of the standard of trap construction which is applicable to all forms of traps, viz.: They must be free from secret partitions through which, in case of defect, the trap seal could leak into the waste pipe unobserved, or sewer air leak into the room above the trap seal ; they must be self-cleaning—that means free from deflectors or pockets that would retard the natural flow of the waste water. It is conceded by those who have given the matter careful study, that a trap that would be satisfactory under a wash bowl, bath tub, wash trays, urinals, etc., would not be satis factory for self-cleaning action under a kitchen sink discharging greasy waste water, so that when the trap placed under a kitchen sink is other than an approved grease trap, or a plain trap, it should be equal in self-cleaning action to the plain trap. This can be accomplished by using only a drum trap with a tangential inlet. It is apparent that there should be a fixed standard of diameters and inlets for drum traps, and the following is in my judgment a satisfactory one :

Every inlet to a drum trap shall be either through the bottom, or on the side on a line with the bottom, so as to prevent any sediment pocket, and shall be either tangetial or bell-shaped. The diameter of a drum trap provided with a bottom or side inlet shall not be greater than twice the diameter of the inlet. The clearance between the outer shell of a drum trap and the stand pipe forming a centre outlet through the bottom of the drum, shall not exceed the diameter of the inlet.

The next question is the standard for a depth of seal, or equivalent in vol-

* A paper read by H. J. Luff, Sanitary Engineer, Cleveland, at the second annual meeting of the American Society of Inspectors of Plumbing and San tary Engineers.

ume, and in connection with this proposition it is necessary to take into consideration the fact that many people leave their homes in the summer time for from one to three months, with no thought of the effect of evaporation on the seals of the traps under their plumbing fixtures. In the winter time, if they leave home, they usually remember the effect of freezing and take the necessary precaution. I have found that a safe estimate of evaporation is one inch per month, so that it is advisable that a positive re-seal equal to the three inch seal in a plain trap be the standard, and the depth of such re-seal should never be less than one inch.

Another feature in trap construction on which a standard should be adopted is the minimum amount of superficial surface. It is a well known fact that a re-sealing and anti-syphon trap must have considerably more superficial surface than a plain trap back vented to prevent syphonage. I have found by experiment that this amount can be kept below three times the superficial surface of a plain trap with a three-inch seal, and a space between the trap equal to the diameter of the trap, so that it would be reasonable to limit the superficial surface in a trap to three times the same size trap with a three-inch seal and space between trap equal to the diameter of trap. While it is desirable if practicable to place the cleanout of the trap in the trap seal or on the inlet side of trap, it is by no means as essential as some maintain, but when located on the outlet of the trap it should be restricted to a maximum distance of the diameter of the inlet from the top of the outlet to the under side of cleanout screw. This would permit of a pressure on the cleanout screw sufficient to indicate a leak should one exist. While it is possible to prevent trap syphonage by increasing the size of the waste pipe, and many plumbers resort to this method, the largely increased fouling surface thereby added, with the possibility of a gradually decreasing diameter from the deposits on its sides, would suggest the advisability of using re-sealing and anti-syphon trap construction and the same size waste pipe.

This brings us up to the proposition of a satisfactory test to require of a re-sealing and anti-syphon trap. If we establish the distance that a trap may be placed from the ventilating stack as ten feet and allow that ten feet to be horizontal or vertical, and re-sealing trap to be used where the discharge of the fixtures above does not exceed two-thirds of the area of the stack, it naturally follows that the following test is a safe one for the re-sealing of traps :

Safe Test for Re-sealing Traps.

Place on the trap inlet a bowl-shaped tank sufficient to hold water enough to fill thirteen feet of pipe the size of trap to be tested. The outlet from tank to be full bore, trap to have a vertical discharge of the same size as the trap, and ten feet in length. After the discharge of tank contents, the seal retained should not be less than one inch in depth and the volume of water not less than the full three-inch seal in a plain trap. No movable parts will be allowed in trap when test is being made. If an anti-syphon trap is to be used where the discharge of fixtures above may completely fill the stack, it naturally follows that the test required should be as severe as the severest condition that is likely to exist in drainage construction. We will suppose that sets of wash trays without overflow are placed above each other and discharging into the same stack, the roof outlet is frozen over or clogged from other causes, the discharge of the two topmost fixtures uniting are sufficient to fill the stack, and passing by the fixtures trap below, produce a strong syphonic action on this trap ; and that at this time the plugs are placed in the wash trays above simultaneously, the water in the trap below will be thrown into violent action differing from that caused by the steady downward pull with an open end above. While this condition may seem improbable, it nevertheless is not impossible, so that the test required for an anti-syphon trap should be severe enough to cover such a possibility and the following test would, I believe, prove a safe one.

Place a 50-gallon tank 10 feet above the trap connection, connect the trap to a Y connection on a vertical pipe no smaller than the trap outlet and drop from this point thirty feet. The entire pipe shall be vertical and full bore throughout. Place a quick opening valve on the pipe above trap inlet. The entire contents of the tank, 50 gallons of water, shall be discharged through this pipe by opening and closing the valve every five seconds, after which test the seal retained shall not be less than 1 inch in depth and the volume of water not less than the 3-inch seal in a plain trap. No movable parts will be allowed in trap during the time that test is being made.

BRASS WORKS FOR GALT.

The Galt Brass Manufacturing Company has been incorporated with a share capital of $40,000 for the purpose of manufacturing all kinds of brass goods and plumbers', gas-fitters', steam-fitters' and engineers' supplies. The head office will be at Galt, the provisional directors being. J. Scott, B. F. Bennett and A. Groff, of Galt. The officers will be James H. Smith, president; Peter H. Cowan, vice-president; W. D. Sheldon, secretary-treasurer, and B. F. Bennett, managing director. The company is backed by some of Galt's wealthiest manufacturers.

ROBERTSON TRAVELERS CHANGE.

E. A. Rogers, city traveler for the Toronto branch of the James Robertson Company, has resigned his position in order to go into business for himself, and J. R. Foster, who has been representing the firm in Western Ontario, will take Mr. Rogers' place. L. J. Martin is to take Mr. Foster's territory, and W. H. Cunningham will cover Mr. Martin's ground in future.

NEW BRASS GOODS FACTORY.

Following the recent changes in the organization of the Ontario Lead & Wire Co., in dropping their white lead and wire nail business, and changing their name to Somerville, Limited, another important development is to take place. A new company is to be formed and about $100,000 invested in machinery and plant for a plumbers' brass goods foundry. Some of the machinery has already been purchased, and Mr. Somerville is now away arranging for the remainder. The plant will be established in Toronto, probably in the east end.

PROTECTING PIPES FROM FREEZING.

The means generally employed to prevent pipes from freezing consist in the use of coatings which protect against cold, says an exchange, and non-conductors of heat, such as straw, cork, and oakum. There are, however, more effective agents, also practicable for use in thawing frozen pipes. The pipes are first covered with a thin layer of straw, sawdust or tanbark. Pieces of unslacked lime as large as the fist are then packed around them, and enveloped in another layer of some non-conducting material, straw, oakum, or cork, and the whole is held firmly together by means of a wrapping of coarse linen. The first layer is for the purpose of protecting the pipes from the action of the fresh lime, which would cause the metal to rust. The lime draws moisture from the air and the materials surrounding it, and is made warm by means of the chemical reaction. The outer covering allows only a small amount of atmospheric air to pass through, so that the lime remains unslacked to keep up the temperature during an entire winter.

This method, with slight variations, can be applied to the thawing out of frozen pipes. For this purpose somewhat more lime is to be packed around the pipes, and water poured over it. The heat generated will melt the ice in the pipes. The ground in winter can also be thawed out in this way, when, it is desired to lift paving stones without breaking.

PLUMBING PARAGRAPHS.

The Calgary Plumbing & Heating Co., Calgary, Alta., have dissolved.

The Northern Plumbing & Heating Company, Winnipeg, Man., has been dissolved and the business in the future will be carried on by C. H. Rivercomb and E. T. Mitchell.

W. H. Meadows, J. N. O'Neil, and Benjamin Kirk, plumbing inspectors, Toronto, have petitioned for an increase in their salaries. Although employed by the city for 19 years, they say, they are now getting only $75 more than at that time.

Two hundred and fifty people were present at the euchre and dance given on Feb. 7 by the Montreal Master Plumbers' Association, and the function proved more than ordinarily enjoyable. The earlier part of the evening was given over to the euchre, for which there were sixty tables set. Thereafter the members of the association with their guests and lady friends sat down to a charming supper. From midnight until a late hour dancing was carried on with spirit and gusto. Among the officers of the association present were : Messrs. N. Turcot, president ; J. A. Godon, first vice-president ; J. A. Marier, second vice-president ; J. E. Walsh, secretary ; John Watson, treasurer, Jos. Thibeault, Jos. Lamarche, P. C. Ogilvie and Jos. Laurier, along with the officers, forming the committee.

PLUMBING MARKETS

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, February 15, 1907

The feature of the market this week is the advance in plumbers' brass goods; all lines of taps, stop cocks, etc., having taken their place in the limelight by jumping up 10 to 15 per cent., and in some cases even higher. The reason this advance has been delayed so long is due to the fact that manufacturers have been standing aside to see what height the metal market would reach. Now that there seems to be more steadiness in that quarter, they consider that the time has arrived when they may safely draw up their new schedule of prices.

Cast iron fittings are reported very hard to get here, but no advance has yet been made over our last quotations.

Considerable uncertainty seems to prevail in regard to what trend the markets may take in the near future, some jobbers predicting that prices have about reached the limit, while others say that many lines are yet due to advance.

Trade in all lines of plumbing supplies remains excellent, and from present indications seems due to stay so.

RANGE BOILERS—An exceedingly good business is being done in this line, and prices remain very firm. We still quote: Iron clad, 30 gal., $5; 40 gal., $6.50 net list. Copper, 30 gal., $33; 35 gal., $38; 40 gal., $43.

LEAD PIPE—Very firm. No change over last week's quotations. Our prices are: 5 per cent. discount f.o.b. Montreal, Toronto, St. John, N.B., Halifax; f.o.b. London, 15c. per hundred lbs. extra; f.o.b. Hamilton, 10c. per hundred lbs. extra.

IRON PIPE FITTINGS — Hard to get, but no advance reported as yet. We still quote: Discounts on nipples, ¼ inch to 3 inch, 75 per cent., 3½ inch to 2 inch, 55 per cent.

IRON PIPE — Expected that supplies will be even harder to get this year than last. Our prices are: Standard pipe in lots of 100 feet, regular lengths, ¼ inch, $5.50; ⅜ inch, $5.50; ½ inch, $8.50; ¾ inch, $11.50; 1 inch, $16.50; 1¼ inch, $22.50; 1½ inch, $27.; 2 inches, $36.50. Discounts on black pipe: ¼ inch, 59 per cent.; ⅜ inch, 59 per cent.; ½ inch, 68; ¾ to 2, 70. Discounts on galvanized pipe: ¼ inch, 44 per cent.; ⅜ inch, 44 per cent.; ½ inch, 58 per cent.; ¾ to 2 inch, 60 per cent. Extra heavy pipe of 100 feet lots are quoted as follows: ½ inch, $12; ¾ inch, $15; 1 inch, $22; 1¼ inch, $30, 1½ inch, $36; 2 inches, $50. The discounts on black pipe: ¼ inch, 74 per cent.; ⅜ inch, 69 per cent.; ½ inch to 2 inches, 68 per cent. Galvanized: ¼ inch, 59 per cent.; ⅜ inch, 69 per cent.; ½ to 2 inches, 58 per cent.

SOIL PIPE FITTINGS — Prices remain: Standard soil pipe, 50 per cent. off list. Standard fittings, 50 and 10 per cent. off list; medium and extra heavy soil pipe, 60 per cent. off. Fittings, 60 per cent. off.

SOLDER — No change in prices. We still quote: Bar solder, half-and-half, guaranteed, 25c.; No. 2 wiping solder, 22c.

ENAMELWARE — We quote: Canadian baths, see Jan. 3, 1907, list. Lavatories, discounts, 1st quality, 30 per cent.; special, 30 and 10 per cent. Sinks, 18x30 inch, flat rim, 1st quality, $2.60; special, $2.45.

"What are the Advantages of Hot Water over Steam Heating in a Private Residence?"

If a customer asked you the above question what arguments would you use in reply?

Send us an answer by March 1st and outline what advantages steam heating possesses over water for this same class of work.

For the best reply we offer a cloth bound copy of J. J. Cosgrove's splendid textbook, "Principles and Practice of Plumbing."

Hardware and Metal

Montreal Toronto Winnipeg

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East.
Toronto, February 15, 1907

Last week's advance on cast iron fittings has been followed generally by the trade this week, and, as predicted, an upward move has been made on iron body valves, the discount having been changed from 60 to 55 and 5 per cent. on Standard, and from 55 and 5 to 50 on Jenkins' disc. These have been accompanied by similar changes on saving checks, Webber gate valves and safety valves. Likewise advances of from 2½ to 5 per cent. have been made on all globe, angle and check valves. Some minor changes have also been made in both cast iron and malleable fittings.

Some booking for future delivery is being quietly done by some shrewd buyers who realize that both iron and copper are bound to retain their present strength and are more likely to go even higher than take a slump during 1907. With the exception of such orders, however, business is slow and is not likely to brighten up for two or three weeks.

Rumors of a new supply house to be established in Toronto are received from well informed parties.

LEAD PIPE — Trade is dull and the discount continues at 5 per cent. off the list price of 7c. per pound. Lead waste, 8c. per pound, with 5 off. Caulking lead, 5¾c. to 6c. per pound. Traps and bends, 40 per cent. discount.

SOIL PIPE AND FITTINGS—Buying is seasonable. We still quote: Medium and extra heavy pipe and fittings, 60 per cent.; light pipe, 50 per cent.; light fittings, 50 and 10 per cent.; 7 and 8 inch pipe, 40 and 5 per cent.

IRON PIPE — The scarcity in the most used sizes continues, with booked orders fairly large. One inch black pipe is quoted at $4.95, and 1 inch galvanized at $6.60. Full list in current market quotations.

IRON PIPE FITTINGS—Last week's advance has now been generally followed. We now quote: Cast iron fittings, 57½ per cent.; cast iron plugs and bushings, 60 per cent.; flange unions, 60 per cent.; nipples, 70 and 10 per cent.; iron cocks, 55 and 5 per cent.; Canadian malleable, 30 per cent.; malleable unions, 55 and 5 per cent.; malleable bushings, 55 per cent.; cast iron ceiling plates, plain, 65 per cent.; cast iron floor, 70 per cent.; hook plates, 60 per cent.; expansion plates, 65 per cent.; headers, 60 per cent.; hangers, 65 per cent.; standard list.

RANGE BOILERS — Trade is seasonable with little buying being done. We quote: Galvanized iron, 30 gallon, standard, $5; extra heavy, $7.75; 35 gallon, standard, $6; extra heavy, $8.75; 40 gallon, standard, $7; 40 gallon, extra heavy, $9.75, net list. Copper range boilers—New lists quote: 30 gallon, $33; 35 gallon, $38; 40 gallon $43. Discounts 5 to 15 per cent.

RADIATORS—At this season buying is not active. Prices continue unchanged at: Hot water, 47½ per cent.; steam, 50 per cent.; wall radiators, 45 per cent.; specials, 45 per cent. Hot water boilers are unchanged.

SOLDER — We quote: Bar solder, half-and-half, guaranteed, 27c.; wiping, 23c.

ENAMELWARE — No changes have been made, with the January list still prevailing on Canadian baths. We quote: Lavatories, first quality, 20 and 5 to 20 and 10 off; special, 20 and 10 to 30 and 2½ per cent. discount. Kitchen sinks, plate 300, firsts, 60 and 10 off; specials, 65 and 5 per cent. Urinals and range closets, 15 off. Fittings extra.

EVAPORATION REDUCED TO A MINIMUM

is one of the reasons why PATERSON'S WIRE EDGED READY ROOFING will last longer than any other kind made.

Mr. C. R. Decker, Chesterfield, Ont., used our 3 Ply Wire Edged Ready Roofing fourteen years ago, and he says it is apparently just as good as when first put on.

We have hundreds of other customers whose experience has been similar to Mr. Decker's.

JOHN LYSAGHT, Limited, Makers, Bristol, Newport and Montreal
A. C. LESLIE & CO. Ltd., MONTREAL Managers, Canadian Branch.

Most Hardwaremen have the chance to indulge in profitable talks about this season of the year. ¶ Your friends, intending to build in the spring, ask your opinion, as a practical man, on many points. When they ask about heating systems you are perfectly safe in recommending the

"Sovereign" Boiler

because that boiler is the prime essential of the most perfect heating system ever devised by man. Not only our own experience and the results of scientific workmanship, which we control, but also the lessons derived from the experience of all manufacturers are represented in the "Sovereign" Boiler. Practical, economical and profitable. The "Sovereign" is all that. It ought to mean something to you. Write for interesting particulars.

Your Business at Your Finger Tips

The merchant, if he is wise, no longer keeps his accounts upon tickets, in memorandum books, or in a loose way, but has a system by which at a glance, he can tell what he is doing

THE CRAIN MONTHLY ACCOUNT SYSTEM

has been in use by successful business men for years. It does the work in one-half the time, and in a way that is much more satisfactory to his customers and more pleasant to himself than plodding along in the old way. In this system, too, you require a binder, such as the Crain, with an unlimited capacity, which binds on one sheet as easily as it does 1,000, not one that you must have a certain number of sheets in before it will bind, and then only allows you to extend to a limited number of accounts.

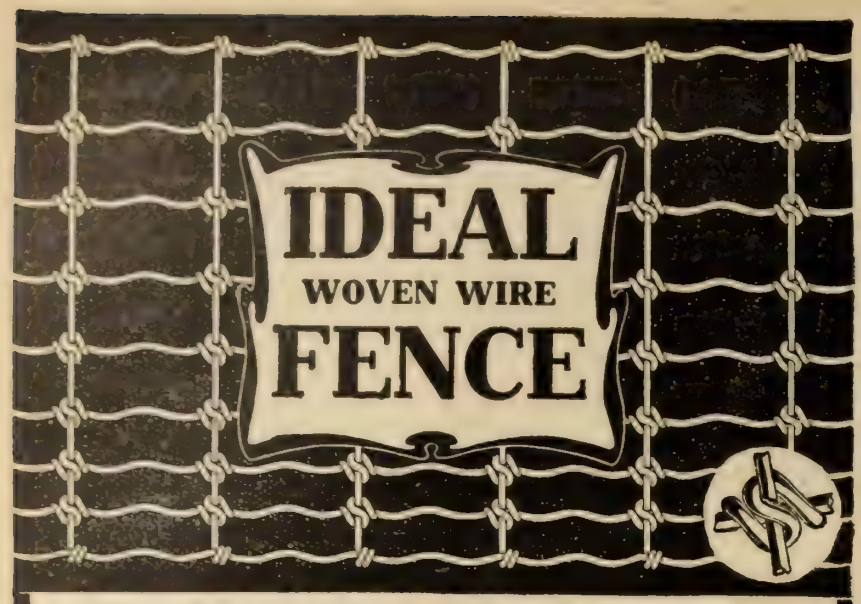
CAPEWELL HORSE NAILS



"THE BEST IN THE WORLD"

MONEY in handling horse nails? Decidly there is. Very different to the wire nail proposition, and there's more money in handling **CAPEWELL HORSE NAILS** than in any other brand, because **CAPEWELL NAILS** are sellers and move quickly. You can more than satisfy all you farrier trade with **CAPEWELL NAILS**. You don't want any dead stock on your floor, and you won't have any if you do your business with us. Our goods are live, asked-for, popular and profitable stock. We give particular attention to all correspondence. Inquiries answered, samples sent and orders taken with corresponding cheerfulness. We are as near as your mail box.

CAPEWELL HORSE NAIL CO., TORONTO, ONT.

212 Nena Street, Winnipeg, Man.

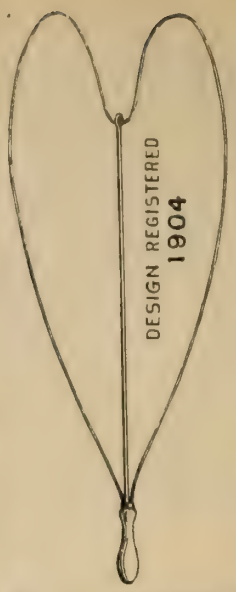
Why not sell a fence that will advertise your business? Ideal Fence makes people stop and take notice, and it stands inspection.

Ideal is the standard Farm and Railroad Fence of Canada. Big, strong wires—all No. 9,—heavily galvanized and firmly locked. See how the patent lock grips uprights and horizontals together at every crossing. No chance for slips. Wires are gripped on five bearing points.

Good margin in Ideal. We want one live man in every locality. Write for catalog and Dealer's Terms.

The McGregor Banwell Fence Co., Ltd., Dept. O, Walkerville, Ont.
The Ideal Fence Co., Ltd., Dept. O, Winnipeg, Man.

Proper Heating Essential



Tensile strength, great durability and facility in welding depend on the treatment of the metal in the furnace.

Only experts handle the iron in the London Mills' Furnaces. This is the secret of the regularity of its good quality.

A trial order will make you a regular customer.

London Rolling Mills
London, Canada.

THE
ANTON
CARPET BEATER

Has double the beating surface of any carpet beater on the market.

LIGHT, yet STRONG and DURABLE; STIFF, yet PLIABLE and EASY TO HANDLE.

Centre rod, made of heavy spring steel wire. Outside wires go through the handle and are clinched at bottom end making it impossible for handle to come off; handle filled with lead, thereby making it a perfectly balanced article.

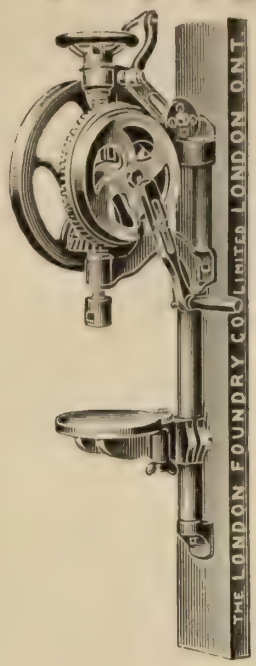
The Reasons Why

you should push this range are apparent to most dealers.



The **Empire Queen Range** is certainly a beauty, and just as perfect as a good range can be.

The heart of any range is the oven. It must be perfect in every detail. Most ovens are imperfect because the heat is not evenly diffused through them. There are devices, peculiar to **The Empire Queen Range,** which makes for oven perfection. A post card will bring yet another reason—and a more convincing one—to you.

A Building Necessity

These are the names that have been made synonymous with the

AEOLIAN VENTILATOR

We are the manufacturers of it and control the patents.

We have placed it on some of the finest buildings in the Dominion.

It is a scientific fact that no modern buildings can afford to neglect sanitation.

We are contractors and sanitary experts. Our ventilator is guaranteed and is placed in position to suit the building as to quality and size.

One Testimony:

MONTREAL, June 12th, 1903.
Canadian Pacific Railway Company.
Messrs. J. W. HARRIS CO., LIMITED,
7 St. Elizabeth St., Montreal, Que.

Gentlemen,—Answering yours of June 1st, I am not personally familiar with the merits of the "AEOLIAN" Ventilators but our Assistant Engineer, Mr. F. Crossley, reports that the Ventilators of this type manufactured by you and used by this Company at the Place Viger Hotel, Chateau Frontenac, Windsor Street Station and elsewhere, have proved satisfactory. Yours truly,
E. H. McHENRY, Chief Engineer.

MONTREAL

Peerless Woven Wire Fence

Here is a fence that will sell. Once up no need for repairs. It lasts for years—just what you are looking for. It's horse-high, pig-tight and bull-strong. No stock can get over, under or through it. The most unruly animal can't butt it down and there are no barbs to tear and injure stock. It's

WIND AND WEATHER PROOF

The Peerless lock holds it perfectly rigid and the wires can't slip up, down, nor sidewise. Cold weather won't snap it and hot weather won't make it sag. It's the greatest thing out for farmers, stockmen and all other fence users which makes it a red hot proposition for dealers. It comes in rolls all ready to put up. It's easy to handle. Write for prices.

The Banwell Hoxie Wire Fence Company, Ltd.
Dept. J, Hamilton, Ont.

Make the Most of Your Opportunities

Farmers drive up to your store for building requisites. How do you know these farmers are not having the first peep at the necessity for a wire fence around their place? Because the farmer doesn't "pop the question" to you is the very reason why you should pop it to him. Moral: Have a sample roll of "Dillon" fence at your door.

All you can lose is a little time.

All you can gain is worth gaining.

Remember the "Dillon."

What To Do Next Month

March is an important month for the hardwareman, as it is the beginning of the spring season; the month that makes the average man's blood tingle and fills the mind of his good wife with thoughts of the housecleaning that is to be done in the near future.

* * *

Stock-taking is over and you know just how you came through your last year's business—or should, if you are a wide-awake merchant. You can therefore go into this month with a clear brain and steady nerve, and pay strict attention to the noble art of getting the best you can out of your worthy neighbors.

* * *

As spring and housecleaning go hand in hand, let us first turn our attention to the articles necessary for the successful carrying on of this hunt for dirt and germs.

Paints, Varnishes, Wallpapers, Etc.

Of course head the list, and together with carpet sweepers, brooms, pails, mops, feather dusters, whisks carpet beaters, carpet stretchers, mop wringing pails, etc., would make a very appropriate display, and if a little ingenuity is exercised, a very attractive exhibit can be made. Floor stains and kalsomine, also come among the needs of housecleaners.

Of course the vacuum cleaners, have in the large cities, greatly facilitated housecleaning, and therefore taken a great deal of trade from the hardwareman, but in towns where these machines have not yet made their appearance, the retailer can, with a little longheadedness, reap a veritable harvest from the above lines.

Not only should a good display be made of these lines, but advertising should be run continually in the daily or weekly papers. There are many catch phrases which can be successfully used, such as "Helps to Housecleaning," "Get After the Dirt," "Cleanliness is Godliness," "Housecleaning Simplified," "Make Housecleaning a Pleasure," "Lighten Woman's Work," etc. To make a success out of your housecleaning advertising you must always bear in mind that 90 per cent. of this work is done by women, and your ads. must always be headed with phrases that will attract a woman's attention. Its always necessary when getting after the fair sex, to describe your goods fully, and, don't forget a woman must see prices in an ad. or she's not all interested. This is a most important fact for you to remember.

* * *

Sugaring time must also be given some thought and all during March, you should be after the farmers. Sap spouts have a habit of getting lost during the winter months, and sap pails will not last for ever, so get into the game. A little advertising wouldn't hurt this line either. Tell the farmers to look over their stocks of spouts and pails early in order not to be left when the rush comes. A good heading for such an ad. would be "Time and Sap Wait for No Man," or something after that style.

* * *

Again, "In the spring a young man's fancy, etc." Watch for the June brides that are to be. A nice fat order for kitchen utensils would repay you for your trouble, etc. Don't think over it too long, your competitor is also a smart man. With the breaking up of winter, houses begin to go up in large numbers and several contracts for builders' hardware, building paper, etc., will help to swell the bank account.

As this paper covers the whole of Canada, its rather hard for us to advise you of all the goods that you might dispose of in the early spring, owing to the different climates prevailing from coast to coast, but we give a line that is used generally, and leave it to your own good judgment to add to it. For instance, in Montreal, March is the great sidewalk cleaning month and naturally the dealer turns over quite a lot of money on sidewalk cleaners, shovels, etc., whereas in Vancouver these articles would have no sale at all.

Lawn mowers, lawn and garden tools, are also lines what may be displayed as soon as the snow begins to leave.

Sporting goods leave the dealer a good profit, and if you have not already done so you should lose no time in getting after the managers of football, baseball, lacrosse, fishing and shooting clubs. Circulars may be sent out, but we would advise you to send these gentlemen personal letters asking them to give you a chance before placing their orders elsewhere, and offering to procure for them, any lines you do not stock regularly. It might also be to your advantage to offer special club rates to any clubs or proposed clubs in your district.

* * *

Among the lines you should order from your jobber during March are ice cream freezers, screen doors and windows, paints, oils, glass, etc., wringers and washing machines, churns, enamelware, fishing tackle, Paris green and all kinds of tools.

Owing to the difficulty the jobbers are experiencing in getting deliveries of goods, it would be well perhaps for you to place your orders for all lines a little earlier than heretofore, in order to receive your shipments in time.

As already stated, this is just a page of suggestions and reminders, and does not begin to cover the thousand and one ways by which you can add to your sales during this season, but if you'll sit down some evening and think it over, you'll be surprised at the number of practical ideas that will come to you. Don't be content to sit and let trade come to you. Use your brain and get after trade. Remember the world's most successful men are the men who use their brains more than their hands.

* * *

The dealer who possesses foresight will also begin to lay plans in March for his summer campaign. Where his store is located in or near a tourist centre, this preparation will have an important bearing on the success of the summer business. Once more we would reiterate the advice for each individual dealer to profit by his previous experiences. He is now in a position to know where he fell short in previous years and he is able to remedy the mistakes then made. A rearrangement of store fixtures and of stock can be recommended. It is better for the summer visitor to find an altered store than to come back and see the same old arrangement. Alterations are not difficult to make and they indicate life and progressiveness. These, in turn, have an influence on customers. March is a good time to attend to this item.

A GREAT VICTORY

During the past eight weeks Hardware and Metal, in conjunction with the Ontario and Western Canada Retail Hardware Associations, has conducted an active campaign against the proposed parcels post c.o.d. system.

With the exception of the MacLean Trade Newspapers, particularly the Dry Goods Review and Printer and Publisher, we are not aware of any other hands being raised in opposition to the P.M.G.'s proposal. Certain it is that the Retail Merchants' Association were invited to join in the fight and declined.

The hardware trade has reason to congratulate itself upon its ability to act unitedly in time of trouble, upon having live associations in several provinces ready to take the lead in opposing injurious legislation—and on having a medium which keeps the retail trade in every part of Canada posted upon all matters of general interest when their interests are betrayed by the great metropolitan daily papers.

Success has crowned the labors of those who took up the agitation against the extension of the parcels post system as desired by the mail order houses. In Parliment last Friday night (Feb. 14) Hon. Mr. Lemieux, Postmaster-general announced that because of the unanimous opposition expressed to the scheme on both sides of the House he would drop the proposal. He said he still considered the scheme a good one, however, and the plan migh be carried into effect later on. "At present,' he said, "we are fighting against wind mills."

The victory is a notable one. The Retail Hardware Associations and the trade press has shown the power they can wield. Strengthen the Associations—extend their membership—and their powers for good work will be so much greater.

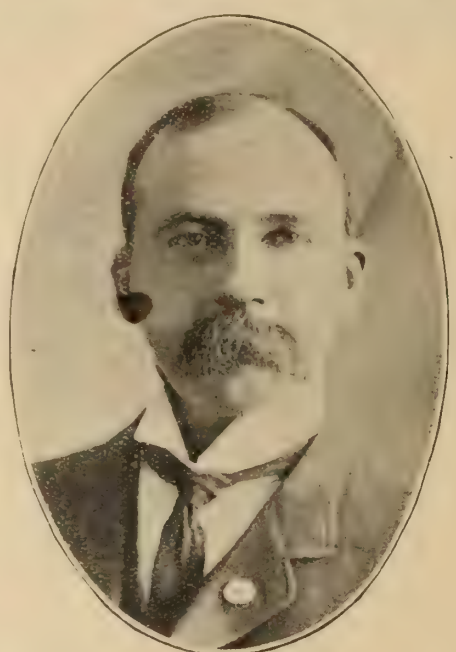
Western Retail Hardware Association

Attendance None Too Large, Owing to Snow Blockades—Keen Interest Shown—Trade Press Excluded—Parcels Post Condemned—Western Board Dissolved—Hardwaremen Stand Alone—Dominion Assoeiation Organized.

On Tuesday, February 12th, the Western Retail Hardware and Store Dealers Association held their annual meeting in the association board room in Winnipeg. Owing to the blockades on the railways the attendance from country points was not so large as it would otherwise have been, but from all parts of the west came cheering messages from dealers who were unable to attend and the enthusiasm of the meeting more than compensated for the small attendance.

In little more than two years and a half the Western Retail Hardware Association has developed from its small but enthusiastic nucleus in the city of Winnipeg into a strong organization embracing the great bulk of the retail hardware trade of the three Provinces of Manitoba, Saskatchewan and Alberta. A few impatient members have expressed dissatisfaction with the association because they have not seen the immediate, direct and tangible results from membership which their enthusiasm led them to expect, but the majority have the sound common sense to recognize that there are many indirect benefits from membership and that the work of perfecting the organization is necessarily slow.

An important step was the appointment of the president and secretary as a committee to act with the president and secretary of the Ontario Associa



A. J. FALCONER, DELORAINE
Re-elected President

tion as a temporary executive of a new Dominion Association, to embrace both organizations and any others which may be formed in the other provinces and which may be willing to unite.

On the C.O.D. Parcel Post Bill the association expressed itself in no uncertain way and the president and secretary were instructed to prepare a resolution on the subject to be forwarded to the Postmaster General.

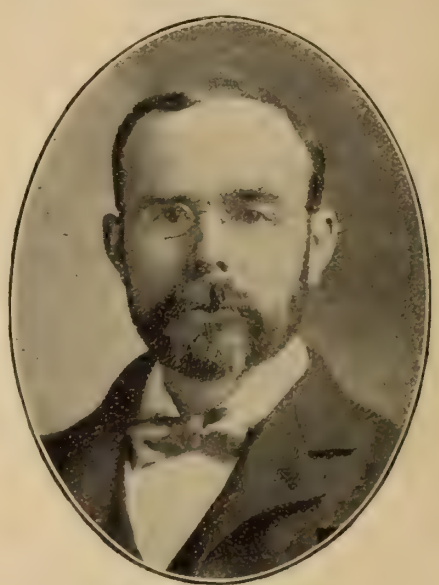
The Register.

An examination of the register shows the following names of members in attendance who did not neglect the formality of presenting the association with their autographs: Wm. M. Gordon, E. B. Lennox, N. H. Lightly, J. E. Riley, C. C. Falconer, S. Drewe, F. E. McFeely, A. P. Macdonald, Oliver Gilmer, W. A. Templeton, I. Woods, J. A. Lindsay, C. A. Baskerville, C. A. B. Whiting, J. E. Thomas, A. E. Dykes, R. Wyatt, Winnipeg; W. Montgomery, Stonewall, Man.; F. Anderson, Teulon, Man.; J. G. Rattray, Pipestone, Man.; R. W. Birch, Roland, Man.; W. Chalmers, Deloraine, Man.; J. A. Decosse, Somerset, Man.; W. P. Sparling, Melita, Man.; W. K. Cherry, Waskada, Man.; J. Estlin, Melita, Man.; J. A. Mountjoy, Heward, Sask.; J. B. Curran, Brandon, Man.; G. K. Smith, Moose Jaw, Sask.; R. J. McConnell, Carman, Man.; D. J. Fummerton, Reston, Man.; A. E. Jones, Milestone, Sask.; O. Kuss, rep. Neudorf Trading Co., Neudorf, Sask.; M. Isbister, Saskatoon, Sask.; E. A. Coleman, Darlingford, Man.; G. M. Brown, Stonewall, Man.; E. A. Walker, Grenfell, Sask.; H. S. Price, Boissevain, Man.; A. J. Falconer, Deloraine, Man.; George Houston, Cypress River, Man.; J. C. Stewart, Grayson, Sask.; D. L. Stewart, Rosenfeld, Man.

J. B. CURRAN, BRANDON
Re-elected 1st Vice-President.

Letters of Regret.

Letters of regret at inability to attend the convention were read from C. F. Comer, Calgary; G. L. Foerster, Neepawa; R. O. Bird, Tofield; D. Bradley, Holmfield; G. R. McLean, Waskada; F. Babb, Portage La Prairie; J. A. Gilhooly, Arden; Lambert & Earle, Elkhorn; Linton & Hall, Calgary; and J. Drewe, manager Calgary branch J. H. Ashdown Hardware Co.



Mr. Comer, in the course of a very cordial letter, said: "Our association has had a very successful season and everything has been harmonious. We certainly appreciate the efforts of yourself and the association generally in the interests of the hardware and store trade in the west, and we think it is the duty of every hardware merchant doing business in the territory covered by the association to become one of its members and thus help the good work along. We are in receipt of your circular letter regarding the proposed Parcel Post regulations and we have added our protest to the number that we hope may have been sent to the Postmaster General and the different members of Parliament."

President's Address.

President A. J. Falconer of Deloraine, Man., occupied the chair and in opening the convention delivered the following address:

"Gentlemen: I extend to you a very hearty welcome to this our third annual meeting. While it is not quite as large as we would like to have it, the uncertainty of railway traveling at the present time has prevented a great many members from meeting with us to-day; however, this does not apply to the Winnipeg members. Although the meeting is small I feel that a lot of good will be accomplished.

"The by-laws have been somewhat changed from former times, and I see

Wm. GORDON, WINNIPEG
Re-elected 2nd Vice-President

the first order of business is the President's address.

"The secretary has received a number of letters from members who were unable to attend, in which they pledged their support and goodwill to the association in the good work we are carrying on for the benefit of the retail hardware and stove dealers throughout this great west of ours; a work which your officers and executive feel is not receiving the support financially from quite a number of members that it is entitled to, and which will be more fully and clearly shown to you when the report of the executive is read.

"The primary object in forming this association was to foster and encourage local associations. A great many of the local boards were formed, and in the majority of cases so gratifying were the results that, I am sure, when the secretary visits where friction exists and explains the advantages already gained by the dealers at other points, they will immediately organize their local boards. But right here let me say, gentlemen, that it rests with each individual hardwareman to make that local association a success; the secretary cannot do it all. You will have to have that confidence one in another that cannot be destroyed by falsehoods circulated for selfish gain.

"At the inception of this association the relationship existing between the retailers and jobbers was not as satisfactory as it is at present. Through the efforts of your secretary the jobbers are confining their trade to the legitimate hardwaremen, and the jobbers recognize that the Retail Hardware Association is a body capable of guarding their own interests.

"In regard to legislation, this is clearly proven by the private action taken by the secretary and executive when the Postmaster-General announced his proposed C.O.D. Parcel Post Bill, a

J. E. McROBIE, WINNIPEG
Re-elected Secretary-Treasurer

bill which is clearly in the interests of departmental and other large stores, and detrimental to the small retailer. In this connection I may say that the secretary and myself sent a letter to the Postmaster-General and the secretary also wrote you all asking you to take action in the matter, and a great many of you have done so. We have the assurance that the Postmaster-General is prepared to withdraw his proposed legislation. This is gratifying, if we had not taken this action, this would have gone through.

"Now there was another matter that concerned you very much and which was sprung on us at the last moment and it was the proposed amendment to the Shops Regulation Act which the druggists asked Parliament to pass, clearly in their own interests. A few of the Winnipeg dealers and other merchants at once saw the proposed bill and immediately got to work to look after their own interests, and other merchants, to see that this should not be passed, with the result that a limitation clause has been inserted, through our effocts.

"In addition to the election of officers for 1907 you will be asked to consider carefully a number of questions of importance to the association.

"1st—The general use of collection

C. F. COMER, CALGARY
One of Alberta's Representatives on the Executive.

forms for bad debts. This we think is a good thing but not used enough.

"2nd—The advisability of publishing a delinquent list for the exclusive use of every paid up member of the association. It would be a good thing for every individual member to have a list of his bad debts sent to the secretary and the secretary prepare same and send one to every hardwareman.

"Now, before the election of officers takes place, let me thank the executive and members for the loyal support accorded me at all times, and I know that the same support will be given my successor.

"Now, in conclusion, let me appeal to you to continue the good work which is so vital to the success of the hardwaremen in this great west of ours."

Secretary's Report.

The report of the secretary was as follows:

"Gentlemen: I beg to place before you the report of the association for the past six months. By it you will see that the association has not been as successful financially as it should. This is accounted for by the failure and indifference shown by a number of members in not remitting their dues, although repeatedly requested to do so. Many replies to these requests were to

G. K. SMITH, MOOSE JAW
One of Saskatchewan's Representatives on the Executive

the effect that the association was a good thing, but had not done them any good so far, and until it did they would not pay their dues.

"It is unfortunate that these dealers have not exercised a little patience in order to allow of the association arriving at that stage where it could show them visible results, there is no doubt but that they, with others, have shared equally in any benefits the trade have so far obtained.

"A striking contrast to these is the evidence of one of our far north members, who, in conversation with me the other day, spoke as follows: 'When the association was formed I did not see at first how it could possibly benefit me, situated as I was, so far away. On thinking it over I came to the conclusion that as the best hardwaremen in the country were at the head of the movement, there must be something in it, so decided to become a member. On my return home after the first meeting I decided as one of the objects of the association was the eliminating of price cutting, and as I had heretofore been compelled, as I thought, to cut prices on representation of customers that my opposition was doing likewise, that I would live up to this feature and test its sincerity. I did so, and the result has been that during the past year I have sold goods at a better profit, have done a larger and more profitable business, and have no doubt but that in a few years every retailer will have benefited to the extent of thousands of dollars through the influence of our association.'

"I have letters from many others testifying to the good the association has accomplished. Don't you think it would be suicide on your part to allow the success secured during the past two years to be lost now? I venture to say that if you do that within two

months you will regret it. Every day matters of interest to your business are coming up. You have the mail order and catalogue houses reaching out more and more after your trade. They are

H. S. PRICE, BOISSEVAIN
One of Manitoba's Representatives on the Executive

now trying to secure legislation to enable them to still further encroach on your territory. are you going to allow them to do so without a protest? If not, how do you expect to combat them if not united?

"A better understanding between the manufacturers, jobbers and dealers has been secured by the association. You are receiving better protection to-day than a year ago; much more, however, remains to be done along these lines, and it is only by your active support of the association that this can be accomplished.

"The question before you to-day, and which you will be called upon to decide, is the continuance of this association on the same broad lines as at present. If you decide to do so, measures will have to be adopted to place it on a sound financial basis.

"This could be done by appointing a member in each locality whose duty it would be to see that every member in his district paid his dues. If this could be accomplished, it would mean the saving of hundreds of dollars to the association and allow of the executive pushing the work more vigorously.

"I would advise that Alberta and part of Saskatchewan be requested to form local associations, which could work with you in all matters requiring legislation or affecting the general welfare of the trade. They are too far away, and the cost to give them the attention they require is too great; the feeling among some of them is that Winnipeg is too far away to properly adjust matters locally.

"Gentlemen, I trust that you will give these matters to-day the careful consideration they deserve; a climax in your association's history is with you, weigh carefully the welfare of your business before deciding. Remember, should you cast aside what you have already accomplished, it will take double the work to overcome, should you ever attempt it again. Not only that, but you will have acknowledged that as hardwaremen who are credited in the commercial arena as the best business heads it contains—have not the energy to accomplish what others have found necessary to do for their own protection."

J. E. McROBIE,
Sec.-Treas.

Dominion Association Executive.

A communication was read from Weston Wrigley, secretary of the Ontario Retail Hardware Association, regarding the proposed Dominion Retail Hardware Association, the principle of which was endorsed at the meeting last July. Mr. Wrigley suggested that the president and secretary of each association be appointed to act as the member of a temporary executive for the Dominion Association until a permanent organization could be effected. The suggestion was received with enthusiasm, and was acted upon, President A. J. Falconer and Secretary J. E. McRobie being appointed to act with the

A. P. MacDONALD, WINNIPEG
One of Manitoba's Representatives on the Executive

president and secretary of the Ontario Retail Hardware Association.

Parcel Post Bill.

The proposed parcel post legislation came up for discussion and was roundly condemned by the association members, a number taking part in the general discussion. It was contended that this legislation was wanted only by the mail order houses and that it would be detrimental to the interests of the retail trade. The president and secretary were instructed to prepare a strong resolution on the subject and forward it to Ottawa.

Reciprocal Demurrage.

The efforts of the Winnipeg Union to secure from the railways a system of reciprocal demurrage charges were warmly endorsed. It was pointed out that the present system is unfair. The merchant is forced to pay demurrage charges if he delays to unload his goods from the car, but the railway company is not compelled to compensate the dealers for delay in delivering goods. Oliver Gilmer moved the following resolution, seconded by J. E. Riley:

"That this association express its unqualified approval of the action that has been taken by the Jobbers' Union to have proper reciprocal demurrage charges which would be beneficial to all parties concerned. And that a copy of this resolution be sent to the Jobbers' Union." Carried unanimously.

Officers Elected.

The officers for last year were re-elected by acclamation. Four members of the executive elected last year for only one year were re-elected last week for a term of two years. There were C. F. Comer, Calgary; A. E. Clements, Olds; A. R. Auger, Okotoks; and J. R. Fox, Weyburn. The other members of the executive were elected last year for a term of two years. The officers and executive committee for the ensuing year are therefore as follows:

President—A. J. Falconer, Deloraine.

First Vice-President—J. B. Curran, Brandon.

Second Vice-President—W. M. Gordon, Winnipeg.

Secretary-Treasurer—J. E. McRobie, Winnipeg.

Executive—Alberta, A. E. Clements, Olds; C. F. Comer, Calgary; A. R. Auger, Okotoks.

Manitoba—H. S. Price, Boissevain; A. P. Macdonald, Winnipeg; O. Gilmer, Winnipeg.

Saskatchewan—G. K. Smith, Moose Jaw; S. A. Clark, Saskatoon; J. R. Fox, Weyburn.

Western Board Disbands.

A year ago the "Western Board" was formed at the request of E. M. Trowern, Toronto, as a connecting link between the Retail Hardware Association of Western Canada on the one hand, and the Retail Merchants' Association of Canada (of which Mr. Trowern of Toronto is secretary) on the other hand. On Thursday morning, February 14th,

O. GILMER, WINNIPEG
One of Manitoba's Representatives on the Executive

the Western Board met in secret session and at the conclusion of their deliberations the following statement was handed out:

"A meeting of the Western Board of the association was held in the association rooms Thursday morning, February 14th, at 9 o'clock.

"After considerable discussion on our connection with the Retail Merchants' Association of Canada, (headquarters Toronto, E. M. Trowern, secretary) it was moved by Mr. Coulson and seconded by Mr. McRobie that we sever our connection with the above body and that the secretary be instructed to advise the secretary of the Retail Merchants' Association of Canada (E. M. Trowern, Toronto) to this effect. Carried.

"G. K. Smith, Moose Jaw, occupied the chair in the absence of W. G. McLaren, who had written that he was unable to attend owing to sickness in his family.

"It was felt by the members present that our connection with the association in the east had hampered us considerably in handling western trade evils, and the feeling was general that we should be willing to work in conjunction with the eastern association on any matters of legislation pertaining to the trade as a whole.

"Moved by Mr. McRobie and seconded by Mr. Coulson, that this Western Board be dissolved. Carried."

This action of the Western Board disposes for good of the vexed question of the relations of the western associations with Mr. Trowern's association in Toronto. The agreement entered into last February has been cancelled entirely and the Western Retail Hardware and Stove Dealers' Association is now on exactly the same footing as when it was first organized. The dissolution of the Western Board also disposes of the affiliation with the Retail Merchants' Association of Western Canada. The two western associations are now as separate, independent and distinct as when they were first organized.

A CORRECTION.

In the summarized report of the convention published last week reference was made to a lengthy discussion which it was understood took place on the subject of price agreements covering the trade in the west. Secretary McRobie states positively that this subject was not dealt with at the convention. The exclusion of the trade press from the convention is responsible for the reference to the discussion at the convention, a brief telegraphic report being all that was procurable by our reporter in time for last week's issue.

Some differences have undoubtedly existed in certain districts, but the fact that the matter did not come up at the convention shows that in all but a few districts the work of the association is meeting with the hearty co-operation of all in the trade. Where differences exist we would urge that the proper method to pursue is to bring the matter to the attention of the executive so that an adjustment can be arrived at promptly. It is much preferable to try and arrange matters on the inside to withdrawing from membership and indulging in open price-cutting warfare.

There are times when an ounce of ingenuity discounts a ton of energy.

PUBLIC SPIRITED HARDWARE MERCHANTS

NO. 9

To be elected mayor of a thriving Canadian city, without having had previous aldermanic experience, and then to be re-elected mayor over another strong candidate by the largest majority in the history of the city, is an honor to be appreciated by any man. And it is appreciated by the subject of this sketch, Mayor Andrew Riddell, of St. Catharines, known to the stove and plumbing trades throughout Ontario as one of the live men in that branch of mercantile activity.

Mr. Riddell, as will be seen by the engraving, is a kindly but determinedly visaged gentleman of mature years, and the success that has crowned his efforts as a merchant has made possible the splendid endorsation he has received as mayor at the hands of his fellow-citizens.

Although not having sat as an alderman, Mr. Riddell has not been without

ANDREW RIDDELL, ST. CATHARINES.
A Prominent Plumber and Stove Dealer, recently re-elected Mayor by several hundred majority.

public experience, he having been for seventeen years one of the water commissioners of the city, as well as a member, deputy and chief of the fire brigade for many years. He retired from these public positions in 1905 in order to devote all his time to business, but in 1906 he was prevailed upon to accept the nomination for mayor, with the result already outlined. As no mayor had ever been elected previously without having aldermanic experience the result was very complimentary to Mr. Riddell.

Born in Scotland in 1839, coming to Canada in 1850, and locating in St. Catharines in 1857, Mr. Riddell took up the trade of tinsmithing, going into business for himself in 1873, building up a large trade as a plumber and metal worker, stove dealer and heating contractor. His eldest son has been associated with the business for many years, having charge of the mechanical work.

St. Catharines has been enjoying an era of prosperity for some time, all lines of manufacturing being rushed with orders. Situated on the Lake Ontario end of the Welland canal, only a few miles from the big power plants at Niagara Falls, and in the natural gas district, the future of the city is assured and it is safe to say that during Mr Riddell's regime as mayor, the building for the future will be sound and substantial.

PIONEER STOVE FOUNDER DEAD.

Thomas Lang Moffat, one of the best known stove founders in Canada, died at his residence, Weston, Ont., last Tuesday, after an illness of some months. Deceased was well known throughout the trade and has put the stove foundry business on a broad and sound basis. Mr. Moffat was a native of Scotland, but has lived in Canada for quite a number of years. Previous to coming to Canada he was connected with the Marine Works on the Clyde at Glasgow.

The Moffat Stove Company at Weston, founded fourteen years ago by Mr. Moffat, has grown into a large industry doing a successful business in all parts of Canada. Mr. Moffat's ancestry dates back to the first iron master of Scotland, the family having been in the iron business for many generations. It is not remarkable, therefore, that all his sons are directly connected with the stove industry, having been brought up by their father "in the way they should go."

Deceased was seventy years of age, he being survived by his wife, five sons and one daughter. The sons are: J. K. Moffat, T. L. Moffat, F. W. Moffat and A. B. Moffat, all of Weston, and C. L. Moffat of Winnipeg; Mrs. Matheson, of Toronto, is the only daughter.

NEW FREIGHT CLASSIFICATION.

At a conference recently held between representatives of the Canadian Freight Association and the Canadian stove manufacturers, a number of reductions were decided upon, which practically gives a third-class rating for stoves in less than carloads, as asked for by the stove manufacturers. The matter is being followed up with the Railway Commission with a view to having it embodied in supplement No. 8 to classification No. 12 which is now before them.

FISHING LINE FOR COD.

(From the Minneapolis Journal.)

"A fishing line worth $2,000?"

"Yes, sir."

"I don't believe it."

"It's the truth. It's a codfish line. It's one of those lines to which you owe your Sunday morning fishballs and your less appetizing, equally helpful, cod liver oil. These codfish lines, you see, are frequently eight miles long. They have 4,680 hooks. They'll often land 2,500 cod. No wonder they cost $2,000, eh?"

WESTERN ASSOCIATION.

Radical and far-reaching changes were made last week by the retail conventions which met in Winnipeg. It will be remembered that a year ago the Retail Hardware Association of the west and the Retail Merchants' Association of Western Canada decided to affiliate for the accomplishment of certain common objects and for that reason elected in joint session a common executive to be known as the Western Board. This Western Board in turn affiliated with the Retail Merchants' Association of Canada, an organization whose headquarters are in Toronto.

The conventions held in Winnipeg last week swept all these affiliations out of existence. In the first place the Western Board met and repudiated the affiliation with the Retail Merchants' Association of Canada. It also decided to disband. In the second place the conventions approved of the action of the Western Board and it was decided that the affiliation between the two western associations should be at an end. The two western associations are therefore absolutely independent from this time on. Their relations are friendly and no doubt they will often act together to attain common objects, the fact that their head offices are in the same building making this easy and convenient. But in some important matters their interests conflict and for this reason absolute independence has been decided upon.

But while the retail hardwaremen of the west have thought it advisable to be independent of the general storemen with whom they disagree on some points they have welcomd the prospect of closer relations with the Ontario Retail Hardware Association. They have appointed their president and secretary to act with the president and secrtary of the Ontario organization as a joint temporary executive of a Dominion Retail Hardware Association.

KEEN COMPETITION EXPECTED.

Both manufacturers and users of heating apparatus are looking for an interesting season during 1907 owing to the introduction into the trade of new factors.

During the past couple of years the Taylor-Forbes Company has come into the market with a very large boiler and radiator plant at Guelph and their advertising has been conducted vigorously. The American Radiator Company have established a plant at Brantford but they have not yet gone after the steamfitters trade. The Pease Foundry Company have erected larger foundries at Toronto and the Gurney Foundry have also been forced to extend their plant. The Canada Radiator Company have also moved their works from Port Hope to Montreal. Further extensions under way at present include: a doubling of the boiler plant of the Star Iron Works, at Montreal, additions to the foundry of the H. R. Ives Company, Montreal, and the erection of the big radiator plant of the King Radiator Co., at Toronto, to work in connection with the Warden King Works, at Montreal, where the capacity for manufacturing Daisy boilers has been doubled. Another expansion is the erection of the new plant of the Dominion Radiator Company at Toronto.

All of these changes have been outlined in our news columns from time to time, but when connected together they make an extended list. A similar expansion has been taking place in the plumbers' brass goods field, new plants having been established during the past year or so at London and Port Colborne and new industries being now projected at Galt and Toronto.

As a result of this development in the manufacturing industry, coupled with the aggressive advertising done by the Taylor-Forbes Company and more recently by Cluff Brothers, the other firms are preparing to pay more attention to their publicity department and some lively advertising will undoubtedly be done during 1907. The competition will not stop there, however, as the rush for business will be participated in by each house, both by personal canvess in the cities and by the traveling salesmen on the road.

Prices, too, will feel the effect of the situation, as they have already done, boilers and radiators not having advanced in price in keeping with the higher quotations ruling for pig iron, etc., and the advanced prices of stoves. The one factor which saves the situation is the steady expansion of the market caused by the continued building activity. Every new plant under construction will probably be kept busy by this increased call for goods, but it would appear that the requirements of the trade will not require much further expansion for a year or so at least.

PARCELS POST PROPOSALS KILLED.

As announced on another page a great victory has been won in the agitation against the proposed parcels post C.O.D. system. Every credit should be given the Ontario and Western Retail Hardware Associations, they being the only organized bodies to take up the agitation and back up the work done by the MacLean trade newspapers.

As has already been pointed out, the daily press representatives at Ottawa practically suppressed all information regarding the proposals and their probable effect. To have, in the face of this obstacle, succeeded in heading off the mail order house legislation is, therefore, a source of satisfaction to the trade and to us.

Full credit should be given Hon. Mr. Lemieux, Postmaster-General, for his prompt action in dropping the proposals as soon as he learned the strength of public opinion against the legislation. Mr. Lemieux is a level-headed and progressive legislator, as is shown by his work in bringing down legislation aiming to rid the country of the evil effects of strikes by providing for a public investigation into the controversial points at issue between employers and employes. It is probable that his parcels post proposals were made on the advice of department heads to whom he, as a new head of the department, must look to for guidance on matters of postal

regulations.' Certain it is that the postal department is being made more efficient and the staff is not so starved as under former administrations.

The Postmaster-General, in considering future legislation affecting the parcels post system, will be sure to consider the interests of the retail merchant throughout the country. The point has been driven home that the retail trade does not want any special favors at the hands of the government and rightfully complain when legislation is proposed tending to divert trade from their hands into the departmental store channels.

The lesson of solidarity learned by the retailers should not be lost. Unorganized the merchants are not well equipped to conduct an offensive or defensive campaign in matters of legislation. Organized into associations for mutual benefit united and prompt action can be taken.

Retail hardwaremen in Ontario and the Western Provinces who have not yet joined the association have much to thank this organization for as if the present attack on retail interests had not been frustrated, more and heavier blows would have been struck. No firm should begrudge the amount of a year's membership fee in the Retail Hardware Association, and provinces where associations have not yet been formed should take up the work of organization without delay.

WESTERN RETAIL HARDWARE CONVENTION.

Last week for the first time in its history the Western Retail Hardware Association excluded from its annual convention the representatives of the trade press. At all previous conventions a representative of Hardware and Metal has been present, and from the reports in this paper the great bulk of the membership who are unable to attend a meeting held hundreds of miles from their homes have been able to keep in touch with the work of the association. In this issue we are able to present only a bare summary of the proceedings for the reason that the executive of the association decided to do their own reporting. Now the members of the executive are business men, not reporters, and they delegated their duties to the secretary, who, although animated by the best intentions, is likewise a business man and not a reporter. Reporting is a business just as selling hardware is a business. A reporter would not make a good hardware merchant and a hardware merchant does not make a good reporter. Each might learn in time, but neither can do work unfamiliar to him and do it well at a moment's notice.

For this sudden and unexpected action of the association executive no reasons or explanations worthy of serious consideration or intended to be taken seriously have been advanced. The association has no reason to complain of the character of the reports of previous conventions; they have been fair, accurate, impartial and complete, and the association executive have made no complaints. Their action is, therefore, all the harder to understand.

At the meeting last week there were present a full delegation of members from the city of Winnipeg, and a few members from the country. That there were not more present from the country was due to the snow blockades on the railways. A merchant leaving his business to attend the convention under the conditions that prevail this winter could not be sure when he could return home, and it is not strange that only a few venturesome spirits braved the dangers and inconveniences of travel. The members who were unable to attend have a right to expect a report in their trade paper. Moreover, distances are so great in the west that it costs money to attend the annual convention. One member, speaking at the convention, last week, is reported to have said that his trips to the two conventions cost him $60 each, which, with his membership fee of $10, amounts to $130 per year. Not many association members are prepared to spend that amount of money to attend the conventions, and if the executive hope to keep up the interest and enthusiasm of the country members they should not deprive those members of their only means of knowing what is being done. The bare minutes of the meeting dished up in skeleton form are not likely to awaken much interest or arouse much enthusiasm.

If the association had anything to hide, the action of its executive could be explained, but unless some radical changes of policy were decided upon last week the association has everything to gain and nothing to lose from the fullest publicity—in the strictly trade press. With the aims and objects of the association as we understand them this paper is in hearty accord, and we would be false to the best interests of the retail trade were we, because of the recent action of the association executive, to cease to advocate the organization of the retail hardware trade of the west and the energetic prosecution of the work of the association. We merely regret that owing to the action of the association executive we are unable in this issue to give our retail friends in the country who were unable to attend the convention, the full and impartial report to which we think they are entitled and which they have always received from this paper in the past.

A BACKWARD STEP.

Postal matters seem to be absorbing a good deal of attention at present, the latest to come to the front being the announcement that after May 1st next the Canadian Postal Department will not accept for delivery any United States publications mailed as second class matter.

This will exclude from the Canadian mails all magazines, daily papers, etc., and will force weekly periodicals and smaller monthlies to pay postage at regular rates in order to secure delivery to subscribers on this side of the line. Monthly magazines will be able to secure a circulation through booksellers, but such trade papers as the "Iron Age" will be practically excluded from the country as they do not look for a general circulation and their weight is such as to prevent them paying the eight cent per pound rate which will be substituted for the one cent charge after May 1st next.

It is inconceivable that public opinion in Canada will be so narrow as to allow the new regulation to become permanent. Canadian publications should be protected against the sensational yellow journalism of the States, and British periodicals should be encouraged in securing a larger circulation in Canada, but the workings of the new regulation will be so drastic as to cause wide discontent.

If we are to have a press censorship at Ottawa, and Canadians are to be told what they shall or shall not read, it is time to establish a definite tribunal which will consider each case upon its merits. The right of trial should not be taken away from publishers. A censorship may be necessary in excluding immoral publications, but scientific, political and industrial publications should have the free use of the mails subject to a democratic, not an autocratic, censorship.

Hardware dealers should protest against such a backward step as has been decided upon. Had the postal rates been raised slightly the reason for complaint would not have been so great. Regulations, however, which are so drastic as to exclude representative trade newspapers of high standing should not be allowed to be put into force unchallenged.

Markets and Market Notes

(For detailed prices see Current Market Quotations, page 66.)

THE WEEK'S MARKETS IN BRIEF.

MONTREAL.

Jenkin's Valves—Advanced about 5 per cent. Discount is now 27½ per cent.

TORONTO.

Plumbers' Brass Goods—Some lines lower.

Old Material—Lead and iron slightly weaker. Rubbers a little higher.

Oiled and Annealed Wire—5 cents higher.

Montreal Hardware Markets

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, Feb 22, 1907.

Conditions remain practically unchanged here this week, most lines continuing to move well, but money is rather tight, and considering the volume of business that has been done during the past two or three months, jobbers are at a loss to understand why collections are not better than they are.

Most jobbers are suffering through delays on the railroads. Car lots on different lines are anywhere from two to four weeks overdue. This makes a shortage in some lines.

Prices on building paper and wire nails are extremely stiff.

Wood screws are very scarce, some of the jobber's shelves being practically empty. One by six are particularly difficult to get.

The only change in prices to record this week is on Jenkins' valves, which have advanced about five per cent, the discount now being 27½ per cent.

AXES — Although the jobbers' season for this line is practically over, sales are still reported to be very good. This is due, no doubt, to the severe weather experienced here this winter. Prices remain: **$7.60 to $9.50 per dozen;** double bitt axes, $9.50 to $12 a dozen; handled axes, $7.50 to $9.50; Canadian pattern axes, $7.50 a dozen.

LANTERNS — Moving, but very slowly. We still quote: Prism globes, $1.20; cold blast, $6.50; No. 0, safety, $4.

COW TIES AND STALL FIXTURES —Very quiet. We are still quoting: Cow ties, discount 40 per cent. off list; stall fixtures, discount 35 per cent. off list.

RIVETS AND BURRS.—Our prices are: Best iron rivets, section carriage, and wagon-box black rivets, tinned do., copper rivets and tin swede rivets, 60, 10 and 10 per cent.; swede iron burrs are quoted at 60 and 10 and 10 per cent. off new lists; copper rivets with the usual proportion of burrs, 25 per cent. off, and coppered iron rivets and burrs in 5 lb. carton boxes at 60 and 10 and 10 per cent.; copper burrs alone, 15 per cent., subject to usual charge for half-pound boxes.

HAY WIRE — Waking up. Prices are: No. 13, $2.60; No. 14, $2.70; No. 15, $2.85; f.o.b. Montreal.

MACHINE SCREWS — The shortage not yet relieved. Prices remain: Flat head, iron, 35 per cent., flat head brass, 35 per cent., Felisterhead, iron, 30 per cent., Felisterhead, brass, 25 per cent.

BOLTS AND NUTS.—Demand is very heavy. Discounts remain: Carriage bolts, 3 and under, 60 and 10; 7-16 and larger, 55 per cent.; fancy carriage bolts 50 per cent.; sleigh shoe bolts, ⅝ and under, 60 per cent.; 7-16 and over, 50 per cent.; machine bolts, ⅝ and under, 60 per cent.; 7-16 and larger, 55 per cent.

HORSE NAILS — Demand increasing. Discounts remain: C brand, 40, 10 and 7 per cent.; M.R.M. Co., 55 per cent.

WIRE NAILS.—We still quote: $2.45 per keg, f.o.b. Montreal.

CUT NAILS.—Prices remain: $2.30 per keg, base, f.o.b. Montreal.

HORSESHOES — Moving well. We still quote: P.B. new pattern, base price, $3.50 per 100 lbs.; M.R.M. Co., latest improved pattern iron shoes, light and medium pattern, No. 2 and larger, $3.65; No. 1 and smaller, $3.90; snow pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15. Light steel shoes, No. 2 and larger, $4; No. 1 and smaller, $4.25; featherweigh, all sizes, No. 0 to 4, $5.60. Toeweight, all sizes, No. 1 to 4, $6.85. Packing up to three sizes in a keg, 10c. per 100 lbs. More than three sizes, 25c. per 100 lbs. extra.

BUILDING PAPER.—No change in prices.

BUILDING PAPER —Warmer weather creating a good demand, but no change in prices yet.

CEMENT AND FIREBRICK.—Prices remain: "Lehigh" Portland in wood, $2.54, in cotton sacks, $2.39; in paper sacks, $2.31. Lefarge (non-staining) in wood, $3.40; Belgium, $1.60 to $1.90 per barrel; ex-store, American, $2 to $2.10, ex-cars; Canadian Portland, $2 to $2.05. Firebrick, English and Scotch $17 to $21, American $30 to $35; White Bros.' English cement, $1.80 in bags, $2.05 in barrels in round lots.

COIL CHAIN.—Our quotations remain: 5-16 inch, $4.40; ⅜ inch, $3.90; 7-16 inch, $3.70; ½ inch, $3.50; 9-16 inch $3.45; 5-8 inch, $3.35; ¾ inch, $3.20; ⅞ inch, $3.10; 1 inch, $3.10.

SHOT.—We are still quoting: Shot packed in 25-lb. bags, ordinary drop AAA to dust, $7 per 100 lbs.; chilled, No. 1—10, $7.50 per 100 lbs.; brick and seal, $8 per 100 lbs.; ball, $8.50 per 100 lbs. Net list. Bags less than 25 lbs., ½c. per lb. extra, net; f.o.b. Montreal, Toronto, Hamilton, London, St. John, Halifax.

AMMUNITION — Our prices are: Loaded with black powder, 12 and 16 gauge, per 1,000, $15; 10 gauge, per 1,000, $18; loaded with smokeless powder, 12 and 16 gauge, per 1,000, $20.50; 10 gauge, $23.50.

GREEN WIRE CLOTH.—We continue to quote: In 100-foot rolls, $1.62½ per hundred square feet, in 50-feet rolls, $1.67½ per hundred square feet.

Toronto Hardware Markets

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, February 22, 1907.

Wholesale dealers are not doing a very brisk business, although, of course, they are holding their own. Retailers are doing a good business in the staple goods with the approach of spring and housecleaning activity. Orders with the wholesalers are being booked well in advance this year, a plan which should be carried out by all retailers.

Practically all the jobbers report a scarcity in screws; one company stating that they could not be gotten "for love or money." One screw manufactory reports a very low stock, not having even their usual six months' stock on hand.

Paint brushes and all cleansing utensils are meeting with a good demand, in anticipation of the spring housecleaning activities.

Special attention is called to our quotation of prices on binder twine which have just been announced by some of the manufacturers. The prices given below practically cover the Ontario market.

TWINE — International and Plymouth, 500 ft. Sisal, 9½-9⅝; 500 ft. Standard, 9½-9⅝; 550 ft. Standard Manilla, 10¾; 600 ft. Manilla, 12¼; 650 ft. Pure Manilla, 13¾-14. Car lots ¼-cent less, five ton lots ⅛-cent less central delivery.

AXES AND HANDLES — The demand for these is practically over as far as the wholesale merchants are concerned. Retailers report quite a brisk business.

SCREWS—Wholesalers report a great scarcity of these, some firms not having a sufficient supply to fill an order.

BOLTS AND NUTS — Business in these is heavy. Demand greatly exceeds the supply, the stock being low with no immediate prospects of repletion.

CHAIN — No change in prices, which we quote as before: ⅝-in., $3.50; 9-16-in.,

$3.55; ½-in., $3.60; 7-16-in., $3.85; ⅝-in., $4.10; 5-16-in., $4.70; ¼-in., $5.10.

RIVETS AND BURRS — Prices remain firm and unchanged, with large orders.

TOOLS—Are in good demand. Merchants are completing their stock and a great business in these is looked for during the coming summer, which will be unprecedented for building.

SHOVELS — The demand for these continues strong with prospects of enlivenment with the opening of spring.

EXTENSION AND STEP LADDERS — The demand is strong, prices remaining unchanged: 11 cents per foot for 3 to 6 feet, and 12 cents per foot for 7 to 10-foot ladders. Waggoner extension ladders 40 per cent.

POULTRY NETTING — This line in good demand, all outstanding orders being rapidly and promptly filled. We continue to quote: 2-inch mesh, 19 w.g., discount 50 and 10 per cent., all others 50 per cent.

OILED AND ANNEALED WIRE—We have revised our quotations on all Canadian wire: gauge 10, $2.46; gauge 11, $2.52; gauge 12, $2.61 per 100 lbs.

WIRE NAILS — No changes in price. Demand is good. We continue to quote $2.40 base.

BUILDING PAPER — The business so far in this is slow. However, with the opening of spring and renewed building operations the demand will be strong.

CUT NAILS—We quote $2.30 base f.o.b. Montreal; Toronto, 20c. higher.

HORSENAILS—"C" brand 40, 10 and 7½ off list; "M.R.M." brand 60 per cent. off. Capewell brand, quotations on application.

HORSESHOES — The demand is strong, large orders coming from New Ontario, especially from railroad companies and lumber camps. Quotations remain the same: P.B. base, $3.65; "M. er prices: P. B. base, $3.65; "M. R.M. Co., latest improved pattern" iron shoes, light and medium pattern, No. 2 and larger, $3 80; No. 1, and smaller, $4.05; snow, No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $4.15; No. 1 and smaller, $4.40; featherweight, all sizes, 0 to 4, $5.75; toeweight, all sizes, 1 to 4, $7. Packing, up to three sizes in a keg, 10c. per 100 lbs. extra; more than three sizes in a keg, 25c. per 100 lbs. extra.

CEMENT—For carload orders, f.o.b. Toronto, we quote: Canadian Portland, $1.95. For smaller orders ex warehouse, Canadian Portland, $2.05 upwards.

FIREBRICK—English and Scotch firebrick, $27 to $30; American low-grade, $23 to $25; high-grade, $27.50 to $35.

HIDES, WOOL, FURS — Trade is very quiet at unchanged prices.

Montreal Metal Markets

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, February 22, 1907

"Copper again," not another advance yet, but just something to talk about. It's higher in New York, with a market shortage, and practically none at all to be had here. This looks as if we might expect another "boost" in prices here. Consumption has completely wiped out all reserve stocks, and there is practically nothing at present to show that there will be any relief, or any decline in prices for some time to come.

Spelter here is firmer. Pig iron is a little easier in England, for future deliveries. This, however, has not affected the Montreal market.

Galvanized iron remains the same as reported last week.

Ingot tin and antimony remain firm, with no change in prices.

COPPER—Prices remain the same here, but are higher in New York. All reserve stocks are wiped out and there doesn't seem to be any chance of immediate relief. We still quote: Ingot copper, 26½ to 27c; sheet copper, base sizes, 34c.

INGOT TIN—Remains the same (very firm, with no change in prices.) We still quote: 45½ to 46c per lb.

ZINC SPELTER—Firmer if anything. We still quote: $7.50 to $7.75 per 100 lbs.

PIG LEAD—We reported last week that this article was a little weaker, with a tendency to lower prices. This was no doubt only a fluctuation, as no decline is reported yet. Our prices remain: 5.50 to $5.60 per 100 lbs.

ANTIMONY—We are still quoting: 27½ to 28c per lb.

PIG IRON—The English market is a little easier for future deliveries, but things here remain unchanged. We still quote: Londonderry, $24.50; Carron, No. 1, $27; Carron, special, $25.50; Summerlee, No. 2, selected, $25; Summerlee, No. 3, soft, $23.50.

BOILER TUBES—Remain very firm. Our prices are: 1¼ to 2 in., $9.50; 2¼ in., $10.35; 2½ in., $11.50; 3 in., $13; 3½ in., $17; 4 in., $21.50; 5 in., $45.

TOOL STEEL — Our prices remain: Colonial Black Diamond, 8c. to 9c.; Sanderson's, 8c. to 45c., according to grade; Jessop's, 13c.; "Air Hardening," 65c. per pound; Conqueror, 7½c.; Conqueror, high speed steel, 60c.; Jewitt's Diamond J., 6¾c. to 7c.; Jowitt's best, 11c. to 11½c.

COLD ROLLED SHAFTING—Present prices are: 3-16 inch to ¼ inch, $7.25; 5-16 inch to 11-32 inch, $6.20; ⅜ inch to 17-32 inch, $5.15; 9-16 inch to 47-64 inch, $4.45; ¾ inch to 17-16 inch, $4.10; 1½ inch to 3 inch, $3.75; 3¼ inch to 3 7-16 inch $3.92; 3¾ inch to 3 15-16 inch, $4.10; 4 inch to 4 7-16 inch, $4.45; 4½ inch to 4 15-16 inch, $4.80. This is equivalent to 30 per cent. off list.

GALVANIZED IRON Market strong, with no changes to report.

OLD MATERIAL — We still quote: Heavy copper, 20c. per pound; light copper, 17c. per pound; heavy red brass, 17c. per pound; heavy yellow brass, 14c. per pound; light brass, 10 to 10½c. per pound; tea lead, 4½c. per pound; heavy lead, 4½c. per pound; scrap zinc, 4½c. per pound; No. 1 wrought, $17 per ton; No. 2 wrought, $6 per ton; No. 1 machinery, $18 per ton; stove plate, $13 per ton; old rubber, 10½c. per pound; mixed rags, 1 to 1¼c. per pound.

Toronto Metal Markets

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, Feb 22, 1907

Transportation problems are uppermost at present, complaints of long delays in receiving shipments being heard on every hand. The railways seem to be utterly unable to handle the large business under way and in consequence of cars being lost between tidewater and Toronto some factories are forced to bank their fires. In one case seventy men will be idle if shipments of pig iron are not hurried along.

During the past week a temporary weakness has developed in the iron markets across the line and some have been quick to predict that the "great divide" had been passed and prices of iron, like water, would run down hill from now on. It is said that some buyers have asked producers to delay shipments in view of the weakness. Locally, however, little stock is taken in these bearish reports, they being looked upon as the work of speculators. Stocks of pig iron in Ontario are far from satisfactory and even though prices declined somewhat furnaces would keep busy for months ahead on present orders. It is not to be expected, of course, that prices will keep up to their present notch for all time, and a decline must come some time, but with quotations $10 higher than those ruling a year or so ago a drop of a dollar or two would not affect the market much.

Business done during February has been fully double that of a year ago and there has been no let-up whatever from

January. Jobbers, therefore, are looking for an even greater volume of trade to be done when navigation opens up.

Copper continues to be a feature with stocks in no better shape than for some time past. Early deliveries are difficult to obtain. Tin continues strong and lead unchanged.

PIG IRON—Speculation has demoralized outside markets this week, but no weakness has been manifested locally. Buying continues active and deliveries slow. Hamilton, Midland, and Londonderry are of the market, and Radnor is quoted at $33 at furnace. Middlesborough No. 1 is quoted at $24.50, and Summerlee No. 1 at $26 f.o.b., Toronto.

BAR IRON—The market is firm and continues active. Stocks are improving slightly. Steady prices rule and we still quote: $2.30 f.o.b., Toronto, with 2 per cent. discount.

TIN—Demand continues very active with prices steady at 45c. and charcoal plates, base, at $6.50.

SHEETS AND PLATES—In the face of light stocks a brisk demand exists for Canada plates, and black sheets. Galvanized sheets are in good demand.

BRASS—Conditions are not improving and stocks continue light. We still quote 30 cents per pound on sheets.

COPPER—Prices keep stiff with stocks at a minimum. Deliveries for present use are exceedingly hard to get. We now quote: Ingot copper, $26.50 per 100 lbs., and sheet copper, $35 per 100 lbs.

LEAD—Buying is fair with prices unchanged. We quote: $4.50 for imported pig and $5.75 to $6 for bar lead. For sheet lead $7 is asked.

ZINC SPELTER—business is fairly active for this season with stocks light. We quote 7½c per lb. for foreign and 7c. per lb. for domestic. Sheet zinc is quoted at 8 1-4c. in casks, and 8 1-2c. in part casks.

BOILER PLATES AND TUBES—We still quote: Plates, per 100 lbs., ¼ in. to ½ in., $2.50; heads, per 100 lbs., $2.75; tank plates, 3-16 in., $2.65; tubes, per 100 feet, 1¼ in., $8.50; 2, $9; 2 1-2, $11.30; 3, $12.50; 3 1-2, $16; 4, $20.00. Terms, 2 per cent. off.

ANTIMONY—The market continues unchanged at 27c. per pound.

OLD MATERIAL—Iron is lower, but rubbers have advanced. Buying prices are: Heavy copper and wire, 20c. per lb.; light copper, 18c per lb.; heavy red brass, 18c per lb.; heavy yellow brass, 15c. per lb.; light brass, 11c. per lb.; tea lead, $4.25 per 100 lbs.; heavy lead, $4.40 per 100 lbs.; scrap zinc, 4½c. per lb.; No. 1 wrought iron, $14; No. 2 wrought, $8; machinery cast scrap, $19.50; stove plate, $12; malleable and steel, $9; old rubbers, 11c. per pound; country mixed rags, $1 to $1.25 per 100 lbs., according to quality.

COAL — The shortage of hard coal continues. We still quote:—Standard Hocking soft coal, f.o.b. at mines, lump, $1.50, ½ inch, $1.40; run of mine, $1.30; nut, $1.25; N. & S., $1; P. & S. 85c. Youghiogheny soft coal in cars, border at bridges: lump, $2.60; ¾ inch, $2.50; mine run, $2.40; slack, $2.15.

London, Eng., Metal Markets

From Metal Market Report, Feb 22, 1907.

Cleveland warrants are quoted at 55s. 10½d., and Glasgow standard warrants at 55s., making price as compared with last week unchanged on Cleveland warrants and Glasgow standard warrants.

TIN—Spot tin opened quiet at £191 15s., futures at £191, and after sales of 150 tons of spot, and 210 tons of futures, closed easy at £191 5s. for spot, £190 10s. for futures, making price compared with last week, £1 5s. lower on spot and 7s. 6d. lower on futures.

COPPER—Spot copper opened steady at £107 17s. 6d., futures £108 17s. 6d., and after sales of 150 tons of spot and 450 tons of futures, closed quiet at £107 17s. 6d. for spot, and £109 for futures, making price compared with last week, 17s. 6d. higher on spot and £1 17s. 6d. higher on futures.

LEAD—The market closed at £19 10s., making price as compared with last unchanged.

The market closed at £26 2s. 6d., making price as compared with last week, 2s. 6d. higher.

United States Metal Markets

From the Iron Age, Feb. 21, 1907.

The pig iron markets throughout the country have been quiet and in some quarters show some easing off.

The English market has receded to 54½ shillings, but there is no new buying for shipment by consumers. It is considered probable, however, that one interest may arrange for March and April shipments to this country under special circumstances.

We note sales to a leading interest of [illegible] by eastern Pennsylvania and New York furnaces, partly for shipment to Pittsburg, at prices which are lower than those recently prevailing. There is more business pending from other quarters in low phosphorus iron.

Reports from the finished iron and steel trade are uniformly cheerful and in some branches, notably in bars and in plates, the pressure for deliveries is enormous.

The manufacturers of cast iron pipe report a continuance of heavy business at a comparatively early period of the year. A Pittsburg concern which controls a number of waterworks in different parts of the country is in the market for 7,900 tons, partly for new construction and partly for season requirements of existing plants.

From the Iron Trade Review, Feb. 21, 1907.

Ten days remain of the one month's continuance of the present freight rate between Birmingham and the Ohio river granted by southern railroads. At the time the postponement was announced, it was intimated that a united effort would be made during the following thirty days to move the iron that had accumulated on furnace yards. In the three weeks that have elapsed there has been no distribution commensurate with the gravity of the situation. Stocks on furnace yards in the Birmingham district are greater to-day than they were at the opening of the month. The effort of the railroads, if any was made, has been a signal failure. Despite frantic appeals of officials of all the furnaces in the affected district, the supply of cars has been wholly inadequate. Furnaces are not moving their daily output, much less the accumulated tonnage. For ten days past one producer with a stock of 30,000 tons and a daily output of 1,150 tons reports that it has had an average of only one car a day from all the railroads in the district. Another large maker states that for three weeks it has not received a single car from the largest trunk line in the south. Others report that the only cars received were those consigned to them loaded with freight. These are not isolated instances, but in one form or another, the car shortage is the substance of every report from the south. Under the circumstances it is futile to expect early relief from the present congestion.

The demand for finished material is unabated. Daily sales continually exceed the daily output. Specifications on mills are the heaviest in history; but instead of overtaking them, producers are steadily falling further behind. Jobbers are having trouble in replenishing their stocks, and because of the uncertainty of mill shipments, they are forced to the recourse of picking up odd lots wherever obtainable. The only price change is in boiler tubes which have been placed to move the market, either upward or downward. Scrap is without improvement and prices are lower.

After an absence of many months from the market, the United States Steel Corporation has placed an order aggregating 9,300 tons of low phosphorus pig iron for delivery in June and August. The purchase is not of great importance, but is significant as showing that the corporation stocks are needed for ordinary grades and cannot be spared to make the low phosphorous iron which is used in the manufacturing of armour plate.

N.S. Hardware Trade News

Halifax, N.S., Feb. 19.

Just at the present time the hardware trade in the province is a little on the quiet side. The jobbers in Halifax are now busy placing their shelf goods and marking them. The prospects for a big spring trade are excellent, and some small orders are already coming in. The lumber promises to reap a harvest this season and this will be of immense benefit to the trade. Prices on all lines particularly staples, have been advanced. Among the most notable is a big increase in hand wood planes. Lines that formerly sold for 95c. are now marked $1.15, and those that sold for 75c. last year are now $1. The manufacturers have increased the price of padlocks 20 per cent. The manufacturers of nails have also added 5c. to the list, bringing the price up to $2.50 per keg. So far the jobbers have made no change. The nail situation is the cause of considerable comment among the trade. The Elder-Dempster line steamer Dahomey, which arrived on Saturday last from Vera Cruz and Mexican ports, brought

a big cargo, which included five thousand bales of sisal, some of which is for the Consumers' Cordage Co., and the rest for London and Liverpool and points in Quebec. The steamer also brought one hundred tons of bitumen for London.

* * *

Hugh Sutherland, of New Glasgow, is interested in a large tin area in Lunenburg. There is a large deposit of ore there, and prosperity has been going on for over a score of years. The assays of ore go 11.12 per cent., which is counted very good. Mr. Sutherland is showing a wonderful rock crystal of some twenty-five pounds, perfect hexagon in shape. A monster one weighing 150 pounds was sent to the provincial museum at Halifax. These were found embedded in a very fine deposit of china-clay as white as chalk and containing no grit, in the tin area in Lunenburg.

* * *

It is reported that Messrs. Rhodes, Curry & Co. are about to start a nail mill in Amherst. So far there are only rumors in circulation, but it would not be surprising if they took definite shape.

* * *

The Department of Railways and Canals has just awarded the contract for the car repair shops and planing mill in connection with the new round-house at Halifax to Rhodes, Curry & Co., of Amherst. The firm's tender was the lowest, and the price is about $80,000. M. E. Keefe, of Halifax, has the contract for the round-house.

* * *

The employes of the hardware firm of William Stairs, Son, & Morrow had a most enjoyable sleigh drive last week. Seated in a sleigh drawn by four horses the party drove about the city, through Dutch village, and then proceeded to Popple's hotel, on the Herring Cone road. During the afternoon all kinds of games, dancing and singing were indulged in. At seven o'clock the party sat down and did full justice to a bountiful repast prepared by Host Popple in grand style. There were no toasts, the men being all temperate. After speeches by William J. Stairs and Captain Douglas and a few others, the games and singing were continued. The party reached the city shortly before midnight, after having one of the best sleigh drives for years.

B.C. Hardware Trade News

Vancouver, B.C., Feb. 15, 1907.

The construction work now being carried on in the southern interim of B.C. by the Great Northern Railway is being pushed rapidly, steel being laid to Oro and by the end of the month it is expected that it will reach Keremeos, the centre of the rich agricultural district of the Similkameen. With rail transpart that far, the question of cost of supplies will be much simplified. The contractors had to team every pound of supplies so far over mountain trails that it was a losing proposition. When the rails reach Keremeos the whole valley as far as Princeton will be reached at moderate cost for transport, and construction will be just that much accelerated.

The final stages of the line from Princeton, across Hope Mountains to the Fraser valley, and so to the coast are to be definitely decided on this year and the last link in the short line from the coast to the interior will then be proceeded with. From Cloverdale the Fraser valley section is being pushed eastward up the Fraser valley to the Hope Mountains. At Vancouver, the V. W. & Y. Railway's plans are said to include a high level bridge across Burrard Inlet, at the Second Narrows, just east of the city boundary, thus giving rail access to North Vancouver. That line put in, the construction to the northern interior of the province is to go on, a route by Howe Sound and thence across the Pemberton Meadows and Lillooet to northern Cariboo, being the general line as foreshadowed by the railway people.

* * *

Other coast railway construction is being looked for, pricipally on Vancouver Island, where the C.P.R. has inaugurated vast plans for development of the princely domain which has heretofore lain untouched. The extension of the E. & N. Railway north from Nanaimo to the northern part of the island with a branch to Alberni, on the west coast, or rather at the head of Alberni Canal, which is an inlet nearly dividing the island and running in from the west coast, the clearing and opening for settlement of large areas of the E. & N. Railway land grant, and the development of the mining and timber resources of the island are among the items on the plans of the C.P.R. and to better further these plans the company has recently promoted A. Marpole, general superintendent, to the position of chief executive in the west, with headquarters at Vancouver. The island improvements will be largely under his care.

* * *

Activity continues in the movement toward Prince Rupert, the G.T.P.'s northern terminal. Several parties are now organized to leave this month for the new city, to be in on the ground floor. The reported commencement of construction in the B.C. portions of the new railway has had a marked influence on the movement north. The coast cities are looking to a great trade to spring up from which they shall benefit during the construction days of the new town and of the railway from the coast end.

* * *

The British steamer Trafalgar which is loading at Hastings saw mill, a part cargo for Australia brought half a cargo of California red wood, which also goes to Australia.

The Holt line steamer Titan, due about the end of February from British ports, has about 2,500 tons of general cargo for B.C. ports. The next steamer of this service to arrive will be the Cyclops, which left Liverpool in January and is due in March. She will have over 3,00 tons of cargo, mainly heavy metals and cement.

* * *

In mining the advent of the Guggenheims, the great New York operators in the field on Vancouver Island, is expected to start quite a boom in copper gold properties, of which there are numbers close to the city of Victoria, in the south-western end of the island. These properties have never been actively developed, though so close to the capital. A bond has been given on a group of claims at Sooke, to the Guggenheims.

* * *

English miners ariving at Nanaimo tell of an expected arrival of large numbers of their co-workers from England. They say an influx of Chinese miners into British coal mines has begun, and will be a threatening menace to the white miners. Over 300 of these Orientals arrived the day the miners left Liverpool for B.C. It has just been announced that the C.P.R. has made a concession in rates third-class from England, making it $40 to British Columbia, as it now is to Calgary. Many skilled operatives and other British laborers are expected to take advantage of the reduction and come to this Province.

FIRE IN LEAD WORKS.

About four o'clock Friday afternoon, February 15th, fire broke out in the works of the Jas. Robertson Co., Montreal, which would have proven most disastrous had it not been for the effective work of the firemen. As it was, the damage amounted to about $60,000, covered by insurance.

The fire broke out in what is known as the central portion of the works, and the greatest damage in what is known as the shot tower and the first flat of the building through which the tower runs. At one time this tower, which reaches a height of about 140 feet, presented the appearance of an immense torch.

In the portion destroyed were the designs and patterns of the company, and the brass moulding works, together with warehouses in which were stored tin plate and enamelled ware.

The Robertson Company employ about 125 hands, forty of whom were in the building affected by the flames.

The shot tower was used for moulding shot by gravity, and constituted a grave danger, as at the top there was a huge caldron used for melting lead, which would hold about two tons of the molten metal. It was feared that this pot would break loose and fall on the firemen, but it was supported by steel beams and held its place.

It is not known what started the fire, but it originated in a part of the factory that was used as a warehouse, and from there worked its way to the shot tower.

There is Twenty Years of Experience in this Can

Doesn't this point the way for you? Stephen's Pure Paint has now a proven record of over twenty years' hard use, under many difficult conditions.

Every gallon is made with Manitoba Linseed Oil—properly aged—this increases not only the body, but also the wearing qualities of the paint.

MANITOBA HARDWARE AND METAL MARKETS

Market quotations corrected by telegraph up to 12 a.m. Friday, Feb. 22, 1907.)

Room 511, Union Bank Building, Office of HARDWARE AND METAL, Winnipeg, Man.

Normal weather conditions prevail once more in the west and there is now some approach at normal transportation conditions. The branch lines are all open again and dealers are getting delivery of long delayed shipments of freight. Except for an advance in petroleum market prices are unchanged.

LANTERNS.—Quotations are as follows: Cold blast, per dozen, $6.50; coppered, $8.50; dash, $8.50.

WIRE — Prices are as follows: Barbed wire, 100 lbs., $3.22½; plain galvanized, 6, 7 and 8, $3.70; No. 9, $3.25; No. 10, $3.70; No. 11, $3.80; No. 12, $3.45; No. 13, $3.55; No. 14, $4.00; No. 15, $4.25; No. 16, $4.40; plain twist, $3.45; staples, $3.50; oiled annealed wire, 10, $2.96; 11, $3.02; 12, $3.10; 13, $3.20; 14, $3.30; 15, $3.45. Annealed wires (unoiled) 10c. less; soft copper wire, base, 36c.; brass spring wire, base, 30c.

HORSESHOES — Quotations are as follows: Iron, No. 0 to No. 1, $4.65; No. 2 and larger, $4.40; snowshoes, No. 0 to No. 1, $4.90; No. 2 and larger, $4.65; steel, No. 0 to No. 1, $5; No. 2 and larger, $4.75.

HORSENAILS — Lists and discounts are quoted as follows: Capewell brand, quotations on application. No. 10, 20c.; No. 9, 22c.; No. 8, 24c.; No. 7, 26c.; No. 6, 28c.; No. 5, 32c.; No. 4, 40c., per lb. Discounts: "C" brand, 40, 10 and 7½ per cent., "M" brand and other brands, 55 and 60 per cent. Add 15c. per box.

WIRE NAILS—Quoted now at $2.85 f.o.b. Winnipeg, and $2.40 f.o.b. Fort William.

CUT NAILS—Now $2.90 per keg.

PRESSED SPIKES — Prices are: ⅜ x 5 and 6, $4.75; 5-6 x 5, 6 and, 7, $4.40; ⅜ x 6, 7 and 8, $4.25; 7-16 x 7 and 9, $4.15; ½ x 8, 9, 10 and 12, $4.05; ⅝ x 10 and 12, $3.90. All other lengths 25c. extra net.

SCREWS—Discounts are as follows: Flat head, iron, bright, 85 and 10 p.c.; round head, iron, 80 p.c.; flat head, brass, 75 and 10 p.c.; round head, brass 70 and 10 p.c.; coach, 70 p.c.

NUTS AND BOLTS— Discounts are: Bolts, carriage, ⅜ or smaller, 60 and 5; bolts, carriage, 7-16 and up, 55; bolts, machine, ⅜ and under, 55 and 5; bolts, machine, 7-16 and over, 55; bolts, tire, 65; bolt ends, 55; sleigh shoe bolts, 65 and 10; machine screws, 70; plough bolts, 55; square nuts, case lots, 3; square nuts, small lots, 2½; hex nuts, case lots, 3; hex nuts, smaller lots, 2½ p.c.

RIVETS—Iron, discounts, 60 and 10 p.c.; copper, No. 7, 43c.; No. 8, 43½c.; No. 9, 45½c.; copper, No. 10, 47c.; copper, No. 12, 50½c.; assorted, No. 8, 44½c., and No. 10, 48c.

COIL CHAIN—Quotations now are: ¼ in., $7.00; 5-16, $5.35; ⅜, $4.75; 7-16, $4.50; ½, $4.25; 9-16, $4.20; ⅝, $4.25; ¾, $4.10.

SHOVELS—List has advanced $1 per dozen on all spades, shovels and scoops.

HARVEST TOOLS — Discounts continue at 60 and 5 per cent.

AXE HANDLES—Quoted as follows: Turned, s.g. hickory, doz., $3.15; No. 1, $1.90; No. 2, $1.60; octagon, extra, $2.30; No. 1, $1.60.

AXES.—Quotations are: Bench axes, 40; broad axes, 25 p.c. dis. off list; Royal Oak, per dozen, $6.25; Maple Leaf, $8.25; Model, $8.50; Black Prince, $7.25; Black Diamond, $9.25; Standard flint edge, $8.75; Copper King, $8.25; Columbian, $9.50; handled axes, North Star, $7.75; Black Prince, $9.25; Standard flint edge, $10.75; Copper King, $11 per dozen.

BUTTS—Wrought iron, 65 and 5 p.c.

CHURNS—Discounts continue at 45 and 5 per cent.; but the list has been advanced and is now as follows: No. 0, $9; No. 1, $9; No. 2, $10; No. 3, $11; No. 4, $13; No. 5, $16.

CHISELS—70 p.c. off list prices.

AUGER BITS—"Irwin" bits, 47½ per cent., and other lines 70 per cent.

BLOCKS—Discount on steel blocks is 35 p.c. off list prices; on wood, 55 p.c.

FITTINGS—Discounts continue as follows: Wrought couplings, 60; nipples, 65 and 10; T's and elbows, 10; malleable bushings, 50; malleable unions, 55 p.c.

GRINDSTONES—1½c. per lb.

FORK HANDLES—Discount is 40 p.c.

HINGES—The discount on light "T" and strap hinges is 65 p.c.

HOOKS—Prices are quoted as follows: Brush hooks, heavy, per doz., $8.75; grass hooks, $1.70.

STOVE PIPES—Quotations are as follows: 6-inch, per 100 feet length, $9; 7-inch, $9.75.

DRAW KNIVES—70 per cent.

RULES—Discount is 50 per cent.

WASHERS—On small quantities discount is 35 p.c.; on full boxes 40 p.c.

TINWARE, ETC.—Quoted as follows: Pressed, retinned, 70 and 10; pressed, plain, 75 and 2½; pieced, 30; japanned ware, 37½; enamelled ware, Famous, 50; Imperial, 50 and 10; Imperial, one coat, 60; Premier, 50; Colonial, 50 and 10; Royal, 60; Victoria, 45; white 45; Diamond, 50; Granite, 60 p.c.

GALVANIZED WARE—Pails, 37½ per cent.; other galvanized lines 30 per cent.

CORDAGE—We quote: Rope, sisal, 7-16 and larger, basis, $11.25; Manila, 7-16 and larger, basis, $16.25; Lathyarn, $11.25; cotton rope, per lb., 21c.

SOLDER—Quoted at 27c. per pound. Block tin is quoted at 45c. per pound.

VISES — "Peter Wright," 30 to 34, 14½c.; 35 to 39, 14c.; 48 and larger, 13½c. per lb.

Anvils—"Peter Wright," 11c. per lb. crow bars, 4c. per lb.

POWER HORSE CLIPPERS—"1902" power clipper, $12; "Twentieth Cen-

SUPERB EMPIRE

The Perfect Cooker

We draw the attention of the **Western Trade** to the Superb Empire Planished Steel Range. The oven door is not only braced but also spring balanced. A lever is attached to the front key-plate to raise it as desired, and contrived also to hold it up if necessary. The Superb throughout is substantial, its nickel dress alone making it a ready seller, besides, it is made by a Western stove factory for Western people only.

HARDWARE TRADE GOSSIP

Ontario.

N. B. Howden, hardware merchant, Watford, died last week.

C. W. Hancock and Co., hardware merchants, Wallaceburg, have advertised their dissolution of partnership.

D. Brocklebank, of D. Brocklebank & Son, Arthur, visited Toronto during the week and took in the horse show.

Mr. Ketley, hardware merchant, of Welland was a visitor in Toronto last week calling on the hardware jobbers.

J. H. Vandusen, of the firm of McDonald and Vandusen, hardware merchants, Tara, died at his home last week.

Harvey Lewis Hymmen, son of Peter Hymmen, hardware merchant, Berlin, was married to Miss Dorothy Boehmer at Berlin, on Wednesday, the 20th inst.

J. J. Foote, London, sales manager of the McClary Manufacturing Co., spent Wednesday in Toronto attending the Stove Manufacturers' monthly meeting.

W. Boyle, of Boyle & Son, Napanee, has not been very well of late and has gone on a visit to friends in Buffalo. Mrs. Boyle accompanies him on the trip.

Benjamin Moore, of New York, the discoverer of "Muresco," has been in Toronto this week looking over the new plant at Toronto Junction, of Benjamin Moore & Co.

Mr. Jamieson, jr., of Bowes, Jamieson Stove Works, Hamilton, was in Toronto on Wednesday, attending the monthly meeting of the Stove Manufacturers' Association.

Madole & Wilson, hardware merchants, Napanee, have desolved partnership. M. S. Madole continues the business. Mr. Wilson intends going to the Northwest very shortly.

J. T. Sheridan, president of the Pease Foundry Co., Toronto, has gone to Naples, Italy, for a six weeks' holiday. Mr. Sheridan's friends expect that his health will be much restored by this pleasant remedy.

Arthur Durnan, city traveler for Rice, Lewis and Son, Toronto, was presented last week with a silver tea service, on the eve of his marriage. Chas. Elliston made the presentation on behalf of the employes of the company.

W. W. Near, general manager; Mr. Rooke, treasurer; and Messrs. Ogg, Mitchell and Taylor, of the bookkeeping staff of the Page-Hersey Iron, Tube and Lead Company, are removing from Guelph to Toronto, owing to the transfer of the firm's headquarters to the Temple Building, Toronto.

Charles Stewart, of the James Stewart Manufacturing Company, Woodstock; John T. Tilden, of the Gurney-Tilden Company, Hamilton; Wm. Burrows, jr., of Burrows, Stewart & Milne, Hamilton; and Stanley Robinson, of the D. More Company, Hamilton, were visitors in Toronto on Wednesday attending the monthly meeting of the Stove Manufacturers' Association.

Ross Mackinnon, who travels for the Pease Foundry Co., Toronto, received a pleasant surprise on Friday the 15th inst., when the other men of the traveling and office staff presented him with a handsome cut glass bowl. Mr. Mackinnon is about to assist in annexing the United States by taking charge of a fair daughter of Raleigh, N.C., whom he has found willing to halve his sorrows and double his joys for an indefinite period.

Gerry Bros., Fort William who have affiliated stores at Brussels and Blyth, Ont., and at Indian Head, Sask., are earnest believers in the future of their town, which, they say, has splendid prospects for extensive building developments during 1907. They draw attention to an error in a recent issue in which Port Arthur was given credit for a new grain elevator which is to be erected at the Grand Trunk Pacific terminal point—Fort William. J. T. Armstrong, manager of the Northern Engineering & Supply Company has also written pointing ou that Barnett-McQueen, the contractors for the new elevator, live at Fort William and the work will be done in that town.

M. W. Connor & Son., Madoc, have been successful in winning three prizes offered by the J. Stevens, Arms & Tool Co., Chicopee Falls, Mass., for the best written and most striking advertisement, winning the following prizes: 1 double barrel hammer shotgun, 1 44 ideal rifle, 1 115 single barrel shotgun. It is exceedingly creditable to our Canadian hardware firms that they should be so successful against keen competition from all over the United States and Canada. Messrs. Connor & Son appear to be all alive from the keen northern air of Madoc, which they say is impregnated with molecules of iron from the Marmoras, which causes it to act as a tonic and sharpen the wits of the inhabitants there abouts.

Quebec.

The Montreal Hardware Co., Montreail, was slightly damaged by fire on the 19th inst.

Dwight Brainerd, of Hamilton Powder Co., Montreal, is going to England shortly on business.

Mr. Tongas, head of P. D. Dods & Co., paint manufacturers, Montreal, has been laid up for the past week.

F. O. Lewis, president of Lewis Bros., Montreal, accompanied by Mrs. Lewis, sailed for England on the 22nd inst.

The board of directors of the Northern Electric and Manufacturing Co., of Montreal, has been increased from seven to nine.

Geo. Edwards, manager of Henderson & Potts, Montreal, has been very sick for several months, and is going south for his health.

A. Macfarlane, manufacturers' agent, Montreal, spent a portion of the week in Quebec. He said that business was flourishing in the ancient capital.

J. B. Barduas, St. Charles, Richelieu, was in Montreal last week on business.

J. E. Majean, L'Epiphanie, was in Montreal this week buying goods.

E. G. M. Cape, who for some time past has been connected with C. E. Deakin, general contractor, Montreal, has left to go in business for himself.

J. R. Baxter, of Baxter, Paterson & Co., Montreal, called on the trade in St. Hyacinthe and other Quebec towns this week and reports business booming.

S. H. Lewis and W. G. Hamilton, of the eastern traveling staff of the Canada Paint Co., were in Montreal for a few days this week renewing their samples.

M. Johnson, formerly in charge of the sample room of Lewis Bros., Montreal, has severed his connection with the firm, in order to seek his fortune in the Northwest.

F. Wilkinson, manager of B. and S. H. Thompson & Co., hardware and metal brokers, Montreal, is going to Europe shortly on business. He will remain there about five weeks.

Col. Cole, representing M. Hartley Co., of New York, is in Montreal at present. Col. Cole, who is a great man for finding bull's-eyes with a rifle, is taking a few crack shots at the trade.

J. M. H. Robertson and J. A. Robertson, of the James Robertson Company, Montreal, returned last week from Baltimore, where they had been paying their annual pilgrimage to the headquarters of the firm in the United States.

J. W. Harris, general contractor; F. C. Gariviere, hardware merchant, and Alex. Prudhomme, hardware merchant, of Montreal, were added to the council membership of the Chambre de Commerce, at the general meeting held on Feb. 14, 1907.

Maritime.

A. F. Armstrong, of Dimock & Armstrong, hardware merchants, Windsor, N.S., was re-elected mayor of that city in the elections in Nova Scotia a fortnight ago.

H. F. Cohoon, of Bent & Cohoon, North Sydney, C.B., an old subscriber to Hardware and Metal, is at present enjoying a holiday tour in England. He favored our London office with a call the morning he arrived, and seemed pleased to see the familiar buff cover so many miles away from home. He is to return to Canada by the Tunisian on February 22nd.

Western.

John Hanbury, president of the new Hanbury Hardware Co., of Brandon, was in Winnipeg last week on business.

O. Landen and C. A. Whiting, hardware merchants, Winnipeg, will hereafter be known as the Whiting-Hardware Company.

The hardware store belonging to the estate of Edward Crouter, Gladstone, Man., has been sold to W. H. Squair, of that place.

James Stepler, of Carveth & Stepler, hardware merchants, Fielding, Sask., is in Winnipeg consulting a physician, being threatened with appendicitis.

T. L. Waldon, of the Marchall-Wells Hardware Co., has returned to business after an extended trip in the east. The Marchall-Wells Co. expect to move into their new warehouse about the first of the month.

John Isbister, of Saskatoon, was one of the enthusiastic devotees of the "roarin' game" during the Winnipeg Bonspiel, but he found time during his stay of about ten days in the city t look up his friends in the hardware and heating trade.

W. G. Jones, treasurer of the Pease Foundry Co., Toronto, is registered at the Royal Alexandra hotel, Winnipeg, this week. Mr. Jones has returned from a business trip in the western provinces and evidently found traveling this winter hard on his health as he is confined to his room with a severe cold.

THE "HAYES" PATENT STEEL LATH

Everybody knows that Metallic Lathing is better than wood

Most people know—do you? That of all Metallic Lathing, "HAYES" PATENT gives best results. It requires less mortar, can be applied more quickly and easily, and has greater rigidity than others.

It holds the mortar firmly, is fire, water and vermin-proof, and gives enduring satisfaction. These are some of the reasons why practical builders everywhere commend it.

Let us give you further information. Actual tests and comparisons have proved all these claims.

THE PAGE WIRE FENCE COMPANY, LIMITED. Walkerville, Toronto, Montreal, St. John, Winnipeg

FOUNDRY AND METAL INDUSTRIES

The Lake Superior Corporation has obtained the contract to supply 65,000 tons of rails to the Temiskaming and Northern Ontario Railway.

The North American Refining and Smelting Company will likely erect their smelter in Thorold, instead of St. Catharines, as at first intended.

The Lake Superior Corporation steel rail mill made a new high record in the month of January, turning out 19,285 tons, the previous high record being 10,800 tons.

The last year has been a very prosperous one for the Lake Superior iron region, as the output approximates 38,000,000 tons of ore, which is far greater than any previous one in the history of that district.

The total amount paid to date in iron and steel bounties in Canada is $8,814,833, of which $998,000 went to the Soo Company; $1,416,169 to the Hamilton companies; $151,095 to the Deseronto company; $1,369,158 to the Nova Scotia Steel Co., at Sydney, and $3,466,519 to the Dominion Steel Co.

The Nova Scotia Steel and Coal Company will carry out their original intention of erecting another furnace. Already orders have been received which far exceed the capacity of the plant, and in order to keep up with the increasing demand the company will have to enlarge their works by another furnace.

The Madison Williams foundry, which is the latest acquisition to Lindsay's industries, is now ready for business. A complete equipment of machinery and patterns and moulding apparatus is in place. Besides a general foundry business, the company will specialize on water-wheels. Pulleys, beltings and tie cutting machines will also be manufac-

JONES BROS. NEW PLANT.

Jones Bros., Bracondale, Ont., manufacturers of stoves linings, fittings, etc., who were burnt out a short time ago, have almost completed the building of a new plant. The kiln shed is 37x33 feet, covered with sheet iron. The machine shop will be 115x28 feet, one story in height. They expect to be ready for business again by April 1.

MANITOBA ROLLING MILLS.

The United States Horse Shoe Company, Erie, Pa., which was recently incorporated as the Manitoba Rolling Mill Company, with a capital of $100,000, and will operate the Kirkwood Rolling Mills, at Winnipeg, Man., have the works now equipped with one 9-in. guide mill, with five stands of housings, one 16-in. bar mill, with three stands of housings, and the necessary heating furnaces, engines, shears, etc. It is the intention to materially enlarge the plant by adding a number of busheling furnaces, squeezer, shears, railroad spike machines and horse shoe machines, and engage in the manufacture of bar iron, railroad spikes and horse shoes, adding other commodities as trade conditions warrant. Contracts have already been placed for the additional equipment, and the company expects to have the plant in active operation within the next four months. T. M. Kirkwood, Toronto, is vice-president.

Throw on the Switch!

A SHERWIN-WILLIAMS Agent has tremendous energy at his disposal. He has only to "throw on the switch" to secure the power that will make sales, develop possibilities and generated overcome competition. This power is vertising for him in the Sherwin-Williams Ad paigns are Department. Special features and campaigns are being constantly planned to push his business.

But advertising power is only one of the advantages the S-W. Agent has. The strongest line of paints and varnishes in the world is another. Write us today and let us tell you about our splendid proposition.

BUILDING AND INDUSTRIAL NEWS

HARDWARE AND METAL would be pleased to receive from any authoritative source building and industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

A permit is to be taken out by George Mannel for a warehouse at Edmonton, to cost $2,690.

A new hotel will be built on the corner of York and Front streets, Toronto, by G. Percival, Toronto.

An addition is to be made to the Sylvester Feed Co.'s block on Yates St., Victoria. It will cost about $6,000.

The Corundum Wheel Company, of Hamilton, have taken out a permit for an addition to their factory to cost $1,000.

The Hamilton Incubator Company have secured a permit for the erection of a brick factory in Hamilton, at the cost of $6,000.

James Woods, of the Woods Company, manufacturers of lumberman's supplies, Ottawa, will erect a $200,000 factory at Winnipeg.

Kurze and McLean Company have procured the lease of a factory in Stratford, and will go into the manufacture of acetylene gas plants.

Rhodes, Curry & Co., of Amherst, N.S., have been awarded the contract for the new round-house at Halifax The price is about $80,000.

Building permits have been taken out by Fred Perkins of Edmonton for the erection of three houses on the corner of Seventh and Victoria Sts.

The Bennett Theatrical Enterprise Company intend erecting a factory in London, Ont., for the manufacture of films for moving picture machines.

A. M. Orpen has bought a block of land in the Avenue Road district, Toronto, and may spend this spring $100,000 in the erection of new houses.

The Grand Trunk Pacific Company has called for tenders at Victoria, B.C., for the erection of a new hotel at Prince Rupert, costing in the neighborhood of $50,000.

The David Spencer Company will erect an eight-storey building in Vancouver, B.C., to be used for manufacturing purposes. The cost estimated at about $200,000.

The National Car Company, Toronto, have accepted the site of 5 acres offered by the town of Whitby, for their car works. Work will be begun on the new shops at once.

A new Y.M.C.A. building will be erected in Ottawa, containing 97 dormitories. It will be of steel construction and fireproof throughout, costing in the neighborhood of $200,000

The Nichols-Shepard Threshing Machines Company, of Battle Creek, Mich., will erect a warehouse in Regina. Regina headquarters will be a source of supply for 150 agents.

The Massey-Harris Company, of Brantford, are making extensive additions to their plant by building a 100-foot addition to their foundry, and also enlarging their blacksmith shop.

The Iron and Brass Manufacturing Company, of Weston, have now located in Chesley. A new building 300 feet long has been erected, and the company will employ 75 hands.

John Mann Son and Company, of Brantford, will establish a plant for the manufacture of sand lime brick in that city. The plant will have a capacity of 30,000 bricks per day.

A sawmill with a capacity of 40,000 feet a day will be erected by the B.C. Mills, Timber & Trading Co. in Burnaby Lake, B.C. The contract is let to Mitchell & Ferris, of Vancouver.

The Security Light Company, Toronto, has been incorporated, with a capital of $40,000, to manufacture gas, gasoline, etc. The provisional directors are, H. E. Pearce, A. Gate and T. Minton, Toronto.

A $110,000 hotel will be erected by E. J. Fader, of the Torpedo Touring and Tug Company, at New Westminster. The new building will be known as the Hotel Russel and is to be completed by October, 1907.

The Gamer Manufacturing Company, Chesley, Ont., has been incorporated with a capital of $50,000, to manufacture bedsteads, etc. The provisional directors include A. Gamer, A. Harrod and T. E. Devitt, Weston, Ont.

"Electro Metals, Limited," is the name of a New York concern which purposes to build and operate an electric ore-reducing plant in the Niagara Peninsula. English capital from New Castle, Eng., is largely interested.

At the annual meeting of the International Portland Cement Co., held in Ottawa this week, the shareholders approved the recommendation of the directors to double the capacity of the plant at Hull. At present it is turning out 2,000 barrels of cement per day.

The Wingold Stove Company, of Winnipeg, Man., has been incorporated with a capital of $40,000, to manufacture stoves, ranges, furnaces, machinery, wagons, carriages, bicycles, etc. The provisional directors are : E. B. Blanchard, O. Gensmer, R. Kello, Winnipeg, Man.

The Excelsior Constructing and Paving Company has been incorporated with a share capital of $30,000, to manufacture, deal and take contracts in cement and concrete works. The head office will be at Toronto, the provisional directors being J. G. Murphy, W. Mitchell, and O. Murphy, Toronto.

A shipbuilding company is to be formed at Kingston, with a site on the west side of the dry dock. The company will likely have a capital of $100,000. Already the companies existing here are full of business, and there is easily a field for increased and larger operations. The new company would be handy for repairing vessels that enter the dock.

Wm. Stones, Sons and Company has been incorporated with a share capital of $100,000, for the purpose of dealing in wool, hides, skins, greases, raw furs, salt, lime and cement. The head office will be at Brantford, the directors being, W. Stone, Sr., A. W. Stone, and J. F. Stone, of Woodstock; E. E. Thornton and P. S. Thornton, of Brantford.

Trussed Concrete Steel Company of Canada, has been incorporated with a share capital of $200,000, to manufacture materials used in connection with concrete reinforcement. The head office will be at Walkerville, the directors being G. Kahn, D. C. Raymond and L. Wiman, of Toronto.

One of the largest sawmills on the Pacific coast is to erected shortly at Vancouver. The contract for the machinery of the new plant has been let to the Prescott Co., of Menominee, and the contract is let to E. H. Heaps & Co. The new plant will have a capacity to handle logs ten feet in diameter and 110 feet long.

The Montreal Steel Works made a record showing in the fiscal year ending Dec. 31. The financial statement submitted at the annual meeting shows that the management has placed the company in a very strong position. Net earnings for the year amounted to $196,997, and after the payment of dividends on preferred stock there was earned over 20 per cent. on the common stock.

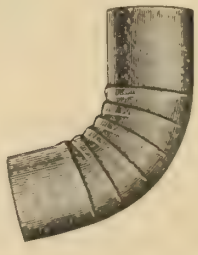
Montreal is to have a big new cotton mill. W. T. Whitehead, formerly of the Dominion Textile Company, and for many years identified with the cotton interests, has been successful in forming a company with a capital of $1,500,000, under the title of the Mount Royal Spinning Company. All the capital has been subscribed. The new mill, which will be situated either at Maissoneuve or on the Lachine Canal, will, it is expected, be in operation in eighteen months.

The Regina Board of Trade held its annual meeting on Feb. 7, electing the following officers: President, P. Cooper; vice-president, A. E. Whitmore; secretary-treasurer, A. E. Boyle; council, P. McAra, Jr., A. T. Hunter, J. M. Young, H. F. Mytton, J. F. Bole, A. E. Jarvis, D. J. Taylor, Robert Sinton and E. A. McCallum. Secretary Boyle is also publicity commissioner and his work during 1906 came in for much praise. For advertising during the year $1,669 was spent to make this thriving town more favorably known as a manufacturing, trade and residental centre.

WATER PURIFICATION.

When a marked industrial growth is taking place in a new country and many factors are exerting their influence either for or against the development of different localities or districts, it is very interesting to note the rivalry that often exists between various towns and cities, any of which may be selected as the site for a coming industry, says Canadian Machinery.

When a manufacturer happens to be looking for a location for his plant, he naturally desires to select a locality which will offer him the cheapest production, and he is more often influenced by such a consideration than by any artificial stimulus that may be offered. Therefore, after such questions as raw materials, market and transportation have been considered, the effect of local conditions on th cost of manufacture is of vital consequence.



As compared with the other natural advantages of a manufacturing region, the availability of a pure and cheap water supply is of the greatest economic importance. The amount of water that is used in some industries is hard to conceive when thinking of it in gallons and it is only when water has to be purchased that this factor is thought of at all, as there are many industries that would hardly exist at all if they were obliged to consider the water they use as an item of expense. However, it is these very manufacturers that are most seriously concerned with the quality of the water that they use, for a very small content of an injurious ingredient may seriously affect the quality of the material treated when such large quantities of water are used.

We have many localities in Canada where the water is relatively soft owing to the insolubility of the rocks and soil over which the streams and rivers pass. Yet these same waters often carry in solution ferruginous and oganic matters which are equally deleterious to many industries. On the other hand are many streams whose course lies mainly through a limestone region and these always contain what are commonly called hard waters.

In Eastern Canada the quality of our average river water is not considered bad from an industrial standpoint and this is one of the reasons that the manufacturer so often ignores the fact that even moderately bad water may do a lot of injury when used in sufficient quantity.

Boiler Feed Waters.

There is one use for water which nearly all manufacturers have in common and that is in the production of steam. In this operation a more or less impure water is continually coming into the boiler while nothing but pure water is passing out in the form of steam and it is common experience that what we consider to be pretty good water will soon leave behind considerable residue. The question to determine from the standpoint of boiler economy is, how bad will the water have to be before it will pay to treat it for the removal of the scale-forming solids prior to its use in steam production. This of course depends upon the relation between the loss sustained from using the natural water and the cost of purification, and whenever the matter is treated as being worth consideration the probabilities are always in favor of the methods of purifying.

OUR LETTER BOX

Correspondence on matters of interest to the hardware trade is solicited. Manufacturers, jobbers, retailers and others are urged to express their opinions on matters under discussion.

Any questions asked will be promptly answered. Do you want to buy anything, want some shelving, a good salesman, any special line of goods, anything at all connected with the hardware trade? Ask us. We'll supply the necessary information.

Electric Cooking Utensils.

K. Stairs, of William Stairs, Son & Morrow, Halifax, asks for the name of some firm manufacturing cooking utensils heated by electricity.

Answer—The Simplex Electric Company, Boston, Mass., and the Promethus Electric Supply Company, New York, make complete lines of these goods, the former being represented in Canada by the Canadian General Electric Company, Toronto, and the latter by the R. E. T. Pringle Company, Montreal. There are many other concerns making electric sad irons, etc., but for complete lines the above are the best known manufacturers.—Editor.

Car Seats.

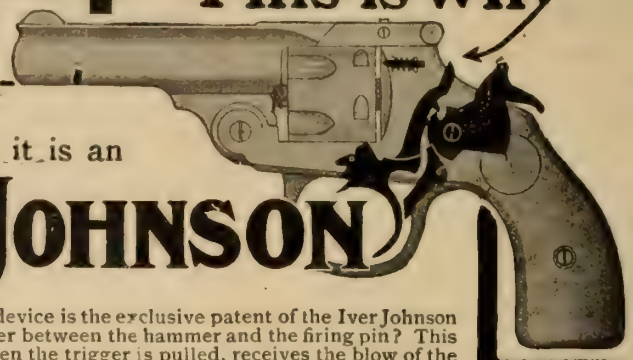
Gerry Bros., Fort William, ask for the names of manufacturers or jobbers of car seats in Canada.

Answer—The Crosson Car Company, Cobourg, the Ottawa Car Company, Ottawa, and the Toronto Railway Company, Toronto, all make some seats for their own use but the largest part of the seats used are imported, Wakefield Bros., Philadelphia, sending a large number of seats to Canada.—Editor.

Diamond Drills.

Arthur Cote, Verner, Ont., wants the address of a manufacturer of diamond drills.

Answer—The Canadian Rand Co., Sherbrooke, Que., are the only Canadian manufacturers.—Editor.



Series of Questions.

The Ontario Nickel Company, Worthington, Ont., inquire for the names of jobbers of carborundum in sheets ⅛-inch thick and about 18 inches long by 6 inches wide; also of Canadian makers of emery wheels and dealers in electrical supplies.

Answer—The Carborundum Company, Niagara Falls, N.Y., represented in Canada by Rice Lewis & Son, Toronto, and other jobbers, can make the sizes desired. It is not stocked by the jobbers referred to. The Canadian Corundum Company, Hamilton; Hart Emery Wheel Co., Hamilton, and the Prescott Emery Wheel Company, Prescott, make emery wheels. The Canadian General Electric Company, Toronto; Munderloh & Co., Montreal; John Millen & Co., Montreal; John Forman, Montreal; Sayer Electric Company, Montreal; R. E. T. Pringle & Co., Montreal, all handle electrical supplies.

Accidental Discharge Impossible—

This is why

True only if it is an

IVER JOHNSON

The positive safety device is the exclusive patent of the Iver Johnson Revolver. See the lever between the hammer and the firing pin? This lever is raised only when the trigger is pulled, receives the blow of the hammer and transmits it to the firing pin. That's why you can throw a loaded Iver Johnson against a stone wall without fear—no discharge can possibly follow, as the hammer never touches the firing pin. An Iver Johnson never fails when you pull the trigger and never "goes off" when you don't.

Iver Johnson Safety Automatic

Prices—Hammer $6.50, Hammerless $7.50.

Iver Johnsons are sold by dealers the world over, or direct from us if your dealer won't supply

Please send for descriptive catalogue, free upon request. It tells all about it.

Paint, Oil and Brush Trades

PAINT ECONOMY.

"It seems paradoxical to say that money spent for paint is money saved, yet with certain limitations it is true. Paint is used on structures for two purposes—to preserve and to beautify them. Beauty itself has a cash value, and as the materials protected by good paint are far more costly than the paint itself, it is evident on both counts that money invested in good paint is money saved.

The selection of good paint is not so difficult as it has been made to appear, but the painter's judgment on this point is not always unbiased. His natural impulse is to recommend the paint that affords him the largest profit. Probably the most economical type of paint is prepared or ready-mixed paint. It is manufactured on a large scale by rigid standards and formulas in thoroughly equipped factories under the supervision of experienced specialists. To obtain the best results such paint should be applied by a practical painter, who understands the adaptation of consistency to the condition of surface. The leading brands of paints of this class are so widely used that it is seldom difficult for the intending purchaser to obtain from his own neighborhood evidence of their quality and behavior in service.

There is room for choice here as elsewhere, of course, but the choice—excluding manifestly fraudulent products—depends far less upon the composition of the paint than upon the method of manufacture. The most highly approved materials insufficiently ground or improperly combined will not yield results comparable to those obtained from second-grade materials scientifically prepared. Paint on a building should be examined every spring and fall, and as soon as deterioration becomes apparent a fresh coat should be applied. In this way its efficiency and beauty may be maintained at a very low average annual expense almost indefinitely; and if a good ready-mixed paint is used this repainting should not ordinarily be necessary more than once in about five years. The important requisite is to apply the fresh coat before the old one begins to "let go." This is the practice with the successful trust estates, and will be found by any property-owner who adopts it to be most economical."

PREPARED PAINT BEST.

Many progressive painstaking painters have tried to make in their own shops better paint than straight lead and oil mixtures. They have failed because they have not the mill equipment necessary to paint making, and these failures are largely responsible for the painters' prejudice against combination paints. They are not disposed to acknowledge that the unsatisfactory results are due to the methods employed rather than to the pigments used. With the proper machinery, and necessary technical information, anyone can make good paint, but no painter, not even the largest contractor, consumes enough paint to warrent the expense of efficient laboratory and mill equipment.

If a white lead and oil job goes wrong, the painter blames the oil. If a prepared paint or combination lead job does not wear well, the painter blames the pigments. As a matter of fact, the painter is sometimes to blame. He applies the paint in a way, or at a time that makes dissatisfaction inevitble.

Paint is often applied immediately after a rain, or in the early morning after a heavy dew or frost. This explains why three sides of a building will sometimes be in a good condition, while on the one side, or a portion of it, the paint has peeled. Paint will not hold on a damp surafce. Natural moisture (as found in green lumber) is even worse than the dampness formed by rain, dew and frost; green lumber therefore should never be painted, nor should painting be resumed after a rain, nor in the morning before the surface has had ample time to dry.

Nothing will make paint hold on pitchy boards. The heat of the sun draws the pitch to the surface; the paint is loosened, and peeling results. Knots pitchy surfaces that are given a coat of good orange shellac will hold paint if there is not too much pitch.

MAKE YOUR WINDOWS SELL PAINT.

Do you use your windows to the best advantage? There is no better way of your keeping paint constantly before the public than by neat and attractive window displays, and no time more opportune than now.

A properly dressed window is a valuable advertising asset; not only is it a forceful advertisement, but it is invariably taken as an indication of the condition of the store and the stock.

At this season a well trimmed window is particularly effective. It is a great aid to your spring advertising campaign. Draw attention to paint as an aid to housecleaning at once and keep up the campaign for several weeks.

The Standard Paint Co., of Canada, are now thoroughly established in their new Montreal factory at Highlands suburb, and have a suite of well-equipped offices at room 119 Board of Trade building. They have a unique and novel method of advertising their Ruberoid and P & B brands of goods, one a roofing and flooring, and the other a waterproof preservative allied to paint. Tablets, with descriptive slips attached, showing a slanting shape of a roof with the exact article, Ruberoid, on it, are distributed, and serve as convincing arguments for salesmen.

IT IS NOT GOOD

MANUFACTURERS LONDON ENGLAND

An Important Announcement regarding "Anchor" and "English" Liquid House Paints.

FOR some time we have been supplying the trade with Paints put up under both brands, but for various reasons we find it advisable to sell hereafter only **"ENGLISH" LIQUID HOUSE PAINTS.** The two brands were identical in quality, the only White Lead used in their manufacture being Brandram's B. B. Genuine White Lead, the world's standard for close on to two centuries. So when we sell you **"ENGLISH" LIQUID HOUSE PAINTS** in place of "ANCHOR," you will know that you are getting the same Paints as you ordered under "ANCHOR," and we would ask you to get into the way of specifying **"ENGLISH"** in your orders in place of "ANCHOR." We would also ask you to tell your cnstomers that **"ANCHOR"** Liquid **House** Paints are now called **"ENGLISH,"** and so assist us to familiarize consumers with the name **"ENGLISH"** as the name of the leading brand of **LIQUID HOUSE PAINTS.**

We maintain the **"ANCHOR"** trade mark on all our other Specialties.

PAINT AND OIL MARKETS

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, February 22, 1907

Firmness characterizes the market this week, in all lines, but particularly in white lead, an article which is in pretty good demand, while stocks of dry in maintaining their quotations.

There is less cutting reported on all the staples than was formerly the case, indeed, with a brisk business, and a shortage of crude supplies, the manufacturers seem to have little difficulty in maintaining theit quotations.

Business remains good, and no advances are reported in any lines.

LINSEED OIL—Remains very firm. We still quote: Raw, 1 to 4 barrels, 55c.; 5 to 9 barrels, 54c.; boiled, 1 to 4 barrels, 58c.; 5 to 9 barrels, 57c.

TURPENTINE — No change in prices. Our quotations remain: Single barrel, 98c. per gal.; for smaller quantities than barrels, 5c. extra per gal. is charged. Standard gallon is 8.40 lbs., f.o.b. point of shipment, net 30 days.

GROUND WHITE LEAD — We still quote: Best brands, Government standard, $7.25 to $7.50; No. 1, $6.90 to $7.15; No. 2, $6.55 to $6.90; No. 3, $6.30 to $6.55, all f.o.b., Montreal.

DRY WHITE ZINC — Very firm. We still quote: V.M., Red Seal, 7½c. to 8c.; Red Seal, 7c. to 8c.; French V.M., 6c. to 7c.; Lehigh, 5c. to 6c.

White ZINC—Our quotations are: Pure, 8½c. to 9½c.; No. 1, 7c. to 8c.; No. 2, 5¾c. to 6¾c.

PUTTY—Our prices remain; Pure linseed oil, $1.75 to $1.85; bulk in bbls., $1.50; in 25-lb. irons, $1.80; in tins, $1.90; bladder putty in barrels, $1.75.

ORANGE MINERAL—The following prices still hold: Casks, 8c.; 100-lb. kegs, 8½c.

RED LEAD—The following quotations are firm: Genuine red lead, in casks, $6; in 100-lb. kegs, $6.25; in less quantities at the rate of $7 per 100 lbs.; No. 1 red lead, casks, $5.75; kegs, $6, and smaller quantities, $6.75.

PARIS GREEN—We revise our quotations: In barrels, about 600 lbs., 25½c. per lb.; in arsenic kegs, 250 lbs., 25¾c.; in 50-lb. drums, 26¼c.; in 25-lb. drums, 26¾c.; in 1-lb. packets, 100 lbs. in case, 27½c.; in 1-lb. packets, 50 lbs. in case, 27¾c.; in ½-lb. packets, 100 lbs. in case, 29¼c.; in 1-lb. tins, 28¼c. f.o.b. Montreal. Terms, three months net or 2 per cent. 30 days.

SHELLAC—Prices remain; Bleached, in bars or ground, 46c. per lb., f.o.b Eastern Canadian points; bone dry, 57c. per lb., f.o.b. Eastern Canadian points; T.N. orange, etc., 48c. per lb. f.o.b. New York.

SHELLAC VARNISH—Very firm. We still quote: Pure white, $2.90 to $2.95; pure orange, $2.70 to $2.75; No. 1 orange, $2.50 to $2.55.

MIXED PAINTS — No change in prices. We still quote; $1.20 to $1.50 per gallon.

PETROLEUM — (In barrels) — Our prices are: American prime white coal, 15½c. per gallon.; American water, 17c. per gallon; Pratt's Astral, 19½c. per gallon.

WINDOW GLASS—Prices remain firm. We still quote: First break, 50 feet, $1.85; second break, 50 feet, $1.95; first break, 100 feet, $3.20; second break, 100 feet, $3.40; third break, 100 feet, $3.95; fourth break, 100 feet, $4.15; fifth break, 100 feet, $4.40; sixth break, 100 feet, $4.95. Diamond Star: First break, 50 feet, $2.30; second break, 50 feet, $2.50; first break, 100 feet, $4.40; second break, $4.80; third break, 100 feet, $5.75; fourth break, 100 feet, $6.50; fifth break, 100 feet, $7.50; sixth break, 100 feet, $7.50; seventh break, 100 feet, $8; eight break, 100 feet, $9. Double Diamond: First break, 50 feet, $3.45; second break, 50 feet, $3.75; first break, 100 feet, $6.75; second break, 100 feet, $7.25; third break, 100 feet, $8.75; fourth break, 100 feet, $10; fifth break, 100 feet, $11.50; sixth break, 100 feet, $12.50; seventh break, 100 feet, $14; eighth break, 100 feet, $16.50; ninth break, 100 feet, $18; tenth break, 100 feet, $20; eleventh break, 100 feet, $24; twelfth break, 100 feet, $28.50. Discount on Diamond Star, 20 per cent.; on Double Diamond, 40 per cent.

TORONTO.

Office of HARDWARE AND METAL.
10 Front Street East,
Toronto Feb 22, 1907.

While very few orders are being taken at present for paint, orders which have been booked are being sent forward in fair quantities. The high prices of raw materials continue and manufacturers may have to advance their products again.

The following is an extract from the Savannah Naval Stores Review, on the causes of the high prices of turpentine: "So far this winter there have been but three or four days that could be called cold, and there has been an absence of rain equally noticeable. As a result of this state of the weather the turpentine farms have practically cleaned up everything in sight. The boxes, as one man remarked, have been "wiped dry, and everyone is looking for an almost total cessation of receipts at any time. The impression prevails in trade circles that the late receipts of the season of 1906-07 and the early receipts of 1907-08 will be noticeably small. As a result the feeling prevails that conditions are in favor of a continuance of high values, and that even better values than at present prevailing are not unlikely in both spirits, turpentine and lower grades of rosins. Buyers seem desirous to gather in stocks of

Ramsay's Paints

Can you hold up your pot of paint, when you offer it for sale, and honestly say you have the best? Everything is in the quality for future trade—for the man you want to come back. With Ramsay's Paints you get the best. We guarantee it, and you can give that confidently to your customer. With our aids to trade, you can secure business if you take advantage of what we offer. With our price, we believe we offer the highest grade at the lowest figure of any paint made to-day. Listen !

A. RAMSAY & SON COMPANY

tarps while there are any to be had, although they naturally do not like to run the market up at their own expense. Stocks are not heavy and as there are probably three months ahead during which the consumers must be fed from the stuff now in hand and the small lots to arrive there appears to be good basis for the bullish feeling that is beginning to show itself, and which may bring important developments at any time."

Linseed oil is firm at the 1c per gallon advance last week. White lead remains firm at the old price, and is meeting with good demand. No further advance is quoted on Paris green, which remains at 27¼c base price.

WHITE LEAD—Ex Toronto pure white, $7.40 ; No. 1, $6.65 ; No. 2, $6.25 ; No. 3, $5.90 ; No. 4, $5.65 in packages of 25 pounds and upwards : ½c. per pound extra will be charged for 12½ pound packages ; genuine dry white lead in casks, $7.

RED LEAD.—Genuine in casks of 500 lbs., $6 ; ditto, in kegs of 100 lbs., $6.50 ; No. 1 in casks of 500 lbs., $5.75 ; ditto, in kegs of 100 lbs., $6.25.

DRY WHITE ZINC.—In casks, 7½c.; in 100 lbs., 8c. No. 1, in casks 6½c. in 100 lbs., 7c. Ground in oil—In 25 lb. irons, 8c.; in 12½ lbs., 8½c.

SHELLAC VARNISH.—Pure orange in barrels, $2.70 ; white, $2.82½ per barrel ; No. 1 (orange) $2.50 ; gum shellac, bone dry, 63c. Toronto. T. N. (orange) 51c. net Toronto.

LINSEED OIL—Remains firm at the 1c advance and is selling very freely. We continue to quote: Raw, 1 to 3 barrels, 59c; 4 to 7 barrels, 58 ; 8 and over, 57c.; add 3c. to this price for boiled oil, f.o.b. Toronto, Hamilton, London and Guelph, net 30 days.

TURPENTINE Stocks on Southern markets are low and the market generally remains firm. We quote: Single barrels at 99c per gal., f.o.b. point of shipment, net 30 days; less than barrels, $1.04 per gallon.

PARIS GREEN—Quotations remain at last week's figures, and most merchants are understood to have placed their orders. We now quote base price on both English and Canadian at 27¼c per lb.

For additional quotations see current quotations at back of paper.

OIL CRUSHING AT WINNIPEG.

We reproduce a cut of the Canada Paint Company's elevator and linseed oil mills at Winnipeg, where the most modern appliances are installed to crush the Manitoba flax seed and to produce linseed oil from the celebrated Manitoba seed. The product is a beautifully bright, plump oil, free from all fibrous or mucilaginous matter—the color of a pale sherry—"clear as a bell and free from sediment."

Canada Paint Company's Oil Mills at Winnipeg.

A ready market is found in Canada for all the linseed oil which this mill will produce, but the residuary product of linseed meal and cake is largely exported. Linseed meal besides being a pharmacopeiae remedy of great value is a valuable food for cattle eagerly bought by stock-raisers, especially in the Old Country, where food stuffs are naturally more expensive than in Canada.

In addition to the oil works to the trade as the Winnipeg linseed oil mills, the Canada Paint Company, under the management of Edward Barry, has a complete paint and color factory in Winnipeg, fitted up with great completeness and detail.

"LET EVERY TUB STAND ON ITS OWN BOTTOM"

The great trouble, however, is that a lot of Tubs are so made that they can't stand long enough to warrant their expense. The wood is not properly kiln-dried, the hoops loosely rivetted and the finishing so poorly done that they warp, hoops drop off and they go to pieces.

A "Cane-made" Tub or a "Cane-made" Pail

has every detail of manufacture so closely looked after that ***a perfect article*** is the result.

The Necessity of Featuring the Best Paint

100 per cent. durability

You would not try to cross the Atlantic in an open boat. Might as well as try to corner a good paying trade in your line without considering paint and its results. Paint makes or mars a business. Every customer your paint defects cost you means the loss of ten probable customers.

ARK BRAND PAINT

differs from all other paints on the market. The paint difference—a difference which hundreds of dealers appreciate—is that it is made from pure linseed oil and the most durable pigments known.

MURESCO WALL FINISH

has restored and improved more retail businesses than any other article that could be mentioned. Quality tells and always will. Muresco is easily applied, durable and strongly endorsed by the best decorators in Canada.

TRADE MARK STERLING REGISTERED

THE SURVIVAL OF THE FITTEST

Selling whiting, glue and color separately for kalsomined walls is a thing of the past. The more modern method of selling whiting, glue and color ready mixed, in packages labelled different names, is **ALSO** a thing of the past, or fast becoming so.

Any compound which can be kept over night or several days without spoiling is simply a preparation of glue and whiting or some other inert base, which depends on the glue in it to hold it to the surface, and in time decomposes, becomes diseased, rubs off and has to be washed off.

The ever-growing public demand is for a pure and sanitary wall coating that will not rub off and is ready for use with cold water.

ALABASTINE

fulfils the public demand. Made from crystaline Alabaster Rock, it is a cement that sets and hardens on the wall and improves with age. It is pure, permanent and sanitary, and as such

HAS NO COMPETITOR

ALABASTINE is being more and more fully appreciated by the public, and the orders are coming in by leaps and bounds.

Fortunately, we have opened a new mine, and hope to fill all orders promptly and on time; but we advise you to order **NOW**.

The ALABASTINE CO., Limited, PARIS, Ont.

BLANCHITE

Blanchite products are the best that can be made. We guarantee them to you and your customer. You want the best. If you have any hesitancy, write us, and we will send you a sample free of charge, so you can compare them with anything you have handled or can get. We want the merit of our goods to sell them, and to do that you must try them. A few agencies are still open. Write at once for information.

Plumbing and Steamfitting

PUBLICITY FOR THE PLUMBER AND FITTER

By P. A. Smith, manager Publicity Department of Cluff Bros., Toronto.

"Advertising is to business what steam is to machinery—the great propelling power."—Lord Macauley.

There are few men in the commercial world to-day who will dispute that statement. Successful business men realize that in this era of strenuous competition that judicious advertising is the great propelling force that makes large enterprises possible. It is no longer looked upon as a hazardous speculation or an expense—but as a safe, sure business investment. Money properly invested in advertising will just as certainly produce profits as money invested in any other line.

The subject under discussion, however, is how advertising effects the plumber and steam fitter. The average member of the trade undoubtedly believes in it. Its efficacy is a concrete fact which has been driven home through the success of many large advertisers, and perhaps there are some in his own town. It is likely that his next door neighbor, the grocer, gives generous publicity to his business; perhaps the clothier or hardwareman has made money through unstinted use of the local newspaper. He looked upon these examples as a matter of course and contents himself by saying, "My business is different." Different in some characteristics, yes; but in essential principles it is just the same. It is quite true the plumber cannot offer the special inducement of a sale of sugar, or of hats, or of saws, but he has goods to market just the same, and the quality of his workmanship is a feature to be advertised, the value of which few plumbers and steamfitters thoroughly appreciate.

In the naturally dull winter months our friends are satisfied to sit in their workshops and wait until the spring opens with its attendent building. Little do they realize that power of the art of increasing trade, of gaining prestige, good will and added profits by means of that merchant-idea of educating the public mind to a proper appreciation of the value of modern goods and excellent workmanship. The average sanitary or heating engineer is content to energetically pursue the contract for work on every new building in his neighborhood, and is quite satisfied if he secures 15 or 20 per cent. of all he bids upon. He is ever keen and alert to master every new feature which tends to enhance his mechanical knowledge, but now little study does he give the art of showing and selling his goods; how little does he realize the great possibilities of creating a demand for a modern sanitary or heating apparatus.

Let us cite an example of how this can be done. It is curiously true that the vast majority of owners of old homes are under the impression that the work of installing a modern hot water or steam heating apparatus can be accomplished successfully only in a new building where special provision is made for the purpose. If they understood the truth of the matter there is no doubt what they would do, and this work would not be the target of all the bids in that locality. It is true also that few people thoroughly appreciate the wonderful strides that have been made in the construction of warming apparatus during the past few years.

What are you doing to convince the layman of the great benefits of modern warming methods in which result added convenience, cleanliness, comfort, health and economy. What means are you using to attract the new-comer to your place of business? What efforts are you making to place your name and your business before the great consuming public.

We would make a passing word to those of the trade who attempt in some measure to advertise. It has been the experience of the writer that the great majority of plumbers merely fill their space with a business card and leave it there unchanged until they receive notice of the expiration of their contract. They are throwing their money away. A space 3 inches deep and double column wide shows up well and allows room to display.

A standing advertisement, be it ever so small, soon loses its power to attract, and it is quite necessary, therefore, that a frequent change be made each setting forth some single indisputable fact why you are "the plumber" or why a particular system of heating should be adopted. You must not forget that in inserting a business card in the newspaper, there are other plumbers and steamfitters whose names are just as euphonious as yours, and that merely telling people who you are will not sell goods for you. Change your advertisements frequently.

If you are not already an advertiser, invest $25 or $50 in your local paper, mailing cards, or in various other means which are so valuable an aid in stirring the public to a proper realization of the advantages of your business

PLUMBING WORK

WILLIAMS & WILLIAMS

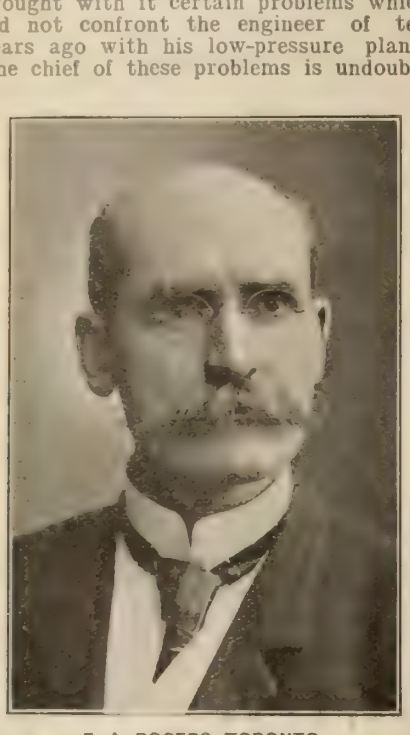
Phone 23 GALT 23 King Street

MONTREAL M.P.A.

The annual election of the Master Plumbers' Association of Montreal held last week resulted as follows:

President, Ald. Nap. Turcot; 1st vice-president, John A. Gordon; 2nd vice-president, J. A. Marier; secretary, James E. Walsh; trustees, Jos. Thibeault, John Watson, David Ouimet.

The choice of the new president was a very popular one and caused general satisfaction, whilst a hearty vote of thanks was accorded the retiring president, P. C. Ogilvie.



PRESENTATION TO TRAVELER.

An interesting event took place las Saturday when E. A. Rogers, who was retiring from the position of city traveler for the James Robertson Company, Toronto, was entertained at dinner at the St. Charles Hotel, by H. S. Harwood, manager, Geo. F. Clare, cashier, and the traveling staff of the Toronto branch of the Robertson Company, he being presented with a beautiful gold locket and watch fob, engraved with the monogram of the recipient and the

inglas of the gives. The dinner was enlivened with many complimentary references to Mr. Rogers' eight years good work as traveler for the company and it evidenced a fine spirit of good fellowship, particularly as it is Mr. Rogers' intention to go into business for himself at Toronto in the plumbing supply line. Previous to his connection with the Robertson Company, Mr. Rogers was for eleven years on the road in Toronto and Ontario for the James Morrison Brass Company, Toronto.

A NEW FLEXIBLE STEAM PACKING.

The modern practice of using steam at high pressures and temperatures has brought with it certain problems which did not confront the engineer of ten years ago with his low-pressure plant. The chief of these problems is undoubt-

E. A. ROGERS, TORONTO

Who has been calling on the Plumbing and Steamfitting trade in Ontario for the past twenty years, represnting the James Morrison and James Robertson Companies

edly the question of suitable packings, a question which grows rapidly more serious as steam pressures are increased. Practically the only high-pressure packings hitherto available have been either metallic, hence rigid and unyielding, requiring constant regrindings, or of rubber, which is not absolutely impervious to steam, has not the necessary wearing qualities, and cannot withstand high temperatures. Recently, a new type of packing has been invented by Frederick M. Ekert, which seems to overcome the defects of previous packings. The material is very tough and tenacious, and it is sufficiently flexible or plastic to conform itself to all irregularities, thus absolutely preventing leakage. It is composed principally of rubber and asbestos fibres with which certain porc-filling substances are mixed. The packing is absolutely impervious to water or steam, and is a non-conductor of heat. Furthermore, it is self-lubricating, owing to the presence of graphite in its composition. It is made into valve disks, which will withstand any pressure up to 450 pounds continuous service, and also in sheets for use on pumps, cylinders, steam chest covers, manhole covers, and the like. In addition to these, a nickel-protected disk is made for superheated steam, which is adapted to withstand temperatures up to 900 deg. Fahrenheit.

A similar material, in which cotton fibres are used in place of asbestos, Mr. Ekert provides for the manufacture of puncture-proof automobile tires, mattings and the like.

SASKATOON WATER WORKS.

Saskatoon is asking for tenders before March 20 for the following work:

Contract "A"—Labor on pipelaying for waterworks and sewerage comprising about 27,000 feet of trenching. Contract "C"—Concrete foundation for water tower housing for water supply. Contract "L"—Sedimentation basin.

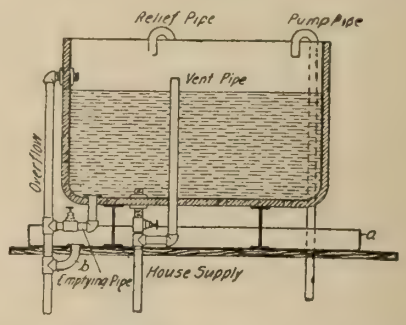
STORING WATER IN HOUSES.

J. J. Cosgrove, author of "Principles and Practice of Plumbing," and an eminent sanitary authority, has the following to say in "Modern Sanitation" in relation to the construction of house tanks:

House tanks are used to store water for the supply of buildings and should be located at least 10 feet above the level of the highest fixture to be supplied. There are two kinds of tanks commonly used—wooden tanks and iron tanks. When located outside of buildings on roofs or in other exposed positions wooden tanks are generally used; when located inside of buildings iron tanks are generally used. During warm weather moisture condenses on the outside of iron tanks and if not cared for will drip to the floor and wet both floor and ceiling below. To prevent this a drip pan should be placed under all iron tanks and a drip pipe from the pan extended to some convenient sink or connected to the overflow pipe from the tank.

Objections to Wooden Lined Tanks.

Lead-lined wooden tanks were formerly extensively used and in some localities are still, to a limited extent; but owing to the liability of carbonates or sulphates of lead being dissolved from the lining and poisoning the water, lead should not be used for tank linings, particularly in localities where the water is soft.



Copper-lined wooden tanks are sometimes used. From a chemical standpoint copper linings are not so objectionable as lead, particularly when the copper is tinned; however, copper linings present so many joints and seams that some of them are liable to leak, and, in some waters, soldered copper joints disintegrate owing to a chemical or galvanic action of the metals.

In extremely tall buildings fixtures on the lower floors are supplied with water direct from the street mains; the upper floors are supplied with water from the house tank on the roof, and intermediate tanks are installed, so that not more than eight floors of the building are supplied with water from any one tank. In such installations the house supply from the roof tank should be cross connected to the house supply from all the intermediate tanks and to the house supply for the lower floors, so that in case of necessity the entire building can be supplied with water from the house tank, which can be filled by pumping from the suction tank.

Size of Overflow Pipes.

Storage tanks should be provided with overflow pipes of sufficient capacity to safely carry off the greatest quantity of water likely to be discharged by the supply pipe. It is a safe rule to allow for the overflow pipe twice the diameter or four times the sectional area of the supply pipe. Overflow pipes from tanks located on roofs of buildings may discharge onto the roof. Overflow pipes from tanks located inside of buildings should discharge into a properly tapped and water-supplied sink. Under no circumstances should they connect directly to the drainage system.

The size of storage tanks depends upon the number of people to be supplied. They should have sufficient storage capacity for one day's supply to tide over possible periods of breakdown of pump or boiler. When figuring the capacity of storage tanks 100 gallons of water per day per capita should be allowed in

hotels, hospitals, apartment houses and public institutions.

Tank Connections.

The general arrangement of pipe connections to a house tank is shown in the accompanying engraving. The cleanout or emptying pipe is valved and connected to the overflow pipe. The house supply extends a few inches above the bottom of the tank to prevent sediment entering the pipe. Below the valve that controls the house supply is connected a vent pipe to admit air to the house supply and permit it to empty when the valve is shut off. A vapor or relief pipe from the highest point in the hot water supply system bends over the tank and thus permits the escape of steam. The pump may discharge into the house tank in the manner indicated when the pump is not controlled automatically. When it is, the pump pipe should enter the tank through the bottom and be controlled by a balanced float valve. A drip pan, (a), under the tank and extending a few inches on all sides of it catches the water condensation and discharges it through the waste pipe, (b), into the overflow pipe. When a tank is supplied with water by a pump that is not automatic in operation a telltale pipe should run from a point in the tank about 2 inches below the level of the overflow pipe to the engineer's sink. Water flowing through the pipe then notifies the engineer when the tank is full.

PLUMBING MARKETS

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, February 22, 1907

Nothing startling has happened this week in plumbing circles. The volume of business done this year, has far surpassed anything for the same period of previous years.

For the past while everything that is used by the plumber has been steadily advancing. Even the wood used for closet seats, cisterns, etc., is no exception, and plumbers are buying goods very freely in order to be on the safe side, should raw material go higher still. When asked by our representative when things were going to stop going up, one prominent jobber said, "It's hard to say. Different people take different views of the situation. Personally, I don't think it's due to manipulation, so much as increasing demand, but there's no saying. The trusts could, no doubt, by making the output a trifle short of the demand, boost up prices, but the shortage in many lines is no doubt due to the tremendous demand of a growing continent.

RANGE BOILERS—An excellent business is being done in this line. We still quote: Iron clad, 30 gal., $5; 40 gal., $6.50 net list. Copper, 30 gal., $33; 35 gal., $38; 40 gal., $43.

LEAD PIPE — Still firm. No change in prices. We still quote: 5 per cent. discount f.o.b. Montreal, Toronto, St. John, N.B., Halifax; f.o.b. London, 15c. per hundred lbs. extra; f.o.b. Hamilton, 10c. per hundred lbs. extra.

IRON PIPE FITTINGS—A shortage is reported in some lines, but we still quote: Discounts on nipples, ¼ inch to 3 inch, 65 per cent., 3½ to 2 inch, 67½ per cent.

IRON PIPE—Some lines are reported short, and it is expected that they will remain so. Our prices remain: Standard pipe in lots of 100 feet, regular lengths, ¼ inch, $5.50; ⅜ inch, $5.50; ½ inch, $8.50; ¾ inch, $11.50; 1 inch, $16.50; 1¼ inch, $22.50; 1½ inch, $27.; 2 inches, $36.50. Discounts on black pipe: ¼ inch, 59 per cent.; ⅜ inch, 59 per cent.; ½ inch, 68; ¾ to 2, 70. Discounts on galvanized pipe: ¼ inch, 44 per cent.; ⅜ inch, 44 per cent.; ½ inch, 58 per cent.; ¾ to 2 inch, 60 per cent. Extra heavy pipe of 100 feet lots are quoted as follows: ½ inch, $12; ¾ inch, $15; 1 inch, $22; 1¼ inch, $30, 1½ inch, $36; 2 inches, $50. The discounts on black pipe: ¼ inch, 74 per cent.; ⅜ inch, 69 per cent.; ½ inch to 2 inches, 68 per cent. Galvanized: ¼ inch, 59 per cent.; ⅜ inch, 69 per cent.; ½ to 2 inches. 58 per cent.

SOIL PIPE FITTINGS — Prices remain: Standard soil pipe, 50 per cent. off list. Standard fittings, 50 and 10 per cent. off list; medium and extra heavy soil pipe, 60 per cent. off. Fittings, 60 per cent. off.

SOLDER — No change in prices. We still quote: Bar solder, half-and-half, guaranteed, 25c.; No. 2 wiping solder, 22c.

ENAMELWARE — We quote: Canadian baths, see Jan. 3, 1907, list. Lavatories, discounts, 1st quality, 30 per cent.; special, 30 and 10 per cent. Sinks, 18x30 inch, flat rim, 1st quality, $2.60; special, $2.45.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East.
Toronto, February 22, 1907

A peculiar condition exists this week in that we are forced to revise our quotations on plumbers' brass goods, reducing the price on account of the keen competition for business. In spite of the continued high quotations on copper and the almost certainty that prices will go even higher it appears that recent advances on brass goods have been too large and the discounts have not been firmly maintained, some houses frankly admitting that in order to get business they have had to increase their discounts. The changes we note this week include an extra 5 per cent. on compression and fuller work and both flatway and roundway goods.

The shortage on iron pipe continues, and with the opening of the season close at hand stocks of pipe are almost bare. This situation presages even worse conditions than existed last summer and the firms which have placed their business early will be the best off in the long run.

In the States the opinion is expressed that pig iron has passed its high point but as all the furnaces are booked ahead until about November future business is all that will be affected. This may make ie easier to procure skelp for iron pipe in the fall.

Trade in other lines remains normal for this season, plus a fair percentage of booked orders placed by far-seeing firms which do not want to be delayed in completing contracts secured.

LEAD PIPE—Business continues fair for this season. The discount continues at 5 per cent. off the list price of 7c. per pound. Lead waste, 8c. per pound, with 5 off. Caulking lead, 5¾c. to 6c. per pound. Traps and bends, 40 per cent. discount.

SOIL PIPE AND FITTINGS—Many orders are being placed for future delivery. We still quote: Medium and extra heavy pipe and fittings, 60 per cent.; light pipe, 50 per cent.; light fittings, 50 and 10 per cent.; 7 and 8 inch pipe, 40 and 5 per cent.

IRON PIPE—Stocks are remarkably low for so close to the opening of the building season. One inch black pipe is quoted at $4.95, and 1 inch galvanized at $6.60. Full list in current market quotations.

IRON PIPE FITTINGS—Plenty of fittings are available and business is being placed for future delivery. We now quote: Cast iron fittings, 57½ per cent.; cast iron plugs and bushings, 60 per cent.; flange unions, 60 per cent.; nipples, 70 and 10 per cent.; iron cocks, 55 and 5 per cent.; Canadian malleable, 30 per cent.; malleable unions, 55 and 5 per cent.; malleable bushings, 55 per cent.; cast iron ceiling plates, plain, 65 per cent.; cast iron floor, 70 per cent.; hook plates, 60 per cent.; expansion plates, 65 per cent.; headers, 60 per cent.; hangers, 65 per cent.; standard list.

RANGE BOILERS — A fair amount of business is being placed. We quote: Galvanized iron, 30 gallon, standard, $5; extra heavy, $7.75; 35 gallon, standard, $6; extra heavy, $8.75; 40 gallon, standard, $7; 40 gallon, extra heavy, $9.75, net list. Copper range boilers—New lists quote: 30 gallon, $33; 35 gallon, $38; 40 gallon $43. Discounts 5 to 15 per cent.

RADIATORS—At this season buying is not active. Prices continue unchanged at: Hot water, 47½ per cent.; steam, 50 per cent.; wall radiators, 45 per cent.; specials, 45 per cent. Hot water boilers are unchanged.

SOLDER — We quote: Bar solder, half-and-half, guaranteed, 27c.; wiping, 23c.

ENAMELWARE — No changes have been made, with the January list still prevailing on Canadian baths. We quote: Lavatories, first quality, 20 and 5 to 20 and 10 off; special, 20 and 10 to 30 and 2½ per cent. discount. Kitchen sinks, plate 300, firsts, 60 and 10 off; specials, 65 and 5 per cent. Urinals and range closets, 15 off. Fittings extra.

PLUMBING PARAGRAPHS.

Somerville, Limited, Toronto, are to spend $100,000 in establishing a new plumbers' brass goods plant in Toronto. The plans show a factory 100x150 and work will be commenced shortly. A separate company will not be formed as originally announced.

The employes of Purdy, Mansell, and Co., Toronto, held their 18th annual sleighing party and banquet to East Toronto last Friday night.

The Ottawa Plumbers' and Steamfitters' Union, have sent a written request to the Master Plumbers' Association of Ottawa, asking for an increase in wages and for Saturday afternoons off the year round. They ask that this change go into force on May 1st.

To Manufacturers' Agents

HARDWARE AND METAL has inquiries from time to time from manufacturers and others wanting representatives in the leading business centres here and abroad.

Firms or individuals open for agencies in Canada or abroad may have their names and addresses placed on a special list kept for the information of inquirers in our various offices throughout Canada and in Great Britain without charge.

A Certain Sense of Satisfaction

goes with every MERRELL PORTABLE HAND MACHINE, PIPE THREADING and CUTTING MACHINE. We build them that way.

For doing ALL kinds of threading—under ALL conditions—labor trouble and faulty material included—where speed, durability and ease of control count for something, our word to you is to investigate the MERRELL.

Whether it be stationary or portable—hand or power driven—30 DAYS FREE TRIAL must prove conclusively that your choice should be the MERRELL.

This Portable Hand Machine has encased gears, MERRELL standard quick opening and closing die-head, and the latest improved Cutting-off Knife.

Let us tell you more about this machine—The Chasers, Vise and the large range of work covered.

Satisfactory Oil Storage—The Proof

THE RUSSILL HARDWARE CO.
126 E. King St.

Toronto, Can., January 3, 1907

Messrs. S. F. Bowser & Co.
66-68 Fraser Ave.
Toronto, Canada

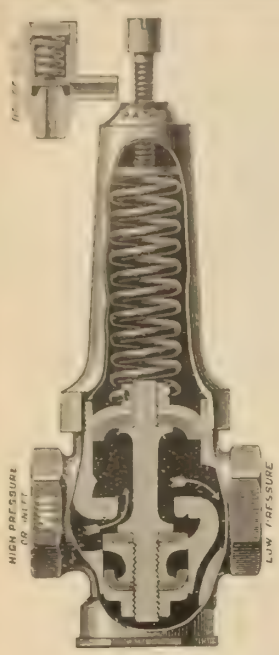
Dear Sirs:—

Just five years ago, you installed for us ten of your Bowser Self Measuring Oil Tanks, the aggregate gallonage of same amounting to twelve hundred gallons.

We wish to express the unqualified satisfaction which the outfit has given us, and we feel that it would be absolutely impossible for us to handle the volume of oil business which we enjoy without the assistance of such an outfit.

We further consider, the money expended for the purchase of same was the very best investment ever made by us in the way of store fittings.

Trusting that your goods are meeting with the success which their merit entitles them to, we are.



Yours truly,

THE RUSSILL HARDWARE CO.
Per Frank Russill, Mgr.

Mueller Water Pressure Regulators

High pressure at faucets is conducive to unnecessary or high water rents, as more water is delivered than is wanted. With this regulator the pressure is reduced at faucets, waste is diminished and water rents correspondingly lessened.

CURRENT MARKET QUOTATIONS.

Feb. 22, 1907.

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate.

SHURE MOVE 'EM!

THE JOY

The **Joy Car Mover** is not only **Sure Grip,** but **Sure Move 'Em** as well. Whoever has had occasion to move a car, but has been annoyed by the steel bit car mover slipping just when it was wanted to stick, resulting in loss of time, cuss words, and frequently in serious injury. It is a positive pleasure to move a car with **"The Joy Sure Grip,"** because the wooden shoe prevents slipping, and the flanges on the malleable iron fulcrum, hold it in place on the rail. We can refer to many satisfied users. Hardware dealers can sell to every one in their territory who move cars.

Send for circular and price.

JOY MFG. CO., 32 Humberside Ave., TORONTO

We also make **The Great Joy Malleable Range,** which is gaining in popular favor daily, and is sold through dealers only.

EVAPORATION REDUCED TO A MINIMUM

is one of the reasons why PATERSON'S WIRE EDGED READY ROOFING will last longer than any other kind made.

Mr. C. R. Decker, Chesterfield, Ont., used our 3 Ply Wire Edged Ready Roofing fourteen years ago, and he says it is apparently just as good as when first put on.

We have hundreds of other customers whose experience has been similar to Mr. Decker's.

Spring is coming pretty quick. Your friends are poking around these lots regularly now. They have decided just about the kind of house they'll build. But they have not decided what heating system they'll instal. It's up to you to do some talking. Recommend

THE

"Sovereign" Boiler

not because we ask you to do so, but because it is by all odds the essential feature of the most perfect heating system ever devised. Ask practical men who have installed the "Sovereign." Ask them to tell you the "profit story." Get our literature about the "Sovereign." Consider things from your standpoint and your decision will please us.

THOS. BIRKETT & SON CO.,

Wholesale Hardware LIMITED

OTTAWA, ONT.

American Twin Freezer

Freezes two flavors of Ice Cream or an Ice or Sherbet and Ice Cream at one and same time, in one freezer.

SOMETHING ENTIRELY NEW —NEVER DONE BEFORE.

THE can is divided in two parts by a vertical partition. One flavor is placed in one, the other in opposite side of can, in each of which the scrapers, etc., operate. The can cannot be turned as in old style freezers, because of the partition. It is therefore swung to and fro by a rocking motion of the crank. This is a more comfortable and much easier movement. It is very much less tiresome than turning a crank. One can sit back in a chair with freezer alongside and rock the crank to and fro without discomfort or undue exertion and even read at same time. Although two flavors are frozen at once and with less exertion, no more time is required than in old style freezers.

The **Pails have electric welded wire hoops,** which are guaranteed not to break or fall off; Cans are of heavy tinplate with **drawn steel bottoms** that are guaranteed not to fall out or break and do not leak, the strongest and most durable Freezer Can made; the **Automatic Twin Scrapers** by their positive action insure perfect scraping of frozen particles from side of can. All inside parts are heavily coated with pure block tin, and outside parts all thoroughly galvanized.

SOLD BY LEADING JOBBERS

Large Stocks — Lowest Prices

M. & L. Samuel, Benjamin & Co.

TORONTO

THE WINTER WILL SOON BE OVER

and then will come the spring with a **big demand for general lines of hardware**, and this year we expect the demand will be much larger than ever before. At the present time there are more buildings in the course of construction, and more in prospect than at any time in the history of Canada.

ARE YOU GOING TO BE READY

to satisfy this demand when trade opens up? This is the question that every live hardwareman should ask himself.

You cannot do the business if you have not got the stock, and the up-to-date dealer realizes this fully. You cannot have everything that your customer asks for, nor can you have sufficient stock to satisfy all demands, and the next best thing to having the goods on hand is to **have a connection with a wholesale house on whose stock you can draw and invariably get your supplies quickly.**

WE HAVE A GOOD SYSTEM FOR MAKING QUICK SHIPMENTS

and on more occasions than one we have been told that our shipments reach the customer days before orders placed with a nearby jobber at the same time.

OUR MAIL ORDER BUSINESS

is in the hands of capable clerks, who have had years of experience in this particular department. We are not mind readers, and we prefer to have our customers state clearly what is wanted, at the same time, if left to us, **you will have the benefit of our experience**, and we will do the best we can in making out exactly what you want.

A post card will bring our illustrated catalogue, order pads and envelopes. If your jobber does not suit you, give us a trial. **If we get the first order we are sure of the second.**

Lowmoor Iron is the iron to sell for use in all work where strength, ductility, ease in working and ability to withstand repeated shocks are required.

We have sold it for thirty years and it has always been found reliable.

It is largely used by the leading Canadian railway, car and locomotive builders and machine shops.

Recommend Lowmoor Iron wherever reliable iron is needed, and keep it in stock.

We have it in rounds, squares, flats.

Also Lowmoor Iron boiler rivets and plates.

He Sells Most
Who Offers
Stanley's Tools

124 Varieties in Stock to Select From.

A Plane for Every Purpose.

Think—

Skilled mechanics always ask for "STANLEY'S PLANES."

Is it not far more profitable to sell them the "genuine STANLEY" which gives every satisfaction and holds them, than to sell them an inferior substitute and have them go elsewhere for the next tool they require?

The irons in these good planes are made from the best English steel, of equal thickness and temper throughout.

Each tool passes a rigid examination before leaving the works, and is fully guaranteed against defect in either material or workmanship.

For household and other purposes we have another make of Iron Planes made in all the leading styles and sizes, known as "Hunts" which sells at a low price.

A GOOD INVESTMENT

You've probably paid for the goods you have sold to your customers — you received a statement for them promptly, and kept your credit good by making a prompt payment. ¶Do your customers get their statements the first of every month? Are you able to get them out without extra effort? Do you know right now just what is outstanding on your books? ¶Our system for Retail Stores arranges all this. It is absolutely the best labor-saving and time-saving proposition on the market—you assist in making out the monthly statement and charge up the goods with one writing—posting to the ledger leaf, which is opposite this statement in the Perpetual Book, with one debit entry the month. The ledger entry is explained by the itemized, detailed statement, a duplicate of which is in the Transfer Binder. The original statement, which is made directly from the Counter Book from day to day, is totalled and detached at the perforated line and mailed to the customer on the last day of each month. ¶We have these retail systems in several different styles of binding, starting at fifteen dollars and fifty cents ($15.50). ¶The outfit shown above is our $15.50 system. It is just as complete as the more expensive outfits, the binding and higher quality of paper making the difference in price. ¶Write for particulars and catalogues.

Too Expensive For My Business!

BUSINESS SYSTEMS LIMITED — SYSTEM THE SECRET OF SUCCESS — TORONTO

Any retailer who says that about Business Systems, is laboring under a delusion.

The size of a business is the factor that determines the cost of installing Business Systems.

Business Systems are, proportionately, just as much an economy for the smallest retail store as for the largest factory.

* * * * * *

In different businesses, Business Systems are designed to fit different ends.

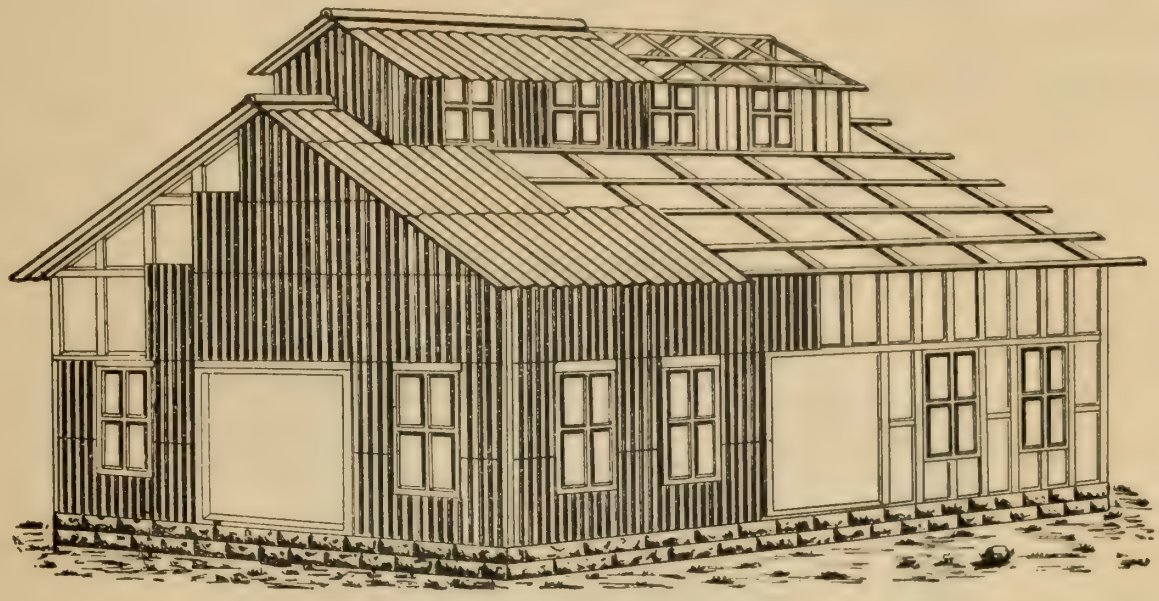
In your business, Mr. Retailer, Business Systems, instead of being "too expensive," are time savers and an actual economy.

You can understand why a system that posts your books and writes out your bills at the same time, is economical, can't you?

That's only one of the things Business Systems will do for you.

* * * * * *

Let us tell you more.



Drop us a post card and we will send you all the details.

It will only cost you a cent to know more.

BUSINESS SYSTEMS LIMITED
84 SPADINA AVE.
TORONTO, CANADA

CORRUGATED IRON

"Keeping Everlastingly at it Brings Success"

PEDLAR'S CORRUGATED IRON is made on a **38,000 lb. Press** (the only one in Canada) one corrugation at a time, and is guaranteed true and straight to size.

We carry a **1,000 ton stock in Oshawa, Montreal, Ottawa, Toronto and London,** and can ship ordinary requirements the same day order is received.

Made in 1″, 2″ or 2¾″ corrugations in sheets any length up to 10 feet in 28, 26, 24, 22, 20, 18 gauge, both painted and galvanized.

This class of material is most suitable for fireproofing, **Factory, Mills, Barns and Warehouse Buildings** and is water and wind proof.

Corrugated Ridges, Lead Washers and Galvanized Nails carried in stock.

Send specifications to your nearest office for catalogues and prices.

Four Reasons why INVICTUS FIBRE is the BEST FIBRE PAPER on the Market

1. Invictus Fibre is made from personally selected pulp wood cut on our own limits.
2. This special pulp wood is again rigidly culled on arrival at our mills
3. The pulp from which Invictus Fibre is made is manufactured in our own pulp mill and transferred at once to the paper mill, avoiding all drawbacks of transportation.
4. Invictus Fibre will increase in strength and not grow hard and brittle as does fibre made from sulphite pulp. This is a quality of the peculiar and selected pulp from which Invictus Fibre is made.

A trial order will convince you that we are correct. See that each package bears the words "Invictus Fibre." Every ream contains 480 sheets

Transient Traders and Pedlars

They do a Good Deal of Harm to Legitimate Merchants—A By-law Which is Used in Ontario.

Numbers of Ontario municipalities have by-laws and see that they are enforced, with results that are satisfying to the merchants. Others have passed by-laws, but they exist in name only. In one town our representative visited recently we were told that transient traders and pedlars were much more injurious to local trade interests than the catalogue houses. "We have a by-law," said one dealer, "but the authorities pay no attention to it. As a matter of fact, one of the members of our council rents premises to a good many transients who come in with stocks."

If this merchant and the others in his town get together and go after the municipal council they can secure the enforcement of the by-law. An eye should be kept on the constable to see that he is on the alert for transients.

* * *

Following are some extracts from the by-law which has been passed by a number of Ontario municipalities :

1. No person shall carry on the business mentioned in the next succeeding section of this by-law unless and until he shall procure a license so to do, and every person so licensed shall be subject to the provisions of this by-law.

2. There shall be taken out by :

(a) All hawkers, pedlars, petty chapmen or other persons carrying on petty trades or who go from place to place or to other men's houses on foot or with any animal bearing or drawing any goods, wares or merchandise, for sale or in or with any boat, vessel or other craft, otherwise carry goods, wares or merchandise for sale (except that no such license shall be required for hawking, peddling or selling from any vehicle or other conveyance goods, wares or merchandise to any retail dealer or for hawking or peddling goods, wares or merchandise, the growth, produce or manufacture of this province, not being liquors within the meaning of the law relating to taverns or tavern licenses, if the same are being hawked or peddled by the manufacturer or producer of such goods, wares or merchandise, or by his bona fide servants or employes having written authority in that behalf and such servant or employe shall produce and exhibit his written authority when required so to do by any municipal or peace officer, and provided that in any prosecution for a violation of any such by-law against any hawker, pedlar or petty chapman or other person mentioned in this sub-section on the ground that any such person has not obtained a license in pursuance of any by-law passed thereunder and the defence is set up that such person does not require any such license by reason of the fact that he is peddling goods, wares or other merchandise to a retail dealer, or is hawking or peddling goods, wares or merchandise the growth, produce of manufacture of this province, not being liquors within the meaning of the law relating to taverns or tavern licenses, and is the manufacturer or producer thereof or the bona fide servant or employe of such manufacturer or producer thereof having written authority in that behalf, then and in such case it shall not be necessary for the complainant to show affirmatively that the person so prosecuted does not come within the defence so set up, but the onus of proving that he does come within such defence shall rest upon the person so prosecuted and in the event of his failing to establish at his trial that he does so come within such defence he may be convicted of a violation of this sub-section ; but no such license shall be required from any tinker, cooper, glazier, harness-mender or any person usually trading or mending kettles, tubs, household goods or umbrellas, or going about carrying with him proper materials for such mending.

(b) The word "Hawkers" in this clause shall include all persons who, being agents for persons not resident within the county, sell or offer for sale tea, dry goods, watches, plated ware, silverware, furniture, carpets, upholstery, millinery or jewelry, or carrying and expose samples or patterns of any such goods to be afterwards delivered within the county to any person not being a wholesale or retail dealer in such goods, wares or merchandise.

(c) Every transient trader or other person whose name has not been duly entered on the assessment roll in respect of income or business assessment for the then current year, and who may offer goods or merchandise of any description for sale by auction or in any other manner, conducted by himself or by a licensed auctioneer, or by his agent or otherwise ; but no license to any transient trader shall affect, apply to or restrict the sale of the stock of an insolvent estate which is being sold or disposed of within the city or town in which the insolvent carried on business therewith at the time of the issue of a writ of attachment or of the execution of an assignment.

(d) The words "Transient Trader" wherever they occur shall extend to and include any person commencing in the municinality the business in the said clauses mentioned who has not resided continuously in such municipality for a period of at least three months next preceding the time of the commencement by him of such business therein.

8. DISPLAYING BADGES — Every hawker, pedlar, transient trader or other person licensed under this by-law who carries on his business or calling with any wagon, cart or other vehicle, shall, at the time of the issue of his license, receive from the chief constable two plates bearing a number, which shall be affixed on a prominent place on the right and left side of the outside of such wagon, cart or other vehicle, and shall remain thereon during the period for which the license is granted ; and no other devise displaying a number shall be exhibited upon the outside of such wagon, cart or other vehicle, and such plates shall be returned to the chief constable at the expiration of the term of the license ; and every such licensed person shall have his name and address legibly painted on each side of his vehicle in letters at least three inches long.

11. FEES—There shall be levied and collected from the applicant for every license granted for the business or object are specified in this by-law, a license fee as follows :

(1) For a license for a lawker, pedlar or petty chapman selling on foot, any fee you deem advisable.

(2) For a license for a hawker, pedlar or petty chapman selling with a vehicle or with a horse or horses or other animal with a vehicle, any fee you deem advisable.

(3) For a license to carry on the business of a transient trader selling from stationary premises or on foot or with a vehicle or with a horse or horses or other animal with a vehicle, not to exceed in cities and towns $250, and in other municipalities $100.

Providing that the sum so paid for a license shall be credited to the transient trader paying the same upon and on account of taxes for the unexpired portion of the then current year, as well as any subsequent taxes, should such trader remain in the municipality a sufficient time for taxes to become due and payable by him and in any other event to be taken and used by the municipality as a portion of the license fund of such municipality.

Provided, nevertheless, that the license fee imposed by any by-law of any village, situated within any territorial district may be a sum not exceeding $200.

12. PENALTY—Except as hereinafter provided, any person convicted of a breach of any of the provisions of this by-law shall forfeit and pay, at the discretion of the convicting magistrate, a penalty not exceeding the sum of fifty dollars for each offense exclusive of costs ; and in default of payment of the said penalty and costs forthwith, the said penalty and costs, or costs only, may be levied by distress and sale of the goods and chattels of the offender ; and case of there being no distress found out of which such penalty can be levied, the convicting magistrate may commit the offender to the common gaol of the city or town of . . . with or without hard labor, for any period not exceeding six calendar months, unless the said penalty and costs be sooner paid.

* *

The by-law as it stands can be enforced against a merchant going into a place and purchasing a business. He may be regarded as a transient until he has resided there three months. His license fee, in case he remains, will apply on taxes. This clause will be amended at the present session of the Ontario Legislature so that legitimate retailers cannot be subjected to such annoyance.

Retail Hardware Association News

Official news of the Ontario and Western Canada Associations will be published in this department. All correspondence regarding Association matters should be sent to the secretaries. If for publication send to the Editor of Hardware and Metal, Toronto.

Officers Retail Hardware and Stove Dealers' Association of Western Canada:

President, A. J. Fahmer, Deloraine.
First Vice President, J. B. Curran, Brandon.
Second Vice President, W. M. Gordon, Winnipeg.

Association offices, 53 Scott building, Main street, Winnipeg.

Officers Ontario Retail Hardware and Stove Dealers' Association:

President, A. W. Humphries, Parkhill.
1st Vice President, W. G. Scott, Mount Forest.
2nd Vice President, J. R. Hambly, Barrie.
Treasurer, John Caslor, Toronto.
Secretary, Weston Wrigley, 10 Front St. East, Toronto.
Executive Committee, The officers and J. W. Peart, St. Marys; M. R. Marshall, Dunnville; D. Brocklebank, Acton; F. W. Jeffery, Midland; E. P. Paulin, Goderich, and Frank Taylor, Carleton Place.
Auditors, J. W. Peacock and C. F. Moorhouse, Toronto.

ONTARIO CONVENTION.

The Ontario Retail Hardware Association annual convention will be held in Labor Temple, Toronto, on March 28 and 29. Single fare on all railroads.

GET READY FOR CONVENTION.

Good Friday will soon be here and every hardwareman in Ontario should be making preparations to attend the convention of the Ontario Retail Hardware Association. The holiday will allow delegates to secure the single fare rate, and as the gathering provides an excellent opportunity for retailers to get together and exchange ideas no up-to-date merchant should miss the treat.

The association's success in forcing the Postmaster-General to withdraw the proposed parcels post c.o.d. legislation has given the organization a big boost, and both new members and renewals are being forwarded in encouraging numbers. There is every indication of the association being an even greater success in 1907 than in its first year of existence.

As the association has no organizer in the field and, in fact, no paid official of any kind, each merchant should co-operate by forwarding his membership fee without waiting for it to be called for. If each one does his part in this matter as well as was done in the parcels post agitation, the association will be in splendid shape to take up a strong campaign against other evils.

OPPOSITION IN NOVA SCOTIA.

Word comes from Nova Scotia to the effect that an effort is being made by certain parties to prevent the formation of the Nova Scotia Retail Hardware Association. The attempt should not succeed. Organization should help both jobbers and retailers and any who oppose this modern method of doing business should be made to realize that they are opponents of progress.

ORGANIZE AGAINST CREDIT EVIL.

Oak Point, Man., retailers are determined to fight the credit system and they have signed a hard and fast agreement to sell only for cash for one year from March 1st. Each dealer has paid in $300 as a guarantee of good faith. For the first breach of the agreement the fine is $50, for the second $100, and for the third, $150. Fines are to be devoted to charitable purposes.

BIG DIVIDENDS.

James Purvis, of Purvis Bros., Sudbury, who was a visitor in Toronto a couple of weeks ago, told the secretary of the Ontario Association that he had just received a credit note for $6.36 for cartage paid on a carload shipment from one of the jobbing houses. Mr. Purvis says this one item will pay his membership fee for two years and he cannot understand the diffidence some of the retailers show about joining the association.

Mr. Purvis was the first to urge the trade in Ontario to organize an association, but has so far been unable to attend any of the conventions. He will be on hand on Good Friday, however, and, being one of the largest retailers in northern Ontario, should be a valuable addition to the delegates' roll.

If large firms, like Purvis Bros., find it an advantage to belong to the association and can by working hand in hand with their fellow retailers make their membership profitable, there is no reason why retailers, whose interests are not as extensive, should not enjoy the benefits of membership when they can be secured for only $3 per annum.

DISTRICT ASSOCIATIONS.

President Humphries expects to have something interesting to report to the Good Friday convention regarding the formation of a district association. The matter is now in hand in his district and the trade seem to be falling in line with the suggestion with avidity.

In London there is a strong local association which the retailers have used to good advantage. Up to the present, however, all the members have not seen fit to affiliate with the Ontario Association.

In Niagara Falls a movement is also on foot to form a local association covering one or two towns. A meeting is to be aranged at once and a definite plan worked out. As it is, the trade are all members of the provincial asociation, and are working together harmoniously, so it should not be hard to get a local or district association going.

It is hoped that some good reports can be made to the convention on district organization so that other sections can take up the matter during the year.

PARCELS POST IN PARLIAMENT.

An interesting discussion on the subject of the C.O.D. parcels post took place in Parliament at Ottawa on Feb. 8, but as the daily press combined to maintain silence on this matter, the public has been kept in ignorance on the subject. Through Richard Blain, M.P., a hardware merchant at Brampton, Ont., however, copies of Hansard containing the report have been received and any reader desiring copies can secure them on request of Mr. Blain or their local M.P.

One of the interesting features of the discussion was the presentation of a petition (the form letter suggested in Hardware and Metal of Jan. 19) signed by Ald. J. J. Coffey, hardware merchant, and about 50 other retail merchants at Barrie. Messrs. A. Martin, Queens, P.E.I.; J. J. Hughes, Kings, P.E.I.; A. McLennan, Inverness, N.S.; G. O. Alcorn, Prince Edward; H. Lennox, South Simcoe; H. S. Clements, West Kent; H. H. Miller, South Grey; and A. A. McLean, Queens, P.E.I.; were the members who took part in the discussion.

B.C. ORGANIZING.

The annual meeting of the B. C. Wholesale Hardware Dealers' Association was held in Victoria recently, delegates being present from New Westminster, Vancouver, and Victoria. Officers were elected as follows: President, C. Swanger, of E. G. Prior & Co., Victoria; vice-president, John Boyd, of Boyd, Burns & Co., Vancouver; secretary-treasurer, John Burns, Vancouver. It was decided to hold the annual meeting in New Westminster. A meeting of the retailers' association was also held, the wholesalers entertaining the retailers at a banquet.

WILL HELP EVERY RETAILER.

"We are pleased to note that the parcels post legislation was defeated. It was through your suggestion that we acted in this matter," write Hose & Canniff, one of the new members of the association.

The defeat of this legislation should be worth a dozen times $3 per year to every hardwareman in Ontario. How many will contribute one $3 to strengthen the association which took up and successfully led the fight against this departmental store game?

RETAILERS UNITE TO MEET MAIL ORDER COMPETITION

Six retail stores in Cartwright, Man., have amalgamated to form a joint stock company, the objects in view being to restrict the credit system and to enable the Cartwright stores to meet the competition of the big catalogue houses. This is a new way of dealing with a couple of problems with which almost every dealer is confronted, and the trade in all parts of the Dominion will be interested in watching the measure of success or failure which may attend this novel experiment.

Cartwright is a small Manitoba village of about 500 population, serving a rich and prosperous farming community. Its merchants would have found business conditions quite satisfactory were it not for two things, viz., they could not escape allowing long credits to their customers, and many of these long credit customers were sending their cash to Winnipeg and Toronto to the catalogue houses. It is an old story, a story which may be duplicated in almost any part of Canada. The local store gives credit to its customers and they, being ungrateful and unappreciative, send their cash, when they have it, to the catalogue houses in the city. In one week it is said that one catalogue house took $1,200 in cash from the little village of Cartwright.

Confronted with these conditions, the Cartwright dealers have taken a bold step, the results of which it is too early yet to predict. Six firms—Moore & Hills, McKenzie & Byce, L. H. Phillips, Wm. Gemmill, W. Macklem and Cannon & Pickell—have formed a joint stock company, to be known as "Merchants Limited." In a circular letter to their customers these firms announce that the new company is capitalized at $50,000, divided into shares of $100 each, and that any farmer or private individual may purchase these shares to the extent of $500. R. F. Moore is president and general manager; Wm. Gemmill 1st vice-president; L. H. Phillips, 2nd vice-president; and J. J. Hill secretary treasurer.

To Fight Department Stores.

In the circular to their customers announcing their new departure the promoters do not disguise the fact that one of their main objects is to fight the city department store. To quote from their circular:

"We would impress strongly upon our patrons that this company is not formed for the purpose of inflating prices or restraining trade; on the other hand, it is formed expressly to enable us to compete successfully with catalogue houses.

"On account of the merger we shall be enabled to buy on the very cheapest available markets, and to save local freights, as practically all our stocks can be bought in car lots. This fact will allow us to sell goods very much cheaper than under present conditions. We would recommend any person who entertains any doubt on this point to from time to time compare our prices with those ruling in adjacent towns."

The Department Idea.

The new company—Merchants Limited—is in fact a new department store, nothing more, nothing less. Its departments are not all under one roof, but it is not impossible that that may come in the future. For the present, stocks have been consolidated and rearranged, groceries being in one store, hardware in another, and so on. To fight the mail order department of the department store in Winnipeg, another department store has been formed in Cartwright. That is the gist of the whole matter.

Against Credits.

But the department store in Cartwright is not to be conducted on exactly the same lines as a city department store. For example, while it is out to fight the credit system it is not insisting upon a strictly cash system of doing business. Credit is being given but only according to a given system. A customer who wants credit must secure a coupon book good for a stated amount, say $10 or $25. In order to get this book he must give Merchants Limited his note for the amount; he is allowed credit in no other way. When he buys

R. F. MOORE, PRESIDENT

goods on credit he pays for them with his coupons. Bookkeeping expenses are thus eliminated and in their advertising the new firm are making a strong feature of this point. Reduced expenses, they say, will allow a reduction in retail prices.

The Produce Question.

Evidently the new company purposes grappling with the produce question as it presents itself to every country store. This is a problem which never confronts the city department store and the country department store has to blaze a trail of its own.

Every country dealer, whether in Western Canada or Eastern Canada knows the difficulty of handling butter and eggs and other farm produce satisfactorily. Competition among rival stores has often forced dealers to pay for butter and eggs a higher price than they can get from the wholesale produce houses. Of course payment is made in goods upon which there is a profit, but the practice is suicidal nevertheless. The customer who pays cash should get the discounts, not the customer who pays in produce which costs time, trouble, and money to handle. Moreover there is seldom in the country store any efficient method of grading butter, and because he does not want to offend an otherwise good customer many a merchant pays for poor butter as high a price as he pays for the first class article.

Merchants Limited announce that all butter is to be graded and paid for according to quality; and it may be presumed quite safely that prices for produce will not be more than the market value. A big, strong concern can grapple with a problem of this kind and solve it satisfactorily.

Probable Outcome.

What will be the outcome of this venture? What will be the attitude towards it of the farmer and the general public? These are moot questions and time will give the only satisfactory answer.

In the meantime it seems that the general public in Cartwright are disposed to regard the new move with approval. Merchants Limited are making a strong bid for local sympathy and they are appealing to local self interest in a convincing way. They state that they are prepared to compete with the catalogue houses and that they invite comparison of prices. In the course of their circular announcement they say:

"We feel that our patrons will agree with us that these departmental stores are drawing on the resources of the small towns and building up the cities. This it is evident cannot be for the weal of people residing in the country and on farms, for it is generally admitted that a good town helps materially to enhance the value of adjacent farm lands; therefore we would ask your co-operation and we will prove to you that you will be benefited in dollars and cents."

The obvious danger is that the public will view the elimination of competition in Cartwright with profound distrust. Everything will depend upon the manner in which the consolidated business is managed. This paper will follow the new venture and from time to time will publish news of its success or failure.

MAKE YOUR STORE ATTRACTIVE.

Realization of changed trade requirements and determination to fit yourself to them can hardly show in any one direction more resultfully than in the way you display your goods.

Make your whole store attractive. People generally like that way of store keeping well enough to go blocks out of their way to buy even a trifling thing where goods are kept in nice, clean, attractive style and where customers are made to feel at home and to understand that their business is appreciated.

They cannot buy on sight in your store unless they do see your goods. If you keep your wares way up near the ceiling in dust proof boxes, don't be disappointed because they stay there.

Of two evils choose neither; both will come home to roost.

It's a wise boy who knows enough to laugh at his father's jokes.

AMONGST THE SALESMEN

GOOD SALESMANSHIP.

They have in Boston a salesmanship class in connection with one of the night schools. Leading merchants have appeared before these young people who desire to succeed in business, and each has emphasized some special line of effort that shall mean advancement in the chosen occupation.

Mr. Ferris, of the Gilchrist Co., in his address last week gave as his motto: "Make up your mind what you want; go after it and keep after it until you get it." "I did not come here to-night to teach you how to sell goods or how to trim windows, but how to get along and reach the top of the ladder," he said. "There is lots of room at the top, the bottom is much crowded. Great opportunities are always open for energetic men and women. Ambition accomplishes many things and will always make people better. The surest test of a man's mettle is his ambition. Ambition makes friends and makes enemies, and makes happiness and unhappiness, and the sooner you get ambition the better it will be for you.

"If you have ambition and do not get discouraged you will surely get along. If you desire to be a Rockefeller or a Morgan, you cannot smother it, you will be such a man.

"Take the best job that is offered to you and have ambition, but be sure always to back it up with honest methods. Keep at all times from getting a big head. If you have ambition and determination you will succeed. Every man who starts with a determination can be his own master.

"If I should lose my position to-morrow I would start in as a salesman and I would at the outset get the names of all people who come into the store and try to please them. Try to excel. Be optimistic. If you are worth getting a raise in salary you will get it."

NEW COLOR AGENCY.

The stories of the "slowness" of the Englishman in business are numerous, but as business men most of them "arrive." In fact, it is said that few have ever been able to beat the British trader at his own business. W. O. Greenway, 13 St. John Street, Montreal, is a good example of the bright, up-to-date Britisher. He arrived in Montreal recently and opened well equipped offices and sample rooms at the address noted, selling a varied list of British and Continental goods along such lines as fine colors and lakes of all kinds for all purposes: ochres, siennas, umbers, oxides, purple browns, turkey and venetian reds, ivory blacks, crocus, rottenstone, etc.; also varnish gums, gambia lac for knottings, polishes etc., hat manufacturing, insulating, etc., English filling up powder (pink and grey) lithopone, zinc white, barytes, sulphate of copper, flake and powdered litharge, also red lead and many other kindred specialties

Mr. Greenway is a "hustler" and has been 27 years in the trade. He will cover the whole Dominion and parts of the United States. His varied experience in the color and allied trades both in Britain and on the European continent, also by previous traveling in United States and Canada, give him accomplishments that mark him as one with rare possibilities before him in Canada. Mr. Greenway is not only seeking business in the lines named, all of which he can offer to advantage, but is also looking for certain Canadian produce for regular shipment to England.

His well printed noteheads bear a unique picture at the top. It embraces a map, showing in red the British Islands and Canada. London and Montreal are in bold black type and sweeping, as if in the form of an ocean liner's track or as a connecting link is the name Wm. O. Greenway. Altogether a striking and original example of letter heading.

TRAVELERS' TAXES IN NEW ZEALAND.

J. S. Larke, Canada's commercial agent in Australia, writes: "In New

WM. O GREENWAY, Montreal.

Zealand the tax of fifty pounds levied a few years ago was changed to an income tax on the goods sold. It was considered that a profit of five per cent. had been made on all sales, and the Government levied a tax of two and a half per cent. upon this profit. This amounted to one-eighth of one per cent., or twelve and a half cents on the hundred dollars of orders taken. It is impossible for the majority of travelers to know how much their sales have been as the larger firms commonly send in their orders through their London or New York agents, and this furnished a means of evading the act and of often escaping it. The Government now requires every traveler to make a deposit of five pounds on entering the colony and pay duty on his samples also. On leaving it he is required to make a declaration of his sales, when, if the deposit exceeds the tax due, the excess is refunded to him, with the duty on the samples he may take away with him. He may enter at any port or take his departure from any port of the colony, a certificate of the deposit and duty paid being given him at the port of entry, which is honored at the port of departure."

A TRAVELER'S MISTAKE.

"A salesman came into my office the other day," said a retailer of hardware, "whom I had never seen before, but of whose goods I had formed a pleasant impression.

"As he came up to my desk I held out my hand, and was prepared to give him a cordial reception, but before I had a chance to say more than 'Glad to see you,' he broke out something like this: 'Never thought I would get here with that poky old local. Is that the best you can do in the way of trains? Then the rain and mud nearly finished me. Never struck worse roads in my life. Nasty weather for any man to be out, anyway.'

"It took all the cordiality out of me, and threw a chill over the interview. He was a good salesman so far as some things went, but a mighty poor one in others. It took him a half-hour to thaw out the ice that his ill-timed salutation and his growl at our town had formed over my buying impulses."

A LITTLE DIPLOMACY.

I was in search of my first job and had been scanning the "Help Wanted" columns every day for a month before school closed, when at last I read the words: "Boy Wanted—Call at No.— Market Street, at 8.00 o'clock a.m.. References," writes a man who is now manager of a large business.

I showed it to the principal at school, who readily gave me a "To whom it may concern" reference, setting forth all my good qualities, and, armed with this, I presented myself at No.— Market Street at 7.30 a.m., when lo! to my dismay there stood twenty others ahead of me.

I took my position in the rapidly increasing line, however, and had waited fifteen minutes when a young man appeared to sweep the sidewalk. While watching him a plan occurred to me. Why not send my letter in ahead?

Calling the boy, I asked him if he would take my "references" in if I would finish sweeping the sidewalk, to which he readily agreed. Upon his explaning matters to the "Chief" the latter immediately sent for me, "took me on trial" and dismissed the line of applicants.

I am still employed by the same firm, but as a salesman now, having given up my broom six years ago to another.

When you die the world will keep right on going around.

A man never fully realizes how homely he really is until he had his picture taken in a group.

Sporting Goods and Supplies

CANOES AND CAMP OUTFITS

E. T. Keyser Gives Some Practical Advice Regarding Stocking and Selling Canoes and Camping Supplies.

The hardware dealer who makes any pretence at handling sporting goods and who has watched conditions closely, during the last few seasons, could scarcely help noticing that the canoeist is gradually assuming the position, as a commercial proposition, which the bicyclist did in the palmy days of the wheel.

The canoeist is not, and probably never will be, as numerous as the bicyclist once was, but as an individual purchaser, he ranks far higher. When the bicyclist had bought a wheel, ranging in price from $150 downward to $70 or $80, a cyclometer lamp, a repair kit, bell and a few other sundries, he was tolerably dead as a customer, and the balance of his money was spent in board and lodging at wayside inns. These latter expenditures amounted to no small item, but did the dealer in bicycle supplies no earthly good.

The canoeist of to-day, on the other hand, expends from $25 to $170 for his canoe and rigging and is then in the market for cushions, back rests, paddles, etc. Before he has used his canoe many weeks, his afternoon trips have lengthened to Saturday afternoon and Sunday cruises, which necessitate, in addition to his outfit, a tent, a cot, cooking utensils, camp stove, a lantern, a folding chair, waterproof clothing bags, etc., until he has gradually accumulated an equipment, the retail price of which has amounted to fully as much, if not more, than the amount which he paid for his craft.

Then, he discovers that his short cruises allow opportunities for fishing, shooting, rifle and pistol practice and amateur photography that no other class of outdoor sportsman can enjoy within such a short distance from home. Incidentally, such articles as camp blankets, ponchos, bathing suits, sweaters and other articles of clothing are always in demand by him.

Don't jump at the conclusion that, because a complete canoe equipment embraces a large and various assortment of sporting goods, with its value well up in the hundreds, that the canoeist must necessarily be a rich man, and therefore few and far between.

The canoeist has this advantage over any other class of outdoor lover. The money which he spends for his equipment takes the form of an investment. He cooks his own food in camp and pays no rent for his tent site, and the difference between the amount which he spends in a year for the food which he, himself, prepares and that which the bicyclist bought at a restaurant, and the saving afforded by pitching his tent with no one to demand rent over the cost of a room, at even a moderate-priced hotel, will about even things up in expenditures as far as canoeist and bicyclist are concerned. Remember also, and this is a main point of my argument, that the money which the bicyclist spent, generally went into the till of some wayside boniface, while the dollars, which the canoeist puts in circulation, go into the bank account of the merchant who has sufficient enterprise to handle goods which the canoeist needs.

A membership in a local canoe club will pay an enterprising dealer many hundred per cent. dividends on his initiation fees and dues, and he is thereby in a position to get into close touch with the canoeist in his vicinity, and also be on the qui vive for the trade of the individual who is just about to purchase his first craft.

There is a fair profit in canoes, and a good one in camp outfits. The sale of one naturally leads to the sale of the other, and the man, who purchases a satisfactory craft, is very apt to return to the same establishment, when he desires to accumulate his camp outfit. It therefore behooves the dealer to use care in the selection of his stock.

The canoeist's trade is worth having, as I have stated before, his original purchase of craft bears a good profit to the dealer, and there never was a canoeist yet, no matter what the size of his equipment, who was not in the market every successive season for additions to it. There are to-day thousands of towns, throughout the country, where men are now sending their orders for craft and outfits to outside parties, and where an establishment, at which they might procure their supplies, would secure a profitable trade. There are thousands of other towns where facilities for canoeing exist, and where a single canoe, put in commission, would induce the sale of dozens more. These are points well worth consideration by the up-to-date retailer who wishes to increase his business, and increase it in a paying direction.

Cut prices have not yet struck the canoeing trade and, from all present indications, it will be some time before they do so. Of course, ordinary common sense must be used in the selection of one's stock. In a well wooded country, where dead wood is plentiful, one of the light wood-burning camp stoves will be found the article most in demand for cooking purposes. Where wood is scarce, a vapor stove burning kerosene is a better proposition.

Then, too, it must be borne in mind that a large, heavy tent, although it may be admirably adapted for a camping party, staying in the same vicinity for many days or weeks, would not appeal to the canoeist in the slightest degree. The canoeist's tent must be light, portable and easy to pitch.

The canoeist, who makes a Saturday and Sunday camp, and whose tent remains in the same spot for but one night, does not care to go to the trouble involved, in properly settling a wall tent, with its numerous guy ropes and pegs, and the addition of a fly, with its extra bulk and weight, is not to be thought of. Therefore a marquee tent, with a single pointed pole, or a pyramid tent, both of waterproof material, and furnished with a waterproof floor cloth, and of comparatively light weight and giving, when set up an area of from 7 by 7 to $7\frac{1}{2}$ by $7\frac{1}{2}$ feet are the styles of tents which can be sold to best advantage to the canoeing trade. It is not necessary for the dealer to lay in an elaborate and costly stock of cooking and eating outfits. He can make these up from his own stock of tin or enamelware, cooking utensils, in various combinations, packing the various assortments in tin buckets of various sizes, accordingly as they are designed for one, two or more parties. He can have made up, to his special order, bags of waterproof canvas with double tops, the inside one tieing up like a half empty salt bag and the outside one closing by a draw string, running through brass grommets. These will last longer and keep clothing just as dry, and pay a better profit to the retailer than the rubber clothing bags, which chip, scale and crack on exposure to the heat of the sun and the rough usage of camp life.

SPRINGS ON SKATES.

The absence of springs on ice skates has been more or less of a mystery. That they are needed is an undisputed fact, as the skater has no means of lessening the jarring naturally incident to the uneven surface of the ice. A New York inventor, noticing the total absence of springs on ice skates, experimented with them and found them desirable in every way. The springs are placed between the steel runner and the plates for the reception of the toe and the heel of the shoe. The addition of the springs also tends to ease the feet while skating, besides greatly adding to the enjoyment of the sport.

NOVEL FISH HOOK.

W. J. Evans, Minneapolis, Minn., has invented a fish hook on which the bait is fully exposed at all times, but cannot escape from the hook or be detached by the fish. At the same time no part of the hook is passed through the body of the bait and the frog, the bait preferably used, may swim about, and even rise to the surface and breathe with nearly as great freedom as though the hook were not attached. The swimming bait attracts the fish and cruelty to live bait is obviated.

STOVES AND TINWARE

STOVES OR BOILERS.

There are many homes in which the right kind of stoves will be more satisfactory to the occupants than some of the heating apparatus which is more persistently urged by salesmen representing other lines, says a writer in the Metal Worker. A short time ago I sold two parlor double heaters because they were cheaper and would be more satisfactory than a hot water heating boiler and radiators in the same building. I would not have made the sale had I not learned from the stove dealer that he had lost the sale of some stoves because the people were thinking of putting in a central heating plant. I asked the address of the people so that I might go and see them, and I reminded the man and his wife, who were familiar with the use of stoves, how pleasant it is to see the fire and feel the direct heat of a hot fire in cold weather. They were familiar from long experience with the comfort derived from a stove in the room, and when I further explained that a hot air pipe could be run up to a register in the floor to heat one or more bedrooms from each stove, they decided the arrangement was just what they wanted. I did not attempt to sell them a cheap stove or an unnecessarily fancy one. I selected a good common sense type of parlor double heater that I knew would do strong heating on the upper floor. I feel sure that as the result of this sale my customer will have demand for similar stoves next winter. I have explained to him how he should bring to the attention of other possible buyers the pleasure and comfort which this customer is deriving so that the good stoves would be doing good advertising for him as long as they are in use.

I believe that very little is gained from selling cheap stoves, and regret that some stove manufacturers do not design their heating stoves with a view to more practical efficiency and pay less attention to the unnecessary gaudy decorators. Stove dealers will do well to be careful in selecting their stock to get only the most efficient heating stoves that are attractive without being so covered with nickel plate as to make their presence too conspicuous in an otherwise tastefully furnished home. The trend in range ornamentation and the ease with which they sell is evidence that merit and chaste design are more popular and profitable than stoves which depend on show to secure the attention of the buyer and be forever after an unsatisfactory purchase, though the owner may not know the real cause.

STORING STOVES.

"What in the world to do with the stoves" is a question that is now bothering many a woman, says the Stoves and Hardware Reporter. If an appeal to the man of the house is made he will generally say, "Oh, leave 'em up; you'll find them there all right in the fall." But that doesn't suit at housecleaning time and the stove dealer who caters to this business can, with a little push, obtain considerable of it to do. An advantage to the dealer is that he generally gets the job of putting the stoves up again, furnishing repairs, new pipes, etc., and often a new stove. He gains an entrance to the houses of customers, has an opportunity to make friends with the women folks, and if he is wide-awake and alert to his business this will lead to many sales. By all means, store all the stoves you can and make the charges reasonable, depending on future business.

HELP CLERK TO KNOW GOODS.

The average retailer is a busy man, and often says, "If I spent the time the average traveler thinks I should spend with him I would not accomplish anything," writes W. L. Leckie, a stove traveler. You are in business to make money, and in order to sell a thing successfully, the only way to learn about them is to go to the factory where they are made and see them made, which many of you have not the time to do, or listen to the traveler.

Another thing, is that it is as necessary for the clerk to know about your goods as it is for you. How many of you take your clerks into your confidence, or give them all the information you know about what you are dealing in? How is a clerk, if you do not do that, going to explain your goods to the customers? I believe the best thing the retailer can do is to educate the clerk on any article that you wish him to sell. And I believe it is just as essential for the clerk to try and learn, and pick up all the knowledge he can, as it is for his employer to inform him.

Another very necessary thing in the selling of stoves, or any other article, but more especially in stoves, is that of display. I am sorry to say that I go into many stores where the proprietor, though he has been successful in many ways and has made money, is a little bit negligent in the display of his goods. I have gone into stores where I have seen stoves covered up with blankets or harnesses or dishpans and nothing to see about the stove but perhaps the legs, or the extreme top, and this man will tell me that he has not been as successful in seling stoves at Jones over there, that he cannot sell them; and one of the great reasons why he does not sell them is because he does not display them. I believe when a lady walks into a store to buy a range or any other article, it is half sold when it appeals to or strikes her fancy, and in order to do that it ought to be clean and polished up and made attractive, but it should not be covered up with a lot of other goods entirely foreign to stoves.

Don't get your gasoline and kerosene cans mixed. That error cost two lives in Ohio last year.

NEW WINNIPEG MANAGER.

W. L. Helliwell, formerly Toronto city traveler for the Gurney Foundry Co., has been apointed manager of the Winnipeg branch of this company, Mr. Helliwell, accompanied by E. Holt Gurney, left on Monday to assume his new duties.

Mr. Drewe, formerly manager at Winnipeg, is ill at Banff.

SOME GASOLINE DON'TS.

Some statistics on the use of gasoline have recently been prepared by H. B. Davis, the state fire marshal of Ohio, who has given some very interesting suggestions regarding lighting protection as noted in these columns some time ago. The information given is as follows:

Don't allow too much fluid to flow into the burner or fail to close it tight when putting the fire out.

Don't slop the stuff—it is more dangerous than powder. Three-fourths of the accidents occur while filling the reservoir.

Don't keep gasoline in any jug or in a can larger than 2 gal., because it is difficult to pour the thin stuff from either without spilling it.

Finally, don't hunt the source of an odor of gasoline with a light. The result of finding it is always instantaneous and disastrous.

Don't fill the can quite full, for gasoline expands much more than water when it becomes warm and is likely to force open a seam in the reservoir.

Don't fail to turn the burner shut before filling the reservoir, for the fluid leaking through it will make a vapor which will set on fire one who strikes a match to light the stove.

Don't pour gasoline from one vessel to another in a room in which there is a fire or light, because the invisible vapor of gasoline will be drawn to any nearby fire, lamp, candle or gas jet.

Don't fill the stove reservoir while the burner is alight. Vapor of gasoline being heavier than air will reach the flame, and the flash will so frighten the filler that more gasoline will be spilled and the room instantly filled with flame.

Don't leave any gasoline can open, because currents of air draw out the vapor. All gasoline stoves should have bottom and three sides closed to prevent combustible material from reaching the flame, and the main burner grates should be two feet from the floor.

Don't fail to watch closely for leaks in reservoir or burner, because gasoline, being but two-thirds as dense as water, will exude through a smaller hole. Remember, too, that when the leak is small there is no drop or damp spot anywhere to show its existence, because the gasoline vaporizes as fast as it exudes.

AN INGENIOUS LIGHT.

An ingenious beacon is located at Arnish Rock, Stornway Bay, in the Hebrides, Scotland. It is a cone of cast-iron plates, surmounted by an arrangement of prisms and a mirror which reflect the light from the lighthouse on Lewis Island, 500 feet distant across the channel.

HARDWARE TRADE GOSSIP

Ontario.

H. Dakin, Galt, was in Toronto this week.

J. H. Vandusen, hardware merchant, od Tara, is dead.

J. H. Hedley, Markdale, is opening up a tinsmith and repair shop.

Moore and Nunn are opening a new hardware store at Lansdowne.

W. A. Hillhouse, Shelburne, has sold out to Button, Spilker & Co.

Chas. R. Banks, Peterboro, has opened a new sporting goods store.

W. Mitchell, Port Stanley, has sold his hardware stock to H. M. Ellison.

F. Grice, of A. J. Ross Co., Cargill, was a buyer in Toronto last Saturday.

B. Werner, hardware merchant, of Innerkip, has sold his business to go west.

Young & McBurney, Wingham, have dissolved partnership, Mr. McBurney retiring.

Jelly & White, tinware and stoves, Shelburne, have dissolved partnership, R. A. Jelly continuing.

Fred Schaeffer, Beaslau, was in Galt last week buying machinery for his brick plant from the Goldie-McCulloch Co.

Col. W. M. Gartshore, manager of the McClary Mfg. Co., London, has left with his wife and daughter for Florida.

Brooks, Sanford Hardware Co., Toronto, have sent A. E. West to Hamilton to represent them as traveler for their branch in that city.

George H. Beaudin, representing J. Wiss & Sons, shear manufacturers, Newark, N.J., called at the Toronto office of Hardware and Metal on Saturday.

B. A. Perry, of the James Morrison Brass Mfg. Co., superintendent of fixture department, was in the train wreck at Guelph this week and had his back injured.

J. B. Reade, for many years a valued employe of H. S. Howland, Sons & Co., has accepted the position of buyer for the Kennedy Hardware Co. George H. Smith, formerly with the Kennedy Company, has joined the staff of Rice Lewis & Son.

J. W. Searle, London, Eng., called at the Toronto office of Hardware and Metal on Tuesday. Mr. Searle is paying a business visit to Canada and United States in the interests of Moffatt's Co., of London, Eng., manufacturers of the "Lucas" incandescent gas lamp.

Amongst the Ontario plumbers seen in Toronto this week were; Ald. Chas. Bull, St. Thomas; Mr. Peters, of Peters & Sylvester, Stratford; Geo. Scott, of Scott & Bennett, Galt; Jack Brady and Jas. Struthers, of Butchart & Co., Owen Sound; Hugh Wallace, of Hamilton; Jas. Boxall, of Boxall & Matthie, Lindsay; and Will Clark, of Adam Clark & Son, of Hamilton.

D. W. Rose, formerly buyer for Van Tuyl & Fairbank, Petrolea, has accepted a position with H. S. Howland Co., Toronto, and will leave for the west next week. He will represent this firm in the district between Winnipeg and Regina. Thos. Wright, formerly covering the district from Winnipeg to the mountains, will travel between Regina and Edmonton in the future.

Quebec.

A. Forget & Co., plumbers, Montreal, are registered.

E. Manbleau, St. John's, Que., is in Montreal buying goods.

The Philbin Specialty Co., hardware, Montreal, has been registered.

A meeting of the creditors of A. D. Armand, hardware dealer, Montreal, was held Feb. 25th.

Wm. Smaill, of the Canada Horse Nail Co., Montreal, has returned from a business trip to Toronto.

C. C. Race, representing Reveillon Freres, of Edmonton, is calling on the Montreal jobbers this week.

John P. Scott, metal merchant, Duchess St., Toronto, has taken out a permit for a new warehouse.

A. W. Stanley, of the Stanley Rule and Level Co., New Britain Conn., is in Montreal calling on the trade.

The Fife, Searle Co., Montreal, have moved from St. Paul St., corner of St. Peter St., to three doors east on St. Paul St.

R. G. Howe, representing the Wilkinson Sword Co., in Montreal, has returned from a trip to the head office of the firm in London, Eng.

A Curry, who lost his eye while working in the Angus shops of the C.P.R., Montreal, has entered suit for $5,000 against that company.

Ex-Mayor O'Donohue, of Stratford, who was killed this week in the railroad wreck near Guelph was connected with the Owen Sound Cement Company for many years.

J. H. L. Pettier, of the Maison, Jean, Paquette, hardware dealers, Montreal, is calling on the trade in Granby and other Quebec towns, and reports business excellent.

S. D. Pearson Co., Montreal, manufacturers of patent cone rotary ventilators, have secured the contract for fitting up the new "La Patrie" building, on St. Catherine St. east.

J. Sophus, representing Schuehardt & Schutte, in Canada, has returned from his wedding trip, and will take up his residence in Montreal. Mr. Sophus has taken up business quarters with Baxter and Patterson, 102 St. Antoine St.

The Canadian branch of the Gillette Safety Razor Co., Montreal, which was destroyed by fire some time ago, has taken up quarters at 622 St. Paul St., Montreal, where correspondence should be addressed.

R. F. Harrison, of London, Eng., is in Montreal to take over the sales managership of the F. W. Reddaway Belting Co. Mr. Harrison comes here with a well-established record in the Old Country, and he will have complete control of the Canadian business.

Geo. T. Moss has severed his connection with the Canada Screw Factory, Hamilton, going to the Canadian Westinghouse Co. Before leaving he was presented with a gold locket by the employes of the screw factory.

V. Eastwood, who has severed his connection, as manager of the Peterborough Hardware Company, to take the management of the Royal Bank in that city, was recently waited on by the officers and staff of the hardware company, and presented with a handsome gold-headed cane.

The Seybold Co., have now taken up their quarters with the Starke Hardware Co., on St. Peter St., Montreal. The long established Dominion prestige of the Starke Company, coupled with the excellent Quebec clientele of the Seybold Co., should help to make the Starke-Seybold Hardware Co. one of the strongest concerns of its kind in Canada.

Frothingham & Workman, Montreal, recently stated in an advertisement of "Lowmoor" bar iron, that they had sold this brand of iron for the past 30 years. At the time of writing the advertisement there was no positive information as to how long time they had sold this brand of iron. There was no doubt, however, that they had sold it for as long a period as the advertisement stated. An early edition of this old firm's catalogue has just been found which shows that in 1867 Frothingham & Workman were importing "Lowmoor" bar iron. This 1867 catalogue, as well as that of 1865, shows that at those dates Frothingham & Workman were selling lines of English goods which they still sell in large quantities, among them being Thomas Jowitt & Sons' files and rasps, and Armitage mousehole forge anvils.

Maritime.

In a fire at Pictou, N.S., Feb. 21, S. H. Hinnison and E. Cameron, hardware merchants, lost heavily.

Western.

T. Weir & Son, Minitonas, Man., hardware and implement dealers, have dissolved.

James Sutherland, Moose Jaw, has sold his hardware and tinsmithing business to A. E. MacKenzie.

J. J. Heinrichs and Jno. Driedger, hardware dealers, Osler, Sask., lost heavily in a fire which visited that town Feb. 17.

L. G. McKam, of New Westminster, B.C., has invented a hand saw called the Twentieth Century hand saw and rips, cuts-off and mitres, practically doing the work of three saws in one.

W. J. Simpson, manager and buyer of hardware and crockery for Robinson & Co., Winnipeg, left on Feb. 16 for a month's purchasing tour of Chicago, Pittsburg and eastern points.

Among the hardware men who visited the Winnipeg wholesale houses last week were: S. Schwanz, Rocanville; J. H. Dulmage, Battleford; A. Johnson, Fort Frances; Alex. Anderson, Saltcoats; Jas. Anderson, Binscarth; L. C. Porteous, Carlyle; J. Sutherland, Kenora, and D. Donahy, Belmont.

NORMAL CONDITIONS IN WEST.

Once again normal conditions prevail in the west. It would be idle to deny that up to the first week in February the winter was exceptionally severe—it was in fact the worst in twenty years—and the resulting losses to the ranches in the Far West and to all classes through the tie-up of the railways have been heavy. At the same time people in the east and south should take with much more than the proverbial pinch of salt the stories which have been telegraphed from Winipeg by a few unscrupulous correspondents anxious to offer saleable "copy"; and they should know that during the month of February mild weather has prevailed and the railways are now grappling successfully with the tie-up in transportation. They were caught unprepared by the worst winter in a generation and the disasters which followed will surely result in provision for adequate equipment in future.

With a return to mild weather the branch lines have been opened up and trains on the main lines are running almost on schedule time. The fuel scarcity is rapidly being relieved in all parts of the west and merchants are getting delivery of their goods from the wholesale houses. A great amount of money is necessarily tied up in the country through the inability of the railways to move more than a small proportion of the 1906 wheat crop. It is evident that the railways will be busy with the 1906 crop almost up to the date when the 1907 crop commences to move; but with the opening of the lake and rail routes heavy shipments of grain will commence and money will again be plentiful from the Great Lakes to the Rockies. Eastern wholesalers and manufacturers should not permit themselves to be alarmed by foolish newspaper stories for they who know the conditions in the west best are the men who have most confidence in its immediate future. There is no reason for alarm. Normal conditions again prevail.

COBALT SPECULATION.

Hardware jobbers inform us that quite a number of retailers throughout Ontario have invested in Cobalt mining stocks, and in consequence are experiencing difficulty in meeting their accounts. It is a fact that about ninety per cent. of the mining companies, so-called, are nothing but stock-selling propositions, frauds, if ever there was a fraud. Mining is a highly specialized form of industry. The merchant of training and experience who knows the pitfalls and difficulties of the business, thinks the man a fool who dashes into it as a cat might under pressure of a dog-hunt take to the water. But it is much easier for the uninformed to make money in retailing than in mining; for the man who knows it is infinitely easier.

If the dealers who have put money into Cobalt had kept it in their business and had taken as much interest in it as they have in the mining market their aggregate profits would have been immensely larger. Not only would their profits have been larger, but their businesses would have been worth more.

There are retailers with money to invest that they do not need in their business. If they are in doubt what to do with it let them ask their banker or a reputable broker. But they should avoid the mining market as they would contagion. Even in the few cases where the mining proposition is a legitimate undertaking, as soon as the public have put in enough and there appears to be a possibility of dividends, a few sharp speculators who know the game are likely to form a combination, "buy" the market and dispossess the rest of the shareholders of all interest in the property, save an unpleasant recollection. A man's business is the place for his money. If he has more than his business requires, there are fields of legitimate investment where his money can browse in safety and not keep him awake at nights or take his attention from his business. Next week we will publish from The Financial Post a statement showing the comparative money earning capacity of various lines of investment.

MALLEABLE INDUSTRY THREATENED.

The hardware trade is united in its strong denunciation of the amendment of the revised customs tariff whereby the duty of 17½ per cent., formerly 20 per cent. on malleable iron castings is to be removed, thus ruining the malleable iron industry in Canada located now in six leading towns, Oshawa, Galt, St. Catharines, Smith's Falls, Brantford, and Walkerville, by placing castings on the free list and leaving Canadian manufacturers helpless against the competition of American firms. If the proposed amendments are carried out, it will practically ruin the malleable industry in Canada, and, moreover, deal a hard blow to the towns in which these industries have been located, for if they have to close down, which is altogether probable, the taxation of the towns will be doubled and the trade decreased. Several thousand men are engaged in this industry in Ontario. We can hardly conceive of a government, by its legislation, deliberately and ruthlessly putting these men out of the way of earning a living in a trade which they spent many years in becoming proficient in.

We ask all hardware merchants and all those directly or indirectly interested in the malleable industry to co-operate in strong endeavors to urge the Government to a serious reconsideration of the proposed measure.. If any industry is to suffer a change in the duties let it be the implement industry which has for so long been nursed by the Government or the iron and steel industries, the bounties to which are sufficient to allow of enough change to save the malleable industry from destruction.

NEW POSTAL REGULATIONS.

Attention was drawn last week to the abrogation of the postal convention between the Canadian and United States Governments, and the possibility of the exclusion of all magazines and trade publications, along with a host of other publications, owing to the imposition of the rate of 8c. per pound, in place of the one cent per pound rate to be discontinued.

Regarding the new regulations the Woodstock Sentinel-Review says:

"Speaking of the proposed intellectual preference for the encouragement of British periodical literature in this country, a contemporary points out that the rate from Canada to Great Britain

on newspapers and periodicals is only one-fifteenth the rate from Britain to Canada. The British postal authorities have persistently refused to modify the rate for the reason that it would mean too great a loss of revenue.

"It would appear from this that the first step towards encouraging the circulation of British periodical literature in Canada should be taken by Great Britain, not by Canada.

"Associated with this talk of an intellectual preference we hear references to the advisability of discouraging the yellow literature of the United States. But why speak exclusively of the yellow literature of the United States? Not surely because there is no yellow literature published in Great Britain.

"The fact is there is yellow literature and bad literature coming from both countries, and the badness that bears a British imprint is not a bit better than the badness that bears an American imprint.

"This is a matter in regard to which the tastes of the Canadian people will probably have the last say. There are a great many cheap magazines printed in America that find their way into this country because the Canadian people cannot get anything else that suits their tastes and their purses any better. It is nonsense to condemn these magazines because they are cheap. They ought to be judged by the character of their contents as well as by their price.

"The fact is that many of the cheap American magazines are very creditable productions and perfectly harmless in their effect on either the morality or the loyalty of the readers.

"Some of the most pernicious publications sold in this town come acress the ocean, not across the boundary line.

"This is a matter in regard to which a little more common sense and a little less prejudice would be desirable. By all means let anything be done that may properly be done to facilitate the circulation of wholesome periodical literature of Great Britain in this country; the more wholesome literature the better, whatever country it comes from; but if the British publishers expect to gain ground in this country they must undertake first to learn something about Canada and the needs and tastes of Canadian readers. Canadians are fond of reading the cheap American magazines, partly because they are cheap, partly because they deal with problems and phases of life with which Canadians are more or less familiar, and partly because there is always the possibility of coming across the work of a Canadian writer."

A. BURDETTE LEE'S DEATH

The hardware trade in Toronto was shocked on Tuesday last on hearing of the sudden death of Major A. Burdette Lee, president of Rice Lewis & Son, and one of the best known men in the trade in the city. Mr. Lee had been ill with la grippe for about ten days, but the trouble was not considered serious until a couple of days before his death, when symptoms of pneumonia developed, and the patient lost strength rapidly. The deceased was the eldest son of A. B. Lee, who died in July, 1901, and who for a generation had been president of the old-established firm of Rice Lewis & Son. On the death of his father, A. Burdette Lee became president of the company, and retained that office until he passed away on Monday last.

Major Lee was in his 46th year, having been born in Toronto in 1861. With the exception of about a year spent in the fur business in Winnipeg, he had been associated with Rice Lewis & Son all his life. In 1885 he, as a member of the Queen's Own Rifles, served as a captain in the Northwest rebellion, rising from the ranks and being pay-master on

THE LATE MAJOR A. BURDETTE LEE
President of Rice Lewis & Son, Toronto.

retiring from active service in 1905. He was educated at Upper Canada College and Trinity College School, Port Hope, and was a member of the Granite and Albany clubs, and Military Institute, he being an enthusiastic bowler and curler.

The deceased leaves a widow and two sons, Stanley Burdette Lee, and Norman Barker Lee, the former having been serving in the sporting goods department of Rice Lewis & Son for the past few months. One brother and four sisters survive, the brother being Gordon Lee, a successful rancher at Marshall, Sask., and the sisters, Mrs. H. C. Wilson, of Edmonton; Mrs. W. C. Crowther, Toronto; Mrs. D. MacMurchie, Toronto, and Mrs. Harold Mara, Toronto. Victor Lee, a brother, who was also associated with Rice Lewis & Son, died in August, 1905, there being, therefore, three deaths, of father and two sons, within the past three years.

The funeral took place on Thursday afternoon, the wholesale and retail stores being closed down in respect for the deceased president, who was particularly well liked by all the inside employes and traveling men.

LICENSE TRANSIENT TRADERS.

In a great many communities the merchants are troubled more or less by transient traders and pedlars operating without licenses, in some cases carrying away thousands of dollars in a year, without expending a cent by way of fee to the municipalities where they get the business. They enter directly into competition with local retailers who are obliged to pay heavy taxes for the privilege of selling goods to the public.

Where such conditions exist in Ontario the fault lies with the merchants themselves for an Act passed at the last session of the Provincial Legislature provides a means whereby they can have transients put on such footing that their competition need not be feared. All municipalities are empowered to pass by-laws imposing fees up to a certain substantial amount. Other provinces may secure legislation of like nature if the merchants present the matter to their local House.

The imposition of good, stiff licenses on transients is in no sense a restriction of trade, but rather the protection of legitimate traders. Heavy taxes or rent enter into a merchant's cost of doing business, and must be covered by the profit which he makes on his goods. Transients, in the majority of cases, have no expense of this kind to reckon with, and can afford to undersell the resident merchant. They take many thousands of dollars annully from the customers of retail stores. A fee which places them on equal footing with the latter is prohibitive to most of them, as it should be.

MARKETS IN DAILY PAPERS.

President Humphries, of the Ontario Retail Hardware Assn. has taken wise action in writing the editor of the Mail and Empire, Toronto, requesting that the publication of paint, oil and glass markets be discontinued on its financial page. One of the leading daily papers in Canada recently discontinued the publication of such market reports on Mr. Humphries' request and he should be successful in this instance. If the reports are not discontinued hardware merchants who are subscribers to the Mail and Empire should write the editor pointing out the injustice of giving wholesale quotations to retail buyers, who do not figure on freight charges, and similar incidentals.

Markets and Market Notes

(For detailed prices see Current Market Quotations, page 66.)

THE WEEK'S MARKETS IN BRIEF.

MONTREAL.

Door Checks and Springs—Discount on some lines, now 10 per cent.

Pipe Stocks and Dies—No's 1 to 2, 75 and 2½ discount.

Shot—New selling basis advanced.

Old Material—Some lines advanced.

TORONTO.

Shot—New list with 5 per cent. off.

Galvanized Sheets—Gordon Crown advanced.

Montreal Hardware Markets

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, March 1, 1907.

In spite of the continuous cold weather wholesalers are doing a very brisk business, but money is still reported tight.

The shortage in wood screws is still very marked, especially ⅝x6, and 2x14, many jobbers having scarcely any on hand at all.

Rivets and burrs, machine screws, bolts and nuts, horse shoes and horse nails, and coil chain, are all selling well. Some shipments of green wire cloth are already going forward.

Door checks and springs, (some lines) have advanced, the discount now being 10 per cent. An advance is also reported in pipe stocks and dies, Nos. 1 to 2, 75 and 2½ per cent. discount. Shot has also advanced 5 per cent., and higher prices on ammunition are looked for daily.

We have received the latest prices on binder twine, lawn mowers and poultry netting, and show same below.

TWINE—"Standard," 500 ft., sisal, 9½c.; "Tiger," 550 ft., manilla, 9⅝c.; "Red Cap," 600 ft., manilla, 12½c.; "Blue Ribbon," 650 ft., pure manilla, 13¾ to 14c. Car lots ¼ less; thousand pound lots, ⅛c. less.

AXES—Axes and handles still continue to sell well here, in spite of the fact that the jobbers' season is practically over.

LANTERNS—Sales are few and far between, and this line can now be counted among the dead ones as far as wholesalers are concerned.

COW TIES AND STALL FIXTURES—This line is another of the "has-beens," moving very slowly now.

RIVETS AND BURRS—Selling well. Prices remain firm, with no changes.

HAY WIRE—Orders are now coming in freely. No change in prices: No. 13, $2.60; No. 14, $2.70; No. 15, $2.85; f.o.b. Montreal.

WIRE NAILS.—We still quote: $2.45 per keg, f.o.b. Montreal.

CUT NAILS.—Prices remain: $2.30 per keg, base, f.o.b. Montreal.

MACHINE SCREWS—Good demand. No change in prices.

BOLTS AND NUTS—All factories are running full blast. Demand exceedingly heavy. Shortage in some lines. No change in prices.

HORSE NAILS—Change in the seasons is starting to create a heavy demand and dealers are trying to get their orders in in good time.

HORSE SHOES—Good demand. No change in prices.

BUILDING PAPER—Prices are very stiff, but no higher.

CEMENT AND FIREBRICK — Good business is being done at the same prices.

COIL CHAIN—Good demand. Prices stiff with no changes.

SHOT—Advanced 5 pet cent. Prices now are: Shot, packed in 25-lb. bags, ordinary drop AAA to dust, $7.35 per 100lbs.; chilled, No. 1—10, $7.88 per 100 lbs.; brick and seal, $8.40 per 100 lbs.; ball, $8.93 per 100 lbs. 5 per cent. off. Bags less than 25 lbs., ½c. per lb. extra, net; f.o.b. Montreal, Toronto, Hamilton London St. John, Halifax.

AMMUNITION—Jobbers are now paying a little more, but have not yet raised their prices. We still quote: Loaded with black powder, 12 and 16 gauge, per 1,000, $15; 10 gauge, per 1,000, $18; loaded with smokeless powder, 12 and 16 gauge, per 1,000, $20.50; 10 gauge, $23.50.

GREEN WIRE CLOTH—Some shipments are being made. No change in prices: In 100-foot rolls, $1.62½ per hundred square feet, in 50-feet rolls, $1.67½ per hundred square feet.

LAWN MOWERS—Quite a few good orders are now being received. Our prices are: Low wheel, 12, 14 and 16 in., $2.30 each; 9-in. wheel by 12 inch, $2.85 each; 14-inch, $3 each; 16-inch, $3.12½ each; high wheel, 12-inch, $4.05 each; 14-inch, $4.25 each; 16-inch, $4.50 each; 18-inch, $4.75 each.

POULTRY NETTING—2x2 mesh 50 and 5 per cent. discount, other sizes 50 per cent. off.

Toronto Hardware Markets

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, March 1, 1907

Hardware trade conditions have improved considerably, prices strengthening, with some lines an upward tendency. The approach of spring and moderation of the climate are the main causes for the improvement in trade. Orders with the wholesalers are coming in rapidly, especially from the west and Northern Ontario. In spite of J. J. Hill's prediction of a depression business is very active.

Binder twine prices are firm, with reports of a probable advance in sisal.

Axes and handles still have a good demand in the retail trade. The wholesale trade is practically ended.

Screws are firm in price with a heavy demand. Business in bolts and nuts is heavy; the demand, however, exceeds the supply, building operations becoming more extensive, the stock being low with little immediate prospects of repletion.

Mechanics tools are in good demand. Carpenters' tool prices are firm and business active with the retailers and with some of the wholesalers, as some retailers are still getting in stock. The demand for shovels continues with the approach of spring and railroad activities.

Axes and handles, still have a good demand in the retail trade. Retail business is heavy.

BINDER TWINE—500 ft. Sisal, 9½-9⅝; 500 ft. Standard, 9½-9⅝; 550 ft. Standard Manilla, 10¾; 600 ft. Manilla, 12¼; 650 ft. pure Manilla, 13¾-14. Car lots ¼c less, five ton lots ⅛c less, central delivery. There are prospects of advance in prices of Sisal.

SCREWS—Wholesalers report a good business, with active prices.

BOLTS AND NUTS—These continue to experience a good demand, which exceeds the supply considerably.

CHAIN—No change in prices.

RIVETS AND BURRS—Prices are firm and unchanged, with heavy demand.

MECHANICS' TOOLS—The demand for these is heavy, especially carpenters. Shovels continue to experience a good demand.

EXTENSION AND STEP LADDERS—The demand is strong, prices remaining unchanged: 11 cents per foot for 3 to 6 feet, and 12 cents per foot for 7 to 10-foot ladders. Waggoner extension ladders 40 per cent.

POULTRY NETTING—A good demand prevails for this line, retailers getting their spring stock rapidly filled. Prices are unchanged: 2-inch mesh, 19 w.g. discount 50 and 10 per cent., all others 50 per cent.

OILED AND ANNEALED WIRE—Prices in these are unchanged. We continue to quote: Canadian wire: gauge, 10, $2.46; gauge 11, $2.52; gauge 12, $2.61 per 100 lbs.

WIRE NAILS—The demand continues heavy, with prices firm and unchanged. We continue to quote $2.40 base.

HORSESHOES AND HORSENAILS—The demand is heavy, especially in Northern Ontario and in all centres of

railroad building operations. Prices remain firm and unchanged.

BUILDING PAPER—The business in this as yet is not active, but should in a few weeks enliven.

HIDES, WOOL, FURS—Business is quiet. For all prices in these see The Canadian Grocer.

Montreal Metal Markets

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, March 1, 1907

There is no advance as yet over last week's prices on copper, but the shortage is just as great as ever. Some well informed gentlemen say that copper will come down, while others just as well informed, say it will go up. One Montreal jobber says, "None of us know where it is going, to tell the truth." This man is also well informed. Judging from the above, we are pretty safe in saying that when the present shortage is relieved, copper will go down, but until then, "nothing doing." Spelter is very firm, with the tone of the market higher. Ingot tin is firmer than last week, minimum price firmly held. Lead has been steady for the past week, with no change in prices. Some lines of old material have advanced slightly.

COPPER.—Conditions remain as stated last week. Ingot copper, 26½ to 27c.; sheet copper, base sizes, 34c.

INGOT TIN.—Stronger than last week. Prices remain: 45½ to 46c. per lb.

ZINC SPELTER.—Firm at 7.50 to 7.75 per 100 lbs.

PIG LEAD.—Steady for the past week. Prices are, 5.50 to 5.60 per 100 lbs.

ANTIMONY.—Firm at 27½ to 28c. per pound.

PIG IRON.—Unchanged: Londonderry, $24.50; Carron, No. 1, 27.00; Carron special, 25.50; Summerlee No. 2, selected, 25; Summerlee No. 3 soft, $23.50.

BOILER TUBES.—Very firm at the same prices.

TOOL STEEL.—A fair business is reported, with no change in prices.

COLD ROLLED SHAFTING.—No changes to report.

GALVANIZED IRON.—Market strong. Same prices prevail.

OLD MATERIAL.—Several lines advanced. Our prices now are: Heavy copper 20c. per pound; light copper 17c. per pound; heavy red brass, 18½c. per pound; heavy yellow brass, 15c. per pound; light brass, 11 to 11½c. per pound; tea lead, 4¼ to 4½c per pound; heavy lead, 4½c. per pound; scrap zinc, 4½c. per pound; No. 1 wrought, $17 per ton; No. 2 wrought, $6 per ton; No. 1 machinery, $18 per ton; stove plate, $14 per ton; old rubber, 11½c. per pound; mixed rags, 1 to 1½c. per pound.

Carry a full line and let your customers look to your store for everything in the paint line.

Toronto Metal Markets

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, March 1, 1907

Tariff matters have attracted considerable attention in the metal markets this week, the danger which threatens Canada's malleable iron industry being realized by every metal merchant. Everywhere the sentiment is expressed that the Government should reconsider their action in throwing this market open to United States producers. The malleable industry has developed into an important branch of the metal trade and should not be squeezed out of existence to benefit implement manufacturers or steel producers.

The statement that the 1,000 employes of the Lancashire Steel Company was kept going during the shipping strike last summer solely because of the Canadian tariff has also been noted with interest.

American markets, which have been full of bearish reports during the past fortnight, are strengthening again and the break which has been so freely predicted is apparently not due yet. It is generally realized that an end has been reached to the upward movement in iron but a gradual easing off is looked for rather than a sharp break. A desire to create business by slightly lowering prices is now said to be developing. Advices, however, report consumption continuing at a record pace and this should keep prices firm. An intelligent view taken is that when underlying conditions are sound, as they are to-day, adverse reports do not precipitate trouble, but rather that the dangerous time is the time when there are no notes of warning, and everyone feels that there are no troubles ahead. Time and again in this period of extreme prosperity there have been little waves of pessimistic talk and they have vanished overnight.

Copper keeps both scarce and firm. Receipts of copper from the mines are slow and refineries are, therefore, unable to forward orders with any promptitude. Better conditions are looked for with the opening of spring.

Regarding tin plate a foreign view is that a falling off in demand need hardly be feared during the next six months, as many consumers have been out of the market for some time and are only just coming to the front again. This particularly applies to China and Japan, which have been working off the enormous supplies which accumulated during the war, and have only resumed buying during the last few weeks. In Russia also trade has been affected by the political crisis, and is only beginning to recover.

Complaints of shipping delays continue, two carloads of pig iron being forwarded from the Old Country to a Western Ontario user, being lost somewhere between Boston and here, it having been shipped from that point on Feb. 4. In such cases, and they are numerous to-day, jobbers are put to endless worry, trouble and expense in correspondence and telegraphing in order to endeavor to satisfy customers. When an order is taken it is by no means filled.

Lead and smelter continue active with a good value of trade doing. Galvanized steets are strong with an advance noted on gordon crown, 26 gauge being moved from $4.20 to $4.40 and 28 from $4.40 to $4.60. There is also talk of higher prices on brass tubing and sheet brass.

PIG IRON—The market is stronger outside. Railroad blockades are causing great distress among the foundries. Buying continues active and deliveries slow. Hamilton, Midland, and Londenderry are off the market, and Radnor is quoted at $33 at furnace. Middlesborough No. 1 is quoted at $24.50, and Summerlee No. 1 at $26 f.o.b., Toronto.

BAR IRON—Stocks are improving slightly. Steady prices rule and we still quote: $2.30 f.o.b., Toronto, with 2 per cent. discount.

TIN—Prices are steady with a fair amount of buying at 45 cents for ingots. The base on charcoal plates continues at $6.50.

SHEETS AND PLATES—Gordon Crown galvanized sheets have advanced. A good trade is being done in sheets and Canada Plates.

BRASS—We still quote 30 cents per pound on sheets, with some talk of an advance on sheets and on brass tubing.

COPPER—Deliveries for present use are exceedingly hard to get. We now quote: Ingot copper, $26.50 per 100 lbs., and sheet copper, $35 per 100 lbs.

LEAD—The market is active with prices unchanged. We quote, $4.50 for imported pig and $5.75 to $6 for bar lead. For sheet lead $7 is asked.

ZINC SPELTER—Stocks are light but trade is good at former prices which are 7½c per lb. for foreign and 7c per lb. for domestic. Sheet zinc is quoted at $8¼c in casks, and $8½c in part casks.

ANTIMONY—A fair trade is reported with price unchanged at 27c per pound.

OLD MATERIAL—Buying prices are: Heavy copper and wire, 20c. per lb.; light copper, 18c per lb.; heavy red brass, 18c per lb.; heavy yellow brass, 15c. per lb.; light brass, 11c. per lb.; tea lead, $4.25 per 100 lbs.; heavy lead, $4.40 per 100 lbs.; scrap

zinc, 4¼c. per lb; No. 1 wrought iron, $13.50; No. 2 wrought, $; machinery cast scrap, $17.50, stove plate, $12; malleable and steel, $8.50, old rubbers, 11c. per pound, country mixed rags, $1 to $1.25 per 100 lbs., according to quality.

COAL.—The shortage of hard coal continues. We still quote:—Standard Hocking soft coal, f.o.b. at mines, lump, $1.50, ¾ inch, $1.40; run of mine, $1.30; nut, $1.25; N. & S., $1; P. & S. 85c. Youghiogheny soft coal in cars, hooker at bridges: lump, $2.60; ¾ inch, $2.50; mine run, $2.40; slack, $2.15

London, Eng., Metal Markets

From Metal Market Report, F b 26, 1907.

PIG IRON—Cleveland warrants are quoted at 51s. 6d., and Glasgow standard warrants at 53s. 9d., 1s. 4½d. lower, making price as compared with last week on Cleveland warrantes 1s. 3d. lower.

TIN—Spot tin opened quiet at £192 15s., futures at £191, and after sales of 210 tons of spot, and 80 tons of futures closed weak at £192 for spot, £190 10s. for futures, making price compared with last week 15s. higher on spot and unchanged on futures.

COPPER—Spot copper opened firm at £107 15s, futures £109, and after sales of 300 tons of spot and 500 tons of futures, closed easy at £107 7s. 6d. for spot, and £108 10s. for futures, making price compared with last week 10s. lower on spot and 10s. lower on futures.

LEAD—The market closed at £19 10s., making price as compared with last week unchanged.

SPELTER—Best selected closed at £114 10s., making price as compared with last week 10s. higher.

United States Metal Markets

From the Iron Age, Feb. 28, 1907.

So far as the finished branches of the iron and steel industry are concerned business is developing in a very satisfactory manner. The mills are full of work, and specifications are coming in steadily. During the first three weeks of the current month the new orders for the United States Steel Corporation have come in at a daily rate which is practically equivalent to the full capacity of the plants. In other words, the corporation, even in a month which is usually quiet, as February is, has not been gaining on its extraordinary accumulation of orders. Shipments during the first half of February were for obvious reasons not quite up to the output of the mills.

The sale of 50,000 tons of steel rails to the Manchurian road, to which we alluded some weeks since, has been followed by contracts for bridge work amounting to 8,600 tons. It is estimated that the February tonnage of the American Bridge Company will aggregate 40,000 tons. This includes 3,200 tons for the new shops of the Grand Trunk Western and 7,500 tons for the Waverly warehouse of the Steel Corporation. Among the contracts pending are 6,500 tons for the Chicago Corn Exchange Bank and 2,000 tons additional for the New Haven road.

In the steel market the most interesting development is the purchase by the leading interest of what tonnage was offered in the market by a new open hearth steel plant in the Buffalo district about to begin production.

The pressure in the wire and tube trades for an advance in prices has been persistent recently. It is thoroughly understood, however, that the most powerful interests are adverse to any raising of prices.

The eastern bar iron markets are strong and makers are now quoting on the basis of their own mills, rather than on the Pittsburgh base.

The pig iron markets are featureless. The spot markets are controlled entirely by local and temporary conditions, with a tendency toward a lowering of premiums. Middlesbrough iron has been offered in cargo lots at $20.50, at tidewater, but for the future business is confined to purchases made for export work. For forward delivery of foundry irons negotiations are pending east and south, but buyers and sellers seem too far apart. Prompt basic is scarce, although the mills have a good deal of tonnage due to them on old contracts.

From the Iron Trade Review, Feb. 28 1907.

The centre of attraction is pig iron. Keen interest is displayed in every move and rumor regarding the situation. The air is full of bearish talk and authenticated reports are current that southern prices are being shaded for other deliveries besides the last half.

Considering the number of rumors afloat, which would tend to increase any inherent weakness, remarkable strength is shown. One event which has been widely referred to in newspaper reports as an indication of weakness, was the action of a large independent steel maker in refusing, on account of what he considered the excessive price, to take about 50,000 tons of Bessemer and basic pig iron on a sliding scale contract which permitted such action in case the price reached a certain point. The ease with which this tonnage, suddenly thrown upon the market, was absorbed is, however, proof of the strength of present conditions. At the time the iron was refused one interest which makes basic iron was badly in need of iron for its customers and bought a part of the tonnage at about $22, and a large steel making interest, whose production of iron had been curtailed by the blowing out of several of its furnaces, was another buyer.

Indications now are that shipments of iron ore from the Lake Superior ranges next season may amount to 42,000,000 tons, about 2,000,000 tons more than has been estimated.

The situation regarding steel bars has now reached an acute stage and delivery promises are about on a par with those on steel plates. If all contracts now on the books are fully specified, mills will operate uninterruptedly for the next seven months. No definite promises are being made on new business and current specifications are so heavy that the leading producers have inaugurated a system of apportionment by which their steel bar output will be divided as equitably as possible, this plan now being in operation on plate distribution.

THE PRICE OF COPPER.

"What causes such high prices to prevail in the metal market" is a question we have on every side, and the answers we get when we ask the question, ourselves, are various. Many people, for instance, think the high prices are due to manipulation, but the great majority claim that the trouble arises from the tremendous demand of a growing continent. This after all seems to be the more rational explanation.

Of course some people will ask why there should be a shortage in copper, for instance, unless it is brought about by "amalgamated" holding up the production. "Amalgamated" certainly could do so, did they desire, but do they? We do not think so.

In the first place, these great enterprises depend for their existence, on doing a tremendous business at a small margin of profit. The very existence of the trusts proves this. The greater the volume of business done, the less the expense proportionately.

Suppose there were three manufacturers in one city, making the same class of goods, and doing about the same amount of business. The heads of two of these concerns get together and decide to amalgamate. What's the result? By manufacturing on a larger scale, the cost of production is reduced, therefore the product can be sold by the larger firm at a much lower figure than the smaller man can hope to meet, without lowering in any way the quality of the goods, therefore, the smaller man must join forces with his rivals, or get out of the game. Thus, in order to keep down the manufacturing cost, the sales must be kept up and the plant running full blast, else there would soon be no profit, and if the price were raised enough that a small independent manufacturer could make a profit on his goods, wouldn't he rather stay out of any combine and stick to himself? A man would rather be the whole thing in a small business than only half the show in a larger one, but rather than go to the wall, he joins the combine.

Just so soon as a combine or trust raises its prices to a figure that allows competition, its power begins to fade away.

If the world's copper mines were nearly exhausted, there would be some object in the great producers holding back for the highest possible prices in order to make the best profit they could while the metal lasted, but with the great mineral wealth of the North America continent, this is unnecessary. There is copper enough for many years to come, and therefore no reason that we can see for any shortage, except the want of labor.

Metal is taking the place of wood in many articles of everyday use, and the strides that all branches of electrical manufacture have taken lately have used

up practically all reserve stocks. In fact metals are used now almost as fast as they can be mined, and the only relief seems to be in increasing the output of the mines, and this can only be done by increasing the number of laborers employed.

B.C. Hardware Trade News

Vancouver, B.C., Feb. 22, '07.

The lumbermen will be represented before the select committee of the House of Commons which is to hear evidence regarding the charge made on the floor of the House that a combine exists among the lumbermen, by which prices are unduly enhanced. All along the millmen have asserted that they welcomed such an investigation, as it will give them opportunity to go on record in a manner impossible otherwise, as to their position and as to the fairness of present lumber prices. R. H. H. Alexander, secretary of the B. C. Lumbermen's Association is to go to Ottawa and give evidence, and other lumbermen are expected to be in attendance there also.

* * *

From all accounts prices of lumber from the coast mills are not at all likely to be less. In fact a well-defined rumor has it that on April 1st the list is to be increased materially. There has been no raise in lumber prices from the coast since Dec. 13, last, when a raise of $1.00 went into effect. The Mountain Lumbermen's Association at their meeting in January increased their schedule on rough grades but allowed the higher classes of lumber to remain. It is said that they too will be increased when the coast prices go up. Owing to their situation the mills of the interior are able to sell somewhat cheaper than coast mills for the good reason that the freight rate is lower. The quality too of the timber or rather the class, is very different from that of the coast, so there are two distinct schedules of prices on B.C. lumber. The fact is the coast and interior lumber does not compete in very many classes, and certainly not in the clear grades of fir and cedar.

* * *

To meet the growth of the city the Vancouver Gas Co. is planning large increase of its plant. The present location of the producing plant is so restricted that a new site has to be secured for the proposed larger plant. The company now has an expert on the ground, L. L. Merrifield, M. Inst.M.E., C.G.S., of Toronto, and this gentleman is to go over the whole situation and make recommendations for the enlargement of the present capacity of the gas plant.

* * *

The cry is going up from many small towns and outlying districts of the province for "more light." The interruption in freight traffic on the railways has not only practically stopped shipments out from the distributing centres of the province, but the steady drain on stocks of oil has reduced them till there is no coal oil in Vancouver and Victoria to meet demands. Other lines of hardware are also badly broken up by non-receipt of goods. It is expected that much delayed freight will soon be coming forward. The C.P.R. has been making a better record for the last week, their line not having been altogether closed at any time. The Great Northern, which was completely blocked for a fortnight or more, has announced that its lines are once more cleared and open for traffic, and that freight may be expected forward at once.

* * *

The greatest interest is being taken by the hardware trade in the altered schedule of freight rates, caused by the recent decision of the Railway Commission, giving Vancouver shippers a rate to Nelson and common points, which means the interior of B.C., of 62 per cent. of the rate from Winnipeg to the same points. As pointed out in connection with the grocery trade last week, the rate is generally satisfactory, but there are special cases in which a special commodity rate, not based on class is of course withdrawn by the new ruling. In such cases there will be an actual increase, by sticking to the letter of the ruling.

* * *

Coast building operations have opened up very strongly since the cold snap has been over. Many large blocks for Vancouver have already been begun. Others are projected, and the usual large percentage of increase in the number of residences is also to be made. Building is very active in Victoria, several blocks being projected, and a large number of residences. Many interior towns have experienced a satisfactory growth too, owing to the influx of settlers, all the available land suitable for farming or fruit-growing now being sought eagerly. The building of the Grand Trunk's new city of Prince Rupert is bound to go on this summer. Many buildings are already erected and with the rush of people who plan to go there almost at once, there is bound to be activity. This is having its effect already on stocks of builders' hardware, plumbing supplies, etc. Much more so is it having its effect on the building trades. The carpenters are said to have served notice on the contractors that at the expiry of the present wage schedule agreement, on April, there must be a very material increase in the rates of pay. Other building trades are also restive, and there may be some return to the disturbances of three or four years ago.

* * *

The Robertson Lumber Co., formerly Kamloops Lumber Co., has rebuilt and enlarged the capacity of its plant at Enderby, on the Okanagan branch railway, at a cost of $75,000. The new plant is to have a capacity of nearly 100,000 feet per day. It will be ready for operation in about two months.

N.S. Hardware Trade News

Halifax, N.S., Feb. 26, 1907.

The bad condition of the roads during the past week has had a very detrimental effect on business, and just at present there is not much doing in the hardware line. Some small orders for spring goods have come in, but it is a little early yet for any rush. Prices now appear to be pretty steady throughout the list, though the jobbers look upon the markets with the utmost uncertainty.

* * *

The new hardware store of L. E. Wamboldt, of Lunenburg, N.S., is up-to-date in every respect. The building is of the flat-iron style, being 63 feet in length, 43 feet in width in the front and tapering to 18 feet in the rear. The store has large plate glass windows and is well lighted. All the ceilings are of metal of a handsome design, and the building is heated throughout with hot air. Mr. Wamboldt is one of the hustling merchants of the Gloucester of Nova Scotia, and his business is most prosperous.

* * *

The employes of Crump & Perrier, plumbers and steam fitters and dealers in shelf hardware, held their annual sleigh-ride to Popple's, on the Herring Cove road, last week. Both members of the firm accompanied the party, which went out on two four-horse teams. After games, songs, etc., the party sat down to a bountiful dinner, and all did it full justice. The toast list was, "The King," proposed by G. A. Perrier; "The Firm," proposed by Charles Rent, the bookkeeper, was responded to by Messrs. Crump and Perrier. The last toast was proposed by Mr. Perrier, "The Employes," and responded to by Mr. Rant for the men, and A. Gale for the boys. The good feeling that exists between employer and employe in this firm is very manifest, both Messrs. Crump and Perrier taking a deep interest in all matters of pleasure which the employes desire to carry out.

* * *

In the destruction by fire of the Henderson block, at Pictou, last week, H. Higginson's hardware store, with all contents, was destroyed. The store of E. Cameron, dealer in stoves and tinware, also situated in the same block, was completely destroyed. Both stores were partially insured, but the loss to the owners will be considerable.

* * *

James Cummings, of the staff of H. H. Fuller & Co., has gone to Winnipeg, where he has accepted a position with the wholesale hardware firm of Miller, Morse & Co., Mr. Cummings was very popular in Halifax, and his many friends regret his departure.

Arthur McAdams, formerly traveler for H. H. Fuller & Co., has joined the staff of Austin Bros.

Thomas Graham has accepted a position with H. H. Fuller & Co., and is now on the road. Mr. Graham has been identified with the hardware trade of the Maritime Provinces for many years. He was employed by Black Bros., up to the time that firm went out of business, and he then joined the staff of Emmerson & Fisher, St. John. Later he went to Glace Bay, being connected with the firm of F. E. Moir & Co., of that town.

MANITOBA HARDWARE AND METAL MARKETS

Market quotations corrected by telegraph up to 12 a.m. Friday, March 1., 1907.)

Room 511, Union Bank Building, Office of HARDWARE AND METAL, Winnipeg, Man.

With a return to normal weather conditions the branch lines on the railways are all open again and the C.P.R. claim to have delivered all delayed freight. Business shows renewed activity, as retail stocks were allowed to run low during the snow blockades and the travelers are now reaching customers whom they were forced to neglect a few weeks ago.

LANTERNS—Cold blast, per dozen, $6.50; coppered, $8.50; dash, $8.50.

WIRE—Barbed wire, 100 lbs., $3.22½; plain galvanized, 6, 7 and 8, $3.70; No. 9 $3.25; No. 10, $3.70; No. 11, $3.80; No. 12, $3.45; No. 13, $3.55; No. 14, $4.00; No. 15, $4.25; No. 16, $4.40; plain twist, $3.45; staples, $3.50; oiled annealed wire, 10, $2.96; 11, $3.02; 12, $3.10; 13, $3.20; 14, $3.30; 15, $3.45. Annealed wires (unoiled) 10c. less; soft copper wire, base, 36c.; brass spring wire, base, 30c.

HORSESHOES—Iron No. 0 to No. 1, $4.65; No. 2 and larger, $4.40; snowshoes, No. 0 to No. 1, $4.90; No. 2 and larger, $4.65; steel, No. 0 to No. 1, $5; No. 2 and larger, $4.75.

HORSENAILS — Capewell brand, quotations on application. No. 10, 20c.; No. 9, 22c.; No. 8, 24c.; No. 7, 26c.; No. 6, 28c.; No. 5, 32c.; No. 4, 40c., per lb. Discounts: "C" brand, 40, 10 and 7½ per cent., "M" brand and other brands, 55 and 60 per cent. Add 15c. per box.

WIRE NAILS—$2.85 f.o.b. Winnipeg, and $2.40 f.o.b. Fort William.

CUT NAILS—Now $2.90 per keg.

PRESSED SPIKES — ¼ x 5 and 6, $4.75; 5-6 x 5, 6 and 7, $4.40; ⅜ x 6, 7 and 8, $4.25; 7-16 x 7 and 9, $4.15; ½ x 8, 9, 10 and 12, $4.05; ⅝ x 10 and 12, $3.90. All other lengths 25c. extra net.

SCREWS—Flat head, iron, bright, 85 and 10 p.c.; round head, iron, 80 p.c.; flat head, brass, 75 and 10 p.c.; round head, brass, 70 and 10 p.c.; coach, 70 p.c.

NUTS AND BOLTS — Bolts, carriage, ⅜ or smaller, 60 and 5; bolts, carriage, 7-16 and up, 55; bolts, machine, ⅜ and under, 55 and 5; bolts, machine, 7-16 and over, 55; bolts, tire, 65; bolt ends, 55; sleigh shoe bolts, 65 and 10; machine screws, 70; plough bolts, 55; square nuts, case lots, 3; square nuts, small lots, 2½; hex nuts, case lots, 3; hex nuts, smaller lots, 2½ p.c.

RIVETS — Iron, 60 and 10 p.c.; copper, No. 7, 43c., No. 8, 42½c.; No. 9, 45¼c.; copper, No. 10, 47c.; copper, No. 12, 50½c.; assorted, No. 8, 44½c., and No. 10, 48c.

COIL CHAIN—¼ in., $7; 5-16, $5.35; ⅜, $4.75; 7-16, $4.50; ½, $4.25; 9-16, $4.20; ⅝, $4.25; ¾, $4.16.

SHOVELS—List has advanced $1 per dozen on all spades, shovels and scoops.

HARVEST TOOLS—60 and 5 p.c.

AXE HANDLES—Turned, s.g. hickory doz., $3.15; No. 1, $1.90. No. 2, $1.60; octagon, extra, $2.30; No. 1, $1.60.

AXES — Bench axes, 10; broad axes, 25 p.c. dis. off list; Royal Oak, per dozen, $6.25; Maple Leaf, $8.25; Model, $8.50; Black Prince, $7.25; Black Diamond, $9.25; Standard flint edge, $8.75; Copper King, $8.25; Columbian, $9.50; handled axes, North Star, $7.75; Black Prince, $9.25; Standard flint edge, $10.75; Copper King, $11 per dozen.

CHURNS—45 and 5 per cent.; list as follows; No. 0, $9; No. 1, $9; No. 2, $10; No. 3, $11; No. 4, $13; No. 5, $16. ?

AUGER BITS—"Irwin" bits, 47½ per cent., and other lines 70 per cent.

BLOCKS—Steel blocks, 35 p.c.; wood 55 p.c.

FITTINGS—Wrought couplings, 60; nipples, 65 and 10; T's and elbows, 10; malleable bushings, 50; malleable unions, 55 p.c.

HINGES—Light "T" and strap, 65 p.c.

HOOKS—Brush hooks, heavy, per doz., $8.75; grass hooks, $1.70.

STOVE PIPES—6-inch, per 100 feet length, $9; 7-inch, $9.75.

TINWARE, ETC. — Pressed, retinned, 70 and 10; pressed, plain, 75 and 2½; pieced, 30; japanned ware, 37½; enamelled ware, Famous, 50; Imperial, 50 and 10; Imperial, one coat, 60; Premier, 50; Colonial, 50 and 10; Royal, 60; Victoria, 45; white 45; Diamond, 50; Granite, 60 p.c.

GALVANIZED WARE—Pails, 37½ per cent.; other galvanized lines 30 per cent.

CORDAGE — Rope, sisal, 7-16 and larger, basis, $11.25; Manilla, 7-16 and larger, basis, $16.25; Lathyarn, $11.25; cotton rope, per lb., 21c.

SOLDER—Quoted at 27c. per pound. Block tin is quoted at 45c. per pound.

POWER HORSE CLIPPERS—"1902" power clipper, $12; "Twentieth Century" $6. "1904" sheep shearing machines, $13.60.

WRINGERS—Royal Canadian, $35; B.B., $39.75, per dozen.

FILES—Arcade, 75; Black Diamond, 60; Nicholson's, 62½ p.c.

LOCKS—Peterboro and Gurney, 40 per cent.

BUILDING PAPER—Anchor, plain, 66c.; tarred, 69c.; Victoria, plain, 71c.; tarred, 84c.

AMMUNITION, ETC. — Cartridges, rim fire, 50 and 5; central fire, 33½ p.c.; military, 10 p.c. advance. Loaded shells: 12 guage, black, $16.50; chilled, 12 gauge, $17.50; soft, 10 gauge, $19.50; chilled, 10 gauge, $20.50. Shot, ordinary, per 100 lbs., $7.25; chilled, $7.75; powder, F.F., keg, Hamilton, $4.75; F.F.G., Dupont's, $5.

IRON AND STEEL—Bar iron basis, $2.70. Swedish iron basis, $4.95; sleigh shoe steel, $2.75; spring steel, $3.25; machinery steel, $3.50; tool steel, Black Diamond, 100 lbs., $9.50; Jessop, $13.

SHEET ZINC—$8.50 for cask lots, and $9 for broken lots.

PIG LEAD—Average price is $6.

PETROLEUM AND GASOLINE. Advanced prices are: Astral, 20c. per gallon in cases, per case, $2.60, Silver Seal in bbls, per gal., 21c., Sunlight in bbls. per gal., 20c., per case, $2.60, Eocene in bbls, per gal., 21c., per case, $2.60, Petrolene in bbls., per gal., 24c., Crystal Spray, 20c., Silver Light, 21c., Engine Gasoline in barrels, per gal., 27c., f.o.b. Winnipeg in cases, $2.75, lamp gasoline, per gal., 30c., f.o.b. Winnipeg, in cases, $3.25.

PAINTS AND OILS — White lead, Pure, $6.50 to $7.00, according to brand, bladder putty, in bbls., 22c., in kegs, 24c., turpentine, barrel lots, Winnipeg, $1.01, Calgary, $1.06, Lethbridge, $1.06, Edmonton, $1.09. Less than barrel lots 5c. per gallon advance. Linseed oil, raw, Winnipeg, 67c., Calgary, 74c., Lethbridge, 74c., Edmonton, 75c., boiled oil, 3c. per gal. advance on these prices.

WINDOW GLASS — 16-oz. O.G., single, in 50-lt. boxes — 10 to 20 united inches, $2.25; 20 to 40, $4.40, 16-oz. O.G., single, in 100-lt. cases — 10 to 20 united inches, $4; 20 to 40, $4.52; 41 to 50, $4.75; 50 to 60, $5.25; 61 to 70, $5.75. 21-oz. O.S., double, in 100-lt. cases—20 to 40 united inches, $7.50; 41 to 50, $8.40; 51 to 60, $9.45, 61 to 70, $10.50; 71 to 80, $11.55; 81 to 90, $12.60; 90 to 90, $14.75; 91 to 95, $17.50.

FURS PLENTIFUL IN NORTH.

Experienced fur dealers expect to get a large consignment of fur from the far north next summer, as the winter, so far, has been good for the trade. According to the signs timber wolves are plentiful in the Peace River district, for the north, the moose travel south, and when the wolves are very numerous in old-timers say they never remember the moose to have been so plentiful as this season. Marten and lynx also reported to be very plentiful. They live on rabbits, and this year the rabbit supply is abundant.

The scarcity of muskrats is due, it is said, to the deep snow. They live in burrows, and when the snow is very deep it covers up their homes. The trappers set their traps on top of the muskrat holes and when the snow is very deep they do not know where to find them.

The coyotes are very plentiful this winter, and on account of the snow being so deep they find it hard to get footing. Farmers in the surrounding district report that the coyotes come close up to their dwellings in search of food.

Altogether the dealers are expecting a prosperous season for the fur trappers in the north, and next summer they expect the number and size of the packs of fur to be larger and better than ever. The cold winter will make a thick growth of fur on the animals, so that the pelts should be of the very best quality. As Edmonton is practically the last town to the north on the railway, and is a well-known traders' post, this fur industry is of considerable importance to it, about a million dollars' worth of furs passing through each year

PIG IRON PRODUCTION IN 1906.

The American Iron and Steel Association's statistics just published show that the total production of pig iron in Canada in 1906 amounted to 511,957 gross tons, against 468,003 tons in 1905, an increase of 43,954 tons, or over 15 per cent. Of the total production in 1906, 525,716 tons was made with coke, 16,621 tons with charcoal, and 220 tons with electricity. The production of basic pig iron in Canada in 1906 amounted to 216,225 tons, against 172,102 tons in 1905, and the production of Bessemer pig iron was 165,609 tons, against 149,203 tons in 1905. Basic pig iron was made in 1905 by three companies owning six furnaces, and Bessemer pig iron by two companies owning three coke furnaces. The basic and Bessemer pig iron was all made with coke, Canada has not made spiegeleisen or ferro manganese since 1899.

On December 31, 1906, Canada had 15 completed blast furnaces, of which eight were in blast and seven were idle. Of the total 12 usually use coke for fuel and three use charcoal. In addition one furnace to use coke was building, and three coke furnaces were partly erected on December 31. Work on the partly erected furnaces was suspended, however, some time ago.

SHUTTING OFF CREDIT IN CARTWRIGHT.

R. F. Moore, Cartwright, Man., president of Merchants', Limited, the new retail consolidation to which extended reference was made in a recent issue of this paper, was in Winnipeg last week and in the course of an interview gave an interesting account of the first week's experiences. It will be remembered that the dealers in Cartwright have formed a joint stock company in order that by united action they may combat the credit evil and the competition of the mail order houses.

"How did you come to think of this scheme?" asked The Canadian Grocer.

"I have had it in mind for two or three years," was the reply. "One Friday night a month or so ago, we merchants in Cartwright met to pass a resolution on the parcels post matter. From that we naturally drifted into a discussion of the credit troubles and the competition of the mail order houses. I put my propositions before the others in rough form and the next Monday night we met and decided definitely to go on with the deal."

"How did the public receive the news?"

"Not very favorably at first. Most of the farmers shouted "combine" and said they would send to other towns and to Eatons; some talked of starting another store. But we have met and are meeting all these arguments and I think most people are disposed now to give us a fair trial. I don't think there will be any trouble when people see that we are not enhancing prices."

"I put it to them this way: You will have no kick if you get your goods as cheap as you are getting them now, will you? To that they must answer "no." Well then, I add, we expect to be able to sell cheaper to you than we are selling to you now for the reason that we can buy in large quantities."

"You are introducing the coupon system of giving credit, are you not?"

"Yes, we are introducing coupons, both for cash and credit sales. In the first place a customer has to settle all amounts owing before we give him credit at all and in this way we are getting in our accounts. Then credit is given only by the sale of coupon books for which the customer gives his note. This note doesn't bear interest until after a date in the fall when the farmers should have plenty of ready cash."

"How is the scheme working?"

"Very well, but of course there is trouble at the start. One of the wealthiest men in our town sent up the first day for a gallon of coal oil. The messenger had no money with him. We refused to let him take the oil without paying for it by cash or coupon. Of course the account was perfectly safe but we had to maintain our system.

"The man came to the store, very much annoyed, but soon saw the justice of our position."

"You mentioned cash coupon books, Mr. Moore."

"Oh yes, we are selling cash coupon books as well as credit coupons. On a $10 book we allow 2 per cent. discount, on a $25 book 3 per cent. discount, and on a $50 book 5 per cent. discount.

"It is early yet to speak of our experiment," concluded Mr. Moore, "as we have been running now only one week, but so far I am more than pleased with the results. Our cash sales the first week were very satisfactory and our credit sales were a smaller proportion than usual of the total amount."

ORGANIZE FOR PROTECTION.

The retailers in Redvers, Sask., have recently organized a Trades' Protection Association in order to deal with the evils attending the long credit system. The car shortage has caused a scarcity of ready cash and outstanding accounts have become so large that the Redvers merchants have decided the time has come for drastic measures. Under the circumstances the strictly cash method of doing business is not considered practicable, but some curtailment of credit is considered absolutely necessary. At a formal meeting of the Redvers dealers the following resolution was passed:

"That we form the Redvers Mutual Protective Association.

"That the following be elected officers pro tem: President, John Carter; secretary-treasurer, R. Douglas; executive committee, T. King, John Dodds and Richard Curle.

"That the object of this association shall be to overcome to some degree the evils of the credit system and protect ourselves against the abuse of it.

"That each member doing credit business shall furnish monthly to the secretary-treasurer a list of customers' names which shall also show the indebtedness of each party named.

"That the secretary is to record in his books, to which all members shall have access at any time, the total indebtedness of members debtors, which

has been incurred with any or all of the members.

"That a special committee be appointed to draft a circular which shall define the amount due by each individual who has been placed on the book of the association, and who shall receive by mail a copy of said circular.

"That we communicate with merchants doing business in other surrounding districts with the view to their co-operation and also to forward the extension of the association to other towns and places in Saskatchewan."

NEWSPAPER ADVERTISING.

(From "The Autobiography of a Business Man," in Everybody's Magazine.)

For a number of years I advertised only in my windows and in some of the street cars, because I did not feel that I could afford to advertise in the daily papers. Two years ago last September I was having a cravanette coat sale, and I succeeded in selling for a couple of weeks about fifty coats a day. I thought I would try a column ad. in one of the evening papers. The next day this column ad. appeared in one of the evening papers, and by the bye, it was not the one that has the largest circulation in Chicago; I selected the paper that this ad. appeared in because they gave me a low rate, but they agreed to give my ad. a good position in the paper. The result was that the next day the sales, which formerly had been about 50 coats a day, jumped to 142, and in 50 days I had sold over 3,500 raincoats. For the year following that sale I continued to advertise in this one paper. Last fall I felt that I could afford to invest say, about $5,000 in advertising in some one of the other papers. I used three morning papers, and three evening papers, the best in Chicago. The results have been something phenomenal. I did not have to invest the $5,000. The profits came back from the newspaper advertising before their bills came in, and I do not figure to-day that I have a dollar invested in advertising.

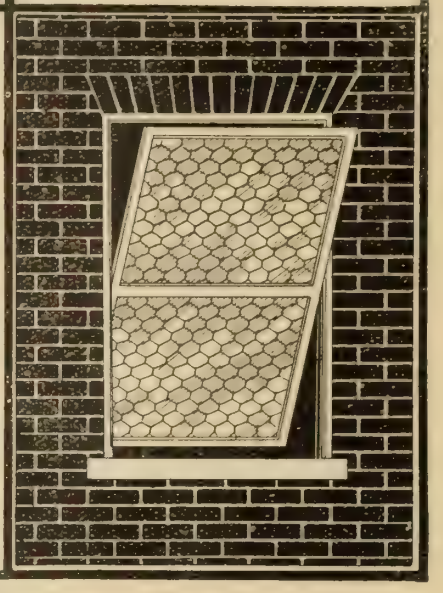
FIRE-PROOF GLASS WINDOWS THAT ARE FIRE-PROOF

These windows in a fire-proof building, complete the security, and in any building will thoroughly prevent the spread and advancement of the fiercest flames.

Better than iron shutters (even if they happened to be closed at the needed time); fire-proof glass remains intact, resisting both the intense heat of the fire and the action of water.

Many practical tests have proved it's efficiency.

Used in conjunction with our hollow sheet-metal frames and other fire-proof fittings, it gives the most perfect protection available.



It's adoption lessens insurance rates.

If you want to know more about "fire-proof windows," write us, it's an interesting subject.

MR. HUMPHRIES NEW STORE.

President A. W. Humphries, of the Ontario Retail Hardware Association, has moved his stock into his new store at Parkhill and has been joined in the business by his son, Ernest, formerly an official at the Institute for the Blind, at Brantford. The new store is more central than the old, being only four stores from the market and next door to the largest dry goods store in town. It was formerly occupied by Magladery Bros.

MONEY IN COPPER.

In British Columbia it is predicted that in 1907 the copper smelters at Granby will produce 25,000,000 pounds. This should be produced at a cost of 9c. per lb., and if it can be sold for 25c. per lb., the Granby Company should earn this year $4,000,000, which is equal to $29.62 per share. Every one-cent per pound fluctuation in the price of copper makes a difference of $250,000 a year in the earnings of the company, equal to $1.85 per share. On a declining copper market, earnings per share would be as follows, figuring on an output of 25,000,000 lbs. per annum:

Price copper.	Earnings per share.
25c.	$29.62
20c.	20.37
15c.	11.11

The Granby Company is now paying dividends at the rate of $12 per share per annum, so that copper would have to be maintained at above 15c. per lb. to permit of the continuation of these dividends.

NEW INVENTIONS.

R. Parker, Lakewood, N.J., has invented an improved pipe clamp embodying in its construction a plurality of jaws, which are universally adjustable, adapting them to support pipes of irregular forms, branch joints, and any kind of pipe-fitting. The nature of the construction is such that it may be folded to occupy a small compass, enabling the clamp to be conveniently carried from place to place, and manufactured at a small cost.

C. F. Smith, New York, N.Y., has secured a patent for a shovel for use in shifting ashes before the same are removed from the stove. The invention is particularly directed to a form of detachable bottom for the shovel and a novel device for securing the same in place, the device being of such construction and placed in such position as not to interfere with the use of the shovel in the ordinary manner.

FOUNDRY AND METAL INDUSTRIES

J. E. Leonard, M.P., president of the Montreal Reduction and Smelting Co., has been for the past year directing the erecting and equipping of a smelting and refining plant at Trout Creek, Ont. It is near North Bay, is the first and only custom smelter for the Ontario mining districts, and will soon be ready to receive ore.

LEAD SMELTING IN ONTARIO.

D. G. Kerr, Toronto, states that the Stanley Smelting Works have been quietly at work for the past four years opening out and developing the lead resources of their property in Eastern Ontario. Present development on two large veins ten to twelve feet wide, fully warrants them in making a large increase in their plants, and they have placed orders with three prominent Canadian machinecy manufacturing companies for all the necessary equipment, which is estimated to cost, with buildings, $75,000. Their mine promises Mr. Kerr says, with suitable plant, a large production of lead ore of 10 per cent. to keep a mill running of a capacity of 200 to 500 tons of ore per day. The demand for lead, he states, cannot be supplied, orders are three months behind, the price is going up, and at present it is $112 per ton for refined pig lead.

STANDARD METALS.

An interesting book, which is being quoted from considerably of late is "Standard Metals," written by R. T. Crane, of the Crane Company, Chicago, the large heating supply house. The work was published some years ago and is a recognized authority in technical schools. It describes where the various metals are found, the manner of their production, their character and their uses in mechanics.

SIFTING SKIMMINGS.

Brass skimmings should never be washed without first sifting them, says the Brass World. Many brass founders believe that the white material in yellow skimmings is nothing but oxide of zinc and carries no copper. As a matter of fact it will frequently run from 20 to 30 per cent. in copper, and if washed, this will be wasted.

All brass skimmings should first be sifted through a rather coarse riddle, say a 20 mesh, and in this manner the fine material can be separated from the metal. The fine, white oxide of zinc which passes through the riddle may be sold for copper contents.
in the riddle should be hand-picked and the large pieces of metal removed. The remainder may be washed in a washing barrel, or otherwise treated.

It is a noteworthy fact that although yellow brass contains less copper than red metal, the skimmings are much richer in copper. The oxide of zinc which escapes seems to carry copper with it. A lot of fine, yellow brass skimmings which have a grey appearance and look as if they contained nothing but oxide of zinc and a little charcoal, may actually contain over 30 per cent. of copper. Repeated tests have demonstrated that this is the case.

Quick and *Ready* Sales

THERE'S pleasure and profit combined in a Sherwin-Williams Agency. Pleasure in showing and selling paints and varnishes that give such universal satisfaction for their quality and price. Profit in the liberal proposition we give our agents and the ready demand, seasons 'round, for our goods.

We are always back of our agents. The advertising helps we give are unexcelled. They create new business for every line of trade the dealer carries. They keep his old friends and win new ones for him.

The spring paint campaign is even now going forward rapidly. Our business getters are the best we have ever planned. If you are not one of our agents, we shall be pleased to explain to you what it means to be with us—the advantages of handling The Sherwin-Williams Paints.

BUILDING AND INDUSTRIAL NEWS

HARDWARE AND METAL would be pleased to receive from any authoritative source building and industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

The Bank of Nova Scotia will build a branch in Winnipeg.

A branch of the Toronto Bank has been opened at Colborne.

The steam saw-mill at Rothesay, N. B., is to be sold by public auction.

A shipbuilding company is to be formed at Kingston, with a capital of $100,000.

The congregation of St. Giles church, Winnipeg, will erect a new church to cost $50,000.

A $50,000 Baptist church is to be erected in Vancouver, with seating capacity of 950.

McCamus, McKelvie & Dowser, New Liskeard, will open a sash and door factory at Englehart.

G. R. Charleson, Minnedosa, has closed his machine shop, to build a new and more capacious one.

Two additional storeys will be built to Stobart, Sons & Co.'s warehouse in Winnipeg this spring.

An apartment block to contain one hundrex suites is to be erected at a cost of $300,000 in Winnipeg.

Scott and Jamieson, meat and produce dealers, Renfrew, are having a cold storage building erected.

The Ellison Milling & Elevator Co. is calling for tenders for a $75,000 mill and elevator for Calgary.

A $15,000 or $20,000 apartment house is to be erected on Queen street east by McCarthy & Co., Toronto.

Two sawmills, with a total capacity of 160,000 feet of lumber, are being built on False Creek, Vancouver.

The Canadian Westinghouse Co., Hamilton, will build a large extension to its present plant this year.

The Canadian Flax Cordage Co. have asked St. Marys for a loan of $5,000 to extend their plant in that town.

A. Haggett & Co., craftsmen, decorators and importers, Victoria, will erect a three-storey building, 80x25 feet.

Nerlich & Co., Toronto, have been granted a permit for a two-storey addition to their warehouse, to cost $35,000.

A permit has been granted to the A. J. Burton Saw Co., Vancouver, for the erection of a $3,300 addition to its plant.

The International Portland Cement Co. have decided to duplicate their plant at Hull. The new capacity will be 4,500 barrels.

J. W. Woods, of Ottawa, has purchased the Redford block in Winnipeg for the Woods Western Co., at a cost of over $100,000.

In the spring one of the biggest private owner car shops in Canada will be erected a few miles east of Medicine Hat, Assa.

Work has been commenced on a magnificent apartment block, 130x197 feet, in Winnipeg. The architects are A. and W. Melville.

A big permit was issued in Winnipeg last week for the erection of a $95,000 warehouse on Princess street for the Fairchilds Co.

The building of the four new Normal schools to be erected at Hamilton, North Bay, Stratford and Peterboro, was commenced on Monday.

An American syndicate has an option on a central block in Ottawa, facing the Government buildings, for the erection of a 300-room hotel.

The Grand Trunk Ry. are making big extensions to the Point St. Charles works, with a view to manufacturing their own rolling stock.

The Imperial Bank has taken out a permit to erect a branch bank on the northwest corner of Bloor street and Lansdowne avenue, Toronto.

The Macgregor-Gourlay Co., Galt, have let the contract for an additional building to their plant, for a pattern shop. Sibley, Miller & Nicol are the contractors.

The Pacific Whaling Co. intend building a barrel factory at Nanaimo. Barrels, not only for their own trade, but also for the general trade, will be manufactured.

Plans for the new Saskatoon office of the National Trust Co. have been received at the Toronto office. It will be a two-storey building, costing about $25,000.

The Rat Portage Lumber Co. will install a $100,000 plant in the $250,000 mill at Harrison, B.C., purchased three years ago and cutting will commence in the spring.

The T., H. & B. Ry. will replace the workshops, recently destroyed by fire, at Hamilton, with a brick building to cost $10,000. George E. Mills has the contract.

A syndicate of American capitalists has secured options on properties in Toronto, with a view to building a large hotel of about 300 rooms, and seven storeys high.

The Alberta Brick Co. has been formed at Medicine Hat, with a capital of $20,000. The president of the company is W. C. Harris, with W. A. Wyatt as secretary-treasurer.

The new Bessemer converter being installed at the Dominion Iron and steel works at Sydney, is nearing completion. This converter will increase the output by 50 000 or 60,000 tons a month.

The Canadian White Co., Montreal, have received a contract from the Fordwick Co., New York, for the construction at Kingston of a million-dollar cement plant, with an initial capacity of 2,500 barrels per day.

The Standard Sand & Machine Co., Cleveland, O., is building a complete plant for handling sand for continuous moulding. This is to be installed in the plant of the Standard Ideal Co., Port Hope, Canada.

The Canada Screw Co., Hamilton, has been incorporated, with a Dominion charter, and a capital of $2,500,000. The incorporators are C. A. Birge, C. Alexander, F. H. Witton, J. O. Callaghan, W. F. Coote, C. S. Wilcox and Hon. Wm. Gibson.

Adam Zimmerman, M.P., is at the head of a big company organized to manufacture balbriggan underwear at

Hamilton. The company is capitalized at $300,000, the Lawrence Co., of Lowell, Mass., being interested. Building operations will begin at once.

The Hamilton and Fort William Nav. Co. have placed an order with the Canadian Shipbuilding Co. for an 8,000-tons steamer, for the upper lake coal and ore trade. The vessel will be 460 feet long, 53 feet beam, and a 29 feet draught. Quadruple expansion engines and Scotch boilers will be installed.

So far this session there have been no less than 65 petitions received by the Canadian Parliament against a continuance of the bounties on steel and iron after June 30 of this year. The petitions, which are all identical in form, are signed almost wholly by farmers of Ontario, the average number of names on each petition being about fifty. They point out that about ten million dollars has already been paid in bounties to the iron and steel industries on Canada, and that if the period of paying bounties is extended four years from June 30 next, as proposed, the total amount paid in bounties will probably reach twenty-five millions.

USES OF ALUMINUM.

It is only a few years since we first began to hear of aluminum, and of its wonderful combination of strength and lightness. The stir occasioned by its discovery passed after a time, as is the case with everything when the novelty wears off. Practical men, however, did not overlook the advantages it had to offer, and soon it was being tested on a great many articles where reduction of weight meant increased efficiency.

A good example of its uses can be seen any day at the Canada Cycle & Motor Co.'s works at Toronto Junction. Here is a separate foundry for moulding the special alloys of aluminum they require for automobile engine crank and transmission cases and plates for skates. By introducing this metal into motor construction the weight of the car has been reduced several hundred pounds and the strength of these parts has not been impaired thereby. Rather has the strength of the car been increased, for the other parts have consequently less weight and strain to carry.

Experience with this metal in this way opened up new avenues for its usefulness. Probably the latest adaptation is for skate tops, for which this company has secured patents. This application reduces the weight of the skates by at least one-third, and at the same time admits of a very unique and elegant design. These "Automobile" and "Cycle" skates, as they are called, have been on the market now for over two seasons and have demonstrated one more practical use of aluminum.

THE IRON BOUNTIES.

In a letter to the Globe, J. H. Sinclair, M.P., quotes from the annual address delivered before the Toronto Board of Trade recently by the retiring president, Peleg Howland, and takes up the cudgels on behalf of the iron and steel industry in Nova Scotia, which he felt had been treated unfairly in the address. Mr. Sinclair says:

I have no desire to make any personal attack on Mr. Peleg Howland, but, judging by the above paragraph, I cannot help wondering how he ever became President of a Board of Trade in a great Canadian city. He refers to Nova Scotia as "the far east." To him it is evidently a foreign country. He can see no reason why the people of Ontario should tax themselves to build up an industry a thousand miles away. I suppose it is our misfortune in Nova Scotia that we are a thousand miles away from the place where Mr. Howland lives but he must remember that Canada is a large country, and that a considerable portion of it lies outside the boundaries of Ontario, and that the people of those remote regions are his fellow-countrymen.

When Mr. Howland complains that the people of Ontario are being taxed to build up an outside industry he evidently forgets that Sault Ste. Marie, Hamilton and Midland are within the bounds of his own province. I suppose Mr. Howland will be surprised when I tell him that out of a total sum of $6,037,350 paid by the Canadian Government for bounties to the manufacturers of iron and steel, no less than $2,570,831, or nearly one-half of the whole amount, was paid not to the far east at all, but to manufacturers in the Province of Ontario. Again, when Mr. Howland says that Ontario is naturally situated to draw its raw material such as iron and steel from the United States, I wish to remind him that the Maritime Provinces likewise are so situated that they could purchase with even greater advantage their manufactured goods from the New England States rather than from the manufacturers of Ontario. The one proposal is just as reasonable as the other. The Maritime Provinces are to-day the best outside market open to the Ontario manufacturer. It has been his hunting ground ever since confederation, and has done not a little to make him the prosperous man that he is to-day. In Nova Scotia we export our lumber, apples and agricultural products to Great Britain. We send our fish to the West Indies, and with the proceeds we purchase flour and manufactured goods largely from Ontario. The only article that the people of Nova Scotia sell to Ontario is steel, and Mr. Howland would stop that, too, if he could. We in the Maritime Provinces are quite well aware that we are subjected to heavy taxation to build up industries in the other provinces, but we are not complaining. We hope we are broad enough to recognize that our countrymen both east and west have equal rights with ourselves, and that the prosperity of any one section or province means the prosperity of the whole. If we are to build up a great country north of the 49th parallel our business men must be broad enough to feel interested in the advancement of the other localities even if they are a thousand miles away.

It's as difficult to find a friend as it is to lose an enemy.

Distance lends enchantment to the view of a friend who is always in need.

Always listen to an honest opinion—if for no other reason than because it's different from your own.

CATALOGUES AND BOOKLETS

When sending catalogues for review, manufacturers would confer a favor by pointing out the new articles that they contain. It would assist the editor in writing the review.

By mentioning HARDWARE and METAL to show that the writer is in the trade a copy of these catalogues or other printed matter will be sent by the firms whose addresses are given.

From Nova Scotia.

We have received from Rhodes, Curry & Co., Amherst, N.S., a very useful little souvenir, in the form of a card case and memo book. This is made of handsome maroon leather, and lined with tan calfskin. The cover is free from advertising, with the exception of the firm's name and address, which appears in gold lettering. The above firm will be pleased, as long as the supply lasts, to send one to any in the trade who will mention Hardware and Metal when writing.

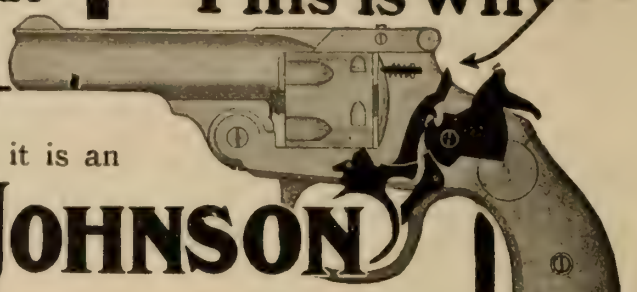
Samples of Roofing.

The tremendous increase in the price of lumber in the last few years has made shingles entirely out of the question on most farm buildings. In order that every reader of this paper may become familiar with a roofing which is very much better than shingles and is rapidly taking their place, the Barrett Mfg. Company offer to send free a sample of their Amatite Roofing to every reader of this paper. The feature of this roofing is a real mineral surface on top, which not only makes coating and painting unnecessary, but is a splendid fire-retardent. We suggest that every reader write at once for a free sample and illustrated booklet. The request should be adressed to the Barrett Manufacturing Company, New York.

Maple Sugar Industry.

The Department of Agriculture at Ottawa have just issued a very effective and instructive book dealing on the making maple syrup and sugar which should prove very interesting to hardware merchants making a specialty of sap pails and spouts. It will be sent to anyone writing the Department of Agriculture, Ottawa, Canada.

LETTER BOX.



Enamelware Manufacturers.

J. M. Bothwell, Allandale, writes: "Could you give me the address of any Canadian firms who are in the market for graniteware? I am wanting to purchase, and thought you could give me the name of some such firm."

Answer.—The older firms in the graniteware business are the Kemp Manufacturing Co., Toronto; The McClary Manufacturing Co., London; The Thomas Davidson Manufacturing Co., Montreal. A new firm which has come into the market recently is the Ontario Steelware, Limited, Brock Ave., Toronto. All of the above companies are advertising with Hardware and Metal.

Accidental Discharge Impossible—

This is why

True only if it is an

IVER JOHNSON

The positive safety device is the exclusive patent of the Iver Johnson Revolver. See the lever between the hammer and the firing pin? This lever is raised only when the trigger is pulled, receives the blow of the hammer and transmits it to the firing pin. **That's why** you can throw a loaded Iver Johnson against a stone wall without fear—no discharge can possibly follow, as the hammer **never** touches the firing pin. An Iver Johnson never fails when you **pull the trigger** and never "goes off" when you don't.

Iver Johnson Safety Automatic

Prices—Hammer $6.50, Hammerless $7.50.

Iver Johnsons are sold by dealers the world over, or direct from us if your dealer won't supply

Please send for descriptive catalogue, free upon request. It tells all about it.

IVER JOHNSON'S ARMS AND CYCLE WORKS, FITCHBURG, MASS.

Wire Nail Machines.

Edward Norman, London, Ont., writes: "Can you give me the names and addresses of Canadian makers of wire nail machines?"

Answer.—There is no Canadian manufacturer of wire nail machines, but the following American firms manufacture them: H. J. Miller's Sons, Bridgewater, Mass.; National Machinery Co., Tiffin, Ohio; Perkins, Henry Co., Bridgewater, Mass.; Turner, Vaughn & Taylor Co., Cuyahoga Falls, Ohio; and Walton & Macke, Kohomo, Ind.—Editor.

NOTES.

C. Leblanc, Joliette, was in town last week buying supplies.

H. J. Elliott, South Durham, was in Montreal buying goods this week.

J. A. Paquin, St. Eustache, called on the Montreal jobbers this week.

W. H. Clapperton, Maria Capes, Que., was in Montreal this week buying goods.

F. Gasselin, St. Alexandre d'Iberville, visited some of the Montreal jobbers this week.

W. W. Chown, of Belleville, now in the hardware business in Edmonton, reports good trade, notwithstanding adverse weather conditions.

T. L. Clark & Co., bell factory, 208 Papineau Ave., Montreal, was burnt out recently, the damage amounting to about $5,000. The fire started on the top floor where the brass foundry is located, and although the firemen succeeded in confining it to that flat, the two lower floors were flooded with water.

A. B. Manship, of the Canadian Wire and Steel Company, died at his home in Hamilton, last Wednesday. The deceased was 56 years of age and had been a resident of Hamilton for five or six years, coming from Cleveland to establish the steel company.

The annual meeting of the Williams Manufacturing Co., was held in Montreal, on Feb. 13th. The old board of directors was re-elected, and Bartlett McLennan was chosen as president and Chas. W. Davis vice-president, and managing director. Alex. Dube was appointed secretary.

The Vancouver Power Co., which at present is the only organization supplying electric energy in the mainland coast cities, is figuring on developing its present installation of 12,000 h.p. by adding three monster units of 10,000 h.p. each. One of these will go in at once and all will be installed in little over a year from date.

We have been asked to state by Pilchers, Limited, London, England, that there is no connection between their house and that of the Mr. Pilcher, whose case of Pilcher versus Price & Co., has recently been reported in various trade papers. The plaintiff in the case refer-

Paint, Oil and Brush Trades

PAINT BUSINESS ENLARGING.

While many hardware merchants have for some time handled paints there is undoubtedly a growing tendency to increase the attention given to this line, and to carry in stock on a larger or a smaller scale some suitable brand of mixed paints, says the Iron Age. This tendency and the great possibilities for the sale of this class of goods in the hardware store are nowhere better recognized than by the paint manufacturers themselves, many of whom are putting forth every effort to secure prestige in the hardware trade by being among the first to take advantage of the tendency toward enlargement of the variety of goods handled by merchants in this branch of business. It is a noteworthy fact that at the conventions of retail hardwaremen held throughout the United States last year paint manufacturers were prominently represented. At one of these conventions, indeed, five different manufacturers reserved expensive suites in the hotel which was the convention headquarters, where they installed elaborate exhibits and distributed unlimited quantities of advertising matter among the 300 merchants present. It may be presumed that at the conventions which are being held this spring the same tendency will be observed, and merchants thus be given an opportunity to get into close touch with paint manufacturers and consider intelligently and practically the advisabilityof taking up the sale of this line of goods.

GET READY FOR SPRING.

Spring paint selling will soon be in full blast. Upon the business you do—the orders you fill—during the present months depend to a very large degree your paint profits for the year. To make this spring's business exceed all past records every paint dealer must maintain its fighting attitude, must "work its plan," must call into service every aid at its command, says an exchange.

"Keeping everlastingly at it" will win. Don't let up in your efforts because things are coming your way, and you feel you are getting a fair proportion of local business. You want more than a fair share. You want ever so much more than you got last year because it's only by progress and continual advances that you can maintain your lead in the paint field.

To "keep ahead, always," you must go after orders, large and small, little and big. Never overlook the specialites. Give a good share of your time and attention to the profitable field of halls, schools, churches, offices and store buildings. If you see a building going up or have a customer whom you cannot quite close with, call on your manufacturer for aid with forceful letters and strong follow ups. Continue to use all the advertising helps and be a "full line" advertiser.

Keep your newspaper space filled with good "copy." Color cards, hangers, posters, fence and field signs are invariably effective when properly distributed.

LUMINOUS PAINT.

Luminous paint is made in the following manner, according to a recipe printed in the Engineering and Mining Journal. Take oyster shells, wash and clean them in warm water; put the shells into a fire for half an hour; after taking them out and allowing them to cool, they are finely powdered by pounding, and the gray parts which are of no use, are thrown away. The powder is then put into a crucible in alternate layers with flowers of sulphur, the lid is put on and the crucible sealed up with a paste made of sand and beer. After this is dry, the crucible is put on the fire and baked for one hour, then cooled, and the cover taken off; all gray parts are now separated, and the remaining substance is mixed into a thin paint with a mastic varnish. Before applying the luminous paint, the article should be given two coats of white lead and turpentine, to form a body ground for the luminant.

This luminous paint, which is really a polysulphide of calcium, has the property of emiting, in darkness, light which was previously absorbed, and when kept in darkness for 12 or 15 hours without being subject to any light, loses its luminosity. Luminous paint of this sort has been used for clock dials, lanterns, etc.; however, its practical application can hardly be said to have met with success.

In connection with the use of luminous paint in mines, it may be stated that when subjected to the light from electric bulbs or an electric arc light, such paint will retain its luminosity and emit light when placed in darkness. For this reason, it is possible that where arrows are painted on the sides of an entry that has been lighted by electricity, should the light suddenly go out, the arrows painted with luminous paint would still emit the light which was previously absorbed.

The early bird catches the spring paint business. Be the early bird.

Time spent in talking cheap paint is time wasted—you'll never have another chance with the same customer.

LAST WEEK

We told you what it was not good for. Now we tell you that ***Elastilite Varnish*** is good for either interior or exterior use on buildings, doors, furniture, bathrooms, boats, carriages and in fact anything to be varnished.

It is a safe varnish for the dealer to handle, because you never make a mistake in recommending it.

It wears on the job, not off.

In tins only—half pints to one gallon.

See Catalogue No. 10, page 3.

A Claim and the Proof

DO YOU KNOW whether the Paints you sell are the best your money will buy? Have you anything to go by except the seller's say so?

It is easy enough to "claim" that a certain brand of Paints is the best. It is quite another proposition to "substantiate" the claim.

The basis of our claim for **"ENGLISH" LIQUID HOUSE PAINTS** is the fact that the only White Lead used in their manufacture is **BRANDRAM'S B. B. GENUINE**, for close on to two centuries the world's standard **WHITE LEAD.**

Our customers have sold these Paints, both under this name and the old name of "Anchor" for many years, and they keep on selling them, because their customers find they give perfect satisfaction. Which fact further substantiates our claim.

Sole Distributors for Western Canada

Paint and Oil Markets

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, March 1, 1907

There is nothing of special interest to report in paint and oil circles at present, all prices remaining the same as quoted last week.

Although sales have fallen off slightly of late, the market remains fairly firm, with a fair demand for stocks.

The quitness in the retail and jobbing trade, is looked upon as being the lull before the storm, and not much is expected to be doing now, until the regular spring season opens. The only people who are rushing now, are the manufacturers, who are all running their plants full blast, in anticipation of a good spring trade.

LINSEED OIL—Still firm at the old prices: Raw, 1 to 4 barrels, 55c.; 5 to 9 barrels, 54c.; boiled, 1 to 4 barrels, 58c.; 5 to 9 barrels, 57c.

TURPENTINE—Fair business is being done. Prices remain the same as last week: Single barrel, 98c per gal.; for smaller quantities than barrels, 5c extra per gal. is charged. Standard gallon is 8.40 lbs., f.o.b. point of shipment, net 30 days.

GROUND WHITE LEAD—The following prices have remained steady now for some time: Best brands, Government standard, $7.25 to $7.50; No. 1, $6.90 to $7.15; No. 2, $6.55 to $6.90; No. 3, $6.30 to $6.55, all f.o.b., Montreal.

DRY WHITE ZINC—Still firm at the following prices: V.M., Red Seal, 7½ to 8c; Red Seal, 7c to 8c; French V.M., 6c to 7c; Lehigh, 5c to 6c.

WHITE ZINC—Pure, 8½ to 9½c; No. 1, 7c to 8c; No. 2, 5¾c to 6¾c.

PUTTY—Prices are as follows: Pure linseed oil, $1.75 to $1.85; bulk in bbls., $1.50; in 25-lb. irons, $1.80; in tins, $1.90; bladder putty in barrels, $1.75.

ORANGE MINERAL—The following prices still hold: Casks, 8c.; 100-lb. kegs, 8½c.

RED LEAD—Is firm at the following figures: Genuine red lead, in casks, $6; in 100-lb. kegs, $6.25; in less quantities at the rate of $7 per 100 lbs.; No. 1 red lead, casks, $5.75; kegs, $6, and smaller quantities, $6.75.

PARIS GREEN—Last week's revision holds good: In barrels, about 600 lbs., 25½c per lb.; in arsenic kegs, 250 lbs., 25¾c; in 50-lb. drums, 26¼c; in 25-lb. drums, 26¾c; in 1-lb. packets, 100 lbs. in case, 27¼c; in 1-lb. packets, 50 lbs. in case, 27¾c; in ½-lb. packets, 100 lbs. in case, 29¼c; in 1-lb. tins, 28¼c f.o.b. Montreal. Terms, three months net or 2 per cent. 30 days.

SHELLAC—Bleached, in bars or ground, 46c per lb., f.o.b. Eastern Canadian points; bone dry, 57c per lb., f.o.b. Eastern Canadian points; T.N. orange, etc., 48c per lb. f.o.b. New York.

SHELLAC VARNISH—Firm at last week's figures: Pure white, $2.90 to $2.95; pure orange, $2.70 to $2.75; No. 1 orange, $2.50 to $2.55.

PETROLEUM — American prime white coal, 15½c per gallon; American water, 17c per gallon; Pratt's Astral, 19½c per gallon.

WINDOW GLASS—First break, 50 feet, $1.85; second break, 50 feet, $1.95; first break, 100 feet, $3.20; second break, 100 feet, $3.40; third break, 100 feet, $3.95; fourth break, 100 feet, $4.15; fifth break, 100 feet, $4.40; sixth break, 100 feet, $4.95. Diamond Star: First break, 50 feet, $2.30; second break, 50 feet, $2.50; first break, 100 feet, $4.40; second break, $4.80; third break, 100 feet, $5.75; fourth break, 100 feet, $6.50; fifth break, 100 feet, $7.50; sixth break, 100 feet, $7.50; seventh break, 100 feet, $8; eight break, 100 feet, $9. Double Diamond: First break, 50 feet, $3.45; second break, 50 feet, $3.75; first break, 100 feet, $6.75; second break, 100 feet, $7.25; third break, 100 feet, $8.75; fourth break, 100 feet, $10; fifth break, 100 feet, $11.50; sixth break, 100 feet, $12.50; seventh break, 100 feet, $14; eighth break, 100 feet, $16.50; ninth break, 100 feet, $18; tenth break, 100 feet, $20; eleventh break, 100 feet, $24; twelfth break, 100 feet, $28.50. Discount on Diamond Star, 20 per cent.; on Double Diamond, 40 per cent.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East.
Toronto, March 1, 1907

The trade in paints and oils is improving. Prices generally are strengthening, with good prospects for advance, and all dealers are looking for milder weather, as they are in all other branches of trade, to enliven the business.

Paris green is experiencing a good demand, a large majority of the orders being booked. Turpentine prices are firm, but unchanged. Linseed oil prices are strengthening, with prospects of an advance. Manufacturers are understood to have already advanced prices to jobbers. White lead prices are stronger, with a tendency to rise, the quotations, however, are still unchanged.

WHITE LEAD — Pure white, $7.40; No. 1, $6.65; No. 2, $6.25; No. 3, $5.90; No. 4, $5.65 in packages of 25 lbs. and upwards; ½c. per lb. will be charged extra for 12½ lbs. packages; genuine dry white lead in casks, $7.

RED LEAD.—Genuine in casks of 500 lbs., $6; ditto, in kegs of 100 lbs., $6.50; No. 1 in casks of 500 lbs., $5.75; ditto, in kegs of 100 lbs., $6.25.

DRY WHITE ZINC.—In casks, 7½c.; in 100 lbs., 8c., No. 1, in casks, 6½c., in 100 lbs., 7c. Ground in oil—In 25 lb. irons, 8c.; in 12½ lbs., 8½c.

Ramsay's Paints

Can you hold up your pot of paint, when you offer it for sale, and honestly say you have the best? Everything is in the quality for future trade—for the man you want to c me back. With Ramsay's Paints you get the best. We guarantee it, and you can give that confidently to your customer. With our aids to trade, you can secure business if you take advantage of what we offer. With our price, we believew offer the highest grade at the lowest figure of any paint made to-day. Listen !

SHELLAC VARNISH.—Pure orange in barrels, $2.70 ; white, $2.82½ per barrel ; No. 1 (orange) $2.50 ; gum shellac, bone dry, 63c. Toronto. T. N. (orange) 51c. net Toronto.

LINSEED OIL—The prices in this are strengthening, with a quite probable advance. We continue to quote : Raw, 1 to 3 barrels, 59c; 4 to 7 barrels, 58 ; 8 and over, 57c.; add 3c. to this price for boiled oil, f.o.b. Toronto, Hamilton, London and Guelph, net 30 days.

TURPENTINE—Prices are firm, but unchanged : Single barrels at 99c. per gal., f.o.b. point of shipment, net 30 days ; less than barrels, $1.04 per gallon.

PARIS GREEN—Trade in Paris green has been brisk, with a large number of orders booked. We continue to quote English and Canadian at 27½c. per lb.

PETROLEUM—The trade in all by-products is steady and improving, We quote : Prime white, 13c.; water white, 14c.; Pratt's astral, 18c.

For additional quotations see current quotations at back of paper.

HOUSECLEANING TIME APPROACHING.

"The best way to clean house is to paint," is a timely motto containing more of fact than fiction, says an exchange. Paint is a great renovator, not simply for brightening up, but literally making clean. Further, it is a little recognized insecticide, destroying both egg and adult ; and those unfortunate in getting into apartments infested with vermin will find it a more satisfactory remedy than carbon bisulphide.

Convince a woman on one or two of these points, and you have an interested listener. Few women who have never substituted the paint brush for the scrub brush are aware that they can do the most of their own painting and varnishing. With prepared paint and a few simple directions regarding care and selection of brushes, which the dealer should be prepared to throw in, creditable work is not beyond the reach of the most inexperienced. But the successful salesman should familiarize himself with the common problems of the housewife, anticipating her needs and showing a cordial interest. He should know what colors harmonize—for the color cards are not fully satisfying to the novice ; how to prepare sizing for the kitchen wall if it is not hard finished plaster ; to warn her against using anything but iron paint on tin. These and other "kinks" will be appreciated and prove profitable on both sides ; for the real home-maker delights in using her own hands in every possible way in beautifying her home, and the newly acquired manual skill will find two ways to use paint where one was found before.

CANADIAN OIL CO.'S EXTENDING.

The Canadian Oil Co., Toronto, manufacturers of "Sterling Brand" oils, paints, and varnishes, are adding a second story over a part of their buildings. This increase of floor space will allow for enlargement of office room, and improvement in storing and shipping facilities. Storage batteries will be installed so that their own steam power can be used for lighting purposes. The recent enlargements of this company's refineries at Petrolea will relieve the Toronto plant of most of the work of compounding oils, except for special orders. The Toronto plant will now be devoted chiefly to the manufacture of paints and varnishes.

FOUR WAYS OF SELLING.

In their weekly market report of a recent date, Strasbaugh, Silver & Co., of Aberdeen, Md., go a little afield from the market and under "Points Worth Remembering" quote a successful manufacturer as follows :

"The desire to buy cheap, anything, is a mania with some people.

"To favor an article simply because its first cost is low is not only unfair, but a poor business policy.

"To buy at a fair price is shrewd, but it is false economy to forget that below a certain limit, cheapness is suicidal should be shunned.

"There are four ways to sell goods :

"1 The Dishonest Method—To sell so low that you can't earn a living, and the sheriff will finally wind up your affairs, and your creditors carry your losses.

"2 The Misrepresentation Method — Palm off upon your customers unfair goods and persuade them that they are the best.

"3 The Suicidal Method — Employ workmen at less than living wages ; buy the cheapest materials ; pare everything down to the lowest notch, and patch results.

"4 The Straight Business Method—Buy the best ; employ skilled labor ; thoroughly know your own business and business values. Provide special facilities for the execution of the greatest amount of high-grade production at a minimum cost. Avoid extravagant management, expensive methods, and have your dealings with customers who appreciate treatment that is not one way.

PRICE CARD SUGGESTION.

The store that does not use a generous number of price cards is not doing the business it ought to do. Everybody knows that mouse traps sell for five cents and there is a good profit in them at that price. Take a ten cent bushel basket and put in a false bottom about four inches from the top. It can be quickly done by using strings and weaving a network into the basket. Throw a gross of these traps—print a large card something like this :

"That mouse kept you awake last night. Here's the remedy, 5c."

Tack it to the basket, set the basket just outside the door and that gross of traps will fairly melt away.

What will make them sell so fast ? Surely not the price, because you have always sold them for five cents—what is it ? If you aren't a believer in price cards try this plan. Put the goods in sight where they will sell themselves, and keep changing both the card and the goods.

Let's Advertise Your Business This Season, Mr. Dealer

100 per cent. durability

We mean that, every word of it. We are prepared to advertise your business and practically prepared to make a success of it. The business not advertised cannot live in the twentieth century. Hardwaremen cannot afford to advertise in the ordinary way. Here is our plan. We claim a good deal for

ARK BRAND PAINT

That paint will endure. That paint cannot fade as other paints do, because it's made different. There is lasting life and beauty in every drop of **ARK BRAND** and so confident are we of it's excellence and superiority that we are willing to insert **a money back clause** in ou agreement with any practical man. Use **ARK BRAND PAINT**, feature it, push it this season and if it dces not advertise your business as never before we want to know about it.

MURESCO WALL FINISH

is nearly as famous and as much of a favorite as Ark Brand Paint. Our aim is to excel in all things. Because our ideals are high we have produced the best paint and the best wall paper finish ever placed on the market. Hundreds of dealers in Canada say so. We would like you to know their opinion. A post card brings full particulars.

THE SURVIVAL OF THE FITTEST

Selling whiting, glue and color separately for kalsomined walls is a thing of the past. The more modern method of selling whiting, glue and color ready mixed, in packages labelled different names, is **ALSO** a thing of the past, or fast becoming so.

Any compound which can be kept over night or several days without spoiling is simply a preparation of glue and whiting or some other inert base, which depends on the glue in it to hold it to the surface, and in time decomposes, becomes diseased, rubs off and has to be washed off.

The ever-growing public demand is for a pure and sanitary wall coating that will not rub off and is ready for use with cold water.

ALABASTINE

fulfils the public demand. Made from crystaline Alabaster Rock, it is a cement that sets and hardens on the wall and improves with age. It is pure, permanent and sanitary, and as such

HAS NO COMPETITOR

ALABASTINE is being more and more fully appreciated by the public, and the orders are coming in by leaps and bounds.

Fortunately, we have opened a new mine, and hope to fill all orders promptly and on time; but we advise you to order **NOW**.

The ALABASTINE CO., Limited, PARIS, Ont.

BLANCHITE

We challenge comparison for our SNOW WHITE **ENAMELS** as we can let their quality do the convincing.

Our enamels are absolutely SUPERIOR to any others in Canadian market and

Plumbing and Steamfitting

IMPORTANCE OF PLUMBING AND HEATING

Position of the Trade Unique—Influence and Responsibility Not Generally Realized.

Written for Hardware and Metal by C. E. Oldacre, Toronto.

The plumber, steam and hot water fitter occupies an unique and more important economic and industrial position in his relations to his fellow-beings than for which he probably takes credit to himself.

Upon him to-day all are largely dependent for the state of their health and of their bodily comfort. A properly and orderly-arranged plumbing system is essential to every modern house or building to-day, as also is a properly heated one. Without either one or both the building, if intended for habitation, is incomplete. It is quite necessary, that, no matter how unpretentious or how extensive these systems may be, they shall be of good quality and able to serve the purpose for which they are intended.

Country Growing Rapidly.

Any one acquainted with conditions in Canada to-day knows it is experiencing a most unprecedented growth and one of great expansion in every direction—new country is constantly being opened up, new mills, new warehouses, new mines, new railroads are everywhere. There is a constant streaming influx of people from other lands—additional facilities being added for both railroad and water transportations.

All this means new towns—new homes, new churches, new schools, new post offices, new fire halls, new banks, new opera houses, new business blocks.

And that means that the plumber, steam and hot water fitter has a constantly expanding field before him and new problems to consider every day. And how to meet all these conditions and their attendant emergencies is the question which continually faces him day by day.

As in all new and expanding countries there are situations to be met and many vexatious annoyances from one source or another that present themselves, that must be overcome, that do not occur to those in old and well-settled communities. Take the one located a considerable distance from the more important present trade centres; he is subjected quite frequently to annoying delays, without seeming reason, in getting the requisite materials, due to the inadequate transportation facilities—both rail and water.

Order Goods Early.

One thing that might well be touched on here, however, is that knowing these conditions one should close his contracts as early as possible, urging upon the customer the great necessity of so doing, and place his requisitions with the manufacturer definitely as long ahead of the actual requirement of the goods as possible, foreseeing one's wants in any particular line as well as can be, so as to avoid the usual delays occurring during periods when there are naturally the greatest demands, when there is the greatest call upon manufacturers, transportation companies and tradesmen.

The present is the time of year when we have the greatest amount of time for preparing for the coming season's business—to look back over the good working and profitable work and at probably some not so well working plants. But there is now time to consider the causes and reasons that led to the success or failure of one or other. It is well known that any poor and unsuccessful work is heralded far and near and soon becomes the thorn in one's side and is often used to good advantage by one's competitors.

Heating Knowledge Necessary.

How to accomplish good heating work is the question that should be ever before the steamfitter. As complete a knowledge of the work in all details so far as possible, a little more learned every day, is the surest safeguard, and a correct installation in accordance with this knowledge and experience is sure to produce the best results. Do not put too much confidence in "rule of thumb" and cut and dry methods, or the policy of "that's good enough."

It is first essential to have a well laid out plan of the work in hand, and then to thoroughly execute the same in accordance with the best practice of the trade.

Is it not too true that too many fitters depend on others entirely too much for planning their work and getting out material lists and costs?

Would it not be much better and more profitable if the fitter did this to a very large extent for himself and would thoroughly check all details of radiation, piping, boiler sizes and cost before submitting tenders on any work.

Would it not be a great advantage to him to so acquaint himself with the real details of his work so that he would determine for himself the radiations required under all conditions and all temperatures?

Would it not prevent going back over work that has been considered complete and a good many complaints from poor working jobs, with their consequent loss of money, time and prestige.

Every Job Different.

Even the best laid out plans of a heating system can not and do not show all the minor details of the work, but it is necessary that the fitter shall be able to adjust the actual work to any and all local conditions so the plant may be correctly installed. To do this, there are many seemingly small details that have to be thoroughly looked to in the course of the erection of the work. If these things were zealously looked to we know that many fitters would have a good many more dollars in their pockets at the end of a good season of business.

Speaking of failures, we all know that heating apparatus as a rule goes into the hands of many people utterly devoid of any mechanical knowledge and if there is any way that a plant can be operated wrongly they will surely find that wrong way sooner or later.

But from some pieces of work inspected we cannot deny that faulty work is too often to blame. The faults are often too glaring to be pardonable at this day.

Importance of Plumbing and Heating.

We too often find boilers too small,—too little radiators, badly placed radiators, too small piping, too little pitch to pipes—improperly connected branches and radiators. To illustrate a few cases are cited.

Some Defective Work.

A steam radiator is connected to a main by a six foot arm or branch and in this arm there is a drop of nearly two inches and the radiator does not give good results,—it throws water from the air valve,—it hammers at times,—it does not heat easily without other radiators.

In a building there is 1,200 feet of radiation and to the main there is connected a boiler that at the best rating that could be given it is not capable of supplying over 1,200 feet gross radiation in zero weather. When the thermometer is down to 20 degrees below zero, even though the boiler is stoked with wood as fast as it can be got through the fire, not a pound of steam will show on the gauge and some of the radiators will remain cold, or partly cold.

Then there's a good sized printing office requiring to properly heat it 2,000 feet of radiation and some one has put in 1,500 feet of radiation, and a small boiler, and he put it in because he could tender lower than someone that would have put in the proper amount.

What are the consequences? The typesetters can hardly get their fingers loosened up in the morning before 9 or 10 o'clock, on account of the cold, and when it comes to run off the paper, the ink will not work right, the paper sticks and the pressman says: "Perhaps there's too much electricity." Would not a properly laid out and carefully executed piece of work at a fair price have been the cheapest?

Then think of the days lost by school children from poor working heating plants due to one cause and another. Can you recall any such cases this winter?

Here's a case where numbers of the radiators are full, so to speak, of water. The branches carrying these radiators are taken out of the side of the steam main near its end when they could just as easy have been taken from the top; only a nipple and an elbow was saved.

Poorly Heated Hotel.

Here's an hotel heated with about 3,000 feet of hot water radiation. There is as good a fire in the heater as could be asked for. The main drops two inches in about thirty feet and in this distances the branches taken off the main are more than equal in size to the main. The radiators of course do not heat equally, and some not at all.

Then here is a building in which a

steam radiator is located close to the entrance, where the door is constantly opening and closing. The radiator has 48 square feet of surface; it is connected to the main by a 1-inch branch 15 feet long which is dropped 1½ inches in its run and is not relieved at the end next the radiator. The radiator naturally doesn t work very well.

Then there is a living room that has 2,400 cubic feet of contents and 70 feet of glass surface. When the temperature gets down to 20 degrees below zero this room is about 55 to 58 degrees with 80 feet of hot water radiation. It is a dining room and needs to be warm. If it had about 120 feet of radiation then a temperature around 70 degrees might have been expected.

Here's a hall that has 40 feet of hot water radiation with a temperature around 50 degrees when the thermometer outside shows 20 degrees below. 70 square feet of radiation would have been nearer the mark.

Scores of cases similar to these could be cited, only accentuating the necessity of good and careful work.

Mistakes to Avoid.

Above all, don't put in too little radiation or too small a boiler on any of your work. With hot water heating particularly there is very little or no danger of getting in too much radiation. With plenty you can carry a lower temperature in the water and a lower fire and if a real good cold snap comes you have the reserve to meet it. You have a pleased customer and one that will recommend your work.

Get a good rule for calculating your quantities of radiation and with your experience use it and don't put in too little radiation when correct judgment tells you that you should put in more. Size up the situation, the cubic contents, the glass surface, the construction of the building and the purposes of the building or rooms that are to be heated.

Safe Rule to Follow.

It is safe to say that if you want 70 degrees in ground floor rooms and 60 degrees in upper rooms of houses when the thermometer is at zero outside under ordinary exposures and ordinary amount of glass you do not want to count on less than 1 square foot of radiation for each 25 cubic feet of space downstairs and 35 cubic feet upstairs, and if you figure for 20 degrees below zero outside allow this amount for 20 and 30 cubic feet respectively. If colder weather is to be met and temperatures inside as noted are required, it will demand a still larger amount of radiating surface.

With steam, it requires about five-eighths as much radiation as with hot water heating, but of course steam is not so well adapted to heating requirements in private houses.

Competition may be said to be the life of trade—but sometimes it is the death of it as well. In Canada there is plenty of trade for all. Do not take a contract on a piece of work for the glory there may be in it and then cut the work down or slight it and find there is neither glory nor profit in the work.

Let some one else take that kind of work in preference for there is more profit in good work and a great deal more credit in the work in the end. Good work always brings trade and ensures a fair profit and far less trouble. Work that is well performed speaks for itself and although you may not hear so much from it directly as you will of unsatisfactory work, the net results are far greater and wider reaching.

THE CLEVELAND SANITARY CODE

A notable improvement over the ordinary sanitary code of cities may be cited in the ordinance governing plumbing, lately compiled for the city of Cleveland, says Modern Sanitation. This code is remarkable not so much for the direction as for the length it goes towards providing an adequate and suitable supply of water, and for the provision made to properly dispose of household wastes, particularly the liquid portion known as sewage, from buildings isolated from public sewers.

No doubt the action of the Cleveland commission will be followed by commissions of other cities when drafting laws to govern sanitation of their communities, and in the near future as many safeguards will be placed around the citizens to protect them from polluted water as there are now to protect them from the less harmful "sewer gas." In addition to providing a community with a sterile water supply, sanitary codes will see that the distributing systems are so proportioned that an adequate supply of water can be had simultaneously at all fixtures, and that the annoyance of one fixture robbing another is made impossible.

In the matter of sewage purification and disposal, the Cleveland code has gone further than have most other sanitary laws and has specified under what conditions septic tanks and filter beds are to be used. This part of the code, however, lacks much of the mandatory directness of the rest of the laws, which specify size and proportions so any architect or engineer can design a drainage system; whereas, in the section devoted to sewage purification no definite data is given that would help an individual in designing a purification works. This lack of data on sewage purification, however, in no way reflects on the completeness of the code compiled by Commissioner Eisemann. The practice of sewage purification for the past ten years has been in a transitory stage, and out of the chaos that reigned definite principles are only now being formulated. Perhaps when another code is drafted, the principles underlying the practice of sewage purification will be sufficiently understood so that portion of the code can be enlarged upon.

There are many excellent provisions in this ordinance that it would be well to incorporate in other city codes, and in order to bring them to the notice of interested persons and in the interest of sanitary progress, various sections will be published from time to time and commented on in this magazine.

A very excellent provision of the Cleveland sanitary code is section 5 of title IX, which provides:

"When inside or outside (rain) conductors are made gas and water tight, and do not open near doors, windows or other openings, within the distance prescribed for soil and waste vents, traps may be omitted."

The distance prescribed for waste vents is 3 feet above and 12 feet away from any door, window, scuttle or air shaft, and 6 feet away from a chimney or smoke flue.

There is no logical reason why the old practice should be adhered to of trapping rain leaders that open above the roof and well away from all openings leading to the interior of buildings. One of the objects aimed at in designing a drainage system is to provide for circulation of air through the pipes to maintain the air within the system comparatively free from deleterious gases. To do so, special pipes are extended to points above the roof, where they are left open to the atmosphere, and if rain conductors can be made to serve the dual purpose of rain conductor and vent pipe, a much purer air can be maintained within the drainage system. Such being the case, interposing a trap, instead of bettering the work from a sanitary standpoint, is actually detrimental to the system.

A JAPANESE BATHROOM.

A tiny space four by six feet. In it were four objects—a stool to sit upon when washing one's self before getting into the bath, a shining brass wash basin, a wooden pail and dipper, in which to fetch the bath water, and the tub. The tub, like most private baths, was round, casket shaped, and made of white wood. It was, perhaps, thirty inches in diameter and twenty-seven inches high. A copper funnel or tube passing through the bottom went up inside close to the edge. This, filled with lighted charcoal, supplied heat for the water. The pipe was higher than the tub, so the water could not leak inside. A few tarnsverse bars of wood fitted into grooves and formed a protection so the bather could kneel in the tub without coming in contact with the hot pipe. The walls of the room were of white wood, with a pretty grain, the floor of pine, laid with a slight slope and grooved so the water might flow into a gutter and through a bamboo pipe to the yard. A moon-shaped lattice window high up let in air and light. As a provision for more ventilation the two outside walls for a foot below the ceiling were lattice of bamboo slats.

As my eye traveled from object to object I quickly sized up the cost. For the tub 8 yen, and it would last indefinitely; 2 yen for the brass basin; 50 sen for the pail and dipper and 25 sen for the stool. Eleven yen would fit up my bathroom, and I asked for nothing nicer.—The Craftsman.

We are weaving character every day, and the way to weave the best character is to be kind and to be useful. And character is the result of but two things—our mental attitude and the way we spend our time.

PLUMBING MARKETS

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, March 1, 1907

High prices do not seem to have affected the plumbing business to any great extent, people continue to buy in spite of the high figures that prevail in all lines. Most jobbers were a little scary when they started their travelers out this year, and wouldn't have been greatly surprised if some of them had been "handed a lemon," therefore the good, generous orders most plumbing salesmen have turned over to their respective houses were happy surprises. There was no doubt as to the ultimate outcome of affairs, only slight anxiety as to what the public would do until they became educated to the prevailing prices. However, the test is over and business remains excellent. This is due no doubt to the building boom which has been going on here lately. Things are higher than previous years, in fact they are very high, but we must have them just the same.

There are no changes in prices, everything remaining as quoted last week.

RANGE BOILERS—Prices on the copper articles are now up in keeping with the prevailing price of copper, and unless an advance takes place in the sheet article, no higher figures are likely to be quoted for some time to come. Prices are: Iron clad, 30 gal., $5; 40 gal., $6.50 net list. Copper, 30 gal., $33; 35 gal., $38; 40 gal., $43.

LEAD PIPE—Firm at 5 per cent. discount f.o.b. Montreal, Toronto, St. John, N.B., Halifax; f.o.b. London, 15c per hundred lbs. extra; f.o.b. Hamilton, 10c per hundred lbs. extra.

IRON PIPE FITTINGS—Some lines still short: Discounts on nipples, ¼ inch to 3 inch, 65 per cent., 3½ to 2 inch, 67½ per cent.

IRON PIPE — Standard pipe in lots of 100 feet, regular lengths, ¼ inch, $5.50; ⅜ inch, $5.50; ½ inch, $8.50; ¾ inch, $11.50; 1 inch, $16.50; 1¼ inch, $22.50; 1½ inch, $27.; 2 inches, $36.50. Discounts on black pipe: ¼ inch, 59 per cent.; ⅜ inch, 59 per cent.; ½ inch, 68; ¾ to 2, 70. Discounts on galvanized pipe: ¼ inch, 44 per cent.; ⅜ inch, 44 per cent.; ½ inch, 58 per cent.; ¾ to 2 inch, 60 per cent. Extra heavy pipe of 100 feet lots are quoted as follows: ½ inch, $12; ¾ inch, $15; 1 inch, $22; 1¼ inch, $30, 1½ inch, $36; 2 inches, $50. The discounts on black pipe: ¼ inch, 74 per cent.; ⅜ inch, 69 per cent.; ½ inch to 2 inches, 68 per cent. Galvanized: ¼ inch, 59 per cent.; ⅜ inch, 69 per cent.; ½ to 2 inches, 58 per cent.

SOIL PIPE AND FITTINGS—Standard soil pipe, 50 per cent. off list. Standard fittings, 50 and 10 per cent. off list; medium and extra heavy soil pipe, 60 per cent. off. Fittings, 60 per cent. off.

SOLDER — No change in prices. We still quote: Bar solder, half-and-half, guaranteed, 25c.; No. 2 wiping solder, 22c.

ENAMELWARE — We quote: Canadian baths, see Jan. 3, 1907, list. Lavatories, discounts, 1st quality, 30 per cent.; special, 30 and 10 per cent. Sinks, 18x30 inch, flat rim, 1st quality, $2.60; special, $2.45.

"What are the Advantages of Hot Water over Steam Heating in a Private Residence?"

What arguments would you use in reply if a customer asked you the above question.

Send us an answer and also outline what advantages steam heating possesses over water for this same class of work.

For the best reply we offer a cloth bound copy of J. J. Cosgrove's splendid textbook, "Principles and Practice of Plumbing."

Address the Plumbing Editor

Hardware and Metal

Montreal Toronto Winnipeg

TORONTO.

Office of HARDWARE AND METAL
10 Front Street East,
Toronto, March 1, 1907.

Last week we referred to the price-cutting going on in plumbers' brass goods, a peculiar situation in view of the steadily rising copper market. We are again revising our quotations on these goods, but no figures can be quoted as definite in view of the cutting going on. As a general rule the trade would prefer to have reasonable and steady prices than an unsettled market.

Business in plumbing supplies is picking up and orders for roughing in goods are being placed more generally. Heating goods, are, of course, out of season and little is being done with them. Prices on other lines are stationary.

LEAD PIPE — The discount continues at 5 per cent. off the list price of 7c. per pound. Lead waste, 8c. per pound, with 5 off. Caulking lead, 5¾c. to 6c. per pound. Traps and bends, 40 per cent. discount.

SOIL PIPE AND FITTINGS—Business is increasing. We quote: Medium and extra heavy pipe and fittings, 60 per cent.; light pipe, 50 per cent.; light fittings, 50 and 10 per cent.; 7 and 8 inch pipe, 40 and 5 per cent.

IRON PIPE—Stocks are low, with one-inch black pipe quoted at $4.95, and one-inch galvanized at $6.60. Full list in current market quotations.

IRON PIPE FITTINGS—The following quotations rule: Cast iron fittings, 57½ per cent.; cast iron plugs and bushings, 60 per cent.; flange unions, 60 per cent.; nipples, 70 and 10 per cent.; iron cocks, 55 and 5 per cent.; Canadian malleable, 30 per cent.; malleable unions, 55 and 5 per cent.; malleable bushings, 55 per cent.; cast iron ceiling plates, plain, 65 per cent.; cast iron floor, 70 per cent.; hook plates, 60 per cent.; expansion plates, 65 per cent.; headers, 60 per cent.; hangers, 65 per cent.; standard list.

RANGE BOILERS—Galvanized iron, 30-gal., standard, $5; extra heavy, $7.75, 35-gal. standard, $6, extra heavy, $8.75, 40-gal., standard, $7; 40 gallon, extra heavy, $9.75, net list. Copper range boilers—New lists quote: 30 gallon, $33; 35 gallon, $38; 40 gallon $43. Discounts 5 to 15 per cent.

RADIATORS—Hot water, 47½ per cent.; steam, 50 per cent.; wall radiators 45 per cent.; specials, 15 per cent. Hot water boilers are subject to an open market.

SOLDER—Bar solder, half-and-half, guaranteed, 27c.; wiping, 23c.

ENAMELWARE—The January list still prevails on Canadian baths. We quote: Lavatories, first quality, 20 and 5 to 20 and 10 off; special, 20 and 10 to 30 and 2½ per cent. discount. Kitchen sinks, plate 300, firsts, 60 and 10 off; specials, 65 and 5 per cent. Urinals and range closets, 15 off. Fittings extra.

ELECTRIC LAMP THAT TALKS.

Two new and unique inventions have been put on the market. One of these is an incandescent lamp that lights when it is spoken to; the other is a talking arc lamp. They are the inventions of Frank Moulan, star in "The Grand Mogul." While there is no practical use to which either of these inventions may be put they demonstrate the wonders of electricity.

The incandescent lamp that talks, however, is a reality. The device is a simple one—just an ordinary telephone transmitter with a highly sensitive diaphram, which vibrates to such an extent when in contact with the human voice that it touches the wire that starts the motor for the lights.

The speaking arc lamp is also a reality. It is wired from a highly sensitive telephone transmitter into which the voice is injected, the sounds being audibly reproduced from the sputtering carbons of the lamp.

EXCELLENT POINTS

The Daisy Hot Water Boiler embodies features in its construction that place it in a position by itself. It is easily handled, durable and efficient and the fitter handling them never fails to acquire a reputation for proficiency and good practice.

CLUFF BROTHERS

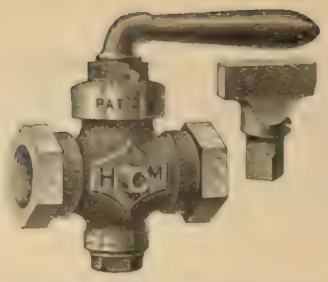
Lombard Street, TORONTO

Selling Agents for - - - WARDEN KING & SON, Limited

Clean Oil and a Clean Store

You don't have to put up with dirty greasy floors and furniture and odor-laden atmosphere simply because you store and sell oil. Neither do you have to sell your customers oil which is full of dirt and grit and only half as efficient as it ought to be on account of evaporation, simply because you store the oil yourself for a time.

The Bowser Self-Measuring Oil Tank will store your oil and keep it pure and clean and secure from evaporation. It will pump the oil, no matter how heavy, directly into the customer's can without funnel or measure and it will keep the store as clean and free from odors as if no oil were sold there.



Cut 19. First Floor Outfit for Non-Lubricating Oils.

The pump can be placed where it is most convenient and the tank can be on the first floor, in the cellar, out doors or underground, in fact, anywhere.

Send for catalogue No. 5, which describes the Bowser System.

EVAPORATION REDUCED TO A MINIMUM

is one of the reasons why PATERSON'S WIRE EDGED READY ROOFING will last longer than any other kind made.

Mr. C. R. Decker, Chesterfield, Ont., used our 3 Ply Wire Edged Ready Roofing fourteen years ago, and he says it is apparently just as good as when first put on.

We have hundreds of other customers whose experience has been similar to Mr. Decker's.

That Stuffy Room

is more deadly than desease itself. air is the curse of crowded living. in all public places such as asylums, clubs, big offices, schools and theatres, **PURE AIR CAN BE OBTAINED ONLY BY OUR SYSTEM OF VENTILATION.**

It has stood the tests of scientific experts.

It is in use in the finest buildings in Canada.

Its price is reasonable and its benefits lasting.

Testimony:

MONTREAL, June 7th, 1901.

Messrs. J. W. HARRIS Co., LIMITED,
Montreal

Dear Sirs,

I have been using your "AEOLIAN" Ventilators on several houses in this city with the best results. The tenants of these houses declared that your Ventilators are of great advantage to them. I also installed two (2) 18 inch on my stable and I can say that your Ventilator cannot be surpassed by any to take out the sweating or bad smell in any room.

F. D. MONK.

Ask for booklet re Aeolian and Zephyr Ventilators, also booklet on Filter, etc.

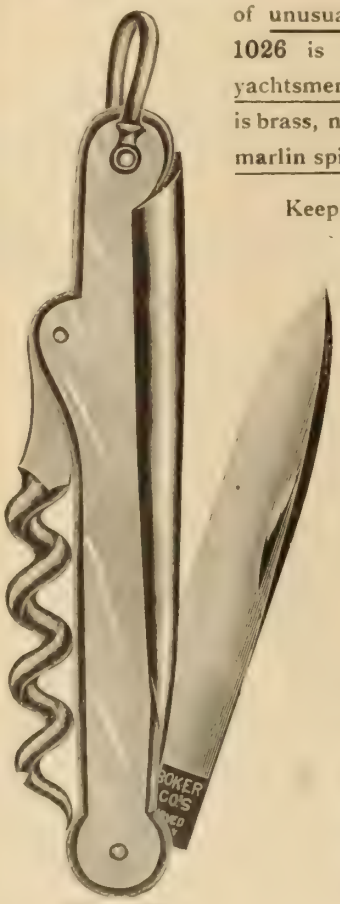
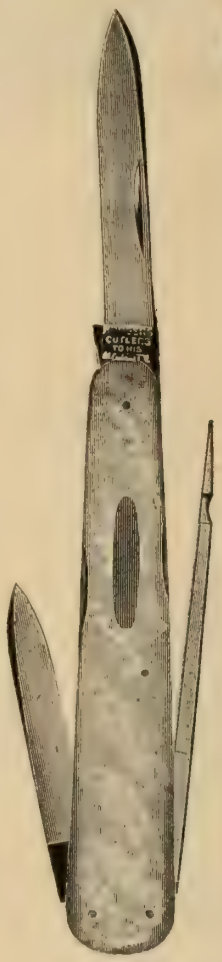
Factory: Dufferin Street, Toronto, Ont.

Our Prices are Right



No. 4332

We show these few knives here because each has some feature comparatively new, they are good knives to have in stock because they will sell.



No. 4332 is a handy farmer's knife with a blade for punching holes in leather. **No. 25836** is also a farmer's knife particularly useful for cattle raisers. **No. 1445** and **No. 461** are new pen knives each with peculiar features. **No. 1445** has an easy working nail nipper and nail file. **No. 461** is very thin and has pearl sides of unusual brilliancy of color. **No. 1026** is intended for the use of yachtsmen, canoeists and sailors. It is brass, nickel-plated, and has a large marlin spike.

Keep up your stock and variety of knives. No other line of goods occupying the same small space pay so large a profit.

No. 1026

We show nearly 500 different knives in our new loose-leaf catalogue now being circulated.

21X		Semi-Steel	3¼-in.	Jaws
22X		"	3¾ "	"
23X		"	4¼ "	"
24X		"	4¾ "	"

The Solid Steel Strengthening Bar as used in the Slide of Parker's New Vises, combined with the blending of steel and best iron in the making of the castings (known as Semi-Steel) make them practically unbreakable.

This is why the machinist will have no other.

Then the Steel Jaws can be removed and replaced when necessary.

The low set jaws make them the most desirable vise for the mechanic to use.

To Sum Up

Parker's Vises are the best that money can buy.

They are sold at a reasonable price.

They are taken in preference to others in the leading machine and railroad shops.

RIDGED AXES

There has been a general tendency to make axes flat for some time, and although an axe is seldom used now to chop a tree down, still there are sections of the country where a well-ridged axe—an axe that will burst a chip—sells best. To meet this demand we make the *Forest Queen* in Square Bit and the *Peerless* in Round Bit.

GIVE YOUR CUSTOMERS WHAT THEY WANT. IT SAVES BOTH TIME AND TROUBLE

Refined Bar Iron

It is false economy to use poor quality bar iron. London Bars are the products of long experience, and the great demand for them is due to their uniform high quality.

They come in two grades, Common and Refined, and re-work with the greatest facility.

A trial order solicited. 65

Amatite ROOFING NEEDS NO PAINT

DO YOU USE A ROOFING THAT REQUIRES PAINTING AND COATING?

If so, do you realize that the coating and painting will probably cost as much, if not more, than the first cost of the roof itself?

When you buy a roofing that has to be coated, you must consider the *cost of maintenance* as well as the first cost. If you do this, you will find that coated roofings cost you just about twice the original cost.

If you try to save money by not coating such roofs they will *soon leak and rot away.*

The best way out of the difficulty is to buy a roofing that requires no coating, such as Amatite. This Ready Roofing has a *special mineral surface* which makes painting *entirely unnecessary.* The first cost of Amatite is the whole cost.

After it is once laid on the roof it costs you *nothing* to keep up.

Furthermore, the price of Amatite in the first place is less than that of almost any other ready roofing. It is by far the lowest priced of the *good* ready roofings.

When you get prices don't forget to count in the cost of putting on paint every year, and you will be sure to come back to Amatite as the cheapest and best.

FREE SAMPLE Let us send you at once a SAMPLE of AMATITE and a Booklet of information about it. We want you to see how much better it is than the kind that has to be painted.

CONGO NEVER LEAK ROOFING

SEND FOR FREE SAMPLE

Roofing troubles! End them with Congo. Leave the old roof there and just lay Congo Roofing over it. It won't cost much; it won't take long.

Everybody who tries Congo likes it the first year, likes it better the second year, is proud of it the third year and gets more enthusiastic after that the longer he waits for it to wear out.

A sample is pretty good evidence. We will send you one free. Ask for it. Address any of the following—

Buchanan-Foster Co., Philadelphia, Pa.; Geo. E. Smith & Co., Halifax; S. Hayward Co., St. John, N.B.; Mechanics Supply Co., Quebec; The Starke Hardware Co., Montreal; H. S. Howland, Sons & Co., Limited, Toronto

MR. DEALER, this is a good time for you to indulge in profitable conversations. Lots of your friends talk of building.

HARDWARE and METAL

MONTREAL TORONTO WINNIPEG

The "WAYNE" CARPET BEATER

Handy, Useful and Durable Household Article. "Not a Seasonable Toy"

Is now made in three styles—to retail at popular prices.

Patented Sept. 8, 1903

The "WAYNE" is the best whip upon the market for beating clothes, carpets, rugs and furniture. Constructed of the best coppered steel wire obtainable and mounted on a seasoned hardwood handle.

The wire is fastened to the handle in such a manner that it is impossible to work it loose. A large ferule pressed over the handle prevents the latter from splitting.

The "WAYNE" beater being made of spring steel wire always retains its shape, also eliminates the danger of puncturing or tearing article being cleaned.

This beater is so well balanced that you get full stroke and best results with very little effort. The "WAYNE CARPET BEATER" is a trade winner. Its usefulness is recognized on sight and sells wherever shown. Place your order now.

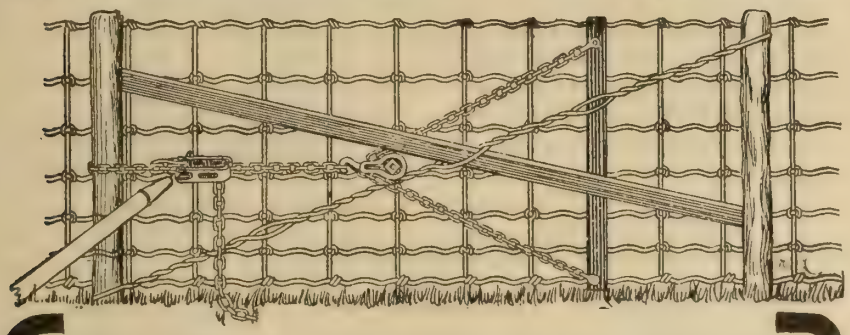
Four Reasons why INVICTUS FIBRE is the BEST FIBRE PAPER on the Market

1. Invictus Fibre is made from personally selected pulp wood cut on our own limits.
2. This special pulp wood is again rigidly culled on arrival at our mills
3. The pulp from which Invictus Fibre is made is manufactured inlour own pulp mill and transferred at once to the paper mill, avoiding all drawbacks of transportation.
4. Invictus Fibre will increase in strength and not grow hard and brittle as does fibre made from sulphite pulp. This is a quality of the peculiar and selected pulp from which Invictus Fibre is made.



A trial order will convince you that we are correct. See that each package bears the words "Invictus Fibre." Every ream contains 480 sheets

HOW TO BUILD A GOOD FENCE

Our new folder on "Erecting Fences" will tell you and if you will follow the instructions carefully when you are through you will have a good job.

It's full of valuable and interesting information on fence building and tells how to erect woven wire fencing in the quickest and most substantial manner.

No farmer, fence man or any one interested in fence construction should fail to write for a copy. It gives all the information required for building fences and we send it

FREE!

In addition there is also a complete and very interesting description of the manufacture of fence wire. Persons who have never had the privilege of visiting a wire mill will find this article of especial interest.

It also has an article quoted from a bulletin issued by the U. S. Department of Agriculture on the manufacture of concrete fence posts, showing how posts made of this most useful and durable material can be manufactured at home. Don't fail to write for a copy today. Ask for our folder called, **"Erecting Fences."** Remember it's **free.** Address

THE BANWELL HOXIE WIRE FENCE CO., LTD., Dept. J, Hamilton, Ont.

Want Help?

If you are located in a small city or country town, a want ad. placed in the local papers means that possibly half-a-dozen young men will read it.

If you are located in even a big city, a want ad. in any metropolitan daily costs money. You are paying for a circulation of 100,000, and there is no possibility of more than 200 of the men you want to reach seeing that ad.

Doesn't that look like throwing money away? It does. Because you are paying for 99,800 of a circulation that is absolutely worthless as far as your wants are concerned.

Every Hardware clerk sufficiently interested in his business to pay you as an employee, reads

Hardware and Metal

When you want a man your ad. should appear in our Want columns. It certainly will pay you well to consider this.

Condensed advertisements in Hardware and Metal cost 2c. per word for first insertion, and 1c. a word for subsequent insertions. Box number, 5 cents extra. Write or phone our nearest office.

HARDWARE AND METAL

Toronto Montreal Winnipeg

I WILL TALK

to practically every Hardware merchant in Canada from the Atlantic to the Pacific. I cannot do it all in one day, but during the first twenty-four hours I will deliver your message to every Hardware merchant in Ontario. I travel all day Sunday and on Monday morning there will not be a village within the limits of Halifax in the East, and Brandon in the West, into which I will not have penetrated.

I cannot go any further East, so I now devote all my energies to the West, and so many new towns are springing up here each week that I haven't as much time as I used to have to enjoy the scenery. But I like talking to hardwaremen, clerks, travellers and manufacturers, especially as they are always glad to see me and hear the news I have to tell them. Tuesday noon I am at Calgary, Wednesday noon at Kamloops, and by Thursday morning I reach Vancouver, having been in all the mining towns and all through the fruit districts of British Columbia.

I have been eighteen years on the road and I have a pretty good connection. I never intrude when a man is busy, but just bide my time, because I know men pay far more attention to what you have to say if you catch them when they have a few moments to spare. So I often creep into their pocket when they are going home at night, and when supper is over Mr. Hardwareman usually finds me. He must be glad to see me, because he listens to what I have to say for an hour or more.

I try to always tell the truth, and men put such confidence in what I say that I would feel very sorry to deceive them even inadvertently. Probably some other week I will tell you about the different classes of people I meet. In the meantime if you want a message delivered to HARDWAREMEN, PLUMBERS, CLERKS, MANUFACTURERS or TRAVELLERS—and want it delivered quickly—I'm your man.

Parcels Post in Parliament

How the Different Members Expressed Themselves—Postmaster General Threatens to Bring the Matter Up Again.

On the evening of Feb. 15th, Hon. Mr. Lemieux, Postmaster-General, announced in Parliament his intention to withdraw the proposal to introduce a parcels post C.O.D. system. It would have been a most pernicious piece of legislation and would have jeopardized the interests of innumerable merchants throughout the Dominion by giving preference and aid to the large departmental stores in carrying parcels at less than cost price and allowing them to collect cash on delivery. Hon. Mr. Lemieux said he still considered the scheme a good one; and it might be carried into effect later. Another fight may be looked for next session, and it will, therefore, be interesting to review the discussion.

The postal express legislation was first referred to in a speech delivered by the member for South Grey (Mr. Miller) on Nov. 30, 1906, which, as the Postmaster-General said, foreshadowed an arrangement for the arrangement and delivery of post parcels C.O.D. Hon. Mr. Lemieux, referring to it, then said: "It is contemplated that the post office should be the means by which parcels could be despatched and collections of any charges thereon made by the department on some definite scale."

Members Declare Themselves.

The next mention of the proposed legislation was made on Feb. 8, 1907, by Alex. Martin (Queen's, P.E.I.) He said "The country postmasters are the poorest paid officials in the public service, and I congratulate the Postmaster-General that he intends to increase their salaries. But I understand it is the intention of the hon. gentleman to introduce a bill this session which will enable postal parcels to be delivered C.O.D., and to carry them at a less rate than the actual cost. I understand also that the Postmaster-General bases the increase in the salaries of the postmasters on the fact that an extra amount of work will thus be thrown on them. Well, I do not believe that the postal service of this country should be used for the purpose of carrying parcels at unremunerative rates, to the advantage of some large business concerns in the cities but to the detriment of the storekeepers throughout the country. Our country merchants are doing an honest business and bearing their share of the municipal and provincial taxation in their several localities, and I do not think it is any business of the Post Office Department to endeavor to injure their trade by such a proposal."

Following this statement of Mr. Martin's came comments upon the proposal by various members, among them Mr. Logan, J. J. Hughes, Mr. Avery, and Mr. Henderson. Mr. Martin in his statement, deplored the poor salaries paid to postmasters. Mr. Logan qualified this by adding that if the postmasters' salaries were poor, the mail carriers' were even more so, and the legislation proposed would incur more work for these with an incommensurate advance of salaries. J. J. Hughes (King's, P.E.I.) expressed his decided opposition to any such proposal to give "additional facilities to the large order houses in the cities for sending their goods all over the country to the detriment of the retail merchants." Retail merchants do their duty as citizens and are at present subjected to very keen competition from the large order houses without having this condition aggravated by the enforcement of such a measure as the one under consideration. They (the large order houses) send out circulars stating that they can furnish all kinds of goods from their departmental stores and they can do that very cheaply under present conditions. But those who give orders have to pay the money in advance, and I know that in many cases when the goods are received there is disappointment. If, therefore, the facilities for sending out these goods be increased, the evil will be increased. I would impress upon the Postmaster-General as earnestly as I can that it will not be a wise policy, in the public interest generally, to tax a whole people in order that a few large order houses or departmental stores may be enabled to send their goods more cheaply throughout the country and thus make it a delivery wagon of our post office system. Mr. Hughes continued by observing that in the United States the system had been tried and found to be enormously expensive. Would it be wise, then, for a country very much weaker, financially, to assume such burdens?

Quotations From Hansard.

We quote from Hansard of that day (Feb. 8) reports of the discussions by various members:

Mr. McLennan (Inverness): "I desire to say a word or two before the hon. the Postmaster-General (Mr. Lemieux) will have time to carry out the various sugestions made to him for doing away with the surplus. I must add my protest against the C.O.D. system being established in connection with the parcel post service for the reason given by other speakers, that the postal service in Canada would be merely an express agency for the benefit of a few departmental stores in the great cities of Canada, to the great detriment of the local trader in the country towns and villages. I may say that when the people of Canada compare notes as to the success of the administration of the present Postmaster-General the question uppermost with them will not be how large a surplus he has rolled up but how much he has advanced the mail and postal service of the people of Canada. In the United States they have an annual deficit of several million dollars in the mail and postal service and no protest will be found in the newspapers from end to end of that country, so eager are the people of that country to secure an efficient mail service; and I am sure the people of Canada are just as eager to secure an efficient service as they are and would be perfectly content to see the surplus wholly wiped out in order to secure a more efficient mail and postal service than at present prevails in a great many rural districts in Canada. I might cite an instance in the county which I have the honor to represent. Three or four mining towns are springing up in it and trade with the country districts around is springing up in various directions from these mining centres, and when I assure the Postmaster-General, who is comparatively new to the department, that the postal service in Inverness does not cost as much to-day by nearly $5,000 as it did ten years ago, I think he will be inclined not to turn down so many of my applications for post offices as he has done since he took office. I must do like the member for Cumberland (Mr. Logan.)"

Petition From Barrie.

H. Lennox (South Simcoe) said: "May I be permitted to call attention to another matter, and that is the proposal to inaugurate, by departmental regulation, a system of parcel post or C.O.D. delivery? I have had many communications addresed to me on the subject. One of them is as follows: 'Kindly present this petition to the Postmaster-General and oblige the foregoing subscribers.' As a matter of fact, it is rather a letter than a petition which I have received and it expresses, in very concise language, and very clearly, the grievance under which follows:

Barrie, January 19, 1907.

To the Hon. Mr. Lemieux,
Postmaster-General, Ottawa.

Dear Sir,—We understand that you are preparing an amendment to the law providing for the existing parcels post system, the said amendment being intended to provide for the collection on delivery of parcels. Such a system would enable mail order houses to send goods C.O.D. to any part of the country in competition with local retailers.

The large departmental stores are already injuring local merchants to a

tremendous extent, and any change in the postal laws which would favor them would be a great injustice to the thousands of merchants who have their capital invested in the small towns and cities throughout Canada, and who are aiding by their presence, their energy and their taxes, in the upbuilding of the small communities upon which Canada's future prosperity must depend.

We do not ask for any special privilege and protest against the mail order houses being given any favors. The proposed legislation would tend to reduce the number of retailers thus destroying competition, depreciating the value of real estate in the towns and having a similar effect upon the farming districts, as well as tending to decrease the opportunities for pleasure enjoyed by the farmer's family. The deserted farm districts of the New England States are an object lesson to avoid.

We trust that you will see the fairness of our argument that the legislation would be detrimental to the continued progress and development of this fair Dominion, and we would ask that you reconsider your announced intention of introduceding the proposed amendment.

This letter is signed by John J. Coffey, hardware merchant, and some fifty merchants and business men in Barrie and surrounding district."

Mr. Lennox added: "Were this matter one which the people generally understood, there would be probably a greater number of petitions sent in against the proposed change. Most people are under the impression that what is proposed is the introduction of a bill; but as it is a change that can be effected simply by departmental regulation, I take this opportunity of bringing the subject to the attention of the hon. minister in the hope that he will very seriously consider its effect before he concludes to take the course suggested, one of the effects of which would be to injure the trade of the merchants in the rural parts and detract from the general prosperity of Canada ———"

H. S. Clements (West Kent): "I think that the c.o.d. system would work to the detriment of the rural storekeepers and not to the advantage of the public."

A Novel Suggestion.

H. H. Miller (South Grey): "I do not think that it was the intention of the Postmaster-General, in introducing the c.o.d. system, to assist the department stores at the expense of the stores in the towns and villages of Canada. It has occurred to me that, perhaps, a c.o.d. system might be established, that, instead of bringing grist to the department store mill will help the stores in smaller places to hold their own against the departmental stores. I think there a provision already by which newspapers pay a certain rate within a certain distance, and a certain increased rate at a longer distance from the place of publication. I have wondered whether it would not be possible to bring into effect the proposed parcel post system on somewhat the same plan. Nobody appears to have any objection to it except to the c.o.d. system. Could you not make the c.o.d. part of the system only applicable to mails within a certain distance, say ten miles from the point of departure? That would not bring in the large departmental store, but it would procure a great advantage to people in the rural sections who, by means of the rural telephone system, could procure parcels by mail from the neighboring town or village not more than ten miles away."

A. A. McLean (Queen's County, P. E. I.): "It is not in the interest of the retail merchants of the different portions of Canada that the large departmental stores should receive the benefit of that c.o.d. delivery in any portion of the country. I think that if it were limited, as was suggested by my hon. friend to my left, it might perhaps be of some benefit, but to allow the large departmental stores in Toronto and Montreal to send their goods c.o.d. at very small cost all over Canada is not in the interest of trade."

Postmaster-General Declares Hmiself.

Hon. A. Lemieux (Postmaster-General): "I do not know, I never dreamt of that great rivalry which seems to exist between the deparemental stores and the country stores, but I quite ag with hon. gentlemen on both sides of the House that there is certainly to-day an undercurrent against the establishment of this parcel post system on account of the injury it might cause to the country merchants. For my I have been biased in favor of cities, having been born and brought up in a city, but it was not my intention to hurt at all the interests or the feelings of country merchants when I thought that I should perhaps give this country the benefit of that system, because my hon. friends on both sides must not forget that the parcel post system is not at all a new system; it exists in Europe, it exists in England; in fact, in England you can send practically anything through His Majesty's mails, and the English mail system is considered to be the most modern and best equipped in the world. There they have the parcel post system and the c.o.d. system. We thought that the Canadian mails could perhaps be used to bring to terms the express companies of this country. We would have afforded additional channels for the public and at the same time we would, perhaps, have put an end to what is practically a monopoly. But, however, I find public opinion, that is to say public opinion framed by the country merchants, against the proposed system, and I may say frankly that I would not run against public opinion in the present case, but I think that if public opinion was educated, public opinion would back up the postoffice department in the proposed establishment of this c.o.d. system."

A. Martin (Queen's County, P.E.I.): "Now, let me tell the Postmaster-General that he never should impose on this country such a scheme as the free parcel post delivery. I am as anxious as anyone could be that people should get cheap goods, but I don't believe that the departmental stores of this country should be able to sell cheap goods at the expense of the postal service."

T. Martin (North Wellington): "I am glad the minister has taken time to give very careful consideration to this question of the c.o.d. delivery. There is certainly a feeling in the country against that proposal. I trust that the matter can be arranged."

Discussion Continued.

The next mention of the c.o.d. delivery proposal was made in the House on Monday (Feb. 11), when, F. L. Schaffner (Souris, Man.) asked:

1. Is the government aware that there is a strong and universal agitation in the province of Manitoba against the extension of the postal system to enable parcels to be carried on the c.o.d. plan?

2. Has the government received any protests from the province of Manitoba against the extension of the postal system to enable parcels to be carried on the c.o.d. plan?

Hon. Rodolphe Lemieux (Postmaster-General):

1. Yes, a strong but not universal agitation has been observed in the province of Manitoba.

2. Yes.

A Dead Issue.

On Feb. 15, Hon. J. G. Haggart asked the Postmaster-General: "Are you entering into a new arrangement for the carrying of parcels, a new system of parcel post?"

Mr. Lemieux: "My own personal view until lately was that we should establish a parcel post system in Canada just as they have in England, but, in order to avoid all useless discussion, I may say at once that I have yielded to the practically unanimous opinion expressed by hon. members on both sides of the House."

Mr. Haggart: "Is it the express companies that have stirred up that opposition?"

Mr. Lemieux. "I am afraid the express companies have stirred up all that trouble and have sent out postal cards all over the country to arouse the country merchants. At all events, although personally I believe that a good parcel post system on a c.o.d. basis as they had in England and all continental countries would be a good system, and that in the lang run a well educated public in this country would sustain the government in such a service, but for the present I am fighting against windmills."

Mr. Herron: "I see an article in the Retail Merchants' Journal of Montreal, with reference to the parcel post system—

Mr. Lemieux: "It is a dead issue for the present."

Retail Hardware Association News

Official news of the Ontario and Western Canada Associations will be published in this department. All correspondence regarding Association matters should be sent to the secretaries. If for publication send to the Editor of Hardware and Metal, Toronto.

THE CONVENTION QUESTION BOX.

A leading feature of the coming convention of the Ontario Retail Hardware Association in Toronto on March 28 and 29 is to be the "Question Box" discussion in which every dealer is invited to express his views. Already over two dozen questions have been suggested for discussion and the success of the feature is assured. There is still time, however, for a few more practical questions on subjects of interest to any branch of the retail hardware trade.

The program which is being mapped out will probably include a meeting of the executive on the morning of March 28. The convention will open in the Labor Temple at 1 p.m. on Thursday and as much business as possible transacted during the afternoon. In the evening the delegates will be tendered a banquet by Lt.-Col. J. B. MacLean, publisher of Hardware and Metal. Two sessions will be held on Good Friday, the election of officers and concluding business being gotten out of the way as soon as possible in order to take up the "Question Box."

Here are the questions so far suggested for discussion :

Should large retailers be able to buy goods as cheaply as jobbers or, in other words, is the quantity system of buying the most satisfactary manufacturers can adopt ?

Should there be a difference between cash and credit prices ? If so, how much ? How can this best be handled ?

What percentage of a merchant's turnover should his expenses be ? What percentage should be spent in advertising alone ?

Should goods be marked in plain figures or ciphers ?

Should some novelty be given away each year ?

Do small remembrances to special customers at Christmas time do more good than harm ?

Assuming that the jobber is willing to pay exchange on local cheques, what is the minimum cheque on which we should ask him to pay exchange ?

When remitting money orders should the cost of the order be taken out of the remittance ?

What do we know of a satisfactory system of filing catalogues from a two-page price list to the regular hardware catalogue ?

To what extent does it pay a hardware dealer to advertise in the local newspaper ? What forms of advertising have been found the most profitable ? Is it profitable to advertise in programs, etc.

Does it pay a dealer doing a $50,000 business to go behind the counter ?

Is it wise to interfere with a clerk or transfer a customer from one clerk to another ?

Is a parcel boy at 50c. a day cheaper than one at $1 per day ?

Can the shortage of tinsmiths be relieved by employing helpers ?

Does it pay to weigh freight and check freight bills ?

Do 5 and 10 cent counters pay in small towns ?

What is the best method of handling stove repairs and storing parts ?

Does it pay to borrow money to discount bills ?

What is the cheapest and best method of handling oil ?

If a hardware dealer has not been handling stoves, what is the best selling system he can adopt to secure publicity and make profits ?

Should the retail hardwareman confine his buying to representatives of jobbing houses ?

What is the best method of dealing with goods substituted by jobbers for lines not in stock ?

In a retail business of $25,000 to $50,000 per year, what is the best system of bookkeeping ?

How can unsaleable lines be disposed of satisfactorily without cutting prices ?

Should a portion of a clerk's salary be withheld or does it pay to offer bonuses to clerks to secure faithful service and prevent them leaving on short notice ?

Does it pay to employ female clerks to look after the housefurnishing department and lady customers ?

Does it pay to handle special lines for holiday trade ? If so, what lines pay best ?

—

WESTERN ASSOCIATION AT WORK

J. E. McRobie, secretary of the Western Association, has addressed the following circular letter to the western hardware trade :—

The annual meeting of the above association was held on Tuesday, February 12th. Unfortunately weather conditions prevented the attendance of a great number, who wrote expressing their regret at their inability to attend and wishing the association every success.

The association has in the past year secured a better understanding between jobbers and retailers, you are receiving better protection to-day than ever before. It has been recognized that the association is a body capable of guarding its own interests. It remains with you to retain the hold which has been secured ; this can be done only by each dealer giving the association his support, don't wait until these benefits has been secured to you, before becoming a member ; come in at once and assist your fellow dealers who have been struggling during the past two years in your interest.

Your association together with others, have been instrumental in having the proposed parcel post c.o.d. bill withdrawn, a measure, which had it gone through, would have interfered materially with dealers in all parts of the country.

We are now working in conjunction with the eastern association towards the formation of a Dominion Hardware Association, with a view of impressing on the manufacturers and jobbers the disastrous results to the retail trade if they do not take steps to protect the trade against the catalogue and mail order houses, and the selling to consumers ; also to assist the trade generally in overcoming indiscriminate price cutting. This has been secured by the hardware dealers on the other side, benefitting by their success there is no reason to doubt that the same good results can be obtained here.

I again beg to call your attention to the collecting forms which are furnished you free of charge. They have been successful in securing bad accounts by those who have used them ; it is your own loss if you fail to take advantage and secure the same results.

We are issuing a delinquent list, a copy of which will be furnished you, such a list in your hands is a valuable protection against dead-beats. I want you to send me a list of all bad accounts on your books before the 1st of April, giving names in full, their occupations and address so they may be included in the list.

The failure of some members to pay their last year's dues has caused a deficit, which is to be regretted, and your executive trusts and expect that every member will pay his dues promptly this year.

J. E. McROBIE, Secy.-Treas.

THE PARCELS POST QUESTION.

Elsewhere in this issue we reproduce a full report of the discussions in Parliament on the parcels post c.o.d. matter so that readers of Hardware and Metal may know who their friends were in the House of Commons. The discussion is well worth reading and can be referred to in case the matter is brought up again as the Postmaster General suggests.

It is amusing to read the conclusion drawn by Hon. Mr. Haggert and Hon. Mr. Lemieux that the express companies have been behind the agitation conducted against this measure. The honorable gentlemen know better, but if it is necessary the retail merchants of Canada can disillusion them if the "dead issue" is brought to life again.

Another interesting incident was the reading in Parliament of one of the form letters suggested in Hardware and Metal. Hundreds of these were forwarded to Ottawa, but this one was backed up by half a hundred signatures secured by a hardware merchant in Barrie.

The discussion was closed by Mr. Herron, (Alberta) stating that he understood the Postmaster General to say in the House that he could put this system into effect without any enabling legislation, but he had seen an article in the Retail Merchants Journal of Montreal from which he quoted: "We are pleased to say on the authority of the Postmaster General, as we anticipated, that no such legislation can be put into operation unless it is presented before the House in a regular manner, and if any change is proposed in the present system he will give us ample opportunity to be heard." To this Mr. Lemieux replied: "This parcel post system could be introduced under the regulations of the department and without any legislation, but in view of the almost unanimous opposition from members on both sides I would not think of putting it into effect. I can tell my hon. friend that no such scheme will be adopted for the present."

The calm assurance of the editor of the Journal that he could go to sleep until the Postmaster General wakened him is on a par with the action of Dominion Secretary Trowern, of the Retail Merchants' Association of Toronto who when asked if he would co-operate with the Ontario Retail Hardware Association in opposing the parcels post c.o.d. legislation replied on Dec. 29 as follows:

"In this matter of the proposed amendment to the Parcel Post System which is of very great importance to Retail Merchants, we are keeping our eye closely on it, but our Legislative Committee, some of whom are constantly at Ottawa during the entire session, feel that it is always inadvisable for organized bodies to attack any legislation until it is presented in proper form before the House, because it has the effect of weakening our influence by putting us in a position of raising objections before the facts are properly before us. When the proposal comes properly before the House, you can rest assured that we will throw our whole weight against it, if it has any of the features that were incorporated proper form before the House, because in the measure introduced in the United States, or any other features that are injurious to the Retail interest."

If the Retail Hardware Associations had laid down and waited until the "legislation" was brought down in the House as suggested by the Retail Merchants' Association it can be taken for granted that the Parcels Post regulations would be in force before an agitation could have been worked up against it. The time to prevent a snowball from developing into an avalanche is to stop its progress while yet in the snowball stage.

The Retail Hardware Associations have the satisfaction of knowing that they were the only organized national or provincial bodies to oppose the mail order houses in their attempts to secure this extension of the postal regulations. They were aided by some local Boards of Trade, a few local branches of the Retail Merchants Association and by Hardware and Metal, the Dry Goods Review, Printer and Publisher and a few other trade newspapers. No other aid was forthcoming, however, and the credit for the great victory must, therefore, rest largely with the hardware associations which first took up the fight and carried it to a successful issue.

AN EDITOR WITH BACKBONE.

It isn't always that a daily paper has the courage to stand up against a big advertiser and insist that he must not attempt to interfere with the news and editorial departments of the paper. In fact it is charged, and the charge seems to have substantial foundation, that a considerable part of the daily press in the big Canadian cities dare not publish news items or make editorial comments which are distasteful to the management of the big departmental stores. However that may be there is at least one editor of a big paper who refuses to submit to dictation from an advertiser.

It was some months ago when one day shortly before the evening edition of a certain city daily went to press the telephone rang and a reporter answered it.

"This is Mr. Dash, of Blank's, speaking. We have had an accident in our building and a couple of men are badly hurt. Now we don't want one line of this to appear in the paper."

The reporter was a new man and he didn't want to take any responsibility, especially as he knew that Dash was the manager of the big department store. So he brought the "main guy" to the telephone.

Mr. Dash repeated his demand to the editor-in-chief.

"What's this?" replied the editor. "You know we are running a newspaper don't you?"

"I don't care about that," was the reply. "This is Mr. Dash, of Blank's, speaking, and I insist that I don't want a line in your paper about this accident."

"We are running a newspaper and this accident is news," was the reply. "We are going to publish it of course. If you have any suggestions to make as to the way you want the story told, we'll be glad to hear them, but we're going to publish the story."

"Look here, young man," was the irate reply. "I don't know who you are, but I want you to know that I am Mr. Dash, of Blank's, and if one line of this accident goes in the paper your people will hear about it when they come around for a renewal of their advertising contract."

"I don't care whether it is Mr. Dash, of Blank's, that's speaking, or the Emperor William of Germany," was the re-

ply. "We are publishing a newspaper and we are going to print the story. What's more, when the time comes to renew the advertising you will find that Blank's will need their advertisement in this paper more than this paper will need Blank's advertising."

That was all. The story was published and the advertising was not cancelled.

RIDICULOUS PRICE CUTTING.

A traveler in western Ontario has forwarded the following communication, which speaks for itself:

"A glaring case of ridiculous undercutting was named to me at St. Thomas where it is alleged churns and washing machines are sold for 25c. profit, and in some cases at cost. The same appears at Aylmer. My suggestion to the complainant that retailers and manufacturers would find their best interests mutually served by uniting to put out the evil, was met with the reply that the retailers are not strong or united enough for this work."

This situation is regrettable and should not be. Hardware merchants are not in business for their health. It is folly for dealers to sell goods on such a close margin, as it doesn't allow for carrying on business, and if continued is bound to result in both the retailer and the jobber coming out short.

Manufacturers could undoubtedly assist in maintaining the price, but there is nothing so important in this work as the existence of a good feeling amongst the retailers in each town. In St. Thomas practically all the hardwaremen are in the Retail Hardware Association. Of course, existing laws prevent the arrangement of prices, but if the trade would only get together occasionally and talk over trade matters it would not be long before such ruinous price-cutting would be discontinued.

In one town in northern Ontario where most of the trade are members of the Ontario Association, the best of feeling exists locally and the several dealers act as a unit in different matters. For instance, not long ago a retailer secured an order from a small consumer for some wire rope and forwarded it to a manufacturer for shipment. Later on, however, he received a telephone message to cancel the order, as a traveler representing a jobbing house had called and quoted a lower price. The jobbing house got the business, but its travelers have got the cold shoulder from every hardwareman in the town since that incident happened.

Associations have a value far beyond the mere arrangement of prices. Standing alone and apart there is every encouragement given to shysters who spread reports of the lower prices offered by the other fellow. United, a more friendly feeling exists, profits are more sure and conditions are better all round.

SHAKING HANDS WITH THE ASSIGNEE.

Upon the man who has got his attention fixed on the possibility of sudden and increased profit in mining stocks a single warning has little effect. So again we venture to remark that the likelihood of a man permanently augmenting his bank account by mining stock speculation is much more remote than his chance for making money in the grocery business, providing he gives it as earnest attention as the man gambling in mining stocks gives to the mining situation. A man with limited capital who ventures into the mining market, accompanied only by his shadow, has a fine disregard of danger. It is almost impossible for him to know the actual value of the stock offered him and the man who is trusting to luck to make money for him has the assignee on one side and the bailiff on the other. We promised to reproduce this week from The Financial Post an article showing the comparative earning power of various lines of investments. For lack of space we have had to hold it over a week.

ATTENTION TO DETAILS.

Nowadays, when a dealer's store is so full of a diversity of goods and new lines are being added so frequently, it is undoubtedly hard to bestow the necessary attention on each new article that is offered for sale. Yet a dealer loses by not specializing on each particular class of his new goods. Novelty wears off rapidly and unless new goods are merchandized quickly, they become an encumbrance.

It is advisable, therefore, to plan a retailing campaign for each novelty secured and, as far as possible, have plans cut and dried beforehand. This may seem burdensome and even impossible but, once the habit is cultivated, it will be seen to work wonders.

Take your clerks into your confidence and discuss plans with them. For instance, you expect a consignment of fishing tackle, rods or some other sporting goods novelty. Your old way of retailing them would be to show them in your window as soon as they arrive. By this means you would of course dispose of a good many. But surely there are other methods that will bring you in greater returns. For a day or two you must concentrate your efforts on selling them. Let your whole staff devise means to this end. Then, having cleared out the bulk of the supply, you are ready to bring forward other goods.

GEO. D. WOOD NOT DEAD.

Someone should suffer for the circulation of the report this week of the death of Mr. Geo. D. Wood, the successful Winnipeg wholesale hardware merchant. There is no truth in the report and there was no foundation for it.

For some months Mr. Wood has not been in good health, his trouble being diagnosed as sciatica. He recently went to Hot Springs, Arkansas, for treatment and was there told that spinal disease was the enemy he had to fight. A fortnight ago he came east to Hamilton, and after about a week's rest went on to Winnipeg with his family.

Mr. Wood's numerous friends will read with pleasure the contradiction of the report of his death and will be glad to know that his ultimate recovery is looked for. We trust that this hope will be realized.

NEW WHOLESALE FOR REGINA.

J. W. Smith, Regina, is organizing a wholesale hardware company in that city to be known as the J. W. Smith Hardware Co. It will be remembered that a few weeks ago the Smith & Fergusson Co. was dissolved and the retail business sold to Peart Bros., proprietors of the Western Hardware Co. At that time Mr. Smith had no intention of starting a wholesale business, but it is hard for an old hardwareman to give up the line of business to which he has devoted most of his life, and Mr. Smith, although young in years, is old in the business. So the announcement has recently been made of the proposed organization of the J. W. Smith Hardware Co. Associated with Mr. Smith as secretary-treasurer of the company will be W. O. Lott, who for so long a time was connected with the Smith & Fergusson Co.

At least $250,000 of the total capitalization of $500,000 will be paid up at once, the capital being subscribed in Regina and in Eastern Canada. A large three-storey warehouse 75x110 feet will be erected at once and Mr. Smith hopes that the new firm will be ready for business by the fall. They are already in negotiations with eastern manufacturers with regard to agencies for special lines.

The hardwareman who does not attend the convention of his retail association is neglecting an opportunity to make a better merchant of himself.

Make a fair start and keep up the pace until the finish. Waning enthusiasm never helped any merchant over the rough spots.

Markets and Market Notes

(For detailed prices see Current Market Quotations, page 66.)

THE WEEK'S MARKETS IN BRIEF.

MONTREAL.

Linseed Oil—Advanced 5c.

TORONTO.

Linseed Oil—Three cents higher owing to new flax seed duty.

Planished Copper—Now 43 cents.

Copperware—Advanced from 35 to 30 per cent.

Copper Pitts—Changed from 25 to 20 per cent.

Ingot Copper—Half a cent higher.

Montreal Hardware Markets

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, March 8, 1907.

The hardware trade is now in full swing here, and jobbers are getting ready their orders for spring shipment. There seems to be no immediate prospect of the shortage in screws being relieved, especially in some lines. The heavy demand for bolts and nuts is still maintained, and some sizes of wrought washers are beginning to run short. Jobbers state that deliveries of sash weights are very hard to get, manufacturers being very slow in filling their orders. There is an exceedingly good demand at present for all lines of carpenters', machinists' and lumbering tools.

The growth of the Northwest has greatly helped along the sales of binding twine, manufacturers having booked most of their business already. There is a tendency on the part of some manufacturers to hold out for a flat price of 14 cents on the 650 feet article, but local makers report that they see no reason why business should not be done at 13¾c.

TWINE—There are no changes to report this week, although some manufacturers are trying to hold out for a 14-cent fiprice on the 650-feet article. "Standard," 500 ft., sisal, 9⅝c.; "Tiger," 550 ft., manilla, 9⅝c.; "Red Cap," 600 ft., manilla, 12¼c.; "Blue Ribbon," 650 ft., pure manilla, 13¾ to 14c. Car lots ¼ less; thousand pound lots, ½c. less.

AXES—The severe winter has evidently lengthened the jobbers' season on axes and handles, as they are still reported to be moving very well.

RIVETS AND BURRS—Sales continue good and prices firm, with no changes.

HAY WIRE—The usual spring business is now being done and prices remain: No. 13, $2.60; No. 14, $2.70; No. 15, $2.85, f.o.b. Montreal.

WIRE NAILS—Sales are very good, and prices stiffer than last week, but quotations remain $2.45 per keg f.o.b. Montreal.

CUT NAILS—Moderate demand. No extraordinary features. We still quote $2.30 per keg f.o.b. Montreal.

MACHINE SCREWS—Demand brisk. Prices remain unchanged.

BOLTS AND NUTS — Manufacturers are running their plants up to the limit, but the demand for some sizes still exceeds the supply.

HORSE NAILS—Bad roads are helping along the demand. No change in prices.

HORSE SHOES—The same applies here as to horse nails. Most of the blacksmith shops have all the business they can handle.

BUILDING PAPER—Very active with stiff prices, but no change.

CEMENT AND FIREBRICK— Moving well. No change in prices.

POULTRY NETTING—2x2 mesh, 50 and 5 per cent. discount; other sizes 50 per cent. off.

GREEN WIRE CLOTH—In 100 ft. rolls, $1.62½ per 100 square feet; in 50 foot rolls, $1.67½ per 100 square feet.

LAWN MOWERS—Demand good. Prices unchanged; Low wheel, 12, 14 and 16 in., $2.30 each; 9-in. wheel by 12 inch, $2.85 each; 14-inch, $3 each; 16-inch, $3.12½ each; high wheel, 12-inch, $4.05 each; 14-inch, $4.25 each; 16-inch, $4.50 each; 18-inch, $4.75 each.

COIL CHAIN—Prices firm and unchanged. Demand good.

SHOT—Last week's advance is well maintained: Shot, packed in 25-lb. bags, ordinary drop AAA to dust, $7.35 per 100lbs.; chilled, No. 1—10, $7.88 per 100 lbs.; brick and seal, $8.40 per 100 lbs.; ball, $8.93 per 100 lbs. 5 per cent. off. Bags less than 25 lbs., ½c. per lb. extra, net; f.o.b. Montreal, Toronto, Hamilton London St. John, Halifax.

AMMUNITION—There seems to be a tendency to higher prices, but no advance has taken place as yet.: Loaded with black powder, 12 and 16 gauge, per 1,000, $15: 10 gauge, per 1,000, $18: loaded with smokeless powder, 12 and 16 gauge, per 1,000, $20.50; 10 gauge, $23.50.

Toronto Hardware Markets

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, March 8, 1907.

Trade conditions in hardware are becoming much better. The approach of spring, with its railroad operations and housecleaning activities, is doing much to better these conditions. Wholesalers are getting prepared to ship their spring orders which this year are large owing to increased building operations.

The situation in screws has not yet been relieved. Big demands prevail with little supply to fill them, and with no immediate prospects of repletion.

The demand for bolts and nuts continues strong, prices fair and unchanged.

Although the prices of Sisal have advanced binder twine prices remain firm and unchanged. Good business is being done, a large number of orders being booked and more coming.

All copper manufactures have advanced in price; copper kettles from 35 to 30, copper pitts from 25 to 20.

The demand for wire nails is good, with firm and unchanged prices.

BINDER TWINE — All the prices in raw material have advanced, twine prices remain unchanged. We continue to quote: 500 ft. Sisal, 9½-9⅝; 500 ft. standard, 9½-9⅝; 550 ft. standard manilla, 10¾; 600 ft. manilla, 12¼; 650 ft. pure manilla, 13¾-14. Car lots ¼c. less, five ton lots ½c. less, central delivery.

SCREWS — The wholesale business is good. They experience a strong demand, but stocks are low with little prospects of being repleted.

BOLTS AND NUTS — There is a good demand for these, the supply, however, being inadequate.

CHAIN — Prices remain firm and unchanged, with good demand.

RIVETS AND BURRS — The demand is steady, with unchanged prices.

MECHANICS' TOOLS — These experience a good demand owing to the increased activity in building operations. This summer will witness a big business in tools of every description as an enormous amount of building will be done—stores, houses and railroads.

EXTENSION AND STEP LADDERS —Demand remains strong, with unchanged prices: 11 cents per foot for 3 to 6 feet, and 12 cents per foot for 7 to 10-foot ladders. Waggoner extension ladders, 40 per cent.

POULTRY NETTING — The demand for this continues strong, the retailers' stock being well filled up. Prices remain unchanged: 2-inch mesh, 19 w.g. discount 50 and 10 per cent., all others 50 per cent.

OILED AND ANNEALED WIRE — Demand continues good with firm and unchanged prices: Canadian wire: gauge, 10, $2.46; gauge, 11, $2.52; gauge 12, $2.61 per 100 lbs.

WIRE NAILS — A good demand continues for these. Prices remain firm and unchanged, with a limited stock. We continue to quote: $2.40 base.

HORSESHOES AND HORSENAILS —Prices remain firm and unchanged, with good demand, especially from New Ontario and the newly opened up districts in the west.

BUILDING PAPER — Business is as yet quiet, but should enliven with the renewal of building operations.

WASHERS, WRINGERS AND CARPET SWEEPERS — The business in these is commencing with good demand.

LAWN MOWERS - - The demand for these is increasing, retailers getting their stock rapidly filled.

HARVEST AND GARDEN TOOLS—Business in these is becoming active among wholesalers, the merchants getting their spring stock completed.

HIDES, WOOLS AND FURS -- The business in these is about all over.

Montreal Metal Markets

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, March 8, 1907

The metal situation this week remains practically unchanged. In fact there seems to be a "waiting attitude" in the air, as if people were standing aside to see how things were going to turn out.

The shortage of copper is still very marked and from present prospects there seems to be no chances of any relief for some time to come. This is not only the case in Canada, but across the border also, a report being received here, that some of the largest American consumers have been compelled to buy small lots of 5,000 or 10,000 lbs. from retail dealers, and pay exceptionally high prices. It is also said that for the first time since the United States became large producers of copper, the imports for February exceeded the exports which were for the first 26 days of the month only 7,379 tons.

Pig iron is weaker in England and deliveries are very much harder to get, but so far, this has made no material difference in the market here.

Tin is very much firmer and although it costs a little more, prices have not yet been raised. Lead also advanced a little during the past 3 or 4 days. This, although not enough to change the prices, shows the standing of the market. Lead is selling in the States for $6.30 spot cash, in minimum car lots of 50,000 lbs. Boiler tubes are unchanged at present, but next week will very likely see new prices.

COPPER.—This metal is till extremely short both in this country and the United States, but no advance has taken place. Prices remain: Ingot copper 26½ to 27c.; sheet copper, base sizes, 34c.

INGOT TIN.—The market is firmer, with a higher tendency, but prices remain: 45½ to 46c. per pound.

ZINC SPELTER.—Still firm at 7.58 to 7.75 per 100 lbs.

PIG LEAD.—Has been advancing for the past three or four days, but not enough to affect prices. We are still quoting $5.50 to $5.60 per 100 lbs.

ANTIMONY.—Remains firm at 27½ to 28c. per lb.

GALVANIZED IRON.—Market continues strong at the same prices.

PIG IRON.—Weaker in England and deliveries are very much harder to get, but this has not had any effect on the market here, prices remaining as quoted last week: Londonderry, $24.50; Carron, No. 1, $27; Carron special, $25.50; Summerlee No. 3 soft, $23.50.

BOILER TUBES.—The old prices still prevail, but next week will very likely see an advance.

TOOL STEEL.—Prices remain unchanged.

COLD ROLLED SHAFTING.— No changes to report.

OLD MATERIAL.—Prices are: Heavy copper 20c. per pound; light copper 17c. per pound; heavy red brass, 18½c. per pound; heavy yellow brass, 15c. per pound; light brass, 11 to 11½c. per pound; tea lead, 4¼ to 4½c per pound; heavy lead, 4½c. per pound; scrap zinc, 4½c. per pound; No. 1 wrought, $17 per ton; No. 2 wrought, $6 per ton; No. 1 machinery, $18 per ton; stove plate, $14 per ton; old rubber, 11½c. per pound; mixed rags, 1 to 1¼c. per pound.

Toronto Metal Markets

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, March 8, 1907

Ingot Copper continues to be the feature of the market with a half-cent advance noted this week. Stocks in Toronto continue bare with supplies coming very slow. A leading New York copper interest is quoted as follows:—"The average price for copper for the entire twelve months of 1907 will probably be 25 cents a pound, and if it falls short of this figure it will be by an exceedingly small margin; and there is a possibility that an average quotation even higher will result. Indications are that the market will hold steady at the prevailing prices, but should manufacturers sell their product in excess of their copper supplies and be forced to cover their future requirements in competition with each other, a scramble would ensue (such as forced the price of copper from 20 to 25 cents a pound) in which advances to 30 cents, or even higher, would undoubtedly result. It is up to the consumers to use judgment in obtaining supplies if they would not see higher copper prices." It is said that the Calumet and Hecla Company has sold 14,000,000 pounds of their brand for July delivery at 26½ cents and the same quantity for September at 26 cents. With these conditions outside the local market cannot be anything else than strong.

Pig iron is firmer in Great Britain and in spite of much talk the market has not yet broken in the States. A reaction across the line would not have very much effect in the Canadian market, however, for some time. Conditions in the Old Country are more interesting to Canadians and the increasing strength there indicates a steady market for some time to come. The recent weakness was caused, it is understod by the high rentals and dear money, these forcing speculators to unload some of the hundreds of thousands of tons of Middlesborough and other iron stored on warrants. With speculators wanting to sell the market was bound to weaken. In the United States the situation is a complicated one. The producers of steel making pig have in the past depended largely upon the large steel making interests to take a considerable proportion of their output. They have lost these interests as customers; the large steel interests who have not been buying for months will not buy at present high prices; should prices gradually recede, in the next three months, six months, or twelve months, they could hardly count upon large purchases by such interests, unless for the purpose of supporting the market, because these interests are building many additional blast furnaces of their own, to come in at various times. In connection with this it is interesting to note the revival of the story that the Steel Corporation are to establish a furnace at Sandwich, Ont. The Corporation is at the present time building no less than 16 blast furnaces (including the 8 at Gary, Indiana), which will give it more than 2,500,000 tons of pig iron a year.

Gadvanized iron and Canada plates are selling well just now and jobbers' stocks, which have been low have been strengthened by good receipts during the past week. In order to secure early deliveries jobbers asked producers to ship in March goods wanted in June and material wanted in November next is being asked for in June. With iron and tin firm in prices there is no in-

dication of any weakness in sheets and plates.

PIG IRON—Firmer conditions are reported from Great Britain and locally all prices have firm. Buying is lively with the railroads still slow on delivery. Hamilton, Midland, and Londonderry are off the market, and Radnor is quoted at $23 at furnace. Middlesborough No. 1 is quoted at $24.50, and Sydney No. 1 at $26 f.o.b. Toronto.

BAR IRON—Bar iron is moving very freely with prices firm. We quote: $2.30 f.o.b. Toronto, with 2 per cent. discount.

TIN—Outside markets have strengthened and higher prices are asked for. Locally prices are unchanged at 45c for ingots. The base on charcoal plates continues at $6.50.

SHEETS AND PLATES—There is a large movement of both Canada plates and galvanized iron. Black sheets are also in fair demand. Prices keep firm with no sign of weakness evident.

BRASS—We still quote 30 cents per pound on sheets. At present prices buying is none too active.

COPPER—Another advance has been made and we are quoting 50 cents higher on ingots. Planished sheets have also advanced to 43 cents. We now quote: Ingot copper, $27.00 per 100 lbs. and sheet copper, $35 per 100 lbs.

LEAD—Primary markets are very strong and conditions locally are very active. An advance is looked for in the States, but the duty keeps the two markets entirely apart. We quote: $5.50 for imported pig and $5.75 to $6 for bar lead. For sheet lead $7 is asked.

ZINC SPELTER—Stocks are light but trade is good at former prices which are 7½c per lb. for foreign and 7c per lb. for domestic. Sheet zinc is quoted at 8¼c in casks, and 8½c in part casks. Sheet zinc manufacturers attribute the present demand for zinc to the existing high price of sheet copper.

ANTIMONY—Prices unchanged at 27c per pound.

OLD MATERIAL—Buying prices are: Heavy copper and wire, 20c. per lb.; light copper, 18c per lb.; heavy red brass, 18c per lb.; heavy yellow brass, 15c. per lb.; light brass, 11c. per lb.; tea lead, $4.25 per 100 lbs.; heavy lead, $4.10 per 100 lbs.; scrap zinc, 4½c. per lb.; No. 1 wrought iron, $13.50; No. 2 wrought, $; machinery cast scrap, $17.50; stove plate, $12; malleable and steel, $8.50, old rubbers, 11c. per pound; country mixed rags, $1 to $1.25 per 100 lbs., according to quality.

COAL—We still quote:—Standard Hocking soft coal, f.o.b at mines, lump, $1.50, ¾ inch, $1.40; run of mine, $1.30; nut, $1.25; N. & S., $1; P. & S. 85c. Youghiogheny soft coal in cars, border at bridges: lump, $2.60; ¾ inch, $2.50; mine run, $2.40; slack, $2.15.

United States Metal Markets

From the Iron Age, March 7, 1907.

There is continued activity in nearly all branches of finished iron and steel, and some of the reports are almost buoyant. In the lighter lines, in sheets, hoops and bands, and tin plate, the mills are far behind their orders, and premiums are being paid for early delivery. The orders for iron and steel bars during February were very heavy, and in the wire industry the spring trade is just opening up with much promise.

Not very much has been done lately in steel rails, but a number of good sales for export have been effected. There has been some cancellation of railroad rolling stock, the Gould system having countermanded a total of 1,000 cars and 100 locomotives. The shops, however, are overloaded with work.

For structural material the prospective demand is very large. It is estimated by a leading interest that there is a tonnage of 150,000 to 175,000 tons in the bids to be opened in March, and in the awards expected to be made in that month on bids which have already been opened. It is noted that there is considerable railroad bridge work in this which indicates that in this branch at least the railroad requirements continue heavy.

The steel market is in a somewhat perplexing condition. There is still a marked scarcity, the sale of 5,000 tons by a new plant in the Buffalo district to a large interest having been based upon the necessity on the part of the latter to make long delayed deliveries on old contracts. On the other hand, in the territory east of the Allegheny mountains lower prices are being offered for forward delivery, and it is even reported that a southern plant has appeared as a seller. An interesting fact is that there has been a sale of 6,000 to 7,000 tons of sheet bars for export for the last quarter of this year, with further important negotiations pending.

A good deal of significance appears to be assigned in the trade to the purchase by the Steel Corporation of some lots of Bessemer pig, aggregating between 5,000 and 6,000 tons for delivery during this month. The reported price is $22 at Valley furnace. It is well known that in spite of having all its furnaces except 2 small stacks in operation the Steel Corporation is short of iron, but there have been no purchases for many months, and it is not clear that this latest transaction foreshadows any systematic buying campaign. It must be noted, however, that probably later on the Steel Corporation will be forced to blow out some of its stacks. While winter weather lasts repairs are deferred, but they must be made in the spring.

While there has been a fair amount of buying of foundry iron throughout the country, buyers and sellers are generally somewhat apart, so far as contracting for forward delivery is concerned.

From the Iron Trade Review, March 7, 1907.

Whatever lull has been experienced in the iron trade since the first of the year has been attributed to the alleged retrenchment policies adopted by some of the leading trunk lines. Postponements of rail and car deliveries by a few of the roads have been magnified by those who have been forecasting a slump in iron and steel values, and the reports that have eminated from certain financial centres have been indicative of a general curtailment of purchases and a suspension of shipments of material already ordered. In fact, however, only two roads of prominence have concluded that the retrenchment period has arrived—the Wabash, which has temporarily suspended operations on all new undertakings, and a western road, which in its mad rush to the coast, has been expending an average of $1,000,000 monthly. Despite this curtailment the latter system has already promulgated a list of machine tool requirements which will cost approximately $100,000, and which indicates that its more important extension work along has been affected.

The Grand Trunk is proceeding with the erection of shops at Battle Creek, Mich., which, when completed, will represent an expenditure of $5,000,000, machine tool builders only recently having been asked to figure on the equipment requirements. The Big Four is likewise going ahead with the erection of its new shops at Indianapolis, which will require at least four years to complete.

It is frankly admitted by the rail makers that there has been some readjustment of shipments, due to the postponement of deliveries for a few of the roads, but in no instances have the manufacturers been embarassed, as other roads anxiously awaited an opportunity to step into the breach. On March 1, the rail bookings of the Carnegie Steel Co. for 1907 were within 80,000 tons of the total ordered last year, and the indications are that the phenomenal record of 1906 will be surpassed in the remaining ten months.

Nor is the situation, as reported, regarding the car builders, borne out by the facts. As in rails, there has been a readjustment of shipments, but these deferred deliveries have in no degree resulted in a curtailment of the output of any of the car plants. Most of the roads were anxious to have their orders brought forward, the car shortage still figuring as the all-important factor preventing the satisfactory movement of the freight.

During the first two months of this year, it is estimated that contracts for no less than 40,000 cars were placed, one manufacturer alone having been awarded 22,000 of this total. In further refutation of the curtailment charges it can be reliably stated that the majority of these cars are for delivery this year and only a few of the builders are in position to make reservations before December. Time of delivery rather than price, governed the placing of practically all of these orders, and instead of reducing the accumulation of car orders, the builder reports that his total was increased 5,000 during the months of January and February.

London, Eng., Metal Markets

From Metal Market Report, March 5, 1907.

PIG IRON.—Cleveland warrants are quoted at 54s. 7½d. and Glasgow standard warrants at 54s., making prices as compared with last week on Cleveland warrants 1½d. higher; on Glasgow warrants 3d. higher.

TIN.—Spot tin opened easy at £191 15s., futures at £191, and after sales of 80 tons of spot, and 70 tons of futures closed quiet at £191, 15s. for spot,

£190, 15s for futures, making price compared with last week £1 higher on spot and 5s. higher on futures.

SPELTER.—Best selected closed at £116 making price as compared with last week £1 10s. higher.

Western Ontario News

By F. T. Yealland.

London, March 6, 1907.

London hardware merchants, in common with those of other cities of the province, are enjoying a prosperous trade, and look for a continuance, if not an increase, of that prosperity. The cause of this optimism is found in the fact that London is a fitting-out point for intending Northwest settlers of no mean importance, and as the approaching spring bids fair to see a large migration from this district westward, a lively trade in settlers' supplies is naturally looked for, as it is felt by many that people can buy much cheaper here than they can in the west. Another favorable feature of the situation is that the coming season is expected to show building activity locally even greater than last year's record-breaker, which, of course, is likewise good for the hardware business.

* * *

In metal manufacturing lines all branches are kept busy. The Wortman & Ward Company, London, are adding largely to their premises and plant.

The London Brass Works Co., having found their business to have outgrown their premises, on Carling street, have purchased a site in the East End for a new building.

The Scott Machine Co., one of the latest additions to London's manufacturing concerns, is rapidly building up a large business, and there is every indication that before long they, too, will have to look for more extensive quarters.

The big concerns, such as McClary's, Leonard's, White's and other, continue to more than hold their own, and taken all in all the hardware and metal trades in London are in an eminently satisfactory state.

Nova Scotia News

By James Hickey.

Halifax, N.S., March 5.

It is reported that a steel shipbuilding industry is about to be established at Handsport, N.S., and that work will be commenced this Spring. John Churchill, a well known builder of modern ships is a leading figure in the new industry.

* * *

Rhodes, Curry & Co., of Amherst, have received an order to build forty three-ton store cars for the Dominion Iron and Steel Company. The Wallace Stone Company has also placed an order with the same firm for eleven cars of the same type. Big gangs of men are working in the iron ore mines at Bell Island, Nfld., and large quantities of ore are being taken out and placed in the stock piles for shipment in the Spring to Sydney. The first steamers will arrive at the Island in May, and there will be a larger output of ore than at any time since the mines were opened. Some 900,000 tons were shipped last year, but next season over one million tons will be sent away.

* * *

The following shipments have been made by the Robb Engineering Co.: 1 vertical boiler to the Canadian Portland Cement Co. at Marlbank, Ont.; to James Valentine & Co., Winnipeg; 2 10 h.p. and 2 20 h.p. vertical boilers; to Joseph Hayens, Montreal, 1 90 h.p. tandem compound engine; to the Allis Chalmers Bullock Co., 1 15 h.p. engine, and to Jenkins Bros., Montreal, 1 125 h.p. Robb-Armstrong engine.

* * *

David MacKay, one of Bridgewater's oldest merchants, is going out of business, and the store has been taken over by W. O. Bates and W. B. Freeman, who will carry on an extensive business which will include paints and oils, and ship chandelry.

* * *

James Simmonds & Co., hardware merchants of Dartmouth, N.S., have almost completed the refitting of their store, which was recently damaged by fire. A free use of paint, and the installation of a metallic ceiling makes a great improvement in the appearance of the shop, and in its new dress, it will present a marked change over the place before the fire.

* * *

The Dartmouth Cordage Company contemplate entering on extensive building operations shortly. It is planned to erect about thirty cottages in the north end of Dartmouth for the employes of the company, following out the plan so successfully carried out by the Acadia Sugar Refining Co. at Woodside.

* * *

Dr. Kendall, M.P.P. of Sydney, has introduced a bill in the Nova Scotia Legislature to regulate the prices of electric light and power, and he has also asked for a commission to inquire into the cost of coal, etc., as follows:

1. To enquire into the practice that prevails in promoting the formation of companies to operate coal areas in Nova Scotia.

2. To enqqire into the methods of mining to ascertain whether in important operations large quantities of coal are being lost which should be saved to the province.

3. To enquire into the desirability of Government supervision of the development of coal properties.

4. To enquire into the conditions on which coal is supplied to consumers in Nova Scotia.

5. To enquire into whether a colliery or collieries owned and operated by the Government would be in the interests of the people of Nova Scotia.

The above is considered to have a very important bearing on mining interests and a spirited debate is anticipated when it comes before the House for consideration.

British Columbia News

By G. S. B. Perry.

Vancouver, B.C., March 1, 07.

There has been some feeling of unrest in the mining centres of Kootenay and the Boundary districts, caused by the discussions between coal operators and operatives as to the making of another agreement. The meeting to be held in Calgary is expected to result in an amicable arrangement, and so far as present indications show, it is likely there will not be much change from that now in force. The old agreement is out in less than a month and is to be renewed at the meeting at Calgary. As there have been such fierce fights in the past, in Crow's Nest Pass coal mines, the nervousness felt in the interior mining districts was natural. The Crow's Nest Pass collieries supply the whole smelting industry of the Kootenay and Boundary with coke and coal, and a tie-up of the mines is a serious evil. Just at present, with all metals at record prices, the condition of mining is very prosperous, every producing mine being worked steadily.

One prominent smelterman, in discussing the situation, said that while he had a big bunch of coke and coal on the way, to guard, as far as possible, against accidents, he had not much fear of a strike. He very shrewdly pointed out that the miners had not yet got over the effect of the last prolonged struggle, and they were now so hard up that they were not in shape to stand another strike.

* * *

Nelson Board of Trade has taken a strong stand in urging on the Dominion government the continuance of the tariff on lead and lead products. A unanimous resolution was forwarded from a meeting of the board held a few days ago, protesting against any lowering of the present duties on these lines. Any disturbance of present conditions would destroy the confidence which has largely been created by the Government's course in paying lead bounties, and serious injury to the lead-mining industry would result. Ministers and local members have been advised of the stand taken.

* * *

Fluctuations in hardware prices are all of upward tendency at the present time. Shortage of stocks, through non-arrival of freight is the universal complaint. Some recent increases in quotations by jobbers are: Wire nails, advanced from $3.10 to $3.50, with hardly any in the market here; putty, advanced from $3.50 to $3.75; tarred building paper, from 80c. to $1; turpentine, from $10.85 to $11 per case; asphalt, California, is now quoted from $26 to $30 per ton in large quantities, with likelihood of this high price continuing. Several local industries are affected by this increase, which is about 60 per cent. over prices prevailing less than a year ago.

There is Twenty Years of Experience in this Can

Doesn't this point the way for you? Stephen's Pure Paint has now a proven record of over twenty years' hard use, under many difficult conditions.

Every gallon is made with Manitoba Linseed Oil—properly aged—this increases not only the body, but also the wearing qualities of the paint.

HARDWARE TRADE GOSSIP

Ontario.

The Field Hardware Co., of Cobourg, is selling out.

T. N. Healey, of Rice, Lewis Co., is on the sick list.

J. H. Hedley, Markdale, is opening a new tinsmith and repair shop.

J. Wright, has opened up a hardware store on Avenue Road, Toronto.

The Massive Corundum Co., of Niagara Falls, has received a charter.

J. W. Macdonald, of Macdonald & Hay, North Bay, was in Toronto this week.

J. L. Flanders, manufacturer of fences, Ottawa, has assigned to R. W. Grant.

J. W. Cornett, Dundalk, has sold his hardware and harness business to W. J. and R. Russell.

A. Whittaker, manufacturer of stoves and furniture, Windsor, has sold to Whittaker & Teahan.

G. Smith, formerly buyer for the Kennedy Hardware Company, Toronto, has joined the Rice, Lewis Co.'s staff.

The Capewell Horse Nail Co., of Toronto, has juht added $3,000 worth of machinery and shafting to its plant.

C. L. Lightfoot, Vancouver, representative of the Gurney Foundry Co., has been a visitor in Toronto this week.

L. R. Greene, manager of Department of publicity, for the Sherwin-Williams Co., in Cleveland was in Toronto this week.

The Dominion Radiator Co., Toronto, is suing Cartier & Cote, of Sturgeon Falls, to recover $1,098 for goods sold and delivered.

F. L. Kelly & Co., tinware and crockery merchants, Ottawa, have assigned to W. A. Cole, a meeting of the creditors being held this week.

J. A. Bostwick, of the office staff of the Canadian Oil Co., Toronto, left this week for Kansas City, where he will engage in the sewer pipe business.

Mel. Canfield, connected with the hardware store of Watt & Squire, at Brantford, has been appointed manager of J. R. Myers' hardware store at Stratford.

Amongst the hardwaremen in Toronto last week were: R. Shannon, Tara; W. T. Walker, Cobalt; Mr. Phillips, of Phillips Bros., Havelock, and Mr. Carter, Fessenton.

Mr. Rice, of Rice & Barnes, Whitby; Mr. Spright, Acton; E. Brasford, Welland; J. P. Noonan, Mount Forest; R. Campbell, of Simmonds & Campbell, Sault Ste. Marie; and F. Bailes, of John Bailes, Oshawa, were visitors in Toronto this week.

A remarkable cure of lockjaw is reported at Nicholls Hospital, Peterboro. John Haris, foreman polisher in the Peterboro Shovel Factory, received a trival injury some weeks ago. For eighteen days his jaws were tightly locked and his only sustenance was in liquid form, taken by a tube inserted where a tooth had been removed. Circulation of the blood also was stopped for a short time. He resumed his duties at the works last week.

Western Canada.

Porteous Bros., hardware merchants, Carlyle, Sask., have sold to H. Stephens.

Brown & Mitchell, hardware merchants, Brandon, have dissolved, Mr. Brown retiring.

The Marshall-Wells Co. have removed to their big new warehouse on Market St., Winnipeg.

John Dunfield has arrived at Fox-Warren, Man., to take charge of the hardware business carried on by his son.

Geo. D. Wood has returned to Winnipeg from his trip to the Southern States, in search of better health. His friends will be sorry to learn that his recovery has not been so nearly complete as was hoped for.

W. G. Jones, treasurer of the Pease Foundry Co., Toronto, left Winipeg for the Southern States early in the week. Mr. Jones had been confined to his room in the Royal Alexandra for more than a fortnight owing to a severe cold.

Quebec.

H. Dagenais succeeds Sauve & Dagenais, hardware merchants, Montreal.

George Phillip & Co., Montreal, wholesale silverware dealers, are registered.

The Montreal Rag & Metal Co. has dissolved, a new partnership being registered.

SITUATION VACANT.

WANTED—Experienced Hardware Clerk—Must be good stock-keeper, and strictly sober; references required. Hose & Caniff, Kenora, Ont. [13]

OUR LETTER BOX

Correspondence on matters of interest to the hardware trade is solicited. Manufacturers, jobbers, retailers and clerks are urged to express their opinions on matters under discussion.

Any questions asked will be promptly answered. Do you want to buy anything, want some shelving, a silent salesman, any special line of goods, anything in connection with the hardware trade? Ask us. We'll supply the necessary information.

Fire Escapes.

P. S. Stewart, hardware merchant, Renfrew, writes: "Can you supply us with names of makers of fire escapes for public buildings?"

Answer: The following are the names of manufacturers of fire escapes: A. N. Cameron, Perth; McGregor & McIntyre, Toronto; Alex. McKay, Montreal; A. E. Whitehouse, Montreal; Shipway Iron Bell and Wire Mfg. Co., Toronto; Toronto Fence and Ornamental Iron Works, Toronto; Wm. Wallace, Three Rivers; National Fence Co., Merrickville.—Editor.

Corks for Bottles.

Taylor Bros. & Co., hardware merchants, Carleton Place, write: "Will you kindly give us the address of a firm in Toronto who make a specialty of corks for bottles?"

Answer: We give the names of two firms in Toronto: Dominion Crown Cork Co., 73 Adelaide Street West, and the Freysing Cork Co., 71 Sumach St. —Editor.

Palmetto Packing.

R. McV., Southampton, Ont., writes: "Please tell me, through your valuable paper, who makes or where a steam packing called 'palmetto:' can be procured at once."

Answer: The Canadian Fairbanks Co. Front Street West, Toronto, are the sole agents for Canada.—Editor.

Labels for Bolt Rack.

The Alameda Farmers' Elevator and Trading Co., hardware merchants, Alameda, Sask., write: "Can you inform us where we can procure a full set of printed labels for a bolt rack?"

Answer: We do not know where you could procure a set of these and we would suggest that you cut the labels off your boxes and use them.—Editor.

Solution of Discount Problem.

A commercial traveler writes: "I would like to see the solution of the following proposition worked out in your journal; it is very simple, but it is surprising how many different answers are given:

"A buys goods at 70 and 10 off list price.

B buys goods at 60 and 10 off list price.

"How much cheaper does A buy his goods than B or how much dearer does B pay for his goods than A?"

Answer: This is a very simple proposition and solutions forwarded to us will be published in this department.—Editor.

CATALOGUES AND BOOKLETS

When sending catalogues for review, manufacturers would confer a favor by pointing out the new articles that they contain. It would assist the editor in writing the review.

By mentioning HARDWARE and METAL to show that the writer is in the trade, a copy of these catalogues or other printed matter will be sent by the firms whose addresses are given.

New Penberthy Lines.

The Penberthy Injector Co., Windsor, have issued their spring catalogue, which is quite an improvement over previous issues.

The company has added to its already comprehensive lines of manufactures several articles, such as Standard Steam Whistles, Plain Engine Lubricators and Penberthy Steam Lubricators. This last article is a new idea and different in construction from the ordinary steam lubricator on the market. This lubricator has a patent combination filler, gauge glass and vent arm. On ordinary lubricators the gauge glass and sight feed glass is a long tube similar to a water gauge glass. The Co.'s new lubricator is fitted with round tempered glass discs, which are out of the way, thus precluding any possibility of breakage—a decided advantage over the long tube style. The company expects to have this new article on the market this coming summer, having already applied for a patent. This is a device with a bright future, as anything new from the hands of this firm, which is patronized by all the leading dealers in Canada, is sure to be.

All firms desiring copies of the new spring catalogue will do well to write at once.

Valuable Selling Helps.

The American Fork and Hoe Co., Cleveland, O., have issued a 48-page catalogue with an additional booklet entitled "Selling Pointers," containing valuable advice to salesmen and clerks. The catalogue contains cuts of the Co.'s articles manufactured and made attractive by some reproductions of photographs of agricultural scenes. Dealers in gardeners' implements will do well to send for copies, as, while the company does not endeavor to sell to the trade in Canada, the "Selling Pointers" will be appreciated by every dealer and clerk.

Attractive Announcement.

The Standard Sanitary Manufacturing Co., Pittsburg, Pa., have published in the form of a neat booklet the announcement of the opening of their new showrooms in that city.

New Enamelware.

The Ontario Steel Ware Co., Brock avenue, Toronto, have just issued a splendid catalogue of eighty-seven pages. This company is new and if this booklet is at all a criterion of their work, their success is already guaranteed.

As an introduction they state that they have decided that the question of most importance to their patrons is conciseness and brevity of description. Their decision has been admirably borne out in the compilation of the catalogue. The first page contains a reproduction of a letter to the firm from Dr. Allan, of Toronto University, who has analyzed their enamel and testifies to its absolute purity, thus avoiding all danger of poisoning.

The engravings throughout the catalogre are perfect representations both in color and in form of the company's manufactures. The paper throughout is of the best quality, and the printing is perfect. The last two pages contain an index, alphabetically arranged, of the entire contents. Dealers who wish to keep posted regarding the development of the kitchen enamelware in Canada should send for a copy of the book, which can be had if this paper is mentioned and the firms' letter paper used.

Snowflake Axle Grease.

The Snowflake Axle Grease Company, of Fitchburg, Mass., have published a handsome booklet, called "The Ambassador," presenting in a forcible style the superiority of their goods.

FOUNDRY AND METAL INDUSTRIES

Young Bros., Almonte, have sold out their foundry business.

The Grand Trunk has placed an order for 3,000 tons of steel for new shops with the American Bridge Co.

The German Canadian Smelting and Refining Co. has been incorporated under provincial charter with a capital of $1,000,000.

The T. & No. O. Railway Commission let the contract to the Montreal Locomotive Works for six new locomotives. The aggregate cost will be about $125,000. Delivery must be made by the end of October.

R. Bigley, manufacturer of stoves and furnaces, and Toronto agent for the Buck Stove Co., Brantford, has purchased land on the Weston Road, near Toronto Junction, and purposes building a factory to cost $7,000, employing at first 50 men, afterwards 120 men.

An important transfer of property took place last week, when Frank Oliver manager of the Perrin Plow Co.; B. Knapp, Morrisburg, and R. S. Harder, Aurora, purchased the plant of the Rideau foundry, Smith's Falls, and all stock on hand. The new company will commence operations at once in the manufacture of stoves. The stock on hand amounts to $10,000, including about 500 completed stoves.

OPPORTUNITY FOR INVENTORS.

Fame and fortune waits the lucky individual who can rediscover the conbination of metals from which the Egyptians, the Aztecs, and the Incas of South America made their tools and arms. Though each of these nations reached a high state of civilization, none of them ever discovered iron, in spite of the fact that the soil of all three countries was largely impregnated with it. Their substitute for it was a combination of metals which had the temper of steel. Despite the greatest efforts, the secret of this composition has baffled scientists, and has become a lost art. The greatest explorer, Humboldt, tried to discover it from an analysis of a chisel found in an ancient Inca silver mine, but all that he could find out was that it appeared to be a combination of a small portion of tin with copper. This combination will not give the hardness of steel, so it is evident that tin and copper could not have been its only component parts. Whatever might have been the nature of the metallic combination, these ancient races were able so to prepare pure copper that it equalled in temper the finest steel produced at the present day by the most scientifically approved process. With their bronze and copper instruments they were able to quarry and shape the hardest stones, such as granite and porphyry, and even cut emeralds and like substances. A rediscovery of the lost art might revolutionize many trades in which steel at present holds the monopoly. If copper could thus be tempered now its advantage over steel would be very great, and it would no doubt be preferred to the latter in numerous industries. It is a curious fact that though this lost secret still baffles modern scientists, it must have been discovered independently by the three races that made use of it so long ago

WE are now making in our new mill at our Montreal plant the highest quality linseed oil that has ever been put on the Canadian market. We use the "screw press process," controlled exclusively by us in Canada, which enables us to extract from the flaxseed a better quality of oil than heretofore obtainable by other processes. A little folder explaining this process will be sent upon request.

Beginning in the States—and now carrying the results of our experiences to Canada—we have developed the manufacture of linseed oil to the highest point. We offer these special oils to the trade:

S-W. Strictly Pure Screw Press Raw Linseed Oil.
S-W. Strictly Pure Screw Press Kettle Boiled Linseed Oil.
S-W. Strictly Pure Screw Press Bleached or Refined Linseed Oil.

BUILDING AND INDUSTRIAL NEWS

HARDWARE AND METAL would be pleased to receive from any authoritative source building and industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

A new furniture factory employing 40 or 50 men will be erected at Elmira.

The Ford Fire Shutter Co., Welland, has booked a $2,000 order from a Toronto firm.

A new Y.M.C.A. building will be erected in Woodstock the coming summer to cost $25,000.

Lendon Bros, Leamington, are extending their premises by the erection of a new warehouse.

A permit has been issued for the erection of a new post office at Edmonton to cost $250,000.

Christie, Brown & Co., Toronto, will extend their premises by a six-storey and basement factory.

The Ottawa Car Co. are looking for a suitable site at Hintonburg for the location of a new factory.

D. Gavin, Vancouver, has been granted a permit for the erection of a $16,000 brick warehouse in that city.

A permit has been granted to the Ottawa Wine Vault Co. for the erection of a stone building at a cost of $28,000.

D. Whitney will have a large brick and stone business block erected at Lethbridge, costing from $10,000 to $15,000.

A large extension will be made to the car works planing mill of the Rhodes, Curry & Co., Amherst, N.S., in the spring.

J. W. Gallagher has been awarded the contract for the construction of J. M. Young's large new $10,000 residence in Regina.

The Canadian Northern and Mackenzie & Mann interests are looking for a suitable site for their car works at Hamilton.

A new public library is to be erected the coming summer at Woodstock costing $20,000. The architects are Chadwick & Beckett, Toronto.

The A. Darling Co., Toronto, has secured a permit to erect a nine-storey warehouse at the corner of Spadina Ave. and Adelaide St., to cost $100,000.

W. E. Bonner, of the Non-resident Owners' Realty Co., Winnipeg, will erect a new hotel at Strathcona this summer, costing between $10,000 and $15,000.

The congregation of the Central Presbyterian church, Toronto, has about completed arrangements for raising $150,000 required for their new church.

The Scientific Brick Co., Toronto, is applying for a winding-up order in the affairs of the Modern Brick and Stone Co. The latter Co. was capitalized at $200,000.

Chas. Rogers & Sons have been granted a permit to erect a three-storey factory adjacent to their present premises at the corner of Defoe and Tecumseh streets, Toronto.

A factory for the manufacture of automobiles and bicycles will be erected at Port Arthur. McKinnon Bros. have secured a site and building operations will commence at once.

The National Spring and Wire Co., of the State of Michigan, has secured the right to do business in Ontario. A. W. Marquis, of St. Catharines, has been appointed as their attorney for Ontario.

The J. W. Woods Mfg. Co.'s plant, Ottawa, will be moved to Hull, Que. Mr. Woods has granted a $40,000 contract with Holbrook and Sutherland, who will undertake the erection of the new factory.

The McFarlane and Douglas Co. have been incorporated under provincial charter, with a capital of $100,000, to carry on the business of founders and machinists and the manufacture of builders' supplies.

The Toronto Plate Glass Importing Co. has been incorporated with a capital of $250,000, to carry on business as a glass merchant and manufacturer. S. J. Rutherford, E. Hill and J. G. Hutchison are the provisional directors of the company.

The amalgamated business of the Canada Screw Co. and the Ontario Tack Co. may be removed from Hamilton to Welland. Negotiations are on for the change but the company state that no definite decision has yet been arrived at.

A canning and preserving plant will be erected at Pelham, Ont., to cost about $12,000. Following are the officers of the company: George Arnold, Ridgeville, president; A. Armbrust, Pelham, vice-president; G. J. McCormick, Welland, secretary. The capital stock is $40,000.

Seventeen independent millings firms in Manitoba and Saskatchewan have merged under the name of the Canadian Consolidated Flour Mills Co., with a capital of $2,000,000. They have a combined output of 3,000 barrels a day, and an elevator capacity of 1,500,000 bushels.

The Dominion Quarry Co., with headquarters at Montreal, has been incorporated with a capital of $20,000/to carry on a general quarry business throughout Canada. The promoters are: L. C. Rivard, R. Delfausse, J. G. Avard, E. L. Rivard, and A. B. Dufresne, all of Montreal.

The Dominion Government will enlarge its accommodation at Ottawa by the erection of two buildings on the eastern side of the canal. One building will have a floor area of 300,000 square feet, and cost $2,000,000; the other an area of 100,000 square feet, costing $750,000. The land for the site of the new buildings has been secured at a cost of $500,000.

The International Veneer and Lumber Co., of Philadelphia, will establish a factory at Arnprior if given by the town a free site of two acres, a subvention of $2,000, exemption from taxation for a period of ten years, free water during a period of ten years for a 250 horse-power boiler, and assistance from the council in placing $8,000 stock.

The Muirhead Milling Co. will erect a 200-barrel flour mill at Port Arthur to cost $100,000.

TRANSPORTATION IN THE WEST : NEED FOR RECIPROCAL DEMURRAGE

The Winnipeg Jobbers and Shippers Association which has recently been organized under the presidency of Mayor J. H. Ashdown, is actively interesting itself in the transportation requirements of the west. G. E. Carpenter, the manager of the freight department of the association, writes this paper as follows :

Much is being said regarding the severe conditions under which the railway companies are laboring in their endeavors to meet the transportation requirements of the public, and justly too, because one and all agree that the weather conditions west of the Great Lakes have been the worst in years. At the same time the present situation would have been much better if the railway companies had had a clean sheet to work on when the Winter commenced. On the contrary they were very far behind.

Therefore the present congested condition is due to more than the exceptional weather conditions.

If a law had been in effect last Summer providing for reciprocal demurrage it is safe to say that the railway companies would have kept abreast of the requirements of the times by obtaining the necessary locomotives and cars to move freight promptly. Then we would have had no such accumulation when Winter broke upon us.

In several of the States to the south of us reciprocal demurrage is in effect. In the State of Virginia a very fair law is in force, which, if applied here, would do much to overcome the serious delay of freight, and present car shortage.

Under the ruling of the Corporation Commission of the Virginian State Legislature, when a shipper makes verbal or written application to a railroad company for car or cars to be loaded with any kind of freight embraced in the tariff of said company, stating in said application the character of the freight, and its final destination, the railroad company shall furnish same within four days of seven o'clock a.m. the day following such application.

Or, when shipper making such application specifies a future day on which he wishes to make a shipment, giving not less than four days notice thereof, computing from seven o'clock a.m. the day following such application, the company shall furnish such car or cars on the day specified in the application.

For failure to comply with this rule, the company so offending shall forfeit and pay to the shipper applying the sum of $1 per car per day, or fraction of a day's delay after expiration of free time, upon demand in writing, made within thirty days thereafter by the shipper.

When freight in carloads or less is tendered to a railroad company, and correct shipping instructions given, the railroad agent must immediately receive the same for shipment, and issue bills of lading therefor, and whenever such shipments have been so received by any railroad company, they must be carried forward at the rate of not less than fifty miles per day of twenty-four hours, computing from seven o'clock a.m. the day following receipt of shipment and for failure to receive and transport such shipments within the time prescribed, the railroad company so offending shall forfeit and pay to the shipper the sum of $1 per car per day, or fraction thereof, on all carload freight, and one cent per hundred pounds per day on freight in less than carloads, with minimum charge of five cents for any one package, upon demand in writing by the shipper, or other party whose interest is affected by such delay; provided that in computing the time of freight in transit there shall be allowed twenty-four hours at each point where transferring from one railroad to another, or rehandling of freight is involved.

The period during which the movement of freight is suspended on account of accident, or any cause not within the power of the railroad company to prevent, shall be added to the free time allowed in this rule, and counted as additional free time.

RULE III.

Railroad companies shall within twenty-four hours after arrival of shipments, give notice, by mail or otherwise, to consignee of the arrival of shipments, together with weight and amount of freight charges thereon, and where goods or freight in carload quantities arrive, such notice shall contain also identifying numbers, letters and initials of the car or cars, and, if transferred in transit, the number and initials of the car in which originally shipped. Any railroad company failing to give such notice shall forfeit, and pay to the shipper or other party whose interest is affected, the sum of $1 per car per day, or fraction of a day's delay, on all carload shipments, and one cent per hundred pounds per day or fraction thereof on freight in less than car loads, with minimum charge of five cents for any one package, after the expiration of the said twenty-four hours: provided that not more than one dollar per day be charged for any one consignment not in excess of a carload.

This rule is also applicable to steamboat and steamship lines.

FREIGHT CAR ORDERS.

The reports of freight car construction the past two years illustrates the strenuous efforts the railroads are making to handle the remarkable increase of traffic. Reports from the car construction plants, and estimates of the freight cars built by the railroads in their own shops, show that no less than 460,000 freight cars were constructed in the United States during the past two years. This compares with less than 300,000 cars in the years 1903 and 1904, and 350,000 cars in 1901 and 1902. In Canada there has also been an enormous output, with several new plants established and more under way. It is not, however, so much a scarcity of freight cars, as of locomotives, which has been troubling the railroads and causing havoc amongst shippers generally.

FIRE IN ROOFING FACTORY.

A fire which broke out on the morning March 1, 1907, in the factory of the Alex McArthur Co., manufacturers of roofing materials, corner of Harbor and Logan Sts., Montreal, caused considerable excitement while it lasted, as well as completely gutting the factory in which it started. The excitement was caused by the fire threatening to spread across Harbor St. and seize a holder of the east end gas plant of the Montreal Light, Heat and Power Co. The heat was so intense that the bricks of the holder were quite hot, half an hour after the fire had been beaten down to a smouldering heap.

The McArthur plant consists of a one story brick building, while behind it are sheds for storage purposes, the boiler house, and another big shed built of galvanized iron.

The fire started in the factory which is used for the manufacture of roofing materials and increased with great rapidity, the large amount of inflammable material in the place aiding its spread. Within a few minutes after the start of the fire, there was an explosion that blew out the front wall of the building. This was presumably caused by a tar tank that stood in the corner of the building catching on fire. Tar on fire, and confined, generates gas.

The fire burned fiercely for an hour, before the firemen got the better of it. The loss on the factory was well covered by insurance.

SOME INDUSTRIAL NONSENSE.

The Canada Tin Plate & Sheet Steel Co., Morrisburg, has been continuing to supply the public through the daily press with a lot of inflated matter regarding their industry. They have made big claims and made demands for preposterous and impossible concessions, but on their side nothing has materialized. They announced a great opening celebration for Jan 26, on which day flags would fly and all of Morrisburg's citizens would be out to celebrate the inception of a new industry. From information we have gathered, no celebration was held, in fact, the existent conditions could never have permitted it. It was impossible to hold a celebration for the following reasons :

1. There was no machinery there at the time the announcement was made of any account.

2. The foundations for the machinery were not completed.

Not one pound of material of any kind was on the ground for the making of tin plate (nor is there at the present time.)

4. Skilled workmen were not there, nor were there any places for them to live in.

5. The power plant for supplying power to the company was not completed (nor is it yet completed).

Such was the condition of things at the time the company had announced for its opening. Conditions have not materially improved up to date. We can hardly conceive of a company making such large promises and falling so far short of ever fulfilling those promises.

"SHEFFIELD" GOODS.

The Canadian agent at Leeds, Eng., says he is informed that a very large amount of German cutlery, razors, etc., is shipped from Germany to Sheffield, and is then sent to Canada as Sheffield goods.

Paint, Oil and Brush Trades

SOAP IN PAINTS.

It might not appear at first sight that the introduction of soap into paints would be likely to be attended by satisfactory results, the very nature of soap appearing on the surface to be entirely at variance with those qualities which we look for in a well-finished ground color. While this holds good in a general way, it is undoubtedly the case that soap in small quantities, and with due regard to the special nature of the soap employed, into paints, is occasionally attended with success.

A number of paint grinders have found that, in the grinding of white lead in oil, cases occur where the pigment with difficulty amalgamates with the medium, owing probably to the presence of a small trace of moisture in the white lead. This gives rise to a more or less crumbly paint, a difficulty which is surmounted in the ordinary way by the introduction of a larger proportion of oil. This method, however, is not to be recommended, as it usually happens that when the paint is left for some time it assumes a sloppy condition owing to the excess of oil tending to separate out.

Under the circumstances we have described, says the Oil and Color Trades Journal, the introduction of quite a small proportion of pale neutral soft soap is attended with good results. The proportion ought not to exceed 2 to 4 oz. per cwt. of paint, and the effect appears to be to bind the pigment and the oil more closely together. It must not be understood that we recommend this addition of soft soap as a general practice. On theoretical grounds alone it is not to be defended. The point we are drawing attention to is that under certain adverse conditions the addition of this material enables the paint grinder to get a passable product.

Cases also occur where through a certain stringent conditions in specifications it is necessary to grind pigments with what the practical paint grinder would term an insufficient quantity of oil. Under such conditions the introduction of a small quantity of soap enables the proportion of oil to be cut down considerably. This is not infrequently done in the grinding of zinc paints for certain foreign markets where the taste or fancy of the purchaser of these materials leads him to demand that the zinc paint shall be of a very firm consistency.

This brings us to the question of the employment of what the chemist terms "soaps" in other branches of paint manufacture. A soap in general chemical language is, we need hardly remind our technical readers, the combination of a metallic base with a fatty acid. Consequently the oleates and linoleates of lead, manganese, and other metals are chemically speaking, just as strictly soaps as the oleates or linoleates of soda and potash. The use of the linoleates of the heavier metals is spreading in the paint trade, and it is probably true that at the present time the uses and application of these materials have not been fully studied.

It is usual in trade literature to describe as soaps the compounds formed by the union of resin acids and metals, these compounds being spoken of as resin soaps. This is not strictly correct, the similarity being more of the nature of analogy than strict chemical resemblance. All the same, use of the so-called resin soaps has increased to an enormous extent, and many of the more specialized products of the paint manufacturers' art contain these bodies in varying proportions.

SUBSTITUTES FOR LINSEED OIL.

It is usual to consider that linseed oil is "par excellence" the fluid medium in which to grind all pigments without exception, says the Oil and Color Trades Journal. This, however, is not the case, there being certain pigments which do not give satisfactory results when ground in this medium. Take, for example, Chinese and Prussian blues and their derivatives, Brunswick and Celestial blues. Every practical paint grinder knows that if these articles are ground in linseed oil pure and simple, the paint is liable, in the course of time, to assume an indiarubber-like consistency. With boiled oil the tendency is even more marked, but as the phenomenon has been frequently observed in connection with raw oil it is reasonable to suppose that the action is primarily due to the oil. In such cases the whole or part of the linseed oil should be replaced with an oil whose fatty acids consist largely of oleic acid. Whale oil and olive oil are chiefly used for fine pigments such as Chinese blue and Prussian blue, while for cheaper materials a part of the linseed oil may be replaced by cotton oil. Poppy oil is also used in grinding certain fine colors. It is an interesting fact in this connection to note that on the continent where some of the grades of white lead commonly employed contain a preponderating proportion of hydrate of lead, poppy oil is used instead of linseed oil in the grinding of the paint, it being found that when linseed oil is employed the product is too crisp, and is liable to set up to a hard mass in the kegs, besides tending to go off color.

A Claim and the Proof

DO YOU KNOW whether the Paints you sell are the best your money will buy? Have you anything to go by except the seller's say so?

It is easy enough to "claim" that a certain brand of Paints is the best. It is quite another proposition to "substantiate" the claim.

The basis of our claim for "ENGLISH" LIQUID HOUSE PAINTS is the fact that the only White Lead used in their manufacture is BRANDRAM'S B. B. GENUINE, for close on to two centuries the world's standard WHITE LEAD.

Our customers have sold these Paints, both under this name and the old name of "Anchor" for many years, and they keep on selling them, because their customers find they give perfect satisfaction. Which fact further substantiates our claim.

Paint and Oil Markets

MONTREAL.

Office of Hardware and Metal,
232 McGill Street,
Montreal, March 8, 1907

Trade is beginnig to pick up wonderfully, due no doubt to the warm weather which has at last made its appearance. There are no changes in prices to report, all staples remaining practically unchanged.

The high prices on white lead seem to act as a tonic to the sales of ready mixed paints, and it is reported that while in some circles the demand for ground white lead is decidedly sluggish the heavy demand for ready mixed paints stands out in bold relief.

The congestion on the railways seems to be relieved, and supplies of crude material from all parts are coming forward and shipments of the finished product will shortly go off with a quick step.

Owing to rumors of a duty on flax seed, a sharp advance has taken place on linseed oil, both the raw and boiled article jumping up 5 cents per gallon.

LINSEED OIL — Very firm, with an upward tendency, but no change as yet from the old prices, which are: Raw, 1 to 4 barrels, 60c.; 5 to 9 barrels, 59c.; boiled, 1 to 4 barrels, 63c.; 5 to 9 barrels, 62c.

TURPENTINE — A moderate business is being done at the following prices, which are very firm: Single barrel, 98c. per gallon; for smaller quantities than barrels, 5c extra per gal. is charged. Standard gallon is 8.40 lbs., f.o.b. point of shipment, net 30 days.

GROUND WHITE LEAD—There is a fair inquiry, but business is slightly hampered by the high prices: Best brands, Government standard, $7.25 to $7.50; No. 1, $6.90 to $7.15; No. 2, $6.55 to $6.90; No. 3, $6.30 to $6.55; all f.o.b. Montreal.

DRY WHITE ZINC — Very quiet. Prices remain unchanged and firm. V. M., Red Seal, 7½c. to 8c.; Red Seal, 7c. to 8c.; French V. M., 6c. to 7c.; Leigh, 5c. to 6c.

WHITE ZINC — Demand spasmodic and the following prices firm: Pure, 8½c. to 9½c.; No. 1, 7c. to 8c.; No. 2, 5⅞c. to 6¾c.

PUTTY — Owing to the excessively severe climatic conditions experienced lately, the demand is easy. Prices are: Pure linseed oil, $1.75 to $1.85; bulk in bbls., $1.50; in 25-lb. irons, $1.80; in tins, $1.90; bladder putty in bbls., $1.75.

ORANGE MINERAL — Is becoming scarce, but not enough so as yet to warrant any change in quotations, which remain: Casks, 8c.; 100-lb. kegs, $8½c.

RED LEAD — Stocks are light, and higher prices are likely to prevail before the opening of navigation, but for the present they remain: Genuine red lead, in casks, $6; in 100-lb. kegs, $6.25; in less quantities at the rate of $7 per 100 lbs.; No. 1 red lead, casks, $5.75; kegs, $6, and smaller quantities, $6.75.

PARIS GREEN—No special features, with the exception that figures are well maintained: In barrels, about 600 lbs., 25½c per lb.; in arsenic kegs, 250 lbs., 25¾c; in 50-lb. drums, 26¼c; in 25-lb. drums, 26¾c; in 1-lb. packets, 100 lbs. in case, 27¼c; in 1-lb. packets, 50 lbs. in case, 27¾c; in ½-lb. packets, 100 lbs. in case, 29¼c; in 1-lb. tins, 28¼c f.o.b. Montreal. Terms, three months net or 2 per cent. 30 days.

SHELLAC GUMS — Prices keep steady. Some fair orders have lately been placed. We still quote: Bleached, in bars or ground, 46c. per lb., f.o.b. Eastern Canadian points; bone dry, 57c. per lb., f.o.b. Eastern Canadian points; T. N. orange, etc., 48c. per lb., f.o.b. New York.

SHELLAC VARNISH—Responds to brisk trade conditions, and is actively inquired for: Pure white $2.90 to $2.95; pure orange, $2.70 to $2.75; No. 1 orange, $2.50 to $2.55.

PETROLEUM — American prime white coal, 15½c per gallon; American water, 17c per gallon; Pratt's Astral, 19½c per gallon.

WINDOW GLASS—First break, 50 feet, $1.85; second break, 50 feet, $1.95; first break, 100 feet, $3.20; second break, 100 feet, $3.40; third break, 100 feet, $3.95; fourth break, 100 feet, $4.15; fifth break, 100 feet, $4.40; sixth break, 100 feet, $4.95. Diamond Star: First break, 50 feet, $2.30; second break, 50 feet, $2.50; first break, 100 feet, $4.40; second break, $4.80; third break, 100 feet, $5.75; fourth break, 100 feet, $6.50; fifth break, 100 feet, $7.50; sixth break, 100 feet, $7.50; seventh break, 100 feet, $8; eight break, 100 feet, $9. Double Diamond: First break, 50 feet, $3.45; second break, 50 feet, $3.75; first break, 100 feet, $6.75; second break, 100 feet, $7.25; third break, 100 feet, $8.75; fourth break, 100 feet, $10; fifth break, 100 feet, $11.50; sixth break, 100 feet, $12.50; seventh break, 100 feet, $14; eighth break, 100 feet, $16.50; ninth break, 100 feet, $18; tenth break, 100 feet, $20; eleventh break, 100 feet, $24; twelfth break, 100 feet, $28.50. Discount on Diamond Star, 20 per cent.; on Double Diamond, 40 per cent.

THE CANADA PAINT COMPANY'S

Oxidised Art Enamels are extremely popular for "touching-up" and beautifying a number of articles. They will give a superior finish to Tables, Chairs, Bird Cages, Bedsteads, Wicker Ware and Ornaments generally.

To cover larger surfaces, such as wood-work in the Parlours, Halls or Bedrooms, the Canada Paint Company's Oxidised Art Enamels may be ordered through the dealer in large tins.

For enamelling Baths, please ask for the Canada Paint Company's Bath Enamel — the standard for excellence.

The enamel effect gives perfect sanitation and makes the Canada Paint Company's Art Enamel impervious to the accumulation or absorption of dirt or dust. It is easily cleaned by being wiped off with a soft cloth, or tepid water and castile soap.

Instructions for applying will be found upon each package.

ENAMELS

the price of linseed oil owing to a raise in the duty of flax seed.

Hon. Mr. Fielding on Wednesday in the House of Commons announced that the tariff brought down in November had made flaxseed free in all tariffs. The duty on linseed oil, lead ground in oil, and other articles which had flaxseed as their basis, had been held, at the request of several delegations, which had urged that the production of linseed oil was an important one, and that a duty on flaxseed was desirable. The Government had decided that the request was reasonable, and that instead of being admitted free, a duty would be placed on it of 7½c. a bushel, British preference; 10 cents intermediate and general tariff.

Following this advance in the duty of flaxseed has come the advance in the price of linseed oil of 3c. to rule at present, with a possibility of being advanced perhaps to 5c.

Turpentine prices are unsteady, the range of prices being lengthened.

Water white petroleum prices have advanced ½c.

The orders for all lines of paints and oils have been booked, and little change in conditions will come until the early part of the Summer when orders are being repeated.

WHITE LEAD — Pure white, $7.40; No. 1, $6.65; No. 2, $6.25; No. 3, $5.90; No. 4, $5.65 in packages of 25 lbs. and upwards; ½c. per lb. will be charged extra for 12½ lbs. packages; genuine dry white lead in casks, $7.

RED LEAD.—Genuine in casks of 500 lbs., $6; ditto, in kegs of 100 lbs., $6.50; No. 1 in casks of 500 lbs., $5.75; ditto, in kegs of 100 lbs., $6.25.

DRY WHITE ZINC.—In casks, 7½c.; in 100 lbs., 8c., No. 1, in casks, 6½c., in 100 lbs., 7c. Ground in oil—In 25 lb. irons, 8c.; in 12½ lbs., 8½c.

SHELLAC VARNISH.—Pure orange in barrels, $2.70; white, $2.82½ per barrel; No. 1 (orange) $2.50; gum shellac, bone dry, 63c. Toronto. T. N. (orange) 51c. net Toronto.

LINSEED OIL.—There is a general advance of 3c. owing to change of tariff. We quote: Raw, 1 to 3 barrels, 62c. to 65c.; 4 to 7 barrels, 61c. to 64c.; 8 and over, 60c.; add 3c. to this price for boiled oil, f.o.b. Toronto, Hamilton, London and Guelph, net 30 days.

TURPENTINE.—Prices are variable this week; trade conditions unchanged, with a possible advance owing to scarcity of labor and the drought in Southern States. We quote: Single barrels at 97c. to $1 per gal., f.o.b. point of shipment, net 30 days; less than barrels, $1.02 to $1.05 per gallon.

PARIS GREEN.—The trade is steady most of the orders, however, being booked up. We continue to quote: English and Canadian at 27½c. per lb.

PETROLEUM.—Trade is steady with moderate demands. We quote: Prime white, 13c.; water white, 14½c.; Pratt's astral, 18c.

For additional quotations see current quotations at back of paper.

DANGEROUS SUBSTITUTES.

Considerable consternation has been excited among those engaged in the paint and turpentine trade recently by the frequency with which substitutes for turpentine are being offered as the price of true turpentine advances. Speaking to Hardware and Metal this week, John R. Walsh dealer in spirits, turpentine and naval stores, Savannah, Ga., who is in Toronto for a short time, said, "It's a dangerous business. Only insignificant firms could safely perpetrate such a thing. Our business is conducted under a rigid government inspection and we can't do it."

The cause for the offering of substitutes by certain firms is the upward tendency of turpentine prices owing to the scarcity of labor in the southern States and the very dry weather being experienced there. So dry is it that Mr. Walsh says forest fires have been raging in Georgia. The price for futures, Mr. Walsh states, is 65c. at Savannah, with a tendency still higher.

Regarding the increased substitution, the National Fire Protection Association of the United States has been and is sending out warning to its members of the dangers of it. A chemical analysis of some of these substitutes which are sold under such various and misleading names as special spirits, paint thinner, turpoline, and mineral turpentine, show that they are far from being pure, and in some cases extremely dangerous to handle. It is found that they are usually mixtures of true turpentine and naphtha.

The trade in Canada will do well to go slow in the matter of buying these substitutes. We understand that the trade is being asked to buy turpentine made in Cleveland, the absurbity of which is self-evident, as the pine belt is in Georgia and not in Ohio.

WALL PAPER.

Last month wall paper manufacturers completed their orders, and are now busy on next year's new set of samples. Warehouses are filled and shipping will be general during the next few months. What will be shown next year is the question holding the attention of the trade. A still further improvement is promised in all lines. In these days of hard competition goods must possess the necessary qualities to sell on their merits; they must possess artistic value and quality to stand against, and compare favorably with, the best. The best goods sell, and the retailer will go far to find the best values. Therefore, it is incumbent upon each manufacturer to produce the best line of samples that he has ever done, for to reduce his range, or to repeat too frequently the stereotyped patterns, would mean ruin. On novelty and freshness of patterns depends the result of the season.

This sampling season will bring out some handsome effects in English designs. This means rich floral pattern of artistic qualities, open and highly colored. Ingrain has to a large extent been displaced by heavy figure and floral effects and also the landscape borders and woodland side-walls. These have taken well with the trade.

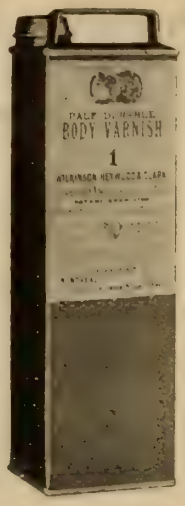
THE SURVIVAL OF THE FITTEST

Selling whiting, glue and color separately for kalsomined walls is a thing of the past. The more modern method of selling whiting, glue and color ready mixed, in packages labelled different names, is **ALSO** a thing of the past, or fast becoming so.

Any compound which can be kept over night or several days without spoiling is simply a preparation of glue and whiting or some other inert base, which depends on the glue in it to hold it to the surface, and in time decomposes, becomes diseased, rubs off and has to be washed off.

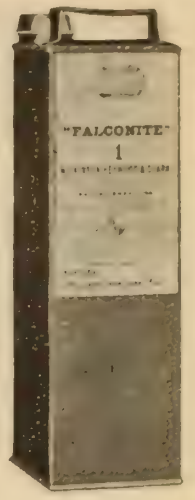
The ever-growing public demand is for a pure and sanitary wall coating that will not rub off and is ready for use with cold water.

ALABASTINE



fulfils the public demand. Made from crystaline Alabaster Rock, it is a cement that sets and hardens on the wall and improves with age. It is pure, permanent and sanitary, and as such

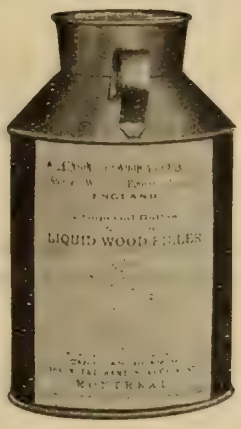
HAS NO COMPETITOR



ALABASTINE is being more and more fully appreciated by the public, and the orders are coming in by leaps and bounds.

Fortunately, we have opened a new mine, and hope to fill all orders promptly and on time; but we advise you to order **NOW**.

The ALABASTINE CO., Limited, PARIS, Ont.



Pure Paint Pays Pleasing Profit

Our paints **are pure paints,** and in handling them you have the satisfaction of pleasing your customers, and at the same time making good money for yourself.

We put nothing but the very best materials into all our lines, with the result that two coats will equal three of any cheaper article. They retain their brilliant, fresh appearance for a long period, and come up to the expectations of your customers.

Many manufacturers **claim** these qualities for their goods, but we would like the chance to **prove** them. Won't you let us have a sample order?

THE "BEST" MOP

Plumbing and Steamfitting

THE PLUMBING OF A COTTAGE

By J. A. F. Cardiff in the National Builder, Chicago

Article XVI.

Water Supply.

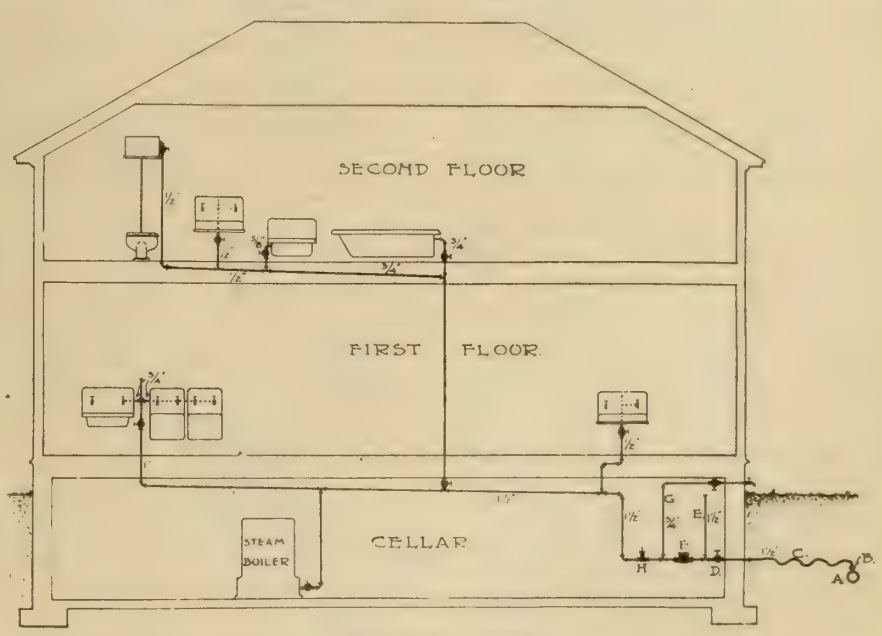
Continuing the consideration of the water supply of a cottage, we illustrate a plumbing section showing a system of piping for the supply and distribution of cold water, taking the supply from the city water main. The illustration is intended to serve as an example for the installation of the piping of a modern cottage having the usual amount of plumbing fixtures, and also includes the use of a pressure regulator and a water meter.

The pipe is galvanized wrought iron, except the service connection. Lead pipe for water supply is no longer used.

Taking up the work in detail, we indicate the city water main in the street at "A." The connection to this main is made by an employe of the city or company that owns the water system. This is done by drilling the street main and screwing in a brass corporation cock, "B," to which the service pipe, "C," is connected. The drilling of the water main and the insertion of the corporation cock is accomplished without shutting off the water in the mains, by means of a device especially made for the purpose.

The size of the corporation cock which may be inserted in a street main is usually determined by the municipality water department or the water company. In New York city the largest tap permitted, except when water meters are installed, is $\frac{5}{8}$-inch in diameter, and in other cities seldom exceeds $\frac{3}{4}$-inch in diameter. The diameter of the service pipe, however, should not be governed by the size of the tap, but should be determined solely by the amount of water required for the building.

The service connection, "C," should be of lead pipe and bent in a wavy form, as shown, so as to be flexible and thereby give and take with any settlement of the building or the street main. The plumber should furnish the mason with an iron pipe sleeve to build in the wall at the point where the service connection will pass through it. This is much preferable to leaving a hole in the wall or cutting one when the piping is being installed.



At "D" is shown the valve which shuts off the entire piping system. At "E" is provided an air chamber to absorb all shocks that occur in the pipes, and protect the meter, "F," from them. Water meters are used to measure the quantity of water which passes through the service pipe to the building. They are required in many cities where the water tax is determined by the amount of water consumed.

At "G" is shown a branch taken off the main house supply to feed a sill cock located on the outside surface of the building and used for cleaning sidewalks, sprinkling lawns, etc. The branch is fitted inside the wall with a shut-off valve with a drip, and when the valve is closed the water in the pipe between the valve and the sill cock passes out through the drip, leaving the pipe empty. If this water was allowed to remain in the pipe it would be likely to freeze, because of its exposed location.

At "H" is shown a pressure regulator, which is a device required when the minimum pressure in the street main is greater than is required to raise the water to the highest fixtures. By means of this regulator the excessive pressure may be reduced so that it is just sufficient to supply the highest fixtures. A greater pressure than this would cause considerable annoyance and wear and tear on the piping.

When a pressure regulator is installed on a water supply system, a relief or safety valve should always be installed on the hot water supply boiler to provide relief for the excessive pressure generated by the water heating apparatus. This is necessary for the reason that the pressure regulator is similar to a check valve, in that it would prevent any excessive pressure generated within the building from finding relief through the service connection and street main.

The sizes of pipe are determined in general by the number of fixtures and the pressure of water in the main. For a low pressure, that is, a pressure not exceeding 20 pounds per square inch, the sizes given in the illustration are about right. The pipe is reduced in size in the manner indicated as the various branches are taken off.

House Water Supply

PLUMBING CHANGE AT BELLEVILLE.

A big change has just been made in the firm of John Lewis & Co., plumbers and steamfitters, Belleville, although the business will be conducted under the old name. Arthur E. Lewis has sold his interest in the business to M. R. Doyle and Jas. H. Reeves, two practical young men who are thoroughly in touch with all the work done by the firm.

Arthur Lewis left on Monday for Calgary, where he has accepted a position in a large wholesale hardware firm. During his long residence at Belleville he made a host of friends by his honesty, integrity and fair dealing principles and has done much to place the firm of John Lewis & Co. in the front rank.

The firm is now composed of Mrs. John Lewis, of Belleville, Jones L. Lewis, editor of the Herald, Hamilton, and Messrs. Doyle and Reeves. Mr. Doyle opened up the plumbing business with the late John Lewis about 15 years ago, and he has been a faithful employee of the firm ever since. He will have charge of the mechanical end of the business, while Mr. Reeves will look after the business end of the firm, he having had a long experience in all branches of the hardware business.

PLUMBING PARAGRAPHS.

Lewis Bros., plumbers and stove merchants, Belleville, are to remove to Calgary.

Geo. Ecclestone, hardware merchant, Bracebridge, has now an up-to-date plumbing department added to his business.

Port Arthur is to have another plumbing establishment—a branch of a Winnipeg concern. Already there are three good firms established.

Moore & Brown, hardware merchants, Sault Ste. Marie, have established a plumbing department, with F. G. Sweetzer, formerly of Portsmouth, N.S., in charge.

APPLICATION OF HEAT UNIT TO BUILDINGS.

Address before the Ohio Society Mechanical Engineers and Steam Engineers

When estimating the heat required for the warming of buildings, the following methods may be used. Determine the loss in heat units through the walls and windows and make some allowance for the loss of heat by leakage of cold air, due to the faulty construction of the room or building. The total loss in heat units for the entire building is found by the following method, which will be found to give a very close approximation. It has been determined by practical experiment that the loss in heat units through the change of air in the room or building, caused by bad construction when not otherwise ventilated, is about 1.430 heat units per square foot of surface per hour. It will require 0.238 heat units to raise one cubic foot of air one degree from absolute zero, but we are only figuring on zero on the Fehrenheit scale, and the specific heat of air at this temperature is 0.0864; therefore, to find the loss in heat units, we must multiply 0.236 by 0.0864, which equals 0.0205. Now, this is equal to the loss of heat in one cubic foot for one hour for each degree difference of temperature, and the room or building must be heated to 70 degrees, with an outside temperature of zero. To find the total loss we must multiply 0.0205 by 70 degrees, which equal 1.439 heat units for one hour.

Outside walls will require 0.223 heat units per hour per degree difference of temperature between the inside and outside temperatures. The difference is 70 degreess, which, multiplied by 0.223, equals 15.61 heat units, which gives the loss for one square foot for one hour. The next operation is to find the loss in heat units through one square foot of glass. The glass being the coldest part of the building, it requires a greater number of heat units ta counteract the cooling effect of the outside temperature. The glass will lose 0.543 heat units per hour per degree of difference of temperature. Now, as in the former example, the difference between the inside and outside temperatures is 70 degrees, and 0.543 multiplied by 70 degrees equals 38.01 heat units, which is the loss for one square foot of glass. The total loss per hour will be about as follows:

	Heat Units
Loss for 1 cubic foot of air	14.39
Loss for 1 sq. ft. of outside wall	15.61
Loss for 1 sq. ft. of glass	38.01
Total	55.059

I will now give a practical example of the above methods of determining the amount of radiation for a given sized room. The room is 16 ft. square by 10 ft. high, and has four windows containing 32 square feet of glass each. The total number of heat units necessary to counteract the cooling effect of glass, outside walls and cubical contents is as follows:

For the cubical contents we have 16 x 16 x 10—2,560 cubic feet, which is the cubical contents. This, multiplied by 1.439 equals 3,683.84, the heat units. The square feet of outside wall equals 16 x 10 x 2 =320, and this multiplied by 15.61 equals 4.995.20 heat units lost through the outside walls. The square feet of glass equals 32 x 4—128, and this multiplied by 38.01—4.864 heat units lost through the glass.

The total amount is equal to:

	Heat Units
Cubical contents	3,683.840
Outside wall	4,995.20
Glass.	4,864
Total....	13,542

The total loss in heat units for the above room is now represented by 13,-542.04.

The number of square feet of pipe or other radiating surface that will be needed to counteract this loss is determined by the aid of the difference between the temperature of the steam pipe and the temperature at which the room is kept. We will assume the temperature of the steam to be 228 degrees —5 pounds gauge pressure. The difference between the temperature of the steam pipe and the temperature of the room will be the number of heat units given off in the room. The room is to be kept at 70 degrees, then 228—70—158 heat units—i.e., each square foot of heating surface will give off to the air in the room 158 heat units, so if we divide 13,542 by 158 the quotient will be the square feet of pipe or radiating surface, which is equal to 85.7.

If it is desired to heat the same room by hot water the process is somewhat similar, with the exception that the temperature of the water will be considerably less than that of the steam, so that the square feet of heating surface will be increased that much. In hot water heating the temperature of the water very rarely gets above 180 degrees, and it will be found safer to estimate the temperature of the water at about 140 degrees. If the outside temperature should get below zero the temperature of the water could be raised to 180 or 200 degrees.

Harrison & Robertson, plumbers and steamfitters, 389 Spadina avenue, Toronto, have dissolved partnership. R. W. Harrison will continue the business at the same location.

The Canadian Buffalo Forge Co., Montreal, have the contract for the heating and ventilation work on the new Molsons Bank building, on Bay street, Toronto. Fiddes & Hogarth, Toronto, are doing the heating work for the contractors. The ventilation is on the fan system and the heating hot water combination.

Ed. Holer, a plumber, employed by W. H. Jones, hardware merchant, Ingersoll, is suffering from scalp wounds sustained while at work at the John Morrow screw works. He fell from a ladder, his head coming in contact with a machine. Forty stitches were necessary to close the wounds.

RADIATOR EFFICIENCY.

Short, vertical cylinders are presumably the best that can be devised for giving off heat. If they be increased in height, say two or three times, they would do less duty because the air in contact with the upper parts would have been warmed by the lower part as it passes upward, and, therefore, is not capable of extracting as much heat. The higher a radiator is, the lower its efficiency per square foot of surface, and 36 or 38 inches has been established as a fair limit of height, says the Engineering Review.

Prof. R. C. Carpenter, in a series of tests at Sibley College, demonstrated the fact that "with radiators of the same height and same dimensions no difference could be traced, which was due either to material or to thickness. With radiators of the same material and the same height, but of different depths, or with varying numbers of tubes, we find invariably that higher results are obtained from the thinner radiator or those with the fewest rows of tubes.

NATURAL WATERWORKS SYSTEM

The artesian well belt of South Dakota is now attracting special attention because of the recent development of a number of wells containing hot water sufficient for the operation of hot water heating plants. This feature in addition to the cold water artesian wells for irrigation purposes in the arid sections of the state, which have also shown a bountiful suply, has enthused the residents of the commonwealth to a high degree. It is declared to be evident that South Dakota is underlaid with a natural waterworks system. The promise is held forth that in addition to abundance of water for irrigation, homes, live stock and crops, hot water for domestic purposes and heat is soon to be added. Water power for the driving of reasonably heavy machinery is among the possibilities. In fact on many farms to-day artesian water power is utilized to operate corn shellers, separators, shredders and other rural machinery.

Recently contractors who sank an artesian well for the Chicago & Northern Railway Company at Midland found that the water which came to the surface with great force had a temperature of 135 degrees. This water, piped to residences, where it would go by its own force, would furnish all the heat desired. There are now in South Dakota about thirty artesian wells, 400 feet deep, sixty-five over 1,000 feet deep and two 2,500 feet deep. At Aberdeen the sewage is pumped away by power obtained from an artesian well, and elsewhere in the state electricity is generated for power and light purposes.

A. A. Horton, district hydrographer of the United States goelogical survey, says: "Artesian wells are certainly doing great things for the Dakotas and Montana. But I fear the flow of water will never reach sufficient power to operate heavy machinery. There is hot water in the belt now, lots of it. But no one can tell how long it will last."

PLUMBING MARKETS

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, March 8, 1907

In spite of the high prices prevailing at present, business in plumbing circles is booming. In fact it was never better.

Although there are no changes in prices to record this week, there is a tendency in the market to higher prices on several lines. Next week will likely see an advance in the price of iron pipe, as high as 3-inch. No figures have been received by the jobbers as yet, however, and prices are merely withdrawn

Jobbers seem to be very much in the dark, in regard to the future prices that will prevail, one large house in fact, give all their quotations with the understanding that they are for immediate acceptance, and refuse to hold an offer over for even 24 hours.

RANGE BOILERS—Very good business is being done in both the copper and iron clad article, and prices on both are very firm; Iron clad, 30-gal., $5; 40-gal., $6.50 net list. Copper, 30 gal., $33; 35 gal., $38; 40 gal., $43.

LEAD PIPE—Owing to the heavy building operations there is a good demand for this article, and the market is firm at last week's quotations. Discount is: 5 p.c. f.o.b. Montreal, Toronto, St. John, N.B., Halifax; f.o.b. London, 15c per hundred lbs. extra; f.o.b. Hamilton, 10c per hundred lbs. extra.

IRON PIPE FITTINGS—Shortage in some lines, and very firm prices, are the prevailing features in connection with this line. Discounts remain: On nipples, ¼-inch to 3-inch, 65 per cent.; 3½ to 2-inch, 67½ per cent.

IRON PIPE—Prices are withdrawn but the new list will likely be distributed by next week. Prices will be higher on all lines up to three-inch.

SOIL PIPE AND FITTINGS—Business is very good in this line. We still quote: Standard soil pipe, 50 p.c. off list. Standard fittings, 50 and 10 per cent. off list; medium and extra heavy soil pipe, 60 per cent. off. Fittings, 60 per cent. off.

SOLDER — No change in prices. We still quote: Bar solder, half-and-half, guaranteed, 25c.; No. 2 wiping solder, 22c.

ENAMELWARE — We quote: Canadian baths, see Jan. 3, 1907, list. Lavatories, discounts, 1st quality, 30 per cent.; special, 30 and 10 per cent. Sinks, 18x30 inch, flat rim, 1st quality, $2.60; special, $2.45.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East.
Toronto, March 8, 1907

The plumbing supplies business is picking up, although trade is not yet by any means as brisk as might be wished for. One thing is certain, conditions are better than they were a fortnight ago

During the past week there have been many reports of price-cutting in plumbing lines, both enamelware and brass goods. In the latter line particularly the market has been unsteady for a fortnight or more While plumbers are keen buyers and not over anxious to pay higher prices than necessary, they are, nevertheless, believers in a steady market, not favoring price cutting on contracts and preferring to have jobbers and manufacturers maintain their prices on an equitable basis. Probably more than any other section of business men, they look upon price-cutting in any branch of the trade as demoralizing to all other branches.

Orlando Vickery, Toronto, representative of the Amherst Foundry Co., who has developed quite a business in plumbing supplies during the past eighteen months, disclaims any price-cutting in his lines, and states that no matter what others may do he will not sell below the regular figure, based on the cost of manufacture and a fair margin of profit. The recent advance of 7½ per cent. on "Beaver" enamelware is being held to firmly.

LEAD PIPE—The discount is still 5½ per cent. off the list price of 7c. per lb. Lead waste, 8c. per lb., with 5 off. Caulking lead, 5½c. to 6½c. per lb. Traps and bends, 10 per cent. off.

SOIL PIPE AND FITTINGS—Business is increasing We quote: Medium and extra heavy pipe and fittings, 60 per cent.; light pipe, 50 per cent.; light fittings, 50 and 10 per cent.; 7 and 8 inch pipe, 40 and 5 per cent.

IRON PIPE—Prices have been withdrawn and an advance is looked for daily. Stocks are low, with prospects of scarcity for the future We continue to quote: 1-inch black pipe, $4.95, 1 inch galvanized at $6.60.

PIPE IRON FITTINGS—Prices are unsteady. Some jobbers have lowered the price from 57½ to 60 per cent. We continue to quote, however at 57½ per cent Cast iron fittings, 57½ per cent.; cast iron plugs and bushings, 60 per cent.; flange unions, 60 per cent.; nipples, 70 and 10 per cent.; iron cocks, 55 and 5 per cent.; Canadian malleable, 30 per cent.; malleable unions, 55 and 5 per cent.; malleable bushings, 55 per cent.; cast iron ceiling plates, plain, 65 per cent.; cast iron floor, 70 per cent.; hook plates, 60 per cent.; expansion plates, 65 per cent.; headers, 60 per cent.; hangers, 65 per cent.; standard list.

RANGE BOILERS—Galvanized iron, 30-gal., standard, $5; extra heavy, $7.75; 35-gal. standard, $6; extra heavy, $8.75; 40-gal., standard, $7; 40 gallon, extra heavy, $9.75, net list. Copper range boilers—New lists quote: 30 gallon, $33; 35 gallon, $38; 40 gallon $43. Discounts 5 to 15 per cent.

RADIATORS—The demand for these is brisk. Keen business is being done, orders being booked ahead in view of the erection of a new factory. Prices are unchanged. We continue to quote. Hot water, 17½ per cent., steam, 50 per cent.; wall radiators, 15 per cent.; specials, 45 per cent. Hot water boilers are subject to an open market.

SOLDER—Bar solder, half-and-half, guaranteed, 27c.; wiping, 23c.

ENAMELWARE—Price-cutting in this line is reported. We continue to quote, however, the January prices, as they are about the average prices Lavatories, first quality, 20 and 5 to 20 and 10 off; special, 20 and 10 to 30 and 2½ per cent. discount. Kitchen sinks, plate 300, firsts, 60 and 10 off; specials, 65 and 5 per cent. Urinals and range closets, 15 off. Fittings extra.

"What are the Advantages of Hot Water over Steam Heating in a Private Residence?"

What arguments would you use in reply if a customer asked you the above question.

Send us an answer and also outline what advantages steam heating possesses over water for this same class of work.

For the best reply we offer a cloth bound copy of J. J. Cosgrove's splendid textbook, "Principles and Practice of Plumbing."

That Stuffy Room

is more deadly than disease itself. Bad air is the curse of crowded living. In all public places such as asylums, clubs, big offices, schools and theatres, **PURE AIR CAN BE OBTAINED ONLY BY OUR SYSTEM OF VENTIL. ATION.**

It has stood the tests of scientific experts.

It is in use in the finest buildings in Canada.

Its price is reasonable and its benefits lasting.

Testimony:

MONTREAL, June 7th, 1901

Messrs. J. W. HARRIS CO., LIMITED, Montreal

Dear Sirs,

I have been using your "AEOLIAN" Ventilators on several houses in this city with the best results. The tenants of these houses declared that your Ventilators are of great advantage to them. I also installed two (2) 18 in. on my stable and I can say that your Ventilator cannot be surpassed by any to take out the sweating or bad smell in any room.

F. D. MONK.

Ask for booklet re Aeolian and Zephyr Ventilators, also booklet on Filter, etc.

OTTAWA, ONT.

American Twin Freezer

Freezes two flavors of Ice Cream or an Ice or Sherbet and Ice Cream at one and same time, in one freezer.

SOMETHING ENTIRELY NEW —NEVER DONE BEFORE.

THE can is divided in two parts by a vertical partition. One flavor is placed in one, the other in opposite side of can, in each of which the scrapers, etc., operate. The can cannot be turned as in old style freezers, because of the partition. It is therefore swung to and fro by a rocking motion of the crank. This is a more comfortable and much easier movement. It is very much less tiresome than turning a crank. One can sit back in a chair with freezer alongside and rock the crank to and fro without discomfort or undue exertion and even read at same time. Although two flavors are frozen at once and with less exertion, no more time is required than in old style freezers.

The **Pails have electric welded wire hoops,** which are guaranteed not to break or fall off; Cans are of heavy tinplate with **drawn steel bottoms** that are guaranteed not to fall out or break and do not leak, the strongest and most durable Freezer Can made; the **Automatic Twin Scrapers** by their positive action insure perfect scraping of frozen particles from side of can. All inside parts are heavily coated with pure block tin, and outside parts all thoroughly galvanized.

Boker's No. 4093 Clipper, Reversible, Nickel Plated, Ebonized Handles, Steel Ferrules.

Stewart No. 1 (enclosed type).

THE STEWART No. 1 HAND POWER CLIPPER

is a new clipping machine, sturdy, compact and perfect in every detail of material and workmanship, and at a price within the reach of every farmer and horseman in the land.

This machine converts the slow motion of the crank handle to the high speed required for the knives with practically no frictional loss. All moving parts are cut from the solid steel bar and hardened, and, being thoroughly encased and protected from dust and dirt, will wear longer than any other machine made. It has an oil tempered, flexible shaft and the highest grade clipper knives, is mounted on a suitable tripod stand and packed in a case 6x11x12½, weight boxed 36 lbs.

20th Century Clipper in operation.

We also carry in stock the Newmarket and 20th Century Power Clippers.

The Stewart Patent New Model 1904 Sheep Shearing Machine

is a marvel of simplicity and strength. The power required to drive it is practically nothing. All parts are interchangeable. It does not weary the operator, tire the boy, or torture the sheep.

IT SAVES WOOL, TIME, LABOR AND SHEEP.

Anyone who raises wool for the market and owns but a few head of sheep, will find this machine a self-paying investment.

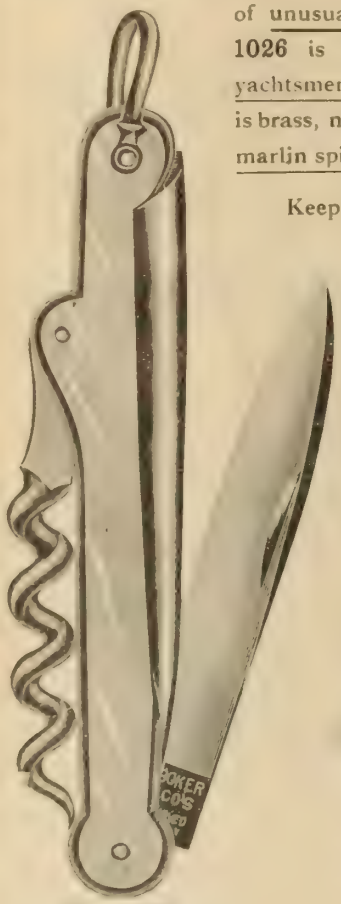
Factory: Dufferin Street, Toronto, Ont.

Our Prices are Right



No. 4332

We show these few knives here because each has some feature comparatively new, they are good knives to have in stock because they will sell.

No. 4332 is a handy farmer's knife with a blade for punching holes in leather. No. 25836 is also a farmer's knife particularly useful for cattle raisers. No. 1445 and No. 461 are new pen knives each with peculiar features. No. 1445 has an easy working nail nipper and nail file. No. 461 is very thin and has pearl sides of unusual brilliancy of color. No. 1026 is intended for the use of yachtsmen, canoeists and sailors. It is brass, nickel-plated, and has a large marlin spike.

Keep up your stock and variety of knives. No other line of goods occupying the same small space pay so large a profit.

No. 1026

We show nearly 500 different knives in our new loose-leaf catalogue now being circulated.

FROTHINGHAM & WORKMAN, Limited, MONTREAL, CANADA.

WARM DAYS will be here before you realize it.

The ice crop all over Canada has been good this year. Cheap ice will mean a great demand for Freezers.

This would suggest getting your order for Freezers in to us now.

We will give you the best Freezers made at a price no greater than you would pay for poor ones.

The tubs of our Freezers are cedar and have electric welded hoops, which will not drop off. The cans are the best to be had, thoroughly tinned, made for wear.

They freeze the cream quickly and use the least possible quantity of ice.

All sizes in stock from 1 quart for small families up to the largest hotel size.

THE AMERICAN TWIN FREEZER will freeze two distinct flavors at one operation without extra effort on the part of the operator.

It appeals to the careful housekeeper, as it gives her the advantage of having in effect two freezers at a cost a trifle over the old style single flavor freezer.

THE GEM FREEZER is double acting. It freezes quickly, making rich, smooth dainties for dessert, such as Ice Cream, Water Ice, Sherbets, Frozen Puddings, etc.

THE BLIZZARD FREEZER is the best low-priced freezer made. It is single acting, easy running and easily cleaned.

Sole Agents for the Dominion

The "WAYNE" CARPET BEATER

Handy, Useful and Durable Household Article. "Not a Seasonable Toy"

Is now made in three styles—to retail at popular prices.

Patented Sept. 8, 1903

The "WAYNE" is the best whip upon the market for beating clothes, carpets, rugs and furniture. Constructed of the best coppered steel wire obtainable and mounted on a seasoned hardwood handle.

The wire is fastened to the handle in such a manner that it is impossible to work it loose. A large ferule pressed over the handle prevents the latter from splitting.

The "WAYNE" beater being made of spring steel wire always retains its shape, also eliminates the danger of puncturing or tearing article being cleaned.

This beater is so well balanced that you get full stroke and best results with very little effort. The "WAYNE CARPET BEATER" is a trade winner. Its usefulness is recognized on sight and sells wherever shown. Place your order now.

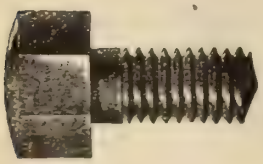
Are You Losing Money?

Rather a personal question; but you do not need to have the silver fever in order to lose money. If you are not securing all the dollars you might make ***you are losing money*** —actually throwing dollars away. There ***are*** some men in the Hardware business, bright fellows, too, who fail to see—or seem to fail to see—the money that's in



Window Glass

for them. The demand for Glass of all shades and variations ***must*** increase. There's just one way of limiting the demand for Glass—all sorts of Glass—and that way is to manufacture an imperishable brand. We'll do that some day, but in the meantime we wish to know if you have our large and beautifully illustrated catalogue? You are losing money every day you do without it. Send off that post card now.

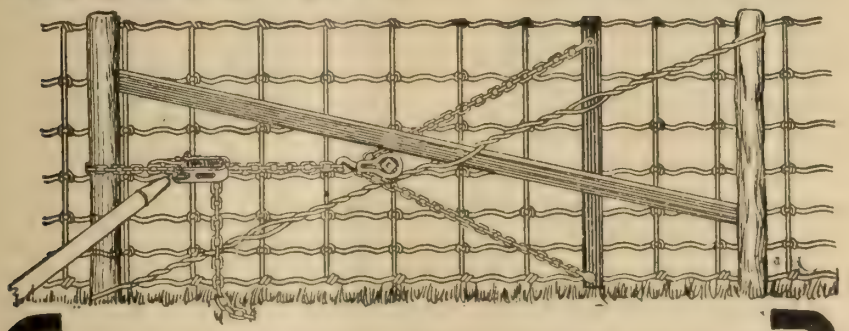
Four Reasons why INVICTUS FIBRE is the BEST FIBRE PAPER on the Market

1. Invictus Fibre is made from personally selected pulp wood cut on our own limits.
2. This special pulp wood is again rigidly culled on arrival at our mills
3. The pulp from which Invictus Fibre is made is manufactured in our own pulp mill and transferred at once to the paper mill, avoiding all drawbacks of transportation.
4. Invictus Fibre will increase in strength and not grow hard and brittle as does fibre made from sulphite pulp. This is a quality of the peculiar and selected pulp from which Invictus Fibre is made.



A trial order will convince you that we are correct. See that each package bears the words "Invictus Fibre." Every ream contains 480 sheets

HOW TO BUILD A GOOD FENCE

Our new folder on "Erecting Fences" will tell you and if you will follow the instructions carefully when you are through you will have a good job.

It's full of valuable and interesting information on fence building and tells how to erect woven wire fencing in the quickest and most substantial manner.

No farmer, fence man or any one interested in fence construction should fail to write for a copy. It gives all the information required for building fences and we send it

FREE!

In addition there is also a complete and very interesting description of the manufacture of fence wire. Persons who have never had the privilege of visiting a wire mill will find this article of especial interest.

It also has an article quoted from a bulletin issued by the U. S. Department of Agriculture on the manufacture of concrete fence posts, showing how posts made of this most useful and durable material can be manufactured at home. Don't fail to write for a copy today. Ask for our folder called, **"Erecting Fences."** Remember it's **free.** Address

Want Help?

If you are located in a small city or country town, a want ad. placed in the local papers means that possibly half-a-dozen young men will read it.

If you are located in even a big city, a want ad. in any metropolitan daily costs money. You are paying for a circulation of 100,000, and there is no possibility of more than 200 of the men you want to reach seeing that ad.

Doesn't that look like throwing money away? It does. Because you are paying for 99,800 of a circulation that is absolutely worthless as far as your wants are concerned.

Every Hardware clerk sufficiently interested in his business to pay you as an employee, reads

Hardware and Metal

When you want a man your ad. should appear in our Want columns. It certainly will pay you well to consider this.

Condensed advertisements in Hardware and Metal cost 2c. per word for first insertion, and 1c. a word for subsequent insertions. Box number, 5 cents extra. Write or phone our nearest office.

HARDWARE AND METAL

Toronto Montreal Winnipeg

I WILL TALK

to practically every Hardware merchant in Canada from the Atlantic to the Pacific. I cannot do it all in one day, but during the first twenty-four hours I will deliver your message to every Hardware merchant in Ontario. I travel all day Sunday and on Monday morning there will not be a village within the limits of Halifax in the East, and Brandon in the West, into which I will not have penetrated.

I cannot go any further East, so I now devote all my energies to the West, and so many new towns are springing up here each week that I haven't as much time as I used to have to enjoy the scenery. But I like talking to hardwaremen, clerks, travellers and manufacturers, especially as they are always glad to see me and hear the news I have to tell them. Tuesday noon I am at Calgary, Wednesday noon at Kamloops, and by Thursday morning I reach Vancouver, having been in all the mining towns and all through the fruit districts of British Columbia.

I have been eighteen years on the road and I have a pretty good connection. I never intrude when a man is busy, but just bide my time, because I know men pay far more attention to what you have to say if you catch them when they have a few moments to spare. So I often creep into their pocket when they are going home at night, and when supper is over Mr. Hardwareman usually finds me. He must be glad to see me, because he listens to what I have to say for an hour or more.

I try to always tell the truth, and men put such confidence in what I say that I would feel very sorry to deceive them even inadvertently. Probably some other week I will tell you about the different classes of people I meet. In the meantime if you want a message delivered to HARDWAREMEN, PLUMBERS, CLERKS, MANUFACTURERS or TRAVELLERS—and want it delivered quickly—I'm your man.

Building a Retail Business

H. N. Higinbotham, in Saturday Evening Post.

Attentiveness to customers should be instant, in season and out of season, from the moment the customer crosses the threshold of the store until he is out on the street again. There is nothing which customers more invariably resent than indifference on the part of the storekeeper or his clerk. To go into a store and be forced to stand about without being recognized is a kind of treatment which goes against the grain of human nature, and will not be tolerated by the average American. Of course, there are at times in almost every store when there is much business to be done in a small time, and it is absolutely necessary to keep several customers waiting. This does not mean, however, that there is any necessity for the proprietor or his assistant to fail to give a pleasant word of greeting to those who are obliged to await their turn.

It is an easy matter for the storekeeper or the clerk to give a nod of welcome and a word of excuse to those who cannot be immediately served. The customer who has been pleasantly greeted and told that he will receive attention in a few minutes will wait cheerfully, whereas he would leave the store in ill-humor if his presence were entirely ignored. The ability to keep waiting customers in good humor and make them feel that they are not neglected is one of the most valuable qualities a storekeeper or a clerk can possibly possess. Just ordinary courtesy and attentiveness demand very little time, and they are far more valuable than flattery or argument in the sale of goods.

Tell the Truth.

Perhaps it will be thought that a word of caution with regard to the over-representation of goods is entirely superfluous and ungracious. I wish this were the case, but I fear that the observation is not at all out of order. Very often the zeal and ambition of the clerk carries him further in this direction than his employer would wish him to go. Again, there are those in the merchandizing business, as in every other business, who allow their desire for gain to impart an elastic quality to their consciences, and who lost sight of the fact that nothing can be more fatal to their final success than misrepresentation.

As a sheer matter of policy, it is far better for the merchant to understate than to overstate the merits of his goods. When a merchant gains a reputation in his community for never misrepresenting his goods he is on the high road to success. He will command the trade of his neighbors and he will hold it against obstacles.

In selecting his clerks every merchant should give careful consideration to securing those who have tact, pleasing manners, and all that is included in the term "a good personal address." At the same time, it will be well for him to remember that a clerk may have all of these qualities and still be a comparative failure. Many a merchant employing quite a force of clerks has been perplexed by the problems presented by this matter of the personal equation. Here is a clerk, for example, who outclasses all his fellow-workers in personal popularity with customers. His graces of manner attract the patrons of the store to him in a degree which marks him as an exceptional favorite. In spite of this, the totals of his sales from week to week fall below several of his co-laborers at the counter. He puts in as many hours as they do and works as diligently as they. Here, on the face of things, is a clear contradiction which is decidedly puzzling to the merchant. What is the difficulty?

Popular Clerk Lacked Decision.

In nearly all cases of this kind, and they are so numerous as to be almost general, I believe the cause of the trouble lies in the fact that the popular clerk, who has decidedly the lead over all his fellows, lacks in decision. Not long ago I saw an interview on this very subject in which the superintendent of one of the big State street retail stores, in Chicago, hit the nail squarely on the head as far as this point is concerned. He related how he had been puzzled to reconcile the fact that the most popular clerk in the fancy dress-goods department took about third rank, so far as the volume of his sales was concerned. The young man had a decided charm of manner which naturally attracted customers to him, and it was apparent to the management that this clerk had practically first call on a large percentage of the customers who came to the department to buy.

At last the superintendent decided to give his personal attention to the solution of this very interesting and practical riddle. To this end he stationed himself near the fancy dressgoods counter and began to watch the young man at his work. A young matron came down the aisle, passed a clerk who was at liberty to wait on her, and went direct to the young man in question. It so happened that the superintendent was acquainted with the woman, and knew, from having waited on her himself before being promoted to an executive position, that she was not especially difficult to please.

The Fatal Fault.

She handed the clerk a sample of goods of which she was having a skirt made, and told him she wished to get the material for a waist which would be appropriate to wear with the skirt. He looked at the sample, turned around to the shelves and started to take out a bolt of goods, hesitated, went to another, and then to still another. Then he drew out two or three bolts, looked at them and finally shoved them back into place. After making several false motions of this kind, he at length returned to the first bolt of goods which his hand had touched, drew it out and displayed it on the counter.

To the keen eyes of the watchful superintendent it was apparent that the indecision of the clerk had communicated itself to the customer, and, after examining the goods in a somewhat indifferent way, she asked if he had not something else more attractive. Then he took down the bolts which he had glanced at in his hesitating pilgrimage along the shelves, showed them to his customer, and discussed with her their relative merits. Still, she was apparently unsatisfied, and he once more ranged the shelves and brought down other patterns. There was more conversation and further comparison of goods, and for the third time he turned about and began to forage in a somewhat hopeless and hesitating way.

More than once the customer seemed to be on the very point of decision, but finally she offered an apology, and, saying that she would come again, she left the counter without buying.

The Secret of Success.

In the meantime, the clerk whom she had passed by had waited upon three customers and sold to every one of them. His manner of work was this: He gave very careful attention to the description of the goods wanted by his customer, and in each case asked one or two questions to bring out more clearly the desires of his patron. But in each instance after he had learned this he turned round and his hand went unhesitatingly to just the right goods. There was decision in his manner, and he placed the bolt of cloth upon the counter with the remark: "I think this is just what you wish." The watchful eye of the superintendent had taken in his movements as well as those of the popular clerk, and he was convinced of two things, first, that the taste or judgment of the clerk who made the three sales was no better than that of the popular clerk who failed to make his sales; second, that the decision with which the less popular clerk acted was the secret of his success.

The conclusions of this superintendent were, to my mind, entirely correct. He found out why the man who attracted the fewer customers was able to make the greater number of sales. Incidentally it may be added that the popular clerk remained at the fancy dressgoods counted while the other was promoted to the head of the department.

Retail Hardware Association News

Official news of the Ontario and Western Canada Associations will be published in this department. All correspondence regarding Association matters should be sent to the secretaries. If for publication send to the Editor of Hardware and Metal, Toronto.

BRITISH COLUMBIA HARDWARE CONVENTIONS

The following report of the recent conventions of the British Columbia Retail Hardware and Wholesale Hardware Associations has been forwarded for publication by John Burns, hardware manufacturers' agent, Vancouver, he being secretary-treasurer of both organizations :

Wholesalers Oppose Parcels Post.

The annual meeting of the B.C. Wholesale Hardware Association was held in

C. P. W. SCHWENGERS, Victoria, B.C.
Of E. G. Prior & Co., Victoria, and President B.C. Wholesale Hardware Association

Victoria, B.C., on Friday, Feb. 8th. There was a full attendance and the greatest interest was manifested in the proceedings by the members, among whom the greatest harmony was shown to exist and a general feeling seemed to be evident that the association was proving a benefit to all parties interested either directly or indirectly. Two sessions were held, the morning one being devoted to the reports of the retiring officers and elections for the ensuing year.

W. G. MacKenzie, of Wood, Vallance & Leggat, Vancouver, the retiring president, in his report spoke of the good work the association was doing and the great assistance the members had been to the officers in carrying out necessary work of the year. The importance of taking action to oppose the new postal arrangements of the Government, etc., etc. The secretary-treasurer's report showed the financial affairs to be in excellent condition.

Election of Officers.

The election of officers then took place and resulted as follows :

President—C. P. W. Schwengers, of E. G. Prior & Co., Ltd., Victoria.

Vice-President—John Boyd, of Boyd, Burns & Co., Vancouver.

Secretary-Treasurer — John Burns, Vancouver.

Executive Committee—W. G. MacKenzie, J. Elliott, A. Cunningham.

Pipe Committee—C. A. Godson, W. A. Akhurst, J. Boyd, C. P. W. Schwenger.

There was no balloting, all nominations being unanimous. The afternoon session was devoted to detail work and laying plans for the year's business, every effort being made to extend the usefulness of the association.

Retailers and Jobbers Dine.

On the following evening the Wholesale Association entertained the members of the British Columbia Retail Hardware Association at a banquet, there being a large attendance in the city on account of the annual meeting of the latter organization taking place on that day. It was the first function of its kind and was indicative of the very cordial relations existing between the two organizations. Mr. Schwengers, the president, occupied the chair, and took occasion to remark on this, and that it would be the aim of the officers of the association and himself to try and further cement this good feeling and lend their best endeavors to keep the retail hardware business on a sound basis. The same hopeful note was also struck by Mr. MacKenzie, who spoke to the same point. In accordance with the general desire, the function was made as informal as possible and was voted by one and all a distinct success.

Officers of Retail Association.

The officers of the Retail Dealers' Association are :

L. B. Lusby, president.

C. Snell, vice-president.

John Burns, secretary-treasurer.

Executive Committee—Messrs. Kirk, Ogilvie and Stearman.

There was a good attendance of members from New Westminster, Vancouver and Victoria, the principal matter of discussion being the question of parcel post C.O.D. system. A committee was appointed to get up a petition against the proposal.

The next annual meeting will be held in New Westminster.

DISTRICT ASSOCIATION FORMED.

A well attended meeting of the retail hardware merchants of North Middlesex, North Lambton and South Middlesex was held at Ailsa Craig on Thursday, March 7 and the North Middlesex Hardware Association formed to include the hardware merchants in Strathroy, Lucan, Forest, Exeter, Parkhill Ailsa Craig, Thedford, Arkona, Crediton and Dashwood. In all fifteen firms have signified their intention of joining the district organization. Those attending the first meeting were : A. W. Humphries, Parkhill ; J. E. Westcott, Ailsa Craig ; W. Scott, R. F. Scott and Wm. Lawrie, Forest; Wm. Kennedy, Ailsa Craig; Young Bros., Crediton; and Mr. Harrison, of Brewer & Harrison, Parkhill. Several others wrote, regretting their inability to be present.

An interesting discussion took place on the subject of cash and credit prices the general opinion being that dealers should avoid price cutting and secure a larger margin of profit on goods sold on credit than on articles sold for cash.

Election of Officers.

It was decided that the membership fee would be $1 per annum and the following officers were chosen to carry on the business of the new association :

President—J. E. Westcott, Ailsa Craig.

Secretary—Wm. Lawrie, Forest.

Executive Committee—Messrs. Haney, Strathroy; Heaman, Exeter, and Harrison, Parkhill.

Hardwaremen in other parts of Ontario who desire to secure additional particulars regarding the work of the district association should write to Secretary Lawrie for the information.

SHOULD TAKE A BROAD VIEW.

The Iron Age points out that one of the dangers which lie in the path of the retail associations is the disposition sometimes found to take a low and narrow view of the retailer's business, and to discourage the growth of retail houses in the direction of a local job-

A. R. AUGER, OKOTOKS, ALBERTA
One of Alberta's Representatives on the Executive of the Western Retail Hardware Association.

bing trade, which in course of time may assume larger dimensions. Such houses who are principally retail in their scope, but who serve an eminently useful purpose as distributors to the cross roads and other small trade in their immediate vicinity, are most desirable customers for either the jobber or the

manufacturer, and in view of their enterprise and enlarging business relations are to be given an honorable place among retail merchants. They should be indeed regarded as exceedingly desirable members of retail hardware associations. Their identification with such an organization adds strength to it. If, however, on the other hand they should be regarded as out of place in such associations simply because with a retail business they are also doing some jobbing, their absence from the membership will weaken the association and rob it of a dignity and influence which it would otherwise possess. This matter came up in the Illinois convention and the subject was there disposed of in an eminently wise and sensible manner, as the association decided that persons doing a retail business and branching out into wholesale lines were entitled to membership. If this broad gauged view of the question were not taken there would be danger that the associations would become limited to the smaller and less progressive houses.

CONGRATULATIONS TO WM. GORDON.

As showing the respect in which the Retail Hardware Association of Western Canada is held among the manufacturers and wholesale men, the following letter, received by W. M. Gordon, Winnipeg, is highly significant :

Toronto, Feb. 23, 1907;

Wm. Gordon,
Winnipeg, Man.,

Dear Sir,—The writer was very pleased indeed to see by Hardware and Metal of this week that you have been re-elected second vice-president of the western association and wishes to congratulate you and also the association on being able to bring men of your class to the head of their affairs. From the work you and the other officers are doing in that association I fell that an organization of that kind is a help to every man throughout western Canada.

Assuring you again that I am very pleased to hear of your re-election, I am,

Yours very truly,
NORMAN A. WYLIE,
Kemp Mfg. Co., Ltd.

ACTIVITY IN THE EAST.

As indicative of the interest taken in this question in the Maritime Provinces, the following editorial from a recent issue of the "Telephone," of Bear River, N.S., is worth reproducing :

"United action is being taken against a proposed legislation providing for the collection on delivery of parcels by post. This measure, if carried, would give added impetus to the system of mail order trading which is already jeopardizing the interests of the local dealers in our provincial towns.

"The attention of Bridgetown merchants was directed to the proposed amendment some weeks ago and they immediately sent in a petition through the local member, S. W. W. Pickup, requesting him to use his influence in preventing the measure to be carried into effect. They also enlisted the attention and caused to be added to their petition the protests of Middleton, Lawrencetown and Paradise merchants.

The Annapolis Board of Trade, ever alive to the interests of their town, have made a point of forwarding protests to the Postmaster General and to Mr. Pickup, and the Bear River Board of Trade will also appeal for the prevention of proposed amendment to the postal delivery law. Many other towns in the province have adopted the same tactics and it is probable the purpose of the measure will be thwarted.

"The interests of the local merchants are one with the interests of the general public, and we are sure their efforts will have the sympathy of all but the few wealthy mail order merchants who would benefit by the proposed legislation."

QUESTION BOX AT CONVENTION.

The interest manifested in the "Question Box" feature of the Good Friday convention of the Ontario Retail Hardware Association has been such as to make certain remarkably interesting morning and afternoon sessions of the convention on the holiday when this feature comes up. No lengthy addresses will be delivered at the convention and the discussions will be practical and to the point, if the officers of the association can carry their wishes into effect.

The attendance at the convention ought to be representative of every part of the province. The association has been successful in its work during the past year and the program outlined under another heading should encourage all live hardwaremen to attend.

The banquet will be the big social feature of the convention, and a number of prominent hardwaremen have been invited to reply to toasts and speak on practical subjects. Richard Blain, M.P., who is a retail hardware merchant himself, has been invited to give a short account of the parcels post discussion in Parliament, as well as to explain other legislation (such as the new co-operative act) which will be injurious to the retail trade.

A few additional questions have been submitted for the "Question Box," which now includes the following topics for discussion :

Should large retailers be able to buy goods as cheaply as jobbers or, in other words, is the quantity system of buying the most satisfactory manufacturers can adopt ?

Should there be a difference between cash and credit prices ? If so, how much ? How can this best be handled ?

What percentage of a merchant's turnover should his expenses be ? What percentage should be spent in advertising alone ?

Should goods be marked in plain figures or ciphers ?

Should some novelty be given away each year ?

Do small remembrances to special customers at Christmas time do more good than harm ?

Assuming that the jobber is willing to pay exchange on local cheques, what is the minimum cheque on which we should ask him to pay exchange ?

When remitting money orders should the cost of the order be taken out of the remittance ?

What do we know of a satisfactory system of filing catalogues from a two-page price list to the regular hardware catalogue ?

To what extent does it pay a hardware dealer to advertise in the local newspaper ? What forms of advertising have been found the most profitable ? Is it profitable to advertise in programs, etc.

Does it pay a dealer doing a $50,000 business to go behind the counter ?

Is it wise to interfere with a clerk or transfer a customer from one clerk to another ?

Is a parcel boy at 50c. a day cheaper than one at $1 per day ?

Can the shortage of tinsmiths be relieved by employing helpers ?

Does it pay to weigh freight and check freight bills ?

Do 5 and 10 cent counters pay in small towns ?

What is the best method of handling stove repairs and storing parts ?

Does it pay to borrow money to discount bills ?

What is the cheapest and best method of handling oil ?

If a hardware dealer has not been handling stoves, what is the best selling system he can adopt to secure publicity and make profits ?

Should the retail hardwareman confine his buying to representatives of jobbing houses ?

What is the best method of dealing with goods substituted by jobbers for lines not in stock ?

In a retail business of $25,000 to $50,000 per year, what is the best system of bookkeeping ?

How can unsaleable lines be disposed of satisfactorily without cutting prices ?

Should a portion of a clerk's salary be withheld or does it pay to offer bonuses to clerks to secure faithful service and prevent them leaving on short notice ?

Does it pay to employ female clerks to look after the housefurnishing department and lady customers ?

Does it pay to handle special lines for holiday trade ? If so, what lines pay best ?

Does it pay to allow customers 2 per cent. if they pay accounts before the first of the month, for the preceding month ?

CONVENTION PROGRAMME.

The second annual convention of the Ontario Retail Hardware Association will be held in Room 2, Labor Temple, Church street, Toronto, on Thursday and Friday, March 28 and 29, the program being as follows :

Thursday, March 28.

11 a.m.—Executive committee meeting.

1 p.m.—Roll call, president's address, secretary's report, committee reports, etc.

7 p.m.—Complimentary banquet tendered the members of the association by Lt.-Col. MacLean, publisher of Hardware and Metal.

Friday, March 29.

9.30 a.m.—Election of officers, general business and question box discussion.

2 p.m.—Unfinished business and question box discussion. Adjournment.

HARDWARE TRADE GOSSIP

Ontario.

D. P. Warren, of Waterford, has opened up a new hardware store.

L. Payette, of Warden, King & Son, Montreal, was in Toronto this week.

A. J. Ross, Owen Sound, hardware merchant, has assigned to J. Pringle.

J. H. Plummer, president of the Dominion Steel Co., is in Toronto this week.

Geo. Lasher & Son, hardware merchants, Toronto, have sold to W. Robertson.

D. McGregor, of Johnston & McGregor, stove manufacturers, Smith's Falls, is dead.

W. H. Wiggs, of the Mechanics' Supply Co., Quebec, was a visitor in Toronto last Friday.

George Taylor & Son, hardware merchants, London, are advertising their business for sale.

Ballantyne Bros., hardware merchants, Kincardine, have sold their business to C. J. McAllister.

Richardson & Sneyd, hardware jobbers, Toronto, have dissolved, J. E. Richardson continuing.

W. Conn, hardware merchant, Aylmer, has sold out; D. C. Davis being the provisional assignee.

C. A. Birge, president of the Canada Screw Co., was in Toronto this week looking after the interests of his company.

W. Lundy, an employee of the Madison, Williams Mfg. Co., Lindsay, was choked with gas while working at the cupola.

Frank Taylor, of Taylor Bros., Carleton Place and Almonte, was a caller at the Toronto office of Hardware and Metal last Saturday.

J. T. Lawler, of the Lawler Regulator Co., New York, and author of Lawler's Hand-book on Plumbing, was a visitor in Toronto this week.

Peleg Hamilton, of the H. S. Howland, Son & Co., Toronto, left last week for Latona, Florida, where he will holiday for about a month.

Mr. Armstrong, of the Blanchite Process Paint Co., is able to be around again after being laid up for about a month with one of his legs injured by a street car.

Among those who were in Toronto this week were: J. B. Skelton, Palmerston; H. Christie, of Christie Bros., Owen Sound; A. Dundas, Cobourg; C. A. Binns, Newmarket; Alex. Hamilton, Herb. Parr, Blackstock.

W. B. Riley, of Arthur street, Toronto, was tried in the Sessions Court this week for receiving and disposing of stolen property. During the trial, a witness, Fred Corner, was taken into custody on a charge of perjury. The goods which Riley is charged with receiving were six gas stoves. Corner swore that the day the detectives searched Riley's premises the box of gas stoves was seen by the police and by him. The officers who made the search swore Corner's statements were false, and he was taken into custody. His trial has not yet taken place. The jury declared Riley not guilty.

Quebec.

Mr. King, of F. Hyde & Co., Montreal, is in the Lower Provinces on business.

Mr. Doherty, of the Sussex Mfg. Co., Sussex, N.B., was a recent visitor in Montreal.

J. G. Lewis, vice-president of Lewis Bros., Montreal, has been made a justice of the peace.

H. Moulden, of the Taylor, Forbes Co., Guelph, Ont., was in Montreal last week on business.

J. A. Tetreault, of the Thomas Robertson Co., was on the sick list for a few days last week.

J. Fowler, of the Fowler Axe Works, St. John, N. B., was in Montreal last week calling on the trade.

Thos. Blaikie, city traveler for the Dominion Wire Co., Montreal, was laid up for a few days last week.

B. and S. H. Thompson, Montreal, are moving from their present premises on St. Sulpice street to St. Paul street, Montreal.

B. S. Saunders, one of Lewis Bros. salesmen, has been presented with a little Saunders, to follow in his father's footsteps.

Wm. H. Newton, Ottawa, representative of the Canada Paper Co., was at headquarters in Montreal for a few days recently.

Tom Fortye, representing the Peterboro Lock Co., Peterboro, Ont., was calling on some of the Montreal jobbers last week.

Chas. Dietrich, eastern traveler for Shurly & Dietrich, Galt, was a caller at the Montreal office of Hardware and Metal last week.

J. C. McCartney, of the Can. Shovel Co. of Hamilton and New York, called at the Montreal office of Hardware and Metal last week.

Robert Munro, president of the Canada Paint Co., Montreal, has returned from a short holiday spent at Palm Beach, North Carolina.

The Metal Shingle and Siding Company have fitted up new premises at the corner of Delormier avenue and St. Catherine street, Montreal.

C. A. McNoun, of Vankleek Hill, was in Montreal last week on business. He has purchased the stock of J. S. McIntosh, hardware dealer, of Vankleek Hill.

E. Tougas, proprietor and general manager of P. D. Dodds & Co., paint manufacturers, Montreal, was confined to the house for a few days this week with a severe cold, but has now recovered.

Wayland Williams, well known to the trade in Montreal, in connection with Walter H. Laurie & Co., is now looking after the advertising of several Montreal firms. He still retains his old position with the Laurie Company.

Frank Bishop, senior partner of Bishop & Son, Brantford, Ont., was in town last week visiting the leading manufacturers and wholesale merchants. He spent Sunday with his old time friend, W. H. Evans, of the Canada Paint Co.

Geo. Caverhill, the new president of the Montreal Board of Trade, entertained his fellow-officers, the members of the council, and a few other guests, to dinner at the St. James Club last week. Among those present were:—J. B. Learmont, T. H. Newman, J. A. Richardson, Geo. A. Kohl, Geo. E. Drummond, T. J. Drummond and others.

Western Canada.

G. C. Truman, hardware merchant, Fairlight, Sask., has sold out.

S. Taylor, Yellow Grass, Sask., has sold out to D. Gunn and A. Jaques, both of Manitou, Man., who will continue the hardware business formerly done by S. Taylor under the name of Gunn & Jaques.

As mentioned in a recent issue, Anderson & Thomas, Winnipeg, has dissolved partnership, Mr. Anderson retiring owing to advancing years, and Mr. Thomas continuing the business under the old firm name. Hardware and Metal is in receipt of a circular letter from Mr. Thomas announcing the change.

Hastings & Willoughby are a new hardware and heating firm starting business in Regina. For a number of years Mr. Hastings was foreman of the Smith & Ferguson Co., and he has a wide acquaintance among the trade and an enviable reputation as a heating engineer. The new firm are making arrangements for a number of agencies and have been appointed agents for the Pease-Waldon Co.'s line of warm air furnaces.

PLATE GLASS COMPANY'S FIRE.

The premises of the Toronto Plate Glass Importing Company, Toronto, was partially destroyed by fire on Saturday, March 9, the cause of the fire being unknown. The building was valued at $40,000, and insured for $30,000; the stock being valued at $125,000 and insured for $100,000. The company are now building a factory on the Don roadway and anticipate no difficulty in filling their orders as usual, as they have two other premises in addition to the one damaged by fire. All the books, etc., were saved and the temporary offices have been opened in the Crown Bank building, corner of Victoria and Queen streets, and next door to the former headquarters.

TURPENTINE SUBSTITUTES.

An interesting situation is developing in the turpentine markets. The price has been climbing upward steadily under the supervision of the manipulators who are understood to represent the Standard Oil Company, and, as predicted by Mr. Walsh of Savannah, in his interview with Hardware and Metal a week ago, the price is likely to advance still farther, even $1.25 being a possibility before 1907 is over. The price of labor has increased and the present pine groves cannot last much longer, it being predicted that five years is the length of life of the sources of supply under the control of the Rockefeller interests.

This being the case and it being a well known fact that painters in all parts of the country are substituting benzine for turps in ever increasing quantities, all interested in the paint trade would undoubtedly welcome the introduction of a species of turpentine which will answer the same purpose and do the same work as the present standard spirits of turpentine. If by any process of manufacture such an article can be produced and marketed the trade will have an alternative to turn to in case the foregoing market predictions materialize.

In Maine, in British Columbia and in Ontario efforts are being made to produce turpentine from pine stumps but so far results do not seem to be satisfactory. "Brazilian" and "Russian" turpentines have not won a place for themselves on the world's market as reliable substitutes and the trade, much though it desires to avoid paying exhorbitant prices for the standard article has rightly become suspicious of all substitutes.

A new article which offers hope of proving the alternative desired is now being introduced in Canada and several analysis have been made by buyers, some paint and carriage manufacturers claiming that it has given satisfactory results. We understand that the importing company, the Defiance Manufacturing and Supply Company, Toronto, a branch of the American Lino-oil Company, of Cleveland, have asked the customs department to have an analysis made in the Dominion Government's Labratory at Ottawa, several samples having ben taken from shipments passing through the customs at Toronto. The result of these tests will be looked for with interest and Hardware and Metal will supply the information as soon as it is obtainable.

MANITOBA ELECTIONS.

It is regrettable that in the recent Manitoba elections so few business men were candidates; the legal and agricultural interests were well represented, but only a few business men sought the suffrages of the electorate. It is, however, gratifying to note that the few business men elected are substantial men of affairs who are certain to give a good account of themselves in the Legislature and to bring to bear upon the discussion of the business of the province the business experience and training which they have gained in the successful conduct of their own affairs.

J. T. Gordon, the member-elect for South Winnipeg, is the head of the immense Gordon, Ironsides & Fares business, and one of the ablest and most substantial business men in western Canada. In Portage La Prairie the Liberal leader, who is a prominent businessman, met defeat, but at the hands of another business man, Hugh Armstrong. The Legislature would be much the stronger if both Mr. Armstrong and Mr. Brown were in it, and it is to be hoped that the opposition will find another seat for Mr. Brown. In Virden J. G. Rattray, a prominent hardware merchant, was defeated by the Provincial Treasurer. In Morden, Geo. Ashdown, another particularly able business man, brother of Mayor Ashdown of Winnipeg, was also defeated.

The defeats of good business men are to be regretted since there were so few in the field, for the Legislature contains too many politicians and too few practical men of business affairs. It is, however, gratifying to know that the business men who have been elected are men who will through sheer force of their ability make their influence felt.

VALUE OF A FIRM'S NAME.

Recent business changes in Regina, Sask., raise a question as to the value of a well-established and widely known firm name. Last fall the big hardware store of the Western Hardware Co., Regina, was totally destroyed by fire. In December the business of the Smith & Fergusson Co. was sold to Peart Bros., the former proprietors of the Western Hardware Co. As a result two widely known firms—the Smith & Fergusson Co. and the Western Hardware Co.—have disappeared from the hardware trade entirely. Mr. Smith is continuing his coal business under the old name of the Smith & Fergusson Co., but his new wholesale hardware business is to be incorporated as the J. W. Smith Hardware Co.

These changes raise the question of the value of firm names. The Smith & Fergusson Co., and the Western Hardware Co., were widely and favorably known. Did not Mr. Smith and Peart Bros. sacrifice valuable assets when in the course of a few business changes they dropped the old firm names?

REPORT LIKELY GROUNDLESS.

The Canadian agent at Leeds, Eng., stated about ten days ago that he was informed that a very large amount of German cutlery, razors and knives, is being shipped from Germany to Sheffield to Canada under the name of Sheffield goods. From information we have gathered we are led to believe that the report is not correct as the present trade conditions in Germany are so favorable that there is no inducement to do such a thing, and, moreover, English traders are not apt to connive with such schemes and too rigid an inspection of imported goods is maintained to allow smuggling. If such a report was true and goods were being brought into Canada under an assumed name, protests and complaints would have been heard before this. Buyers with an average knowledge of cutlery are able to distinguish German and English goods, not that the German manufacturers are generally inferior to the English, but that certain grades are

In successful stores the floor is not used as a waste-basket, nor the counter for a catch-all.

Markets and Market Notes

(For detailed prices see Current Market Quotations, page 62.)

THE WEEK'S MARKETS IN BRIEF.

MONTREAL.

Putty—Advanced 20 cents per 100 lbs.
Zinc Spelter—Prices reduced 25 cts. per 100 lbs.

TORONTO.

Turpentine—Higher prices quoted.
Varnishes—Change in duty means advances.
Pig Iron—English iron quoted easier.
Old Materials—Brass higher.

Montreal Hardware Markets

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, March 15, 1907.

The spring rush continues and jobbers are finding no difficulty in disposing of their heavy stocks. The seasons seems to be further advanced at present than for the corresponding period last year, and on the average, trade is also a little better. This may be caused by the retailers ordering earlier than they have been in the habit of doing in the past, so as to be on the safe side should any unexpected advances take place. This is a good plan and should be given more attention by retailers, some of whom are prone to hold back their orders till their shelves are almost empty of the desired article, and then blame the jobber for not being able to deliver the goods immediately.

Retailers are doing quite a business now in all lines of sidewalk cleaning implements.

Some lines of chain and coat screws are reported to be running short.

TWINE—No special features to report. Prices remain unchanged, and orders are now mostly booked up for the coming season. "Standard" 500 ft., sisal, 9½c.; "Tiger," 550 ft., manilla, 9⅝c.; "Red Cap," 600 ft., manilla, 12¼c.; "Blue Ribbon," 650 ft., pure manilla, 13¾ to 14c. Car lots ¼ less; thousand pound lots, ½c. less.

AXES—Axes and handles are still reported to be moving fairly well.

RIVETS AND BURRS—Are in good demand. Prices unchanged and very firm.

HAY WIRE—The demand is good, and there are no changes to report in prices.

WIRE NAILS—The demand for these still continues good, and prices remain stiff and unchanged at $2.45 per keg f.o.b. Montreal.

CUT NAILS—No extraordinary features. The demand is moderate at $2.30 per keg f.o.b. Montreal.

MACHINE SCREWS—A very brisk business is being done at the old prices.

BOLTS AND NUTS—Sales this year so far exceed those of the same season last year. Prices remain unchanged, and the shortage is still very marked in some lines.

HORSE NAILS—This line is reported to be moving extremely well just at present.

HORSE SHOES—Large sales are reported, and the output is well taken care of.

BUILDING PAPER—With the warmer weather, the sales are increasing.

POULTRY NETTING—Dealers are buying freely. 2x2 mesh, 50 and 5 per cent.; other sizes, 50 per cent. off.

GREEN WIRE CLOTH—Orders have mostly been booked now for the season. Prices remain: In 100 ft. rolls, $1.62½ per 100 square feet; in 50 foot rolls, $1.67½ per 100 square feet.

LAWN MOWERS—What is said of green wire cloth, also applies to lawn mowers. Low wheel, 12, 14 and 16 in., $2.30 each; 9-in. wheel by 12 inch, $2.85 each; 14-inch, $3 each; 16-inch, $3.12½ each; high wheel, 12-inch, $4.05 each; 14-inch, $4.25 each; 16-inch, $4.50 each; 18-inch, $4.75 each.

COIL CHAIN—Some sizes are getting scarce.

SHOT — Not in great demand at present. We still quote.: Shot, packed in 25-pound bags, ordinary drop AAA to dust, $7.35 per 100lbs.; chilled, No. 1—10, $7.88 per 100 lbs.; brick and seal, $8.40 per 100 lbs.; ball, $8.93 per 100 lbs. 5 per cent. off. Bags less than 25 lbs., ½c. per lb. extra, net; f.o.b. Montreal, Toronto, Hamilton. London St. John, Halifax.

AMMUNITION — Moving moderately. No change in Prices: Loaded with black powder, 12 and 16 gauge, per 1,000, $15; 10 gauge, per 1,000, $18; loaded with smokeless powder, 12 and 16 gauge, per 1,000, $20.50; 10 gauge, $23.50.

Toronto Hardware Markets

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, March 15, 1907.

Hardware trade conditions continue good, most of the seasonable lines experiencing strong demand. Wholesale dealers report big orders, especially for garden tools, and mechanics' outfits in view of the greatly extended building operations the coming summer.

The scaccity in screws continues with no prospects of relief. Orders are coming in rapidly, and the shippers are unable to fill them. If relief does not soon come the situation will become grave; the scarcity is even now sufficient to excite alarm.

A scarcity also prevails in wire nails, with no prospects of repletion. The demand is heavy, prices remaining unchanged.

Sporting goods, fishing tackle and guns are moving, quite a number of orders for fishing tackle having been received.

The moderation in the climate this week has helped the trade very much, and wholesalers are preparing to get out their spring shipments.

BINDER TWINE—Twine prices remain firm and unchanged. Most of the orders have been booked and shipments will commence early in April. We continue to quote:—500 feet Sisal, 9½-9⅝; 500 feet, standard, 9½-9⅝; 550 ft. standard manilla, 10¾; 600 ft. manilla, 12¼; 650 ft. pure manilla, 13¾-14. Car lots ¼c. less, five ton lots ½c. less, central delivery.

SCREWS—Business continues brisk, orders being booked tapidly. The supply, however, is very low with no immediate prospects of repletion.

BOLTS AND NUTS—Business in these is brisk, with good demand, but inadequate supply.

CHAIN—Business is steady with firm and unchanged prices and good demand.

RIVETS AND BURRS—The demand is good, with unchanged prices.

MECHANICS' TOOLS—The demand for these is increasing. The moderation in the climate has increased building operations. The present congested housing conditions should do much towards the strengthening of the trade in all tools.

EXTENSION AND STEP LADDERS—Demand continues strong, with unchanged prices. We continue to quote: 11 cents per foot for 3 to 6 feet, and 12 cents per foot for 7 to 10-foot ladders. Waggoner extension ladders 40 per cent.

POULTRY NETTING — The demand continues good, with unchanged prices: 2-inch mesh, 19 w.g., discount 50 and 10 per cent., all others 50 per cent.

OILED AND ANNEALED WIRE — Business in these is good, demand strong with firm and unchanged prices. We continue to quote: Canadian wire: gauge, 10, $2.46; gauge, 11, $2.52; gauge 12, $2.61 per 100 lbs.

WIRE NAILS—The demand continues strong. The supply is becoming small, and those who have their supply of wire nails in may congratulate themselves for there are no immediate prospects of repletion. Prices are firm and unchanged We continue to quote: $2.40 base.

HORSESHOES AND HORSENAILS—Demand continues strong, especially from newly-opened-up districts. Prices remain firm and unchanged.

BUILDING PAPER—Business in this is enlivening as building operations commence.

WASHERS, WRINGERS AND CARPET SWEEPERS—The demand for these is increasing with the opening up of spring.

LAWN MOWERS—Business in these is increasing, retailers getting their stocks completed.

HARVEST AND GARDEN TOOLS—Business is increasing in these and should in a few weeks be strong. Demand is good, retailers completing their stock as soon as possible.

HIDES, WOOLS AND FURS—We con-

tinue to quote the old prices, as consignments of furs are still coming in.

HIDES AND RAW FURS — Country hides are lower. Sheepskins are higher.

Hides, inspected, cows and steers, No. 1		0 10½

Montreal Metal Markets

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, March 15, 1907

Quietness seems to reign this week as far as metals are concerned. One large jobber says: "Things are jogging along in the same old way." Business remains good and prices in most cases firm and unchanged.

Copper is still extremely scarce and the prices are firmest of any metal reported this week, and, although an advance was reported in the Toronto markets last week, prices here remain unchanged. Tin is firmer than last week, with an upward tendency, and there will probably be an advance in prices next week. Zinc spelter is a little easier at present than when last quoted. Pig lead is very firm, and it is reported that prices during the past week reached the high water mark. The expected advance in the price of boiler tubes failed to connect, and quotations remain unchanged.

All kinds of structural iron and steel are in good demand owing to the extensive building operations going on here at present, and the mills and works have orders booked for some time to come.

COPPER — This metal is still extremely short, and it's a practical impossibility to obtain any large quantities on the local market. Although an advance was reported in the Toronto markets last week, no change has taken place here, and prices remain extremely firm. Ingot copper is quoted at 26¾ to 27c., and sheet copper, base sizes, 34c. per pound.

INGOT TIN—Although there are no changes this week the market is very much firmer and next week will probably see an advance. For the present we quote: 45½ to 46c. per pound.

ZINC SPELTER — The market has been a little easier during the week and we have reduced our prices 25c. per 100 lbs. We now quote: $7.25 to $7.50 per 100 lbs.

PIG LEAD- Remains very firm, and prices during the week reached the high water mark. We are still quoting $5.50 to $5.60 per 100 lbs.

ANTIMONY- Prices remain firm and unchanged at the following figures: 27½ to 28c. per lb.

GALVANIZED IRON—Heavy building operations have created a good demand, and prices remain firm and unchanged.

PIG IRON—No special features, the following prices remaining firm: Londonderry, $24.50; Carron, No. 1, $27; Carron, special, $25.50; Summerlee, No. 3, soft $23.50.

BOILER TUBES—The advance which was expected to take place this week failed to materialize and the old list still prevails.

TOOL STEEL - Prices remain unchanged.

COLD ROLLED SHAFTING - No changes to report.

OLD MATERIAL.—Prices are: Heavy copper 20c. per pound; light copper 17c. per pound; heavy red brass, 18½c. per pound; heavy yellow brass, 15c. per pound; light brass, 11 to 11½c. per pound; tea lead, 4¼ to 4½c per pound; heavy lead, 4½c. per pound; scrap zinc, 4½c. per pound; No. 1 wrought, $17 per ton; No. 2 wrought, $6 per ton; No. 1 machinery, $18 per ton; stove plate, $14 per ton; old rubber, 11½c. per pound; mixed rags, 1 to 1¼c. per pound.

Toronto Metal Markets

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, March 15, 1907

While there is a good business being done in most metals, matters are running along with little change. English pig iron is quoted a little easier, but Canadian furnaces are still booked ahead for months and no iron can be procured for present delivery without paying a premium. The market in the States keeps firm.

Copper continues very scarce and last week's advances are held to firmly. As illuserating the condition in foreign markets the American Metal Market Report says that a new high record was made in London last Monday and for deliveries in three months from now, buyers in London are paying for G.M.B. £111 10s. equal to about ¼c. per pound more than the spot price. G.M.B., means, "Good merchantable brands," and is the term under which the London copper speculative trading is done. The market continues to demonstrate its remarkable intrinsic strength, in the face of conditions in the American and foreign stock markets that ordinarily would create lack of confidence and ultra conservatism. But present untoward conditions have no effect on copper or the copper trade here or abroad. It does not enable our producers to get any more copper mined and smelted, and does not seem to affect orders for the manufactured article. The question is how to supply enough metal to meet the demands of the world.

Tin has been fluctuating in outside markets, owing to speculation, but the local continues firm. Business in galvanized iron and black sheets is very good while lead continues to manifest great strength. Zinc spelter is a little weaker but prices remain as before. Old materials show a few changes, brass being higher and iron and rubbers a trifle weaker.

PIG IRON—Recent weakness in English markets has made slightly lower prices possible on English iron, but the market is in good condition. Hamilton and Midland are off the market, Radnor is quoted at $33 at furnace, Londonderry at $26, Middlesborough No. 1 at $23.50, and Summerlee No. 1 at $25.50 f.o.b. Toronto.

BAR IRON—Bar iron is moving freely, with prices steady. We quote: $2.30 f.o.b., Toronto, with 2 per cent. discount.

TIN—Prices are unchanged at 15c for ingots. The base on charcoal plates continues at $6.50.

SHEETS AND PLATES — Canada plates and galvanized iron are being bought freely and black sheets are also in fair demand. Prices keep firm with no sign of weakness evident.

BRASS We stell quote 30 cents per pound on sheets.

COPPER—The market retains its firmness in spite of last week's advance and we continue to quote: Ingot copper, $27 per 100 lbs., and sheet copper, $35 per 100 lbs.

LEAD—There is talk of even higher prices and the firmness of the market gives warrant for this feeling. The same quotations stand: $5.50 for imported pig and $5.75 to $6 for bar lead. For sheet lead $7 is asked.

ZINC SPELTER—Spelter is reported weaker, but we still quote:—7½c per lb. for foreign and 7c per lb. for domestic. Sheet zinc is quoted at 8½c in casks, and 8½c in part casks.

ANTIMONY — Market is fairly strong with the ruling price 27c. per pound.

OLD MATERIAL — Buying prices are: Heavy copper and wire, 20c. per lb.; light copper, 18c per lb.; heavy red brass, 18½c. per lb.; heavy yellow brass, 15c. per lb.; light brass, 12c per lb.; tea lead, $4.25 per 100 lbs.; heavy lead, $4.40 per 100 lbs.; scrap zinc, 4½c. per lb.; No. 1 wrought iron, $13; No. 2 wrought, $8, machinery cast scrap, $17.50; stove plate, $12; malleable and steel, $8.50, old rubbers, 11c. per pound; country mixed rags, $1 to $1.25 per 100 lbs., according to quality.

COAL—Standard Hocking soft coal, f.o.b. mines, lump, $1.50, ¾-in., $1.40, run of mine, $1.30; nut, $1.25; N. & S., $1; P. & S. 85c. Youghiogheny soft coal in

London, Eng., Metal Markets

From Metal Market Report, March 13, 1907.

PIG IRON—Cleveland warrants are quoted at 53s. 10½d., and Glasgow standard warrants at 53s., making prices as compared with last week on Cleveland warrants 9d. lower, on Glasgow warrants 1s. lower.

TIN—Spot tin opened firm at £192 5s., futures at £191, and after sales of 260 tons of spot, and 180 tons for futures closed easy at £192 5s. for spot, and £190 15s. for futures, making price compared with last week 10s. higher on spot and unchanged on futures.

COPPER—Spot copper opened steady at £110 7s. 6d., futures £111 12s. 6d., and after sales of 500 tons of spot and 300 tons of futures, closed quiet at £110 7s. 6d for spots, and £111 10s. for futures, making price compared with last week 17s. 6d. higher on spot and 17s. 6d. higher on futures.

LEAD—The market closed at £20, making price as compared with last week £3 17s. higher.

SPELTER—The market closed at £26 10s., making price as compared with last week 10s higher.

British Columbia News

By G. S. B. Perry.

Vancouver, B.C., March 8, 1907.

New industries, in fact all industries, established in Vancouver are to be encouraged by exemption from taxation on all improvements, as buildings, machinery, where the industry is strictly a manufacturing industry. This action is the result of some agitation through the Markets and Industries Committee, a special committee of the city council which has been engaged in promoting and extending business in the city. It was first proposed to limit the industries receiving the benefit to those that employed white labor only. On it being pointed out by one member, a mill man, that of a monthly pay roll of $15,000 he only paid some $4,000 or $5,000 to Orientals, the limitation was removed and the recommendation unanimously adopted by the committee.

Water rates are to be reduced to manufacturing industries also. The present rate is 7c. per hundred cubic feet, and it is proposed to reduce this to 3c. per hundred cubic feet. One gentleman presented a bill which his company had paid, amounting to $227.-89 for one month, and then but three boilers were in operation. In his new plant fourteen boilers were to be installed, and at the same rate the cost would be appalling. The fear was advanced in this, as in the question of taxation, that industries would seek suburban locations, thus depriving the city of the benefit of their presence and the distribution of their wage sheets, and other disbursements.

The big Blue Funnel liner Titan, 500 ft. long, and 9,060 tons gross, reached port last Saturday from Liverpool. She first discharged cargo at Victoria and then came on here. The vessel had 2,100 tons of miscellaneous merchandise for Vancouver, principally metals and cement.

The lumber manufacturers will not by any means let the investigation of allegations regarding the industry go by default. When the House of Commons select committee begins its sittings on March 15th, the lumbermen will be on hand with data to show increased cost all along the line, from the logging camps to the loading in cars. The advances in wages average from 50c. to $1 per day over rates formerly in effect. At the same time, men are hard to get. The shortage in the number of men who can be secured for the work is also a serious factor as it has had its influence in putting up the price of logs where they are bought in the open market. There are not nearly enough logs now being marketed to keep the price down.

Coal measures on Queen Charlotte Islands are to be exploited. A syndicate of Victoria men has negotiated a sale of several thousand acres at $20 per acre. Extensive tests are to be made during the summer.

Coal operators at Edmonton, where a number of mines of good quality lignite coal have been opened for years, are out with a resolution endorsing the recommendation of the Edmonton Board of Trade that freight rates on coal be reduced during the months of August and September. It is pointed out that at that time many cars are coming west loaded with machinery and other merchandise. These are not in demand for return shipments and go back empty. Later on, the wheat movement blocks the single track railways, and coal cannot be moved, so that if the coal were got out earlier than the wheat it could be stored at various points along the line. This would serve a double purpose as farmers marketing their wheat could take home a stock of coal. It is the aim that the experience of the winter just ending shall not be repeated.

The British Columbia-Mexican steamer service is now in full running order direct from the ports of this province to Salinas Cruz, the Pacific terminal of the Tehuantepec Railway, giving direct connection from Pacific to Atlantic across the Isthmus. Three steamers, the Woodford, the Georgia and the Lonsdale have been acquired. The first to reach B. C. ports will be the Georgia, which is due to sail from Salinas Cruz on March 15 for Victoria and Vancouver.

Water power for electric generation continues to excite interest in this province. Many streams of considerable dimensions in the coast district have been recorded for power purposes and others are being sought. It is stated that the B. C. Electric Railway Co., owning and operating all electric lines at Victoria, Vancouver and New Westminster, may, if sufficient power can be secured, electrify the E. & N. Railway, now owned by the C.P.R. Co., and running from Victoria to Nanaimo. The change which electric power would make, in case the electric company and the C.P.R. came to terms, can hardly be calculated. A district now sparsely settled, adaptable for occupation by a large number of people on small holdings, is served by the railway, and rapid and frequent transit as provided by an electric line, would make a vast improvement and provide for the numerous incoming settlers who wish to locate on land.

On the mainland several large water powers have been recorded and some of them are to be developed this year.

N.S. Hardware Trade News

Halifax, N.S., March 12, 1907.

The travelers who are now on the road are sending in orders for spring lines, and the opening of the business appears unusually bright. Industrial development is expanding in many districts and everything gives promise of a big trade. All lines of goods are very firm, and some advances are looked for, but at the present time the jobbers have not increased their prices very materially.

* * *

The weather is very favorable for lumbering operations, and some record cuts are anticipated. The Sissiboo Lumber Company is cutting over a million feet per month.

* * *

D. G. Kirk, of Antigonish, has added another to his list of stores, having recently purchased the store, merchandise, etc., from W. M. Strople, on Bayfield road. A new stock of goods will be ordered and Mr. Strople will continue the management of the store.

* * *

Bruce McKay, of Parrsboro, formerly a member of the firm of the Fox River Lumber Company, will leave shortly for Calgary, Alta., where he will engage in business.

* * *

W. Curry, of Rhodes, Curry & Co., Amherst, has gone on a tour of the West Indies.

* * *

James Dempster, proprietor of Dempster's Mills, Halifax, and Robie Davidson, lumber merchant, both of Halifax, have gone to the West Indies for the benefit of their health.

* * *

R. W. W. Buck, of St. John, representing the Dayton Computing Scale Co., of Ohio, is touring Prince Edward Island, in the interests of his firm.

* * *

On the completion of the Dominion Iron and Steel Company's Bessemer converter at Sydney, the company expect to increase its output by five or six thousand tons a month. It is expected that it will be in operation next month.

MALLEABLE IRON DUTIES REVISED.

The Government has backed down from the position it originally took regarding the malleable iron industry. All malleables that were 25 per cent. before will now be dutiable at 27½ per cent., thus putting the industry in a better position than before. Malleable castings, formerly 17½, are now 20 per cent. The Globe commenting on the subject editorially says that a prominent Ontario manufacturer negotiated unsuccessfully with no less than five malleable iron founders in the province, who were unable to book orders, as the capacities of the foundries was not equal to any greater output. An

application to the Finance Minister for leave to import during the stringent season was refused, as he has no authority to levy or remit except as the Government approves. Our foundries are taxed to their utmost capacity and a demand unsupplied will not last.

An important change in the tariff is in the matter of sprocket chains, formerly dutiable at 15, 17½ and 20 per cent., which now go on the free list.

PRESENTATION AT WINNIPEG.

Fred A. Sermon has resigned his position with The Miller-Moorse Hardware Co., Winnipeg, and is going to St. Louis to take a position with a big hardware house there. A little less than two years ago Mr. Sermon came to Winnipeg from Montreal, where he had been with the firm of A. Macfarlane & Co., he thus has a wide acquaintance among the hardware trade of Canada.

The other night Mr. Sermon was entertained at the Mariaggi Hotel, Winnipeg, by a number of his friends and business associates. Mr. Fred A. Reinhardt occupied the chair and in a few well chosen remarks expressed the sentiments of the company when he said that their regret in losing Mr. Sermon's presence among them was only surpassed by the joy it afforded them to know that in making this move he was climbing one step higher on the ladder of commercial importance. A pleasant evening was spent and Mr. Sermon carries with him the very best wishes of his many friends in Winnipeg.

TO TEST STEEL BOX CARS.

After experimenting with steel flat cars and steel passenger, postal, baggage and Pullman cars, railroad officials are devoting their attention to steel box cars, and it is likely contracts will be awarded shortly by some of the leading railroads of the country for a large number of such cars. Local railroad men are in the west inspecting the new steel box car built by the Union Pacific Railroad Company, which is the first car of its kind ever constructed. One or two other roads which have been experimenting with the steel box car have instructed their motive power officials to watch carefully the experiments with the new car built by the Union Pacific, and upon the result of this investigation will depend largely what action is to be taken by the various roads in the construction of the new equipment.

The new box car is regarded by motive power experts as the extreme development of the steel car, and they think it strange that the experiment of building a box car with a steel body has not been tried before, for it is only a short step from the high steel gondola to the box car. Some railroad officials have not thought it important that the steel construction should be carried above the underframe, but they now realize that this can be done to good advantage.

It is claimed that the new box car weighs 37,800 pounds, or about 12 per cent. less than the standard box car used on the Harriman lines. The two cars have practically the same dimensions, the difference in cubic capacity being only about 50 cubic feet. This saving of weight is accomplished largely by using only one centre sill and designing the side frames as efficient plate girders of considerable length.

The body framing of a wooden box car has always been more or less of a failure as a truss to carry that part of the load between bolsters. The combination of green timber and imperfect fitting usually results in a side frame, which carries little or none of the load after a few months of service, but the steel box car, the sides having all the members rigidly attached to each other, supports a great deal of the load which would otherwise be carried by the longitudinal sills.

Railroad officials realize that it will cost more to repair a steel box car than the present equipment in case the car is damaged, but they figure that repairs will not be required nearly so often.

MANITOBA HARDWARE AND METAL MARKETS

Market quotations corrected by telegraph up to 12 a.m. Friday, March 15, 1907.)

F. R. Munro, Western Manager HARDWARE AND METAL, Room 511, Union Bank Building, Winnipeg, Man.

Wholesale houses still complain of the difficulty in getting through shipments from Fort William to western points, and report that many cars of hardware are held up in that town.

An advance of five cents per gallon in linseed oils and a decline in petroleum are the features of the market this week. The discount on copperware is now 25 per cent.

LANTERNS—Cold blast, per dozen, $6.50; coppered, $8.50; dash, $8.50.

WIRE—Barbed wire, 100 lbs., $3.22½; plain galvanized, 6, 7 and 8, $3.70; No. 9 $3.25; No. 10, $3.70; No. 11, $3.80; No. 12, $3.45; No. 13, $3.55; No. 14, $4.00; No. 15, $4.25; No. 16, $4.40; plain twist, $3.45; staples, $3.50; oiled annealed wire, 10, $2.96; 11, $3.02; 12, $3.10; 13, $3.20; 14, $3.30; 15, $3.45. Annealed wires (unoiled) 10c. less; soft copper wire, base, 36c.; brass spring wire, base, 30c.

HORSESHOES—Iron No. 0 to No. 1, $4.65; No. 2 and larger, $4.40; snowshoes, No. 0 to No. 1, $4.90; No. 2 and larger, $4.65; steel, No. 0 to No. 1, $5; No. 2 and larger, $4.75.

HORSENAILS — Capewell brand, quotations on application. No. 10, 20c.; No. 9, 22c.; No. 8, 24c.; No. 7, 26c.; No. 6, 28c.; No. 5, 32c.; No. 4, 40c., per lb. Discounts: "C" brand, 40, 10 and 7½ p.c.; "M" brand and other brands, 55 to 60 p.c. Add 15c. per box.

WIRE NAILS—$2.85 f.o.b. Winnipeg, and $2.40 f.o.b. Fort William.

CUT NAILS—Now $2.90 per keg.

PRESSED SPIKES — ¼ x 5 and 6, $4.75; 5-6 x 5, 6 and 7, $4.40; ⅜ x 6, 7 and 8, $4.25; 7-16 x 7 and 9, $4.15; ½ x 8, 9, 10 and 12, $4.05; ⅝ x 10 and 12, $3.90. All other lengths 25c. extra net.

SCREWS.—Flat head, iron, bright, 85 and 10; round head, iron, 80; flat head, brass, 75 and 10; round head, brass, 70 and 10; coach, 70.

NUTS AND BOLTS — Bolts, carriage, ⅜ or smaller, 60 and 5; bolts, carriage, 7-16 and up, 55; bolts, machine, ⅜ and under, 55 and 5; bolts, machine, 7-16 and over, 55; bolts, tire, 65; bolt ends, 55; sleigh shoe bolts, 65 and 10; machine screws, 70; plough bolts, 55; square nuts, cases, 3; square nuts, small lots, 2½; hex nuts, cases, 3; hex nuts, small lots, 2½ p.c. Stone bolts, 70 and 10 p.c.

RIVETS — Iron, 60 and 10 p.c.; copper, No. 7, 43c., No. 8, 42½c.; No. 9, 45½c.; copper, No. 10, 47c.; copper, No. 12, 50½c.; assorted, No. 8, 44½c., and No. 10, 48c.

COIL CHAIN—¼ in., $7; 5-16, $5.35; ⅜, $4.75; 7-16, $4.50; ½, $4.25; 9-16, $4.20; ⅝, $4.25; ¾, $4.10.

SHOVELS—List has advanced $1 per dozen on all spades, shovels and scoops.

HARVEST TOOLS—60 and 5 p.c.

AXE HANDLES—Turned, s.g. hickory doz., $3.15; No. 1, $1.90. No. 2, $1.60; octagon, extra, $2.30; No. 1, $1.60.

AXES — Bench axes, 40; broad axes, 25 p.c. dis. off list; Royal Oak, per dozen, $6.25; Maple Leaf, $8.25; Model, $8.50; Black Prince, $7.25; Black Diamond, $9.25; Standard flint edge, $8.75; Copper King, $8.25; Columbian, $9.50; handled axes, North Star, $7.75; Black Prince, $9.25; Standard flint edge, $10.75; Copper King, $11 per dozen.

CHURNS.—45 and 5; list as follows: No. 0, $9; No. 1, $9; No. 2, $10; No. 3, $11; No. 4, $13; No. 5, $16.

AUGER BITS—"Irwin" bits, 47½ per cent., and other lines 70 per cent.

BLOCKS—Steel blocks, 35; wood, 55.

FITTINGS—Wrought couplings, 60; nipples, 65 and 10; T's and elbows, 10; malleable bushings, 50; malleable unions, 55 p.c.

HINGES—Light "T" and strap, 65.

HOOKS—Brush hooks, heavy, per doz., $8.75; grass hooks, $1.70.

STOVE PIPES—6-inch, per 100 feet length, $9; 7-inch, $9.75.

TINWARE, ETC. — Pressed, retinned, 70 and 10; pressed, plain, 75 and 2½; pieced, 30; japanned ware, 37½; enamelled ware, Famous, 50; Imperial, 50 and 10; Imperial, one coat, 60; Premier, 50; Colonial, 50 and 10; Royal, 60; Victoria, 45; white 45; Diamond, 50; Granite, 60 p.c.

GALVANIZED WARE—Pails, 37½ per cent.; other galvanized lines 30 per cent.

CORDAGE — Rope, sisal, 7-16 and larger, basis, $11.25; Manilla, 7-16 and larger, basis, $16.25; Lathyarn, $11.25; cotton rope, per lb., 21c.

SOLDER—Quoted at 27c. per pound. Block tin is quoted at 45c. per pound.

POWER HORSE CLIPPERS—"1902" power clipper, $12; "Twentieth Century" $6. "1904" sheep shearing machines, $13.60.

WRINGERS—Royal Canadian, $35; B.B., $39.75, per dozen.

FILES—Arcade, 75; Black Diamond, 60; Nicholson's, 62½ p.c.

LOCKS—Peterboro and Gurney, 40 p.c.

BUILDING PAPER—Anchor, plain, 66c.; tarred, 69c.; Victoria, plain, 71c.; tarred, 84c.

AMMUNITION, ETC.:—Cartridges, rim fire, 50 and 5; central fire, 33½ p.c.; military, 10 p.c. advance. Loaded shells: 12 guage, black, $16.50; chilled, 12 gauge, $17.50; soft, 10 gauge, $19.50; chilled, 10 gauge, $20.50. Shot, ordinary, per 100 lbs., $7.75; chilled, $8.10; powder, F.F., keg, Hamilton, $4.75; F.F.G., Dupont's, $5.

IRON AND STEEL—Bar iron basis, $2.70. Swedish iron basis, $4.95; sleigh shoe steel, $2.75; spring steel, $3.25; machinery steel, $3.50; tool steel, Black Diamond, 100 lbs., $9.50; Jessop, $13.

SHEET ZINC—$8.50 for cask lots, and $9 for broken lots.

PIG LEAD—Average price is $6.

AXLE GREASE—"Mica," 1-lb. tins, $11 per gross; 3-lb. tins, $2.40 per doz.;

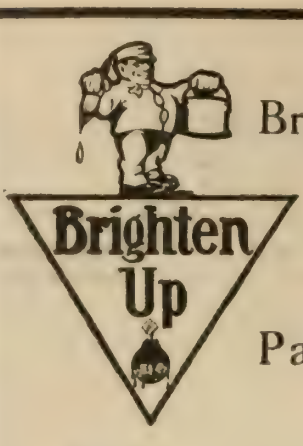
United States Metal Markets

From the Iron Age, March 14, 1907.

The monthly pig iron statistics show that the output for February, a short month, of coke and anthracite pig iron amounted to 2,045,068 tons, as compared with 2,205,607 gross tons in January. This is an increase of 1,880 tons daily.

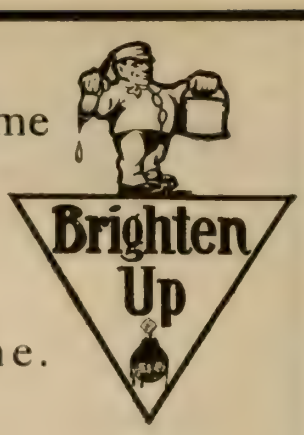
In pig iron both sides maintain a defensive attitude, and there is comparatively little business doing for delivery during the second quarter.

The pipe and tube trade is in an exceptional position. The National Tube Company has been forced to withdraw prices, and has notified the trade that no more orders will be booked for shipment prior to June 1, prices to be fixed at the time of shipment of the order. Outside mills have withdrawn their prices and are quoting an advance of $2 to $4 per ton.



The sheet and tin plate mills are running under tremendous pressure. There is some talk of advances in prices, but it is well understood that the leading interest is opposed to any such action.

The implement makers and the mills rolling bars and merchant shapes are still negotiating over the fixing of prices on season contracts. Last year the mills made concessions, but they show little disposition to do so this year.



From the Iron Trade Review, March 14, 1907.

Despite the absence of noteworthy transactions, the iron and steel market gained considerable strength during the week. Structural fitters are being urged by the steam roads to hurry forward material. The structural mills of the Carnegie Steel Co. this week received specifications from the American Bridge Co. for 26,000 tons of material for rolling within the next sixty days, and plates for 1,000 steel cars were placed by the western plant of the Pressed Steel Car Co.

The demand for wire nails has reached abnormal proportions, most of the mills being from four to six weeks behind in their deliveries. So heavy were the requirements of jobbers during the winter months that few of the manufacturers were able to accumulate stocks for the spring trade, while shipments are again be pro-rated to meet the needs of the greatest number. An early advance, not only on wire nails, but wire products generally, is anticipated, some of the independent mills already asking premiums for prompt deliveries.

Brighten-Up Time
is
Sherwin-
Williams
Painting Time.

THE spring season—painting time—is rapidly approaching. Already the householder and housewife are laying plans for cleaning and renovating. They will make extensive use of paints and varnishes in brightening up. Nothing brightens everything so well at such a slight expense. The house can be made to look like new, inside and out.

Are you prepared for the demand for ***Sherwin-Williams Specialties*** that is sure to come? You should not let this business get away from you. You want the profit and the trade. The call will come for ***Sherwin-Williams Paints and Varnishes*** because they are the real brighten-up products. Nothing on the market is as satisfactory. There is a Sherwin-Williams product for every purpose.

Write us today and be ready when the season opens.

BUILDING AND INDUSTRIAL NEWS

HARDWARE AND METAL would be pleased to receive from any authoritative source building and industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

A waterworks plant will be erected at Welland, to cost $70,000.

A new Methodist church is to be erected at Victoria at a cost of $25,000.

Work has been commenced on the addition to the Galt Malleable Iron works.

The Berlin (Ont.) Hotel Co. has been incorporated, with a capital of $250,000.

Wentworth County Council will erect a House of Refuge at Hamilton, to cost $40,000.

The W. R. Brock Co., Calgary, will open in a few weeks their large new warehouse.

The Washburn Crosby Co., of Minneapolis, will erect an 8,000-barrel mill at Keewatin.

The congregation of Central church, Hamilton, will build a new church, to cost $165,000.

The Dominion Smelters Co. will build a customs smelter at Parry Sound, to cost $1,500,000.

A new Anglican church will be erected at Fort William to cost between $35,000 and $40,000.

The Merchants Bank of Canada will establish another branch at Montreal to cost $160,000.

Jas. Coristine Co., Montreal, will erect a seven-storey office building, to cost about $82,000.

Public Works Department, Ottawa, is asking for tenders for erection of a post office at Fernie, B.C.

A company is being formed for the purpose of building a skating rink at Thornhill, to cost $1,500.

Kelly Bros. & Co., Kenora, have received the contract to erect a $100,000 round-house for the C.P.R. at Kenora.

Bryan & Henderson have been awarded the contract for the erection of the Carnegie Hall at Lucknow, to cost $9,475.

Damage to the extent of $600 was done to the brass works of W. Coulter & Sons, Toronto, on Tuesday, March 12.

The Carnegie library, municipal buildings and fire hall, Sault Ste. Marie, were completely destroyed by fire last week.

The Lethbridge, Alta., Knights of Pythias, in conjunction with a Calgary syndicate, will erect a new brick block in Lethbridge.

Smith Bros. & Wilson have been awarded the contract for the erection of Ald. T. Wilkinson's new warehouse in Regina to cost $12,000.

The Polson Iron Works have been awarded the contract for the construction of a $12,000 hydraulic pump for the city of Toronto.

J. & J. McDiarmid Co. has been awarded the contract for the erection at St. Bonafice, Man., of a new post office, to cost $20,255.

S. F. Whitham, Brantford, contractor for the new Normal school there, has taken out a permit for the building, which will cost $52,000.

The L. & N.O. railway commission has contracted to the Montreal Locomotive Works for six new locomotives, the aggregate cost to be $125,000.

The T. Eaton Co., Toronto, have been granted a permit for the erection of an eight-storey building, at the corner of Yonge and Albert streets.

The Northern Turpentine Co. has been incorporated with a capital of $250,000 for the establishment of a large turpentine plant at Killaloe, Ont.

W. R. Brock & Co., Toronto, have been granted a permit for the erection of a two-storey addition to the Piper street wing of their factory.

A cordage company will be established at Valleyfield, Que., arrangements having been made with the Montreal Cotton Co. for supply of electric power.

An immense cement plant will be erected at Kendall, B.C., to cost $1,000,000, employing 700 men, and having a daily capacity of 5,000 barrels.

The Vancouver Board of Trade has passed a resolution calling on the Dominion Government to build a 250,000-bushel elevator in that city to store Alberta wheat.

The Tidman Silver and Aluminum Co., Toronto, has been incorporated, with a capital of $40,000, to manufacture and deal in aluminum ware, silverware and metal novelties. Provisional directors of the company are: F. A. Lewis, E. Gillis and M. W. Mayhr.

Two Guelph men, W. W. Hadley and John Grey, have secured options on zinc ore lands in Frontenac, from Richardson & Sons, and will build a smelting and refining plant, provided the council grant them land and exemption from general taxes for ten years.

A bill to give the Dominion Iron and Steel Company the right to form subsidiary companies to carry on any trade or business within the limits of the company, and to guarantee the stock of these companies, has been introduced in the Nova Scotia Legislature.

The King Electrical Works, Montreal, has been incorporated, with a capital of $30,000, to carry on the business of manufacturers of and dealers in electrical machinery, brass, copper and other metals. The promoters are: E. F. Surveyer, A. Chase-Casgrain, J. W. Weldon, E. M. McDougall, and S. J. LeHuray, all of Montreal.

The Imperial Steel & Wire Company offer to construct at Hamilton a wire drawing mill with a capacity of one hundred tons of wire daily, at an approximate cost of $200,000, if the city will guarantee the principal and interest of the first $100,000 and grant a site of ten acres of land with a river frontage of 150 feet.

One of the new factories lately contributed to Canada by Uncle Sam is the Anthony Fence Company, of Walkerville, Ont. This new concern is an outgrowth of a similar business established at Tecumseh, Michigan, and although one of the youngest of American fence companies, having been under way only about three years, it now ranks as one of the most important of its kind. The Walkerville business is financed largely by Canadians.

B. C. TRADE NEWS.

By May 1st it is expected that the new terminal city of the coast, Prince Rupert, is to have its first electric light plant in operation. The B. C. Tie & Timber Co., of which D. H. Hays, brother of President Hays, of the G.T.P., is manager, is installing at its mill a plant capable of generating electricity for 1,200 lights. Tris will be run by steam power, using the waste from the saw mill for fuel. The Canadian General Electric Co. is supplying the plant.

* * *

A pole line from Vancouver to the location of the Stave Lake Power Co.'s generating plant, a distance of over 38 miles, is to be surveyed this year. The company is now receiving tenders for turbines and electrical equipment sufficient for the generation of ten thousand H.P. This portion of the development will be completed this season, and the transmission of power, it is expected, will be possible before many months. The entire installation will develop much more than the initial 10,000 h.p.

* * *

There will be two or more coal mines added to the shipping list in B.C. this year, it is likely, as a reslt of the establishing of rail transportation into the Similkameen and Nicola districts. The Diamond Vale Coal & Iron Co. expects to be shipping by May 1st, its property being near Coutlee on the Spences Bridge-Nicola branch of the C.P.R. The company is about to take over this line from the contractors, who have been operating it under construction. The last few miles, added last season, have now been completed. The inspection visit of the representative of the Department of Railways is all that is now necessary to allow of the road being formally taken over.

* * *

The Alien Labor law of Canada has been demonstrated for once, and the unlucky subject of the demonstration is S. A. Mundy, the millionaire head of the Mundy Lumber Co., which has mills at Three Valley Lake, a few miles west of Revelstoke on the main line of the C.P.R. Mr. Mundy is an American, a former resident of Bradford, Pa. In attempting to operate his mill Mr. Mundy found himself up against the shortage of labor, which is chronic in this province. He inserted advertisements in papers back in the Quaker state offering not only to pay transportation of willing laborers, but provide them a lunch basket as well if they would go to work in his mill in far B. C. He secured several employes in this way, and the trouble began when an employe getting higher rate of pa was let out to make room for all those brought in. He instigated the action, and a decision has just been handed down fining Mr. Mundy $200 and costs.

It was held that the advertisement offering to engage men under the terms stated, formed, together with the subsequent acts of sending men on the basis offered, a "contract" within the meaning of the Act. The trial judge, Justice Morrison in imposing the smaller penalty took occasion to comment that he was not sure, from the course defendant adopted, that he was aware of the provisions of the Alien Labor Act, or had deliberately ignored it. This is about the first case in which a conviction under the Canadian Alien Labor law has been secured. The difficulty, as a rule, lies in proving that a contract has been entered into in a foreign country.

* * *

One of the largest timber and milling transfers made in this province for many months has just been announced, M. Carlin, F. W. Jones and Hugh Sutherland have sold their one-third interest in the Columbia River Lumber Co., for close to one millions dollars cash. The purchasers are American capitalists, headed by J. D. McCormick, of Duluth. This gentleman will in future reside in Vancouver. The company's principal mill is at Golden, B.C., and they have several other [illegible] on the main line of the C.P.R. between there and Kamloops. Wm. Mackenzie, of the Canadian Northern Railway, holds the other two-thirds interest in the property.

* * *

Car chortage is causing trouble among the shingle men, who have been trying all the month of February to get down to business after their six weeks' close down. But car shortage is not all. They cannot get shingle bolts, most of the mills cutting from bolts instead of from large timber. There are no heavy stocks on hand, and if more timber is not soon secured the stocks will remain light.

A NEW MINING JOURNAL.

The first number of the Canadian Mining Journal has just been issued. This journal takes the place of what was formerly known as The Canadian Mining Review, which has been incorporated with the new paper. The front cover contains an engraving of a beautiful specimen of Cobalt nickel silver ore. The articles throughout are entertaining, well illustrated, and the paper should secure a large circulation.

NEW PATENTS.

O. Katsenberger, San Antonio, Texas, has recently secured a patent on a door lock arranged so as to be opened by a key from the outside of the door and also to be opened from the inside without employing a key.

C. F. Smith, New York City, has secured a patent on a new tin dipper. The inventor overcomes the objection of not being able to dip milk from an almost empty can, by providing means to swing the cup to a vertical or horizontal position, a means operable by the hand holding the dipper.

CINCINNATI, O., U.S.A.

OUR LETTER BOX

Correspondence on matters of interest to the hardware trade is solicited. Manufacturers, jobbers, retailers and others are urged to express their opinions on matters under discussion.

Any questions asked will be promptly answered. Do you want to buy anything, want some shelving, a safe, showcases, any special line of goods, anything in connection with the hardware trade? Ask us. We'll supply the necessary information.

Fire Escape Ladders.

The Coaticook Hardware Co., Coaticook, Que., writes: "Would you kindly let us know who manufactures iron fire escape ladders?"

Answer—Last week we gave a list of manufacturers of iron fire escapes and ladders. The Dennis Wire and Iron Works, London, however, are the most extensive manufacturers in Canada, their brands being sold throughout the country from Halifax to Vancouver, and their men being engaged at present at Calgary erecting fire escape and iron stairway. Since the beginning of the year shipments have been made to Vancouver, B.C., Rimouski, Que., Stanstead, Que., Edmonton, Alta., Brandon, Man., Halifax, N.S., and Wolfville, N. S.

Boot Calks.

E. Chown & Son, Kingston, write: "Can you tell us who makes the Sampson Boot Calks? We are anxious to purchase some and would like to know where they are made."

The "Samson" brand of boot calks, shovels, etc., is marketed through H. S. Howland, Sons & Co., Toronto.

Cement Tile Moulds.

John Hillhouse, Clifford, Ont., writes: "Can you direct me to makers of moulds for cement tile?"

Answer—We do not know of any Canadian manufacturers of cement tile moulds, but H. C. Baird & Son, Parkhill, Ont., are makers of moulds for common tile.

Problem in Discounts.

Fred C. Lariviere, of Amiot, Lecours & Lariviere, Montreal, writes: Problem: A buys at 70, 10 per cent. off price list; B buys at 60, 10 per cent. off price list.

1st question—How much cheaper does A buy his goods than B? Answer—A buys his goods 25 per cent. cheaper than B, or 33 1-3 per cent. if his own cost is considered.

2nd question—How much dearer does B pay for his goods than A? Answer—B pays 33 1-3 per cent. dearer than A, or 25 per cent., if his own cost is considered.

Furniture Manufacturers.

W. Holborn, Sutton West, writes: "Would like you to send me list of furniture manufacturers in Ontario."

Answer: The following are manufacturers in Ontario of furniture: Ellis Furniture Co., Ingersoll; M. Erb & Co., Berlin; John Ferguson & Sons, London; Charles Rogers & Sons Co., Toronto; Snyder, Ross & Co., Waterloo; Canada Furniture Manufacturers, Toronto. The entire list is too long for insertion here, but the above are among the most important.—Editor.

Paint, Oil and Brush Trades

PROFITS IN PREPARED PAINT

By S. W. F. Davis, of Sanderson Pearcy & Co., Toronto.

In the first place, it is necessary to get the agency for a pure, prepared paint, which you can rely on, as mixed paint is one of the most profitable lines handled in a hardware store. Try and instil in the minds of your clerks how to talk intelligently on mixed paint. The chief fault is in the salesman not knowing his business.

A customer comes in and asks for a quart, or a half gallon of paint, as the case may be, and finds he has not enough to finish the job. Then he comes for another pint and finds the color a little different.. Then there is a complaint and he says the paint is no good. If the salesman had known his business he would have sold him enough in the first place.

Always sell a little more than the customer requires and be sure and tell him to keep his paint well stirred. Shake the tin of paint thoroughly, and if the customer is not going to use it at once have him turn it upside down and let it stand thus until it is required. On opening it should be thinned down and stirred thoroughly until it is of equal body throughout. Also advise the customer to stir it occasionally while using to keep the pigments thoroughly in suspension.

Use a good brush and spread evenly allowing ample time to dry between first and second coats, the time depending greatly on the weather, and whether for inside or outside use. The more coats applied the better, but be sure the paint is thin or it is sure to peel off. Shellac all knots and sappy wood as heat in time will otherwise draw sap through the paint.

Never paint over wood that is not perfectly dry. Do not wash a floor before painting. Sweep it and if there are any grease spots take benzine or turpentine and clean them off, as paint will not dry over grease, water or pitch. Do not put paint on too thick or in damp or rainy weather.

It is the "mystery mixtures" that have prejudiced many minds against prepared paints. "The burned child dreads the fire."

Scientific Paint Making.

At the outset it should be explained that paint making is not a mere mixing of solids and liquids, but a scientific process involving technical knowledge, skilled labor and expensive and powerful machinery. Good paint is made chiefly of linseed oil, in which solid coloring matter or pigments are ground — not simply mixed. The pigments serve a triple purpose—they thicken the paint (oil alone would run off), they beautify surfaces, and protect the oil from the sun and rain. Turpentine, dryers, varnish, &c., are added to paint to serve a special, rather than a general purpose.

Linseed oil is so important a part of paint that it is often called "the life of paint." It may well be so regarded, for just so long as the oil lasts the paint has life. When the oil, from chemical action or long exposure, is no longer present, the paint is dead. Dead paint, a lustreless, dry, chalky coating, has no protective qualities and disintegrates rapidly. The pigments have no cohesive attraction after the decomposition of the oil.

The property which gives linseed oil its peculiar paint value is that it absorbs oxygen from the air when it is exposed in thin films, as in painting. This film, from oxidation, begets the valuable properties of being practically neutral in its reaction, more or less transparent, and quite elastic. The property of absorbing oxygen is increased by heating linseed oil, and it is still further increased by adding to the oil while it is being heated, certain bodies, known as dryers. While boiled oil dries more quickly than raw oil, and leaves a more lustrous surface, the film is less elastic and is liable to crack.

Anything added to the paint to unduly hasten its drying will destroy the elasticity and toughness of the oil film. Therefore all dryers should be used sparingly and with caution.

Furthermore, any pigment chemically active, will not make an enduring paint. If used at all, they should be in combination with more stable or inert pigments, to neutralize as far as possible, the chemical action on the oil.

It is this chemical activity that lessens to a marked degree the value of white lead as a paint pigment. Strictly pure white lead carries comparatively little oil, and the little it does carry soon ceases to be linseed oil, by reason of the chemical change that takes place when the lead and oil are united and exposed to the elements. To correct this serious defect in the lead and oil mixture, modern paint makers have added various pigments in varying formula, and years of experience have proven that of these combinations those

A Claim and the Proof

DO YOU KNOW whether the Paints you sell are the best your money will buy? Have you anything to go by except the seller's say so?

It is easy enough to "claim" that a certain brand of Paints is the best. It is quite another proposition to "substantiate" the claim.

The basis of our claim for **"ENGLISH" LIQUID HOUSE PAINTS** is the fact that the only White Lead used in their manufacture is **BRANDRAM'S B. B. GENUINE**, for close on to two centuries the world's standard **WHITE LEAD.**

Our customers have sold these Paints, both under this name and the old name of "Anchor" for many years, and they keep on selling them, because their customers find they give perfect satisfaction. Which fact further substantiates our claim.

PAINT AND OIL MARKETS

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, March 15, 1907

A splendid activity is maintained in all lines of colors, paints and varnishes.

The duty of 10 cents per bushel imposed on flaxseed last week, naturally raised the cost of linseed oil 5 cents per gallon, and the increase took effect immediately.

It is only natural to assume that the higher price will effect all productions in paints and varnishes. In fact already the leading manufacturers are conning their lists with special interest, in order to mark up future quotations. It is not necessary to tell even a novice that advances will be absolutely necessary. Putty also feels the high price of oil, and has been advanced 20 cents per 100 pounds.

It is now thought that the tariff is absolutely finished for this session, and that any fluctuations for the balance of the year will be due to trade conditions, and not from tariff readjustment.

The advance in linseed oil created no little interest among dealers. Those who held stocks naturally felt very comfortable, and those who were short were just the opposite.

LINSEED OIL—The demand has been somewhat checked by the sharp increase which took place last week, and which is firmly maintained: Raw 1 to 4 barrels, 60c.; 5 to 9 barrels, 59c.; boiled, 1 to 4 barrels, 63c.; 5 to 9 barrels, 62c.

TURPENTINE—The demand is fairly active, with no change in prices, which remain: Single barrel, 98c. per gallon; for smaller quantities than barrels, 5c extra per gal. is charged. Standard gallon is 8.40 lbs., f.o.b. point of shipment, net 30 days.

GROUND WHITE LEAD—With the advent of spring weather (especially in the west) large quantities are now being shipped, and prices are exceedingly strong. Best brands, Government standard, $7.25 to $7.50; No. 1, $6.90 to $7.15; No. 2, $6.55 to $6.90; No. 3, $6.30 to $6.55; all f.o.b. Montreal.

DRY WHITE ZINC — In fair demand only. Prices remain: V. M., Red Seal, 7½c. to 8c.; Red Seal, 7c. to 8c.; French V. M., 6c. to 7c.; Lehigh, 5c. to 6c.

WHITE ZINC GROUND IN OIL—Inquiry moderate, prices firm. Pure, 8½c. to 9½c.; No. 1, 7c. to 8c.; No. 2, 5¾c. to 6¾c.

PUTTY—Advanced 20 cents per 100 lbs. Shipments are somewhat larger than last week. We now quote: Pure linseed oil, $1.75 1-5 to $1.85 1-5; bulk in bbls., $1.50 1-5; in 25-lb irons, $1.80 1-5; in tins, $1.90 1-5; bladder putty in bbls., $1.75 1-5.

ORANGE MINERAL—This article is still short, but there is not much call for it at present, so prices remain the same: Casks, 8c.; 100-lb. kegs, 8½c.

RED LEAD—Moving slowly. Stocks being light are carefully husbanded. Genuine red lead, in casks, $6; in 100-lb. kegs, $6.25; in less quantities at the rate of $7 per 100 lbs.; No. 1 red lead, casks, $5.75; kegs, $6, and smaller quantities, $6.75.

PARIS GREEN—The demand seems to have been met for the present, and there is no change in quotations: In barrels, about 600 lbs., 25½c per lb.; in arsenic kegs, 250 lbs., 25¾c; in 50-lb. drums, 26¼c; in 25-lb. drums, 26¾c; in 1-lb. packets, 100 lbs. in case, 27¼c; in 1-lb. packets, 50 lbs. in case, 27¾c; in ½-lb. packets, 100 lbs. in case, 29¼c; in 1-lb. tins, 28¼c f.o.b. Montreal. Terms, three months net or 2 per cent. 30 days.

SHELLAC GUMS—In fair demand. No change in prices: Bleached, in bars or ground, 46c. per lb., f.o.b. Eastern Canadian points; bone dry, 57c. per lb., f.o.b. Eastern Canadian points; T. N. orange, etc., 48c. per lb., f.o.b. New York.

SHELLAC VARNISH—Trade is exceedingly brisk and some good shipments are being made. Prices remain: Pure white, $2.90 to $2.95; pure orange, $2.70 to $2.75; No. 1 orange, $2.50 to $2.55.

PETROLEUM — American prime white coal, 15½c per gallon; American water, 17c per gallon; Pratt's Astral, 19½c per gallon.

WINDOW GLASS—First break, 50 feet, $1.85; second break, 50 feet, $1.95; first break, 100 feet, $3.20; second break, 100 feet, $3.40; third break, 100 feet, $3.95; fourth break, 100 feet, $4.15; fifth break, 100 feet, $4.40; sixth break, 100 feet, $4.95. Diamond Star: First break, 50 feet, $2.30; second break, 50 feet, $2.50; first break, 100 feet, $4.40; second break, $4.80; third break, 100 feet, $5.75; fourth break, 100 feet, $6.50; fifth break, 100 feet, $7.50; sixth break, 100 feet, $7.50; seventh break, 100 feet, $8; eight break, 100 feet, $9. Double Diamond: First break, 50 feet, $3.45; second break, 50 feet, $3.75; first break, 100 feet, $6.75; second break, 100 feet, $7.25; third break, 100 feet, $8.75; fourth break, 100 feet, $10; fifth break, 100 feet, $11.50; sixth break, 100 feet, $12.50; seventh break, 100 feet, $14; eighth break, 100 feet, $16.50; ninth break, 100 feet, $18; tenth break, 100 feet, $20; eleventh break, 100 feet, $24; twelfth break, 100 feet, $28.50. Discount on Diamond Star, 20 per cent.; on Double Diamond, 40 per cent.

ELASTIC OAK VARNISH

This is a clear, bright Varnish for inside or outdoor purposes. It is also useful for all kinds of cabinet work. Care should be taken in applying this Varnish to see that it is thoroughly hard before carpets and cushions are placed upon it. When properly applied it is very durable.

All surfaces to be coated should be free from dust The contents of package, when not in use, must be carefully corked or sealed, to prevent evaporation. Keep from excessive cold or heat. Do not expose to the sun's rays in window. Brushes should be clean and soft, and The Canada Paint Company's Elastic Oak Varnish applied with an even, light coat.

lon in duty and a consequent advance in price.

Trade in turpentine is unchanged but prices have advanced owing to the scarcity of labor in Georgia, the prices being the highest in years in Savannah.

The orders for oils, paints and paris green are practically all booked up, the wholesalers awaiting spring freight.

An advance has been made in the duty on varnish amounting to 5c. a gallon, and some price changes are looked for next week.

It is stated that the prices in mixed paints will be affected by the advance in oil.

WHITE LEAD.—We continue to quote: Pure white, $7.40; No. 1, $6.65; No. 2, $6.25; No. 3, $5.90; No. 4, $5.65 in packages of 25 lbs. and upwards; ½c. per lb. will be charged extra for 12½ lbs. packages; genuine dry white lead in casks, $7.

RED LEAD.—Prices remain unchanged, with good demand: Genuine in casks of 500 lbs., $6; ditto, in kegs of 100 lbs., $6.50; No. 1 in casks of 500 lbs., $5.75; ditto, in kegs of 100 lbs., $6.25.

DRY WHITE ZINC.—In casks, 7½c.; in 100 lbs., 8c., No. 1, in casks, 6½c., in 100 lbs., 7c. Ground in oil—In 25 lb. irons, 8c.; in 12½ lbs., 8½c.

SHELLAC VARNISH.—Pure orange in barrels, $2.70; white, $2.82½ per barrel; No. 1 (orange) $2.50; gum shellac, bone dry, 63c. Toronto. T. N. (orange) 51c. net Toronto.

LINSEED OIL.—As announced a week ago, there is a general advance of 3c. owing to the change of tariff, with prospects of a still greater advance to 5c. We quote: Raw, 1 to 3 barrels, 64c.; 4 to 7 barrels, 63c.; 8 barrels and over, 62c.; add 3c. to this price for boiled oil, f.o.b. Toronto, Hamilton, London and Guelph, net 30 days.

TURPENTINE.—Prices continue variable, the tendency, of course, being upward. Prices this week have advanced owing to scarcity of labor and the dought in Georgia. We quote: Single barrels at $1.02, f.o.b. point of shipment, net 30 days; less than barrels, $1.07 per gallon.

PARIS GREEN.—Trade continues steady, the greater part of the orders, however, being booked. We continue to quote: English and Canadian at 27½c. base.

PETROLEUM.—Trade is good, the demand increasing. Prices remain firm and unchanged. We quote: Prime white, 13c.; water white, 14½c.; Pratt's astral, 18c.

For additional quotations see current quotations at back of paper.

WHERE COLORS COME FROM.

The cochineal bug furnished many of the most brilliant colors, including the bright carmine, crimson, purple lake, and scarlet. The cuttlefish gives the sepia, and Indian yellow comes from the camel. Ivory chips produce ivory black, and the exquisite Persian blue was discovered accidentally by fusing horses' hoofs and other refuse animal matter with impure potassium carbonate. Crimson lake comes from the roots and barks of certain trees; blue-black from the charcoal of the vine chalk; and Turkey red comes from the root of the madder plant found in Hindustan. India ink is made from burned camphor by the Chinese.—Ex.

TO MAKE WATERPROOF GLUE.

Waterproof glue is manufactured of gum shellac three parts and india rubber one part by weight, these constituents being dissolved in separate vessels in ether, free from alcohol, subject to a gentle heat. When thoroughly dissolved the two solutions are mixed and kept for some time in a vessel tightly sealed.

PROFITS IN PREPARED PAINTS.

(Continued from page 46.)

carrying the greater amount of oil make the better paint when they have good opacity or covering qualities.

Advantages of White Lead.

White lead has some good points of excellence not possessed by any other pigment. It has remarkable covering qualities, is a good dryer, and works easily under the brush. A good paint without lead would be like good bread without flour. Unfortunately, lead's qualities are such that it continues to dry in linseed oil until finally no oil, as such, remains, and what paint is left on the painted surface is like chalk and is blown or washed from the building.

The best paint authorities agree that white lead should not be used alone. Zinc has great affinity for linseed oil, carrying from 60 to 70 per cent. more oil than white lead. This gives it exceptional spreading capacity. Zinc, unlike lead, is not affected by chemical action when united with oil, nor is it injured by gases and atmospheric elements which so quickly destroy lead. Zinc itself would be an ideal paint pigment were it not that it dries too hard and that it lacks porosity.

Painters have learned from practical experience that a combination of lead and other more enduring pigments makes a better paint than lead alone, but some of them have yet to learn that it is quite impossible for them, even with the knowledge of proportions to mix by hand a paint so composed The very nature of pigments is such that they require a thorough mixing and grinding in their dry state and again in their paste form, and again and again in their semi-liquid and liquid forms. This mixing, chasing, grinding and regrinding is done in expensive mills especially constructed to handle the pigments used by this or that manufacturer. This explains why makers of prepared paints have acquired success and reputation, while painters have found their home-made mixtures of similar pigments to be unsatisfactory.

In the spring the dealer should advertise his line freely in his local papers and place circulars, printed matter and cards in the hands of every possible customer. If printed matter is included in parcels delivered to customers they will take them home and look them over so that when the time comes for painting they will have had time to study over what they require.

Good window displays of all the goods should also be made as the window has been proven to be one of the best selling mediums for this branch of the hardwareman's business.

The superiority of **"Sterling" Pure Prepared Paints** is explained by the materials used and method of their manufacture.

THE BASE.

White Lead. For body, density, free-working qualities.
Zinc White. For temper, weather-resisting properties.
Not a "slap-dash," "hit or miss" mixture, but the scientifically correct combining equivalent of each.

THE VEHICLE, or Thinner.

Kettle Boiled Linseed Oil. For toughness, elasticity.
Turpentine. To assist in making the paint easy-flowing.
Japan Dryer. In sufficient quantity only to secure proper hardening.

THE COLORS USED IN TINTING.

The purest, strongest and most permanent to be found in Canada, the United States and Europe.
The best machinery, modern processes, intelligent, experienced workmen, competent supervision.
The net result of all of which is that **"Sterling" Paint** is **"Sterling" in name, "Sterling" in quality.**

THE SURVIVAL OF THE FITTEST

Selling whiting, glue and color separately for kalsomined walls is a thing of the past. The more modern method of selling whiting, glue and color ready mixed, in packages labelled different names, is **ALSO** a thing of the past, or fast becoming so.

Any compound which can be kept over night or several days without spoiling is simply a preparation of glue and whiting or some other inert base, which depends on the glue in it to hold it to the surface, and in time decomposes, becomes diseased, rubs off and has to be washed off.

The ever-growing public demand is for a pure and sanitary wall coating that will not rub off and is ready for use with cold water.

ALABASTINE

fulfils the public demand. Made from crystaline Alabaster Rock, it is a cement that sets and hardens on the wall and improves with age. It is pure, permanent and sanitary, and as such

HAS NO COMPETITOR

ALABASTINE is being more and more fully appreciated by the public, and the orders are coming in by leaps and bounds.

Fortunately, we have opened a new mine, and hope to fill all orders promptly and on time; but we advise you to order **NOW**.

EXCELLENT WORK IN BRITISH COLUMBIA

Some work approved by President Davis, of the Plumbing Inspectors' Association of America, has encouraged "A. S.," of Victoria, B.C., to write describing a job done by him in that city, the work differing materially from that approved by Mr. Davis, although being of a similar nature. The job was in a tenement building in Victoria, where the system of venting is what is termed venting in the rough, and from the Victoria point of view is the best yet adopted by any city on the continent.

An Excellent Piece of Plumbing Work Recently Done in Victoria, British Columbia.

A Practical Letter.

"According to the plumbing and sewerage by-laws all main and branch sewers under a building must be of a soil pipe termed extra heavy. The sizes of same will be given in the plan of building just completed and approved by our plumbing inspector, H. Shade, who is a practical man for the position he occupies, having passed a strict examination in practical and theoretical work, including plan drawing, before receiving his appointment. Under his supervision we have a set of plumbing by-laws which the practical plumber is proud of. According to them all plumbing work must be subject to the following tests:

"At the completion of the roughing in of the work all ends of wastes must be plugged and a water test of not less than fifteen pounds be given to the work before calling in the inspector for the first examination. If everything is tight you may then start in to instal your fixtures, and as soon as this is done the final test is given by using the smoke test. At the completion of this a certificate is issued from the inspector's office giving a guarantee to the property owner that the work is in first-class condition, and is in compliance with the city plumbing and sewerage by-laws.

"I am giving this general routine of work so as to compare same with work in other cities, for, after studying some of the working plans in plumbing, I have come to the conclusion that something is radically wrong with the system in having so many different varieties of work, as anyone who studies the problem must realize that there is one goal and that is perfection. How much easier it would be for the plumber who travels from north to south, east to west, to be familiar with his trade, so that should he be in Chicago one week and land in Victoria the next he could take his position along with his fellow employees and go to work without having to study the by-laws and learn the trade over again.

"From my own experience as an employer of labor I find that a universal by-law is what is needed, so that we may be able to kill the sewer pipe monopolists, et al., who are holding Chicago by the throat at the present day for the lust of gold. 'Let the people die from bad plumbing and sewer work, the plumber will get the blame anyway; and we can sit in our armchairs and gather the shekels in,' says the sewer pipe combine of Chicago.

"But there are other questions nearer home to the plumber which ought to be considered seriously, and one is, that when a building is being erected, generally speaking, no provision is made for the piping unless you can squeeze everything between the studding or ex-

pose the piping on the outside. In milder climates, such as we have in Victoria, the latter course is generally adopted, but in the eastern states I have noticed the soil pipes and wastes are exposed inside the building, which gives a very bad impression to the owner. The architect provides a place for the fixtures, but forgets that there are soil pipes to be taken to them. Were the plumbers to put their heads together this would not be the case, and better satisfaction would be given the owner and the trade in general raised a notch higher, for it is every move that counts.

Vent Pipes Clean Themselves.

"In my accompanying plan you will notice that all venting is done perpendicularly or at an angle of 45 degrees. The reason for this is to give all vent pipes an opportunity of cleaning themselves directly into the main soil pipes, and I think you will agree with me that this is a good law. In most of the cities of the United States I find that they allow horizontal runs of vent pipes, which must be condemned by anyone who studies the question of venting.

"Did ever any of the trade take the trouble to inquire into old work that they have taken out, and see whether it was full of rust or scales, generally at the elbows? If not, try it the next time. The coal fumes and acids from factories may have a good deal to do with this, but as long as the easy plumber gives those factories the opportunity to do so by this system of horizontal venting just so long will the defect remain. It is one thing to do a job and have it give satisfaction for the time being, but it is another to have the same job give satisfaction for all time to come.

"Another point I might touch upon is the system of direct connection to the sewer versus the intercepting trap. Some engineers take exception to the direct system, but I have yet to see the city adopting such that ever went back to the intercepting trap, and I have been informed of many who have adopted the direct after experiencing the indirect. Those who have adopted the intercepting trap must have found out by this time that the stoppage in any sewer is generally from this, and then the smell from the streets where the vents for flushing the main sewer are is enough to knock you down. If it is good to vent and take off the smell from your own sewerage until it passes your property, is it not just as well to vent until it passes out to the sea?

"Think it out, fellow craftsmen, and let us have your opinion. That is what I am writing this article for. My ambition is to see the plumbing fraternity recognized as men of culture in whatever community they may reside, in company with doctors, lawyers and preachers, using the Golden Rule at all times for the benefit of their less informed fellow citizens."

A Discussion Suggested.

This is an interesting letter and we will be glad to give space to the comments of anyone in the trade on the system outlined and views advanced. The Plumbers' Trade Journal of New York, by whom the letter was published a month ago, added the following comment, which covered the several points raised very completely and concisely:

"As we look at it, the elevation of plumbing work as done in Victoria, which correspondent submits, shows an excellent piece of work. The system which he calls 'venting in the rough' is certainly, he suggests, the best that has yet been adopted. This system has been referred to in the columns of the Journal as 'continuous venting,' and the advantages of the system and many illustrations of it have often been brought to the attention of our readers. It appears to us that it is only question of time before our cities will adopt this method very extensively.

"The correspondent's remarks on the architect bring up again the question which has often filled every plumber with dismay. It is an old subject, one upon which much has been written, but we do not see that much headway is being made, and it strikes us that it is a difficult matter to adjust. In the layout of our large public buildings architects are often employed who have in their service experts on the various lines of construction, and under such such conditions it is usually to be observed that the arrangements for properly installing the piping are far better than in those buildings designed by the architect who employs no such assistants, and who has little or no knowledge of practical plumbing installation. Until the architect is educated along this line we do not see that conditions will change, unless, indeed, the architect can ever be persuaded to come down from his dignity sufficiently to allow himself to consult with tht plumber regarding the layout of this part of the work.

Hard to Harmonize.

"As to a universal plumbing ordinance, we believe that it would be a splendid thing; but probably as unattainable as it is splendid. In the first place, our correspondent would not want to see the intercepting trap appear in that universal law. The other fellow would want it there. Our correspondent does not increase his roof pipe, while in another part of the country it is necessary.

"The question is along the same lines as a universal religion. Custom has a great deal to do with these things, and is often stronger than law. Various local conditions often make necessary certain changes in the plumbing ordinance. In other words, it appears to us that while it is a pleasing thing to consider, there would be about as much chance of bringing the various elements together on one common ground as there is of bringing our two great political parties together in one common party. However, we can see where much advantage might be derived if, for instance, smaller sections of country, each state or province, for instance, could be governed by a single plumbing ordinance."

WATERWORKS BY-LAWS.

Wetaskiwin, Alta., ratepayers have voted favorably on the following by-laws: To provide for the raising of the sum of $140,000 for the construction of a municipal system of waterworks and sewers. For the raising of the sum of $30,000, for improving and extending the municipal electric light and power plant. For $2,500 for buying a hospital site, and $10,000 for the erection of a hospital.

CHAIN FOR PIPE HANGING.

The Oneida Community Company are manufacturing a chain for pipe hanging which consists of two parts. An adjustment screws solidly into the ceiling, on which is hung a strong chain which holds the pipe. This chain may be shortened or lengthened at will, thus allowing the pipe to be hung at any distance from the ceiling. This is a very simple and convenient device and is becoming very popular. Readers may obtain additional information by writing the Oneida Community Co., Oneida, N. Y., and mentioning the Plumber and Steamfitter.

PLUMBING MARKETS

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, March 15, 1907

Things are booming now in all branches of the plumbing trade, both wholesale and retail. Wholesalers are working at top speed, in order to keep their orders up to date, and the usual spring rush is starting with the practical men of the trade.

The prices were withdrawn on iron pipe last week, but so far, the new schedule is not made up. We can only say that there will be an advance of about 4 per cent. on the old list, on all lines up to 3 inch.

RANGE BOILERS.—The demand remains good, with no change in prices; which are very firm at the following figures: Iron clad, 30-gal., $5; 40-gal. $6.50 net list. Copper, 30 gal., $33; 35 gal., $38; 40 gal., $43.

LEAD PIPE.—Business is very brisk, and prices remain firm with no changes. Discount is: 5 p.c. f.o.b. Montreal, Toronto, St. John, N.B., Halifax; f.o.b. London, 15c per hundred lbs. extra; f.o.b. Hamilton, 10c per hundred lbs. extra.

IRON PIPE FITTINGS.—The demand in some lines still exceeds the supply, and the following prices are very firm: Discounts on nipples, ¼-inch to 3-inch, 65 per cent.; 3½ to 2-inch, 67½ per cent.

IRON PIPE.—The new prices are not yet made up, but the advance will be about 4 per cent. on all lines up to 3 inch.

SOIL PIPE AND FITTINGS.—Business good and prices firm. We quote: Standard soil pipe, 50 p.c. off list. Standard fittings, 50 and 10 per cent. off list; medium and extra heavy soil pipe, 60 per cent. off. Fittings, 60 per cent. off.

SOLDER.—No changes to report. Prices remain: Bar solder, half-andhalf, guaranteed, 25c.; No. 2 wiping solder, 22c.

ENAMELWARE — We quote: Canadian baths, see Jan. 3, 1907, list. Lavatories, discounts, 1st quality, 30 per cent.; special, 30 and 10 per cent. Sinks, 18x30 inch, flat rim, 1st quality, $2.60; special, $2.45.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto March 15, 1907.

The feature of the plumbing markets in Toronto at present is the slashing in prices on plumbers' brass goods, enamelware and closets. Trade has been quiet owing to the dull winter season, but is beginning to enliven with the moderation in the climate and opening up of spring.

The cut in brass is especially out of place just now, with copper making another advance. The brass goods manufacturers say they cannot get deliveries of copper in less than eight weeks' time and their cost of production is constantly advancing.

The new list on iron pipe is out with about a ten per cent. advance. Pipe continues to be scarce.

LEAD PIPE—The discount is still 5 per cent. off the list price of 7c. per lb. Lead waste, 8c. per lb., with 5 off. Caulking lead, 5¾c. to 6¾c. per lb. Traps and bends, 40 per cent. off.

SOIL PIPE AND FITTINGS — Business continues good. We continue to quote: Medium and extra heavy pipe and fittings, 60 per cent; light pipe, 50 per cent.; light fittings, 50 and 10 per cent.; 7 and 8 in. pipe, 40 and 5 per cent.

IRON PIPE—We give the new prices in iron pipe. Stocks are low, with prospects of scarcity. We quote: 1-inch black pipe, $5.12; 1-inch galvanized, $6.77.

PIPE IRON FITTINGS—Prices continue unsteady. We continue to quote: Cast iron fittings, 57½ per cent.; cast iron plugs and bushings, 60 per cent.; flange unions, 60 per cent.; nipples, 70 and 10 per cent.; iron cocks, 55 and 5 per cent.; Canadian malleable, 30 per cent.; malleable unions, 55 and 5 per cent.; malleable bushings, 55 per cent.; cast iron ceiling plates, plain, 65 per cent.; cast iron floor, 70 per cent.; hook plates, 60 per cent.; expansion plates, 65 per cent.; headers, 60 per cent.; hangers, 65 per cent.; standard list.

RANGE BOILERS — We continue to quote: Galvanized iron, 30-gal., standard, $5; extra heavy, $7.75; 35-gal. standard, $6; extra heavy, $8.75; 40-gal., standard, $7; 40 gallon, extra heavy, $9.75, net list. Copper range boilers—New lists quote: 30 gallon, $33; 35 gallon, $38; 40 gallon $43. Discounts 5 to 15 per cent.

RADIATORS—The demand continues brisk, orders being booked ahead in view of the erection of a new factory. We continue to quote: Hot water, 47½ per cent.; steam, 50 per cent.; wall radiators, 15 per cent., specials, 15 per cent. Hot water boilers are subject to an open market.

SOLDER—Bar solder, half-and-half, guaranteed, 27c.; wiping, 23c.

ENAMELWARE— Price-cutting continues in these in some quarters. We continue to quote January prices; Lavatories, first quality, 20 and 5 to 20 and 10 off; special, 20 and 10 to 30 and 2½ per cent. discount. Kitchen sinks, plate, 300, firsts, 60 and 10 off; specials, 65 and 5 per cent. Urinals and range closets, 15 off. Fittings extra.

"What are the Advantages of Hot Water over Steam Heating in a Private Residence?"

What arguments would you use in reply if a customer asked you the above question.

Send us an answer and also outline what advantages steam heating possesses over water for this same class of work.

For the best reply we offer a cloth bound copy of J. J. Cosgrove's splendid textbook, "Principles and Practice of Plumbing."

PRICE OF ILLUMINATING GAS IN ENGLAND.

The price of illuminating gas in Widnes, Lancashire, England, is now 32 cents to small consumers, but will be reduced to 30 cents on July 1. Large consumers will pay from 22 to 26 cents. This is claimed to be the cheapest gas in the world. The town has about 30,000 population. The price of gas is remarkably low everywhere in Great Britain, whether under public or private control, the general range of price being 40 to 70 cents.

ELECTRIC HEATING FOR RESIDENCES.

In a paper read before the Atlantic City convention of the National Electric Light Association. Jas. I. Ayer stated that in cooking, gas at $1 per thousand cubic feet is equivalent to electricity at 2½ cents per kilowatt hour, and that while electric cooking is practicable at a higher rate, it will require a 5 to 3 cent rate to make it an important competitor of gas. A 10-gallon jacketed hot water boiler can be heated to 150 degrees Fahrenheit with approximately 2½ kilowatt hours. Radiators for occasional use in ordinary-sized bedrooms should have at least a capacity of one kilowatt, while for heating a bathroom a heater of at leats two kilowatts should be used, in order to heat the room quickly—fifteen to twenty minutes. The cost of doing the average family ironing with an electric iron is given at $1 to $1.25. Instantaneous hot-water heaters are not recommended, although for small quantities of water the cost of operation is not excessive.

CRAIN CO. EXPANDS.

Fuel Consumption

How much fuel will the

Daisy Hot Water Boiler

consume ?

It is doubtful if the steamfitter is asked a question quite so frequently, and there is no more difficult one to answer accurately. But this fact can be truthfully emphaized : there is no boiler made which has such an area of fire surface, in proportion to grate area; such ample provision for positive and accurate circulation, and perfect fuel consumption. It is not hard to sell the Daisy when you convince your prospective customer of these positive truths.

It's a Pleasure to Sell Oil

The Bowser Self-Measuring Oil Storage Outfit makes it a positive pleasure to sell oil. Why? Because it is convenient. Just a few steps to the pump, one simple stroke and the can is filled. It's just as easy as selling a hammer or saw. Because it is clean. All the oil is kept where it belongs, in the tank or in the customer's can. Because it is safe. No danger of fire or explosion. Because it is economical. It pays for itself in one year by its own saving of time, labor and oil.

Cut 15. CELLAR OUTFIT
For non-lubricating oils.

If you handle oil with the old style tank, you can realize what the Bowser gives you. Catalog V tells more about the Bowser. Send for it to-day.

Don't Be Misled

Users of Mueller Brass Goods are Guaranteed Absolute Immunity From All Liability on Account of Patent Suits.

The Glauber Company in recent advertisements in trade journals seeks to make business capital of the fact that they have instituted a suit against the H. Mueller Manufacturing Company, alleging "imitating and infringing supplies."

It is not the desire of the H. Mueller Manufacturing Company to try this Suit in the public prints or to be drawn into a newspaper controversy, but in justification to itself and the trade, feels called upon to direct attention of dealers and consumers to the fact that they will be protected.

The H. Mueller Manufacturing Company is financially responsible and has always stood behind its goods with an *Unconditional Guarantee.* It will continue to do so, but in addition at this time wishes to assure the trade and the public absolute immunity from any liability of whatsoever kind arising from the use of its goods because of this or any similar suit.

Whether the action brought possesses merit is a question for the courts to determine. The mere bringing of the suit carries with it no more weight as to its merit than a bald and unsupported statement of an individual. The H. Mueller Manufacturing Company asks the trade and the public to withhold judgment and not be misled by any statements printed in paid advertisements.

We will continue to manufacture the supplies in question and will protect all sellers and users of same.

: : It Saves Lives : :

A Building Necessity

These are the names that have been made synonymous with the

AEOLIAN VENTILATOR

We are the manufacturers of it and control the patents.

We have placed it on some of the finest buildings in the Dominion.

It is a scientific fact that no modern buildings can afford to neglect sanitation.

We are contractors and sanitary experts. Our ventilator is guaranteed and is placed in position to suit the building as to quality and size.

One Testimony:

Montreal, June 12th, 1903
Canadian Pacific Railway Company.
Messrs. J. W. Harris Co., Limited,
7 St. Elizabeth St., Montreal, Que.

Gentlemen,—Answering yours of June 1st, I am not personally familiar with the merits of the "Aeolian" Ventilators but our Assistant Engineer, Mr. F. Crossley, reports that the Ventilators of this type manufactured by you and used by this Company at the Place Viger Hotel, Chateau Frontenac, Windsor Street Station and elsewhere, have proved satisfactory. Yours truly,
E. H. McHENRY, Chief Engineer.

A. C. LESLIE & CO. Ltd, MONTREAL Managers, Canadian Branch.

A Winner all the Way

That's what they all say. You know how keenly and carefully practical men scrutinize anything new in the heating line, and during the last two years the SOVEREIGN has had more than the ordinary share of observation. That was to be expected because

THE

"Sovereign" Boiler

has reduced the heating problem to an exact and simple science. Its economic devices, making for boiler perfection, swung it into popular favor at once. Then there is a **Profit Story** in connection with the "**SOVEREIGN**" which shrewd Dealers find peculiarly pleasing.

Forward your address on a post-card and we'll mail you interesting facts.

A Good Hardware Catalogue

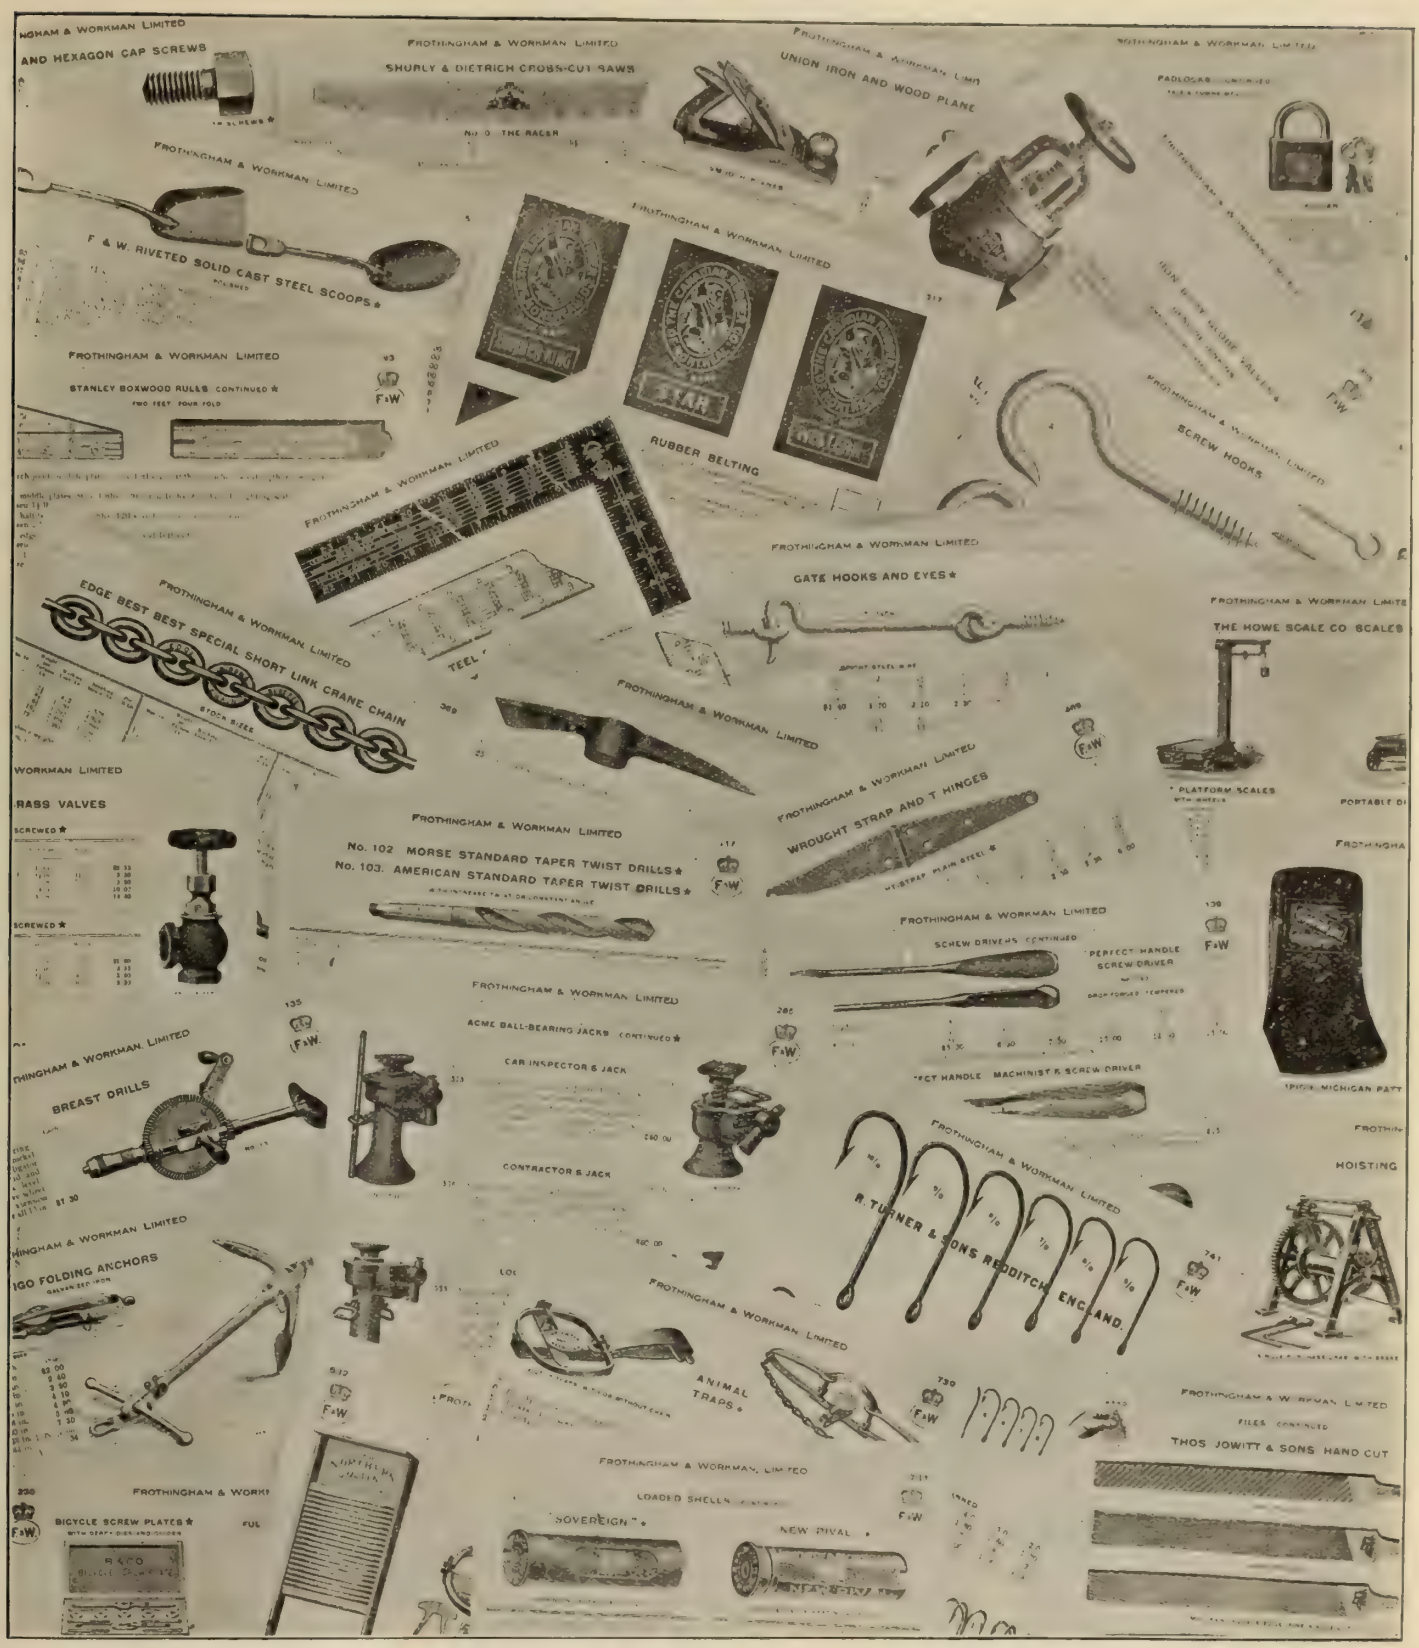
should contain

a line of goods that sell, correct information and adequate description.

These objects we have kept in mind in making our new loose-leaf catalogue which we are now sending to our customers.

The goods shown in the catalogue have been chosen for their selling qualities. They are correctly described and sufficient information is given as to material, finish, size, weight and packages to enable you to order without seeing the goods.

They are priced so that you can show this book to your customers without disclosing your cost price.



We show a few leaves from the catalogue on the opposite page.

You ought to get in line for a copy of this catalogue.

WISS "Stielweld" Shears

The exclusive Wiss "Stielweld" process insures a cutting edge that will stay sharp forever, and also a frame proof against breakage.

WHY take all this trouble to make a Wiss Shear blade, when it is possible to make a casting of iron, "convert" it into so-called "steel," give it a coat of enamel or nickel and have it look almost like a genuine Wiss "Stielweld?"

BECAUSE we make Shears not alone for looks, but for perfect and lasting cutting power.

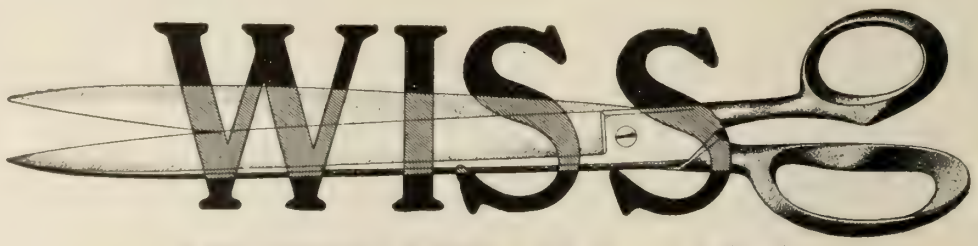
Wiss Shears are adjusted to a hair's breadth. They cut evenly from heel to point of blade, and never pinch or chew the cloth, even after a lifetime of constant use.

If your dealer can't show you the name "Wiss" stamped on the blade, go to another store.

All shears so stamped are *guaranteed* to give satisfaction. If for any reason they fail, your dealer will exchange them, or we will.

OUR BOOK, "POINTED SHARPNESS," MAILED FREE

It illustrates, describes and gives prices of 150 varieties of shears and scissors, designed for all conceivable uses. Write for it.



J. WISS & SONS CO., 15-33 LITTLETON AVENUE, NEWARK, N. J., U. S. A.

WISS HELPS TO SELL WISS GOODS by enormous advertising through an educational campaign now being read by 25,000,000 people every month. This campaign teaches the public that this brand, whether it is on shears, scissors, razors, tinner snips or pruning shears, means that the article will give absolute satisfaction. No if's or and's about it.

J. WISS & SONS
NEWARK. N.J.
U.S.A.

INCREASE YOUR CUTLERY SALES AND YOUR CUTLERY PROFITS. We wonder sometimes why some dealers bother with the shear business at all, they pay so little attention in selecting the line they are to sell. If you only sell a shear or two every week it is because you have't the right shear or do not go at all in the right way. Without the right quality you will not get the kind of shear and scissors trade that will increase with time—Trade that sticks—Trade that knows your quality is right—Trade that pays a good price for good goods. In other words—Wiss Trade. The Wiss name will get good business for you. The Wiss quality is so far ahead of any other—it is the standard the world over.

OUR SYSTEM OF INSPECTION is such that we are able to guarantee to you that when you sell an article bearing our trade mark you should have no fear of your customer returning it as unsatisfactory. Wiss goods have been sold under this guarantee for 60 years.

The Shirreff Lines Assure the Paying Trade

It will pay every dealer in this Dominion — pay him well — to push the famous dollar-making Shirreff lines, because our goods are reliable, durable and easy-priced. Every article we market has demonstrated it superiority over all competitive lines, and the wise hardwareman will cut out this page for future reference.

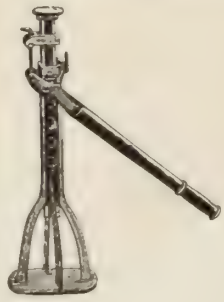
Dollars for You

just figure it out in your own way and if you can come to any other conclusion we would like to know about it.

The "General" Food Chopper

is practically a necessity in every kitchen, because particular housewives, knowing its virtues, insist on it. The "General" will last a lifetime. It's a self-cleaner, a self-sharpener, and a money-maker. You are losing money every day you fail to carry a stock of "General" Food Choppers.

The Young Matron's Favorite



It would be practically impossible to sell any other bread-maker to an intelligent woman who knows

The "General" Bread-maker

and its perfections. The "General" is simply an easier, quicker and cleaner way of making bread. It accomplishes as much work in 3 minutes, as far as kneading is concerned, as could be accomplished by hand in half-an-hour. The women of Canada demand the "General" Bread-maker. Can you supply the demand ?

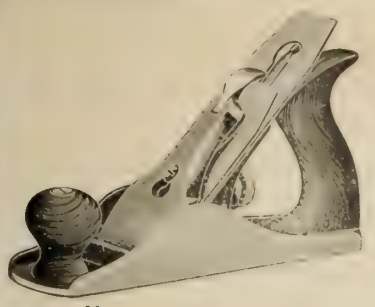
The Eureka Wagon Jack

is a new article on the Canadian market, although it has already captured the United States market. It holds whatever it raises—because it has double-acting dogs.

This jack is built of steel and malleable iron. There is nothing to get out of order about the Eureka. Built to lift all kinds of buggies, heavy wagons, and general work.

There you see the ***strongest, cheapest*** and ***best Ladder*** on the market. Big talk, but we stand ready to prove any claim we make for our goods.

There are no nails in this ladder. It is put together with screws and rivets and constructed of thoroughly seasoned ash. Durable, safe, and ***a money-saver.***



We claim that our goods are better than competitive lines, and none the worse because they are "Made in Canada."

Every article we market must give utter and complete satisfaction, because we back its goodness with a money-back guarantee.

Write now for our catalogues and literature.

No. 5, 5½, 6, 7, 8

Think—

Skilled mechanics always ask for "STANLEY'S PLANES."

Is it not far more profitable to sell them the "genuine STANLEY" which gives every satisfaction and holds them, than to sell them an inferior substitute and have them go elsewhere for the next tool they require?

The irons in these good planes are made from the best English steel, of equal thickness and temper throughout.

Each tool passes a rigid examination before leaving the works, and is fully guaranteed. Any tool showing defect in either material or workmanship, if brought to our notice, will be replaced without cost to the owner.

For household and other purposes we have another make of Iron Planes made in all the leading styles and sizes, known as "Hunts" which sells at a low price.

The Ladies' Desire

You will find that the average lady knows more about **"Universal Choppers"** than you ever dreamed of.

When buying, she does not merely ask for a "chopper" but emphasizes the **Universal** kind.

WHY?

She has seen the maker's extensive advertising in the journals that enter the home.

Dozens of her friends are now satisfied users of the **Universal,** they recommend it highly and she must have one also.

REMEMBER

The **Universal Chopper** is inexpensive, yet will last a lifetime.

It has four cutters which will chop all kinds of food from very fine to very coarse, as desired. These cutters are so made that any wear tends to keep their edges keen. Whole chopper is easily cleaned, comes apart without trouble of any kind. All parts are neatly tinned.

We carry **Universal Choppers for Butchers' Use** as well as for the home, in all sizes.

No matter what luck you have had with other choppers you will find that handling the **Universal** will bring increased sales, increased sales will mean **more profit for you. Try it.**

CAVERHILL, LEARMONT & CO.

WHOLESALE DISTRIBUTORS

MONTREAL and WINNIPEG

MY BUSINESS

is to talk each week to hardware merchants, plumbers, clerks, manufacturers and travellers. I find out what they want and then I satisfy those wants.

Sometimes I find a man in Halifax who wants to buy a set of tinner's tools and I may find a purchaser for him in Vancouver.

Frequently hardware merchants buy new show cases and then they want to sell the old ones. Well, no person in their own town wants to buy them and they can't afford to start out on the road for they can't travel as cheaply as I can. So I find a purchaser for them, it may be in a nearby town or it may be half way across the continent. My charge is the same in each case.

Hardware merchants are always wanting clerks, and clerks are always wanting new positions, aud when you know all these people it isn't so hard to introduce them and let them come to terms if they can.

I had some work last week that kept me pretty busy. A hardware merchant in Eastern Ontario wanted to buy some cut nails, so he told me to go into all the hardware stores in Canada and deliver this message:—

ANY hardwaremen having stock of cut nails they wish to dispose of at reduced prices should write at once to Box 501 HARDWARE & METAL, Toronto.

Over sixty dealers left their work at once and wrote offering to sell their stock. A number of others seemed to be interested and will probably write later. I charged him half a dollar for my work. Do you think this was too much?

I am always glad to carry any message no matter what it is. You see, I am a sort of Jack-of-all-Trades. I'm an employment bureau and a second-hand store although I sell a good many new articles as well.

I do my work well because I have been going over the ground for over 18 years and know practically every hardware merchant, plumber, stove and tinware dealer in Canada.

Have you a message to be delivered to any of these people?

Do you want it delivered quickly?

The "WAYNE" CARPET BEATER

Handy, Useful and Durable Household Article. "Not a Seasonable Toy"

Is now made in three styles—to retail at popular prices.

Patented Sept. 8, 1903

The "WAYNE" is the best whip upon the market for beating clothes, carpets, rugs and furniture. Constructed of the best coppered steel wire obtainable and mounted on a seasoned hardwood handle.

The wire is fastened to the handle in such a manner that it is impossible to work it loose. A large ferule pressed over the handle prevents the latter from splitting.

The "WAYNE" beater being made of spring steel wire always retains its shape, also eliminates the danger of puncturing or tearing article being cleaned.

This beater is so well balanced that you get full stroke and best results with very little effort. The "WAYNE CARPET BEATER" is a trade winner. Its usefulness is recognized on sight and sells wherever shown. Place your order now.

Are You Handling the Proper Handles?

There is a reasonable doubt—unless you are carrying the Handles made by the J. H. Still Manufacturing Co. Because it has been demonstrated beyond the shadow of a doubt, that the **J. H. Still lines** are not only the best Handles but also **the most profitable** for the dealer to handle.

The Pick and Axe Handles shown in the cut are made of Southern Hickory, and of first-class Southern Hickory at that.

The Adze Handles, Whiffletrees and Neck Yokes are made from Hickory and second growth Ash of the very best quality. Second-class material cannot by any chance find its way into any Handle we make and the workmanship is A 1.

THEY ALL SPELL DOLLARS FOR YOU

Besides these lines we also manufacture Fork, Hoe and Rake Handles out of the best Ash money can buy.

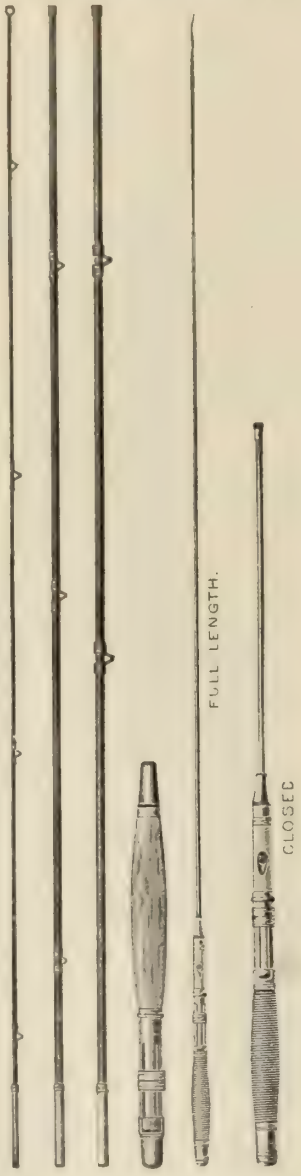
Our Broad Axe, Bench and Hunters' Axe Handles made St. Thomas famous, while our Hammer, Cant Hook and Peavy Handles have set a pace for genuine goodness which our competitors strive to equal in vain.

The immense superiority of the J. H. Still lines is readily and practically universally granted. Owning our own huge timber reserves helps some. But **our system of doing business conserves the dealer's profit and every hardwareman in Canada should know our "Profit Story." Write to-day.**

J. H. Still Mfg. Co., - St. Thomas, Ont.

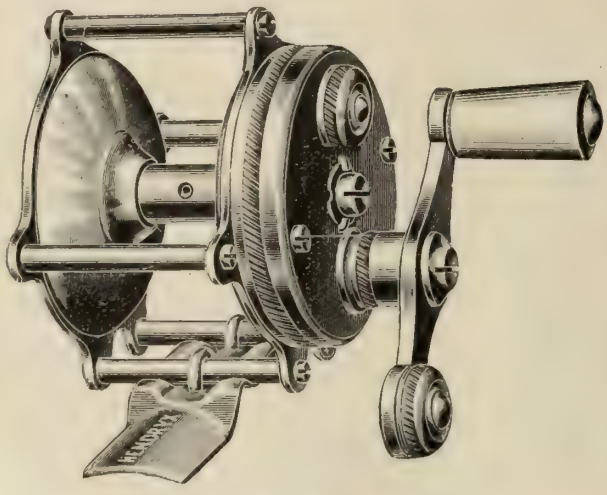
Do you want profitable lines to help fill out the profit on goods like Nails, Wire and Rope?

Why not try fishing tackle?



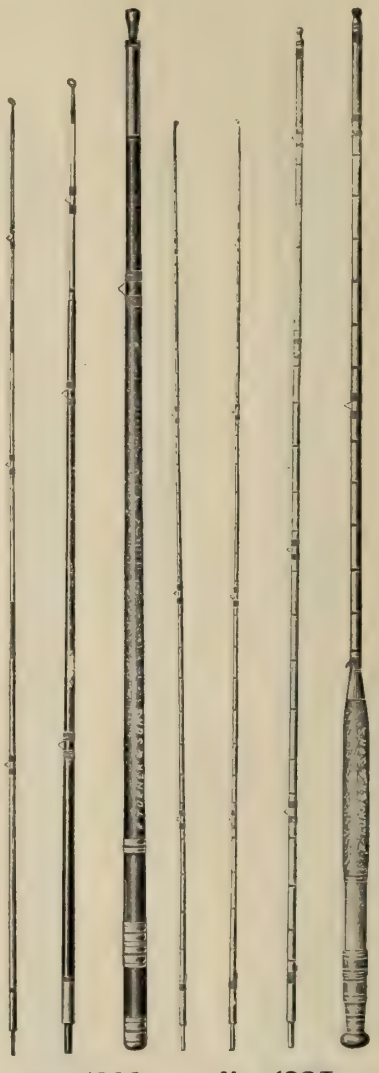
You can sell fishing tackle even though you may be miles from water. Of course, you will sell more if situated in a district of lakes and rivers.

Fishing Tackle pays, the profit on many articles being 100% and over.



Keep a small supply, don't over stock, call upon us as often as necessary.

The line is shown in our "Sporting and Fall Goods" and new loose leaf catalogues.



Our travellers will quote you—or write direct.

J. C. FAIR
Traveller Maritime Provinces.

The Firm

The J. C. McLaren Belting Co., of Montreal are the pioneer manufacturers of leather belting in Canada, having been established by the late J. C. McLaren in 1856, and later on the manu- of card clothing and reeds was taken up. After the death of founder of the firm, the business was successfully carried on by his son D. W. McLaren, until his death recently, when the management came under the hands of F. A, Johnson, the present head of the firm.

F. A. JOHNSON
Director and General Manager,

The General Manager

F. A. Johnson, since he has been head of the firm has developed the business very rapidly. In the early eighties, he entered the lumber business and for seven years followed this line. For the next few years he engaged at mining and milling of ores in California, and then returned Canada, having accepted the position of assistant manager of the English Portland Cement Co. Martbank, Ont. He next came to Montreal in connection with the Standard Asbestos Co., of which concern he became a director and secretary-treasurer. He later became associated with the J. C. Mc Laren Belting Co., of Montreal, succeeding to the position of director and general manager on the death of D. W. McLaren. It is evident Mr. Johnson has had long and varied experience in the using as well as the manufacture of leather belting.

CAPEWELL
HORSE NAILS

The Best in the World and "Made in Canada"

CITY HEAD

MADE WELL
HOLD WELL
DRIVE WELL } CAPEWELL
LOOK WELL
SELL WELL

CAPEWELL HORSE NAILS

are known, in the Horse Nail World, as the Standard of Perfection among all competitors. "Imitation is the sincerest flattery," and we acknowledge the compliment paid us by the manufacturer who marks his boxes "Also called City Head." We are the **ONLY** makers in Canada of the genuine City Head Horse Nail, as illustrated above. Both our Regular and City Heads are the approved half-countersunk pattern—the best adapted for **ALL** classes of shoeing. The material of which **CAPEWELL HORSE NAILS** are made is the very highest grade of Swedish iron, made specially for us, and imported by us direct from Sweden. The magnitude of our contracts, which exceed those of all other makers combined, insures the most minute care being taken in the preparation of our material. With the best rods obtainable in the markets of the world and the "**CAPEWELL**" process, which is controlled **EXCLUSIVELY** by us, we are able to produce a horse nail which is absolutely unequalled. We invite your comparison, in any particular and in any test. The best and most conclusive test of all is in service in the hoof. The horse-shoers of Canada are rendering their verdict in no unmistakable voice, and the business of this Company has increased by leaps and bounds. We know our product is what we claim for it, "**THE BEST IN THE WORLD**," and we shall always strive to merit your patronage.

PROMPT SHIPMENTS. **EVERY NAIL GUARANTEED.**

WHAT DO YOU WANT?

If you want anything that can be supplied by some Hardware merchant, Stove or Tinware dealer in some part of Canada, the cheapest and quickest way to have that want satisfied is to insert a small advertisement in our "Want Ad" column.

Results are what count. We reproduce a letter received a few days ago from a well known Hardware firm.

Mackie & Ryan

Hardware and Coal Merchants
Plumbing, Steam and Hot Water Heating
Stoves, Ranges and Furnaces

PEMBROKE, ONT., March 5, 1907

HARDWARE & METAL, Toronto

Gentlemen:-

We are pleased to acknowledge receipt of your favor of the 4th inst. enclosing another lot of answers to our Advertisement in your Condensed Ad. Column.

We wish to thank you for your promptness in sending to us any replies that came to you, and also compliment you on the excellent results we have obtained from this advertising. We have received upwards of seventy inquiries from Hardware men in all parts of Canada and have been able to secure the goods we asked for in our Ad.

We do not know of any other means whereby we could have reached as many of the Hardware trade as we have through your columns; writing to as many as we could get the names of would not have been as satisfactory and would have entailed a great deal of trouble and cost.

We have frequently used your Condensed Ad. Column when in want of Clerks, Plumbers or Bookkeepers and have always been well pleased with results.

Yours truly,

(Signed) MACKIE & RYAN,

Per W. D. Dewar

Sheet Metal Building Materials of the Highest Grade

"An ounce of preventative is worth a pound of cure."

The best possible protection against fire and lightning, for frame buildings, is Galvanized Roofing and Siding. It is the "preventative." Very few men can make a fire pay. All owners of buildings---houses, barns, factories, mills, warehouses, etc., are turning to galvanized iron covering, not only for protection from fires and lightning, but also on account of the splendid wearing and storm-proof qualities which it possesses.

We have the best form of galvanized iron roofing---our "Sure-Grip" Shingle---to which we have added an important improvement, which raises the "Sure-Grip" about three notches further above all others. Our representatives are now on the war-path with new samples. Be sure you see the :—

Galt "Sure-grip" Shingles

This is THE LINE with which to identify yourself, for various good and sufficient reasons. The "Galt Kind" will always be asked for and recommended by your best customers, because our system of publicity keeps our goods in demand and therefore make sales for Our Dealers. Once sold, our goods will, themselves make lasting friendships with their buyers and coax large quantities to the same localities.

We deal with the Trade only, wherever possible, and we want you to have our Catalogues and Price Lists of :—

DUNDAS AXES

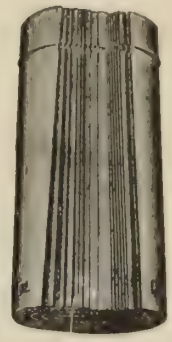
Rabbit No. 1.—"I am done for. My axe is broken."
Rabbit No. 2.—"Why don't you buy a Dundas axe? They stand Hemlock Knots."

Axes may be as good as Dundas Axes are, and yet to have them lead all others as sellers, you must let it be known that you have them. To aid you in this we furnish electros such as appear on this page. If you are amongst the large number that have already ordered, let us hear from you and we will supply what you want, and if you have not yet ordered, mention in your order what electro you want. You want to have the best axe in the market, and you want to let it be known that you have it.

THE DUNDAS AXE WORKS

DUNDAS, ONT.

TRIUMPH ADJUSTABLE STOVEPIPE



PUT TOGETHER,

The Best on the Market.

WHY?

NESTED

BECAUSE IT IS STRONGER. All other patent stovepipes are held together and depend for their strength on one or two very small tabs the same thickness as the sheet. The **Triumph** is held together and depends for ts strength on a heavy staple sliding into two loops firmly riveted on.

ADJUSTABLE. The staple can be widened to make the **Triumph** fit larger pipe, or make narrow to fit smaller pipe.

EASIER PUT TOGETHER. The edge slips straight into the fold and the staple is then inserted. A child can put them together.

REQUIRES NO RIVETS OR POUNDING DOWN.

CRIMPED AT ONE END.

SAVES TIME, TEMPER AND FREIGHT. Packed 25 in crate.

Manufactured by

EDWIN CHOWN & SON, Kington, Ont.

Sovereign Treasure Steel Range

The Newest and Most Up-to-date Steel Range on the Canadian Market.
It Contains All the Very Latest Improvements in the Mechanism of Stove Manufacture

An entirely new and original patent "LEVER" for raising front section, for broiling, toasting or coaling fire. Also other new and exclusive features on this range.

"Treasures" are a luxury, because they always please.

The greatest value in stove construction ever offered to the Canadian public.

No competition found with this stove. It sells itself.

Every line agent should have a "Sovereign Treasure" on his floor. Enquiries solicited.

Made either with cast base or nickel plated legs.

Design registered 1907.

Full particulars on request, or from our travelling representatives.

CARLETON PLACE,

Branch House, - Winnipeg

The Perfect Idea Cast Range

IS THE ONLY RANGE MADE IN CANADA
THAT IS EQUIPPED WITH A

Patent Electric Sliding Oven Tray

The Latest and Most Convenient Patented Improvement in Ranges.

By buying the PERFECT IDEA you secure the agency for the

PATENT ELECTRIC SLIDING OVEN TRAY

The GREATEST SELLING POINT on any Range made in Canada. Instead of the old-fashioned "Kicker" to open the oven door, which requires the foot to be raised 12 or 15 inches to work it—we have a push button about 5 inches from the floor; by simply pressing this with the foot the door opens and the oven tray slides forward two thirds of the depth of the oven, bringing out whatever is cooking, or to receive anything that is ready for the oven. No need to stoop down to look in the oven. No burning of hands pulling pans out. Just what has been wanted. The door can be opened without the shelf sliding out if desired. GET IN LINE. WRITE US FOR THE AGENCY.

GUELPH STOVE CO., Limited

GUELPH, ONT.

The Range With the Selling Points

GREAT IDEA

STEEL RANGE

SUPPLIED EITHER WITH CABINET BASE OR LEGS

Has two thicknesses of steel and one of asbestos in **all flues**, even the flue **below the oven.** Cast oven top, with a space in between it and the steel oven top, making baking perfect on top and bottom. Front key plate can be raised as shown to permit of broiling. Duplex grates for coal or wood, can be removed at end of range. Can be changed from an 8-inch to a 9-inch top in a few minutes, very simple. Write for prices at once.

Guelph Stove Co., Limited - Guelph, Ont.

STERNE'S ASBESTOS STOVE AND FURNACE CEMENT

with

A GUARANTEE THAT MEANS SOMETHING

If any stove dealer receives **Sterne's Asbestos Stove and Furnace Cement** and is not satisfied with it, or if he does not find it exactly as represented, or if he has any reason for returning it, or if he returns it without any reason with in thirty days, he may have his money back by return mail, without any talk. Do you risk anything?

Drop us a card for Prices. **They will please you.**

G. F. STERNE & SONS

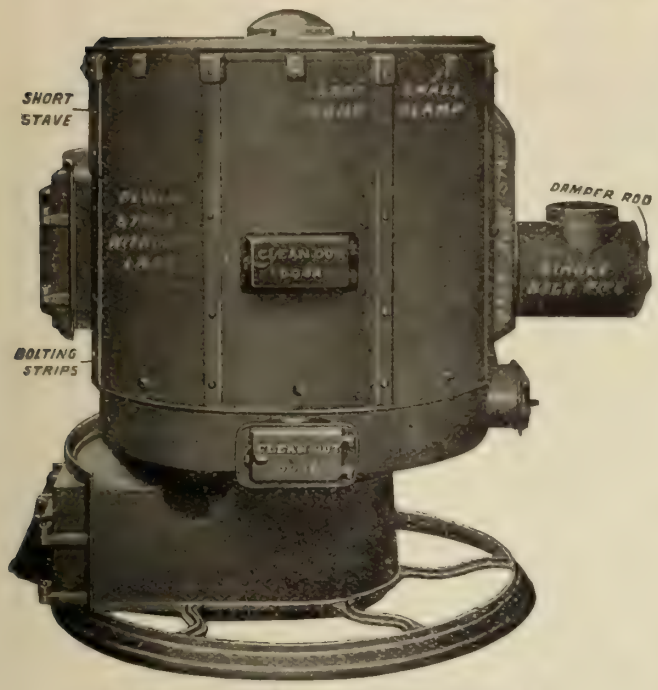
BRANTFORD, ONT.

COLONIAL RANGE

Why Aren't You in the Swim

For Coal or Wood. 4 or 6 Holes

for 1907 and have the up-to-date Colonial? The first semi-plain, loose nickel Range placed on the Canadian market. We lead; others follow. 1906 found us unable to supply the demand. Why? Because it is Handsome in Appearance. The Detachable Nickel is Removed Instantly—no Bolts or Nuts Used. The Quick Change Grates—change from coal to wood in a minute. Large Square Oven takes four 10-in. Pie Tins. It always gives satisfaction. We have increased our capacity for this year, and hope to supply all orders.



Our Line of Imperial Cook Stoves and Oak Heaters are second to none.

Send for Illustrated Catalog.

The Percival Plow and Stove Co., Limited, - Merrickville, Ont.

18 Years Practical Use Has Demonstrated

KELSEY EFFICIENCY, ECONOMY, DURABILITY,

THE ALL CAST IRON KELSEY
PRACTICALLY INDESTRUCTIBLE

It is 18 years since the first "Kelsey" Warm Air Generator was made and sold, 3 having been made and sold in 1889.

There were 30,000 pleased users in 1906.

Improvements have been made, but without altering in any way, the many special patented features of construction.

Many imitations, and so-called first-class devices, have come and gone since the Kelsey was introduced, this should be conlusive evidence that THE KELSEY IS HERE TO STAY.

Kelsey dealers are not continually up against the "How Cheap" proposition. Why allow your competitor to make prices for you?

Kelsey dealers do not have to.

Kelsey dealers are given an exclusive agency and protected in their territory.

Kelsey experts always available to assist dealers in interesting intending purchasers and in closing contracts.

The Kelsey agency puts you right up to the front.

Do you wish to get there. If so do not put off writing us.

Competition Challenged

It's the easiest thing in the world to challenge competition ; but—it isn't quite so easy to back up mere words with **irresistible facts**.

There are several excellent heating systems on the Canadian market—systems which are bound to give satisfaction because they come mighty near being as perfect as money and human ingenuity can make them.

My problem was to manufacture an **A1 High Grade** Heating System more economically, and scores of practical men declare that

THE HOWARD HEATER

has more than solved that problem. Some heating systems just happened. The makers might have been manufacturing sewing machines, or Pullman cars ; but they just happened into the heating business.

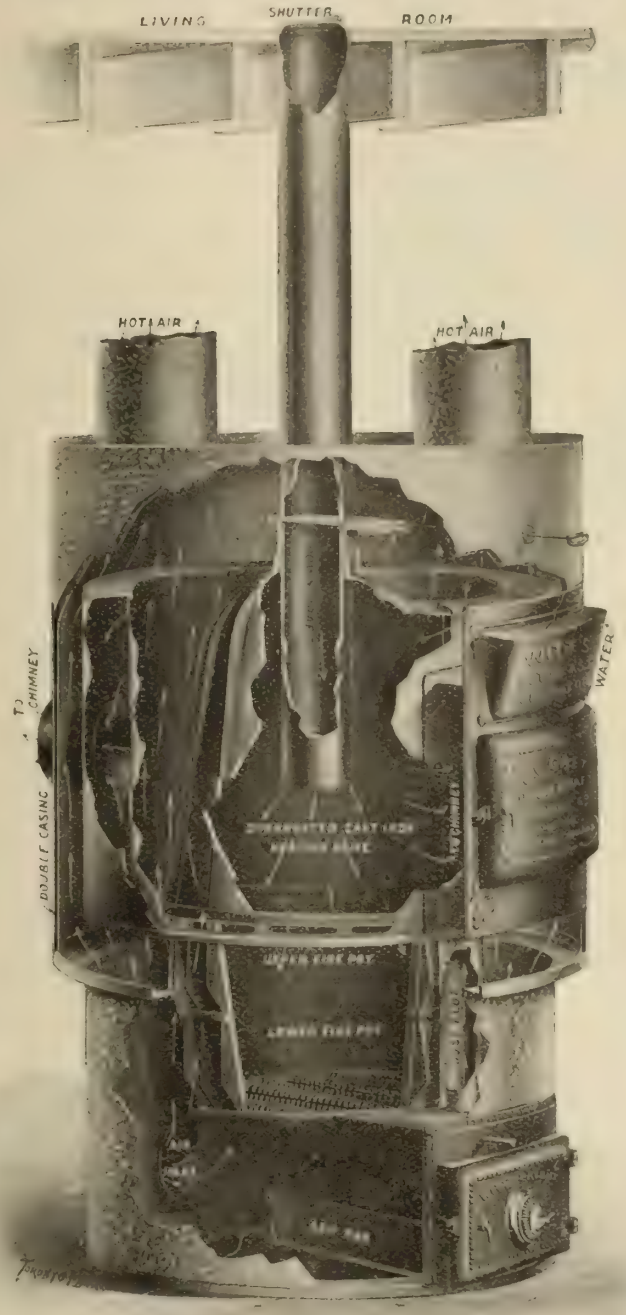
The Howard Heater didn't just happen. It is the product of a life-time is practical experience, investigation and study of all other systems. We have improved their best features and eliminated their weaknesses.

The Howard burns any kind of fuel, makes tin pipes unnecessary, assures pure air and a child can control it.

The Howard makes you independent of the Electric Light Co. You can operate your own electrical plant with it in your home.

There's a **come-back guarantee** to every **Howard** which leaves our factory. The Howard must give utter and complete satisfaction.

You are not giving yourself a square deal, Mr. Dealer, unless you know all the virtues of The Howard. One of these is :



MONEY IN YOUR POCKET

You can invest a one-cent stamp and two minutes of your time very profitably right now. Do it !

WM. HOWARD 248 MacDonnell Ave., TORONTO

'PHONE PARK 2633. 'PHONE PARK 3077.

THE DOWN DRAFT FURNACE

HEATING MADE EASY

by using our latest device in hot air heating

THE DOWN DRAFT PRINCIPLE

By this principle the fire burns from the top and the pressure of the cold air down the Down Draft Pipe does not allow the gases and soot to escape up the chimney as is the case with any ordinary furnace, but, instead, it burns these gases and gains thereby the additional heat derived from these gases, which is at least 20 per cent.

SPECIAL FEATURES

The Down Draft Principle.
Cast Iron Dome or Combustion Chamber.
Large Feed Door.
Large Water Pan.
Large Ash Pit.
Heavy Sectional Fire Pots.
Heavy Triangular Grate Bars.
Dust Flue Connection.
Regulated by a Regulating Cap from the Floor of the Living Room.
Made in Five Sizes.
The only Furnace that will burn equally satisfactorily either Hard Coal, Soft Coal, Peat or Coke.

See our line of Ranges and Heaters before placing your order. We can name you prices that will interest you.

SUMMER SPECIALTIES FOR THE KITCHEN

The work and discomfort of summer cooking can be reduced to the minimum by the use of our **Gas, Gasoline and Oil Stoves, Gas Hot Plates, Refrigerators, Ice Cream Freezers, and other specialties** made to meet this need.

Their great simplicity and economy are considerations with which your customers may not be familiar, and if better understood would be sure to result in many more sales. A little introductory work along this line should prove effective.

Model Wickless Blue Flame Oil Stove

Height—14 inches.

An Ideal Summer Stove. Reliable. Easy to Operate. Easily Cleaned. Handsome Full Cabinet Frame, Nicely Japanned and Ornamented. Removable Safety Oil Tank, Brass Sub-Tank. Automatic Feed. Powerful Brass Burners. Perfect Working Valves.

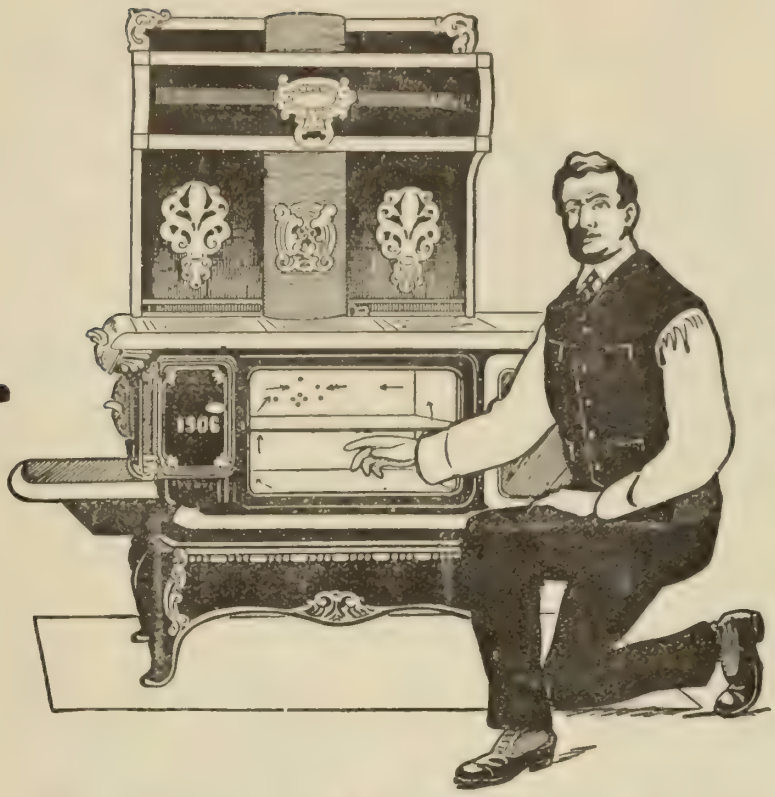
SUMMER QUEEN (White Flame) OIL STOVE

Without Extension Top

Guaranteed to be better constructed than any other Oil Stove of this style made. Simple, durable, effective.

The Model is a moderate priced refrigerator. but compares favorably with the more expensive lines, and is much better value for the money than many of the so-called high-grade refrigerators.

It is made of hard wood, finished in golden oak; has heavy, solid bronze locks and hinges and is lined with zinc, while the insulation is superior to many of the higher-priced refrigerators.



Made of Hard Wood. Perfectly Constructed. Saves Ice.

Our Summer Goods Catalogue for 1907 has just been completed and mailed. If you have not received a copy please advise us.

The McClary Mfg. Co.

London, Toronto, Montreal, Winnipeg, Vancouver, St. John, Hamilton, Calgary

"EVERYTHING FOR THE TIN SHOP."

"Grand Peninsular"

The Ideal Kitchen Range

The "Grand Peninsular" is my ideal of what a perfect cast-iron range should be.

It is the most reliable cooker of its kind—because the oven is built exactly like the oven of an expensive steel range.

Steel radiates heat quicker than cast-iron. Instead of using only a steel BOTTOM —I make the ENTIRE OVEN—top, bottom and sides—of patent Levelled Steel Plate.

That's one reason why the "Grand Peninsular" is such a quick, even cooker—and saves so much fuel.

Then I do away with all guess work about the baking, by putting a thermometer on the oven door. The oven is perfectly ventilated—the air kept fresh and dry—thus preventing soggy baking. I make the Grate Bars large and strong and easily removable.

All the ornamentation—the nickeled parts—can be lifted off the range when cleaning, without loosening a single bolt. You can see Peninsular Ranges at your local dealer's store.

A Good Judge Wanted

We want you, as a practical man, to give us your opinion of that barrow. Our experience makes us believe and believe firmly that this Barrow is the best by any test in America. To show you the strength of the faith that is in us, we will ship to your order a Sample Barrow, freight prepaid, and if it does not give you utter and complete satisfaction ship it back to us at our expense. You can see that our belief in the genuine goodness of that barrow is mighty strong; but we want the opinion of every contractor in Canada. Now, Mr. Dealer! You cannot possibly lose on this transaction. All we ask you to do is cut this out or to show it to your friend the contractor. Get any customer you have, who uses barrows, to test this one at our expense. You certainly stand to win because it is apparent that such an offer would put us out of business if we weren't absolutely certain of the validity of the claims we make.

There You See the Famous

Knoll Double-Action Washing Machine

conceded to be the greatest labor-saving device ever placed on the world's markets.

The perfections of the Knoll Washer carried off First Diploma and highest honors at the World Fair in Chicago 1893—when pitted against 800 of the best machines the genius of man had produced.

That says enough for the immense superiority of the **Knoll Double-Action Washing Machine** over all other makes.

There's just another point. The Knoll is different in that it will pay you well to handle, talk and recommend it to your women customers. Because **there's more money** in it for you.

The KNOLL **simply cannot destroy clothes,** while it will wash Faster, Better, Cleaner than any other washer ever built.

Write for particulars. Let us show you how to make money.

BRANTFORD, CANADA

GROWING FOREIGN TRADE

of the

DOMINION OF CANADA

Every manufacturer interested in the development of Canada's export interests should read the article on

"Foreign Trade of the Dominion of Canada"

in the March AMERICAN EXPORTER

On request, a copy of this issue will be sent, without charge, to any Canadian manufacturer desiring it.

AMERICAN EXPORTER

The world's leading export publication is devoting considerable space and attention to Canadian export matters. It believes that the word "American" in its title means Canada as well as the United States.

Now in its thirtieth year, the AMERICAN EXPORTER is the pioneer publication devoted to the upbuilding of a world-wide demand for Canadian and United States manufactured articles. It reaches all the principal dealers, importers and other buyers of such goods the world over.

Two editions are published each month—one wholly in English and one wholly in Spanish.

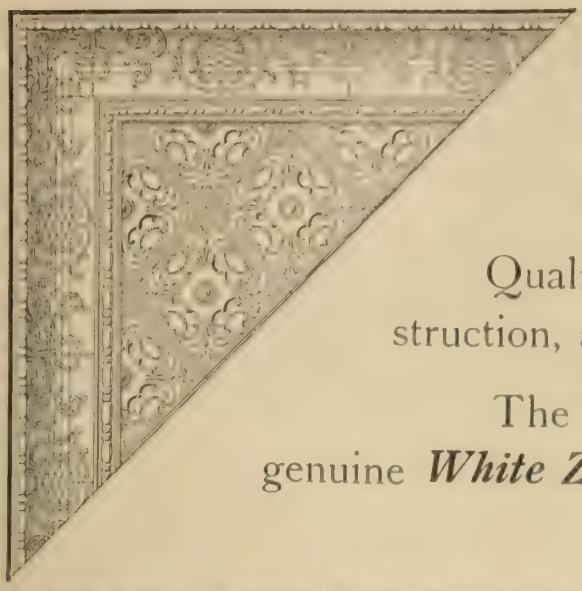
Besides the best and widest export publicity, the AMERICAN EXPORTER, without additional charge, furnishes its clients an unequalled

Foreign Trade Service

This service includes the co-operation of the AMERICAN EXPORTER'S staff of export specialists, men who have traveled in practically every country in the world and are familiar with conditions existing in the different foreign markets; translations of correspondence from and into any foreign language; commercial reports on foreign dealers from whom orders are received, and other specific foreign trade information of the utmost practical value.

Third Consecutive Annual Foreign Tour

Mr. W. J. Johnston, publisher of the AMERICAN EXPORTER, will sail for Europe on June 19th, 1907. He will make personal calls upon the leading Import Merchants, Dealers and large Consumers of Machinery, Apparatus and Supplies, in Great Britain, Germany, France, Austro-Hungary, Belgium, Denmark and Holland.



What can Mr. Johnston do for YOU on this extensive trip ?

Do you wish reliable agents in any of these countries ?

There is no charge to our advertisers for special services.

May we not tell you more about how capably we can serve you in building up a profitable export trade ?

AMERICAN EXPORTER W. J. JOHNSTON, Publisher
135 William St. - - New York

METALLIC CEILING

We make hundreds of artistic designs. Quality, workmanship, accuracy of construction, and ease of application unequalled.

The *only* Metallic Ceilings coated with genuine *White Zinc Enamel.*

EASTLAKE METALLIC SHINGLES

(Made in Canada 22 Years)

Warranted made of better material, more accurately and scientifically constructed, and can be applied more quickly than any other.

Fire, Lightning, Rust and Storm Proof

WE ALSO MANUFACTURE

Corrugated Iron (Straight or Curved, Galvanized or Painted.)
Ready Roll Cap (for Flat Roofs).
Hayes' Metallic Lath.
Skylights and Ventilators.
Pressed Zinc Ornaments.
Finials and Crosses.
Metallic Cornices.
Fireproof Glass Windows.
Architectural Sheet Metal Work in General.

HARDWARE AND METAL

Vol. XIX. MONTREAL, TORONTO, WINNIPEG, MARCH 23, 1907 No. 12.

MATTERS OF MUTUAL INTEREST

Just as it often appears that the crest of the wave has been reached in the rising tide of metal prices and to see the wave gather additional force and rise to even greater heights, so do the publishers of Hardware and Metal each year consider that the Annual Spring Number has reached its limit, only to see the following year far eclipse the mark set in the preceding issue.

The 1906 Spring Number won words of of commendation from many of the best known men in the trade, all agreeing that the issue was creditable to the publishers, of great publicity value to advertisers, besides containing practical reading matter serviceable to every reader. The 1907 Spring Number, now presented to our readers, will, we feel certain, deserve as hearty commendation as any previous issue. The reading matter has been compiled during the past few months by our editorial staff and comprises much practical, educative and authoritative matter which should cause thousands of readers to preserve the issue for future reference.

From an advertising standpoint this year's issue also shows a marked advance, between three and four hundred of the leading manufacturers and jobbers doing business through the hardware trade in Canada using the pages of the issue to make their lines known to the retail trade. The size of the paper has had to be considerably increased in order to include all this valuable matter.

* * *

That the retail trade reads and appreciates the value of the advertisements in this issue has been proven again and again. If the advertisements did not bring results the space used by jobbers and manufacturers would be constantly decreasing instead of steadily increasing. And if the retail trade did not find it of advantage to consult our advertising pages in order to keep posted regarding the latest annoucements and lines being introduced by our advertisers, they would not send in the orders which produce the results the advertisers desire.

In reality the advertising pages are equally advantageous to both advertiser and subscriber. It costs less to reach the trade through an advertisement in Hardware and Metal than through circular letters and the results are better. Besides, the retailer prefers to look for the announcements of manufacturers and jobbers in a medium which he reads regularly and which contains the announcements of others in the same line. The Annual Spring Number has been well likened to an annual exhibition wherein the most up-to-date manufacturers and jobbers exhibit their latest lines and present their arguments, outlining why business should be placed with them. An exhibition would be attended by only a small percentage of the trade. The Spring Number will be read by every hardwareman in Canada. Consequently no manufacturer or jobber of standing in the trade can afford to fail to grasp the opportunity of reaching and talking to the trade in this number.

* * *

Another indication of the interest taken in Hardware and Metal by the trade is the increasing number of letters sent to the editor for information regarding the names of manufacturers of lines which merchants do not stock but which they are asked to supply to customers. Much valuable information has been given in the "Letter Box" during the past year, the trade realizing that this "Letter Box" is the one source from which they can secure prompt and impartial information regarding any class of goods sold through hardware stores.

The "want ad." department is also being used more liberally by the trade. A merchant who wants to buy or sell a set of tinsmith's tools, wants to secure a clerk or wants to sell his business, or a clerk or traveler who wants to change his position or locate in the west, can find no better medium than Hardware and Metal's "want" column. A. W. Humphries, Parkhill, Ont., recently tried the "want" pages of a leading daily newspaper and got very unsatisfactory results. He then tried Hardware and Metal and transacted the desired business in short order. Mackie & Ryan, Pembroke, secured about seventy replies to a want ad. they recently inserted in our "want" columns at a cost of only 55 cents.

* * *

Probably the most important happenings of the past year, so far as the retail hardware trade in Canada is concerned, have been the organization of the Retail Hardware Associations in several provinces and the successful fight waged against the parcels post c. o. d. legislation proposed in Parliament by Postmaster-General Lemieux, but finally withdrawn as a direct result of the opposition developed by Hardware and Metal and the Retail Hardware Associations.

* * *

A development worthy of mention is the birth of the "Plumber and Steamfitter of Canada" this month. For nearly twenty years Hardware and Metal has been publishing technical articles and news of interest to those engaged in plumbing and steamfitting work in Canada, the aim being to establish a separate plumbing paper as soon as the constituency was large enough to warrant this action. This time has now arrived and the cordial reception given the new paper ensures it a bright future. A large portion of the plumbing and steamfitting work done in Canada, particularly in the smaller cities and towns, is contracted for by hardware merchants and arrangements will be made to allow these to secure more practical information than ever before at a minimum of cost.

The "Plumber and Steamfitter of Canada" has an able staff of writers, including, amongst others, M. J. Quinn, Toronto, who will conduct a department of "Questions and Answers"; C. E. Oldacre, Toronto, a member of the American Society of Heating and Ventilating Engineers, who has a wide reputation as a writer on heating subjects; Wm. Holley, Montreal, Associate in the Royal Sanitary Institute, who has written an able series of articles on the "Advancement of Practical Sanitary Science"; and W. B. Mackay, Toronto, an article by whom on "The Heating of a Hardware Store" will be read with interest by hardwaremen, even though they are not interested in plumbing and heating contracts. These are only a few of the features being arranged for the newspaper, the subscription price for which will be $1 per year.

* * *

An incident which has given us considerable pleasure has been the advance made during the year by one of the contributors to last year's Spring Number. Probably the best and most interesting article in the issue of a year ago was that written by Albert E. Karges, a Woodstock hardware clerk, on the "Interior Arrangement of a Hardware Store." The article excited a great deal of favorable comment, and as a result of the publicity gained by Mr. Karges, he was offered a position as traveler for the James Stewart Manufacturing Company, Woodstock. Mr. Karges went on the road and in calling on customers he was repeatedly asked if he was not the writer of the article on store arrangement. The interest thus established resulted in many orders and after a few months of successful work on the road Mr. Karges was as the beginning of the year promoted to the management of the Winnipeg branch of the business.

The hardware clerk of a year ago is now the western manager of a large manufacturing concern and the change is almost directly due to Hardware and Metal. Mr. Karges had the ability to succeed, but he was modest and his opportunity had not yet come. The editor encouraged Mr. Karges to spend his spare time in studying window-dressing and store arrangement and prepare articles on these subjects. These articles uncovered Mr. Karges' ability and developed his opportunity.

The incident shows clerks a road to success. Use the spare time in increasing the knowledge on store subjects and advancement is certain.

* * *

In response to a letter advising W. J. Illsey, of Winnipeg, that he had been awarded first prize in our Christmas window-dressing contest, Mr. Illsey replied: "The winning of this prize gives me a more earnest desire to increase my capabilities as a window-dresser. I enjoy, and more than formerly, your valuable paper's contents from week to week and endorse what Mr. Ross said in a recent issue: 'Give it to all the clerks.'"

In many ways we endeavor to make Hardware and Metal interesting to the clerk and traveler. We have departments: "What to do Next Month"; "Amongst the Salesmen"; "Window and Interior Display"; "Effective Advertising"; amongst others which are helpful to all in the trade and the jobber and merchant who does not encourage his employes to read the paper is losing an opportunity to make his staff of greater productive value to him.

* * *

One of our Montreal staff recently called on a prominent hardwareman for information regarding market reports, etc., and after the business in hand had been atended to satisfactorily, the conversation shifted round to our market quotations. "You want to be very careful to give the correct quotations as far as possible,' said the gentleman, "because the trade relies so much on the prices you give them, that it would make it very uncomfortable for jobbers and manufacturers, should a wrong price get in there by mistake." In gathering our information about the markets great care is taken and we have to thank both jobbers and retailers for much valuable information received during the past year. We invite correspondence from our readers regarding the quotations we give if it is found at any time that the discounts and net prices we quote are not thoroughly up-to-date.

* * *

Space prevents the reproduction of many testimonial letters, but the three below speak for hundreds received during the past year:

From a retail hardwareman: "I have been taking your Hardware and Metal ever since you started and you are improving with age as it is better to-day than it ever was and a great help to any hardware dealer."—F. A. Campbell, Mitchell, Ont.

From a hardware clerk: "We have always taken your paper in the east and I feel lost here without it. I believe every hardwareman should be a subscriber."—Leroy J. Chown, Edmonton, Alberta.

From a traveler: "You certainly deserve great credit for the progressive way Hardware and Metal is distributed through the trade in Canada. I find it is received by nearly everyone I call on, and, in addition, find that your editorials and comments on trade matters make very interesting reading. It is always a pleasure to pick up your paper whenever I have a few moments to spare waiting for a customer. It must be difficult to make trade reports interesting, but you deserve credit for the successful way you put this matter before the trade."—W. J. Wall, Montreal, Canadian representative of the Crane Company, Chicago, and the J. L. Mott Iron Works, New York.

ENTHUSIASM.

What does enthusiasm mean to the hardware merchant or clerk?

To the one it means increased sales, to the other increased salary.

You must love your goods or you cannot sell them. If you are enthusiastic you can make a possible customer enthusiastic, for there is nothing more contagious than enthusiasm—unless it's indifference.

But enthusiasm is not a made-to-order article. It's not an escape of natural gas or effervescent bluster. To be effective it should be spontaneous come from the heart as well as the head; it must not be a studied or affected enthusiasm, for there is more than one kind of wireless telegraphy, and men and women especiallly will read you like a book.

But how to acquire this enthusiasm: there is only one way.

Know your goods. Read the advertisements in this number, and pay special attention to those which are bristling with enthusiasm, that have the ring of sincerity about them. If a talking point in an advertisement strikes you as being good remember it will probably strike your customers in the same way. Encourage your clerks to read the advertisements and assimilate the selling points of the paints, revolvers, roofing materials and other lines in which they are interested.

Confidence in one's self and in the goods one sells is half the battle.

BENEFITS OF ASSOCIATIONS.

A year ago the retail hardware trade in Ontario was unorganized; the master plumbers' organization in Toronto had been adjudged guilty of criminal conspiracy; the hardware manufacturers had been investigated on charges of unlawful combination, and, with the exception of the strong retail hardware association in western Canada, there seemed to be no ray of hope for the organization of the hardwaremen of Canada.

To-day all is different. The Ontario Retail Hardware Association has come into existence and secured a strong membership. Nova Scotia and British Columbia are partially organized, and practical steps have already been taken to organize a Dominion Retail Hardware Association to enable the retailers in all parts of the Dominion to work together to advantage—just as they have already stood shoulder to shoulder in successfully opposing the parcels post c.o.d. legislation proposed in Parliament by Postmaster-General Lemieux.

The Dominion Government have not yet revised the Criminal Code to allow retail merchants the same rights enjoyed by lawyers, doctors and trades-unionists—who can meet together and jointly agree upon a price at which to sell their various commodities—but on the other hand, their failure to press the charges made against the grocers' guild, the tack manufacturers and others, shows that they see the injustice of the position these business men have been placed in. The grocers' guild are demanding that the Government reimburse them for the legal expense they have been put to, and the master plumbers seem likely to reorganize along lines which will be unobjectionable to any section of the community. Altogether the position of trade organizations in Canada has been vastly improved during the past year.

This is an age of organization, and nothing can stop the getting together of men whose interests are common in opposing certain matters. All the important industries — manufacturing, wholesale and retail—are organized for self protection and advancement, and the retail hardware trade should not be following the rear guard in the procession. They should organize nationally, provincially and in smaller county or district organizations.

Trade organizations have broken down the bars which formerly kept men in the same line of business from meeting in friendly intercourse. They have demonstrated that when competitors get together their illusions that the other fellow wears horns, cloven feet and a forked tail are false, but that he is a good fellow trying to overcome the same problems and make his business pay him a fair profit so that he may live comfortably. Hardwaremen in Canada have met together at conventions, have rubbed shoulders with competitors, and have been better for the experience.

The convention of the Ontario Retail Hardware Association which is to be held in Toronto next Thursday and Friday, March 28 and 29, will be one of the most important gatherings ever held by the trade in Canada. Indications point to a record-breaking attendance, a splendid program comprising business, good fellowship and trade discussion features has been arranged, and the Ontario retail hardwareman who does not avail himself of the opportunity to gain knowledge by hearing the views of some of the most successful men in the trade—well, he's not up-to-date and he's missing a good thing, that's all.

A REFRESHING INCIDENT.

Last month, an example of business integrity was brought to our attention, which was as rare as it was refreshing. We regret that we have been prohibited from mentioning names; it would have given us particular pleasure to have

openly expressed the appreciation of the trade for the man who acted with such a high sense of his obligations.

It was the old story of a failure years ago and a struggle ever since to gather together funds to repay creditors, who, in the eyes of the law, had no claim on the bankrupt. It meant the building up from the foundation of a business which has proved a success and which has enabled the owner to pay off all debts with interest to date.

The trade has few such examples before it and this one should serve as a reminder that even in the ordinary course of business, there is something a little higher and finer than the mere adherence to legal obligations.

INDIVIDUALITY OF WESTERN TRADE.

It is often said that the Canadian west is a general store country and easterners who are unacquainted with the actual conditions in the newer part of Canada are apt to accept the statement without question. A trip through the west soon shows that this general statement is only a half truth. There are many general stores in the west and the bulk of some classes of goods is handled in general stores, although in the west, as in the east, a generation ago, the tendency is towards the establishment of specialized stores. But while the general statement may apply to some classes of goods it does not apply to hardware. It would be safe to say that at least 85 per cent. of the hardware sold in the west is sold in specialized hardware stores.

A trip through the country or an examination of Bradstreet's or a general business directory will establish this contention beyond the shadow of a doubt. Even the smallest towns have their specialized hardware stores. For the purposes of this article the writer has selected at random five small towns as given in Henderson's Northwest Gazetteer for 1906. Redvers, Sask., with a population of 150 in 1906, had three general stores and two hardware stores; Miami, Man., with a population of 100 in 1906, had two general stores and one hardware store; Saltcoats, Sask., population, 600 in 1906, had three hardware stores and five general stores. Warman, Sask., with a population of 100 in 1906, had three general stores and two hardware stores, and Waskada, Man., with a population of 200, had three general stores and one hardware store. It is, in fact, a difficult matter to find a hamlet anywhere on a line of railway in the west that does not support at least one hardware store. In the newer parts of the country it is the same story as in the old. Along the main line of the Canadian Northern between Winnipeg and Edmonton there are many new towns which had no existence a year ago. The traveler finds in them all at least one hardware store in addition to the general store, handling the usual varied assortment of all classes of merchandise.

The reason is not far to seek. The hardware business is the biggest individual business in the west. The amount of building done each year in a new country is enormous, and straight line hardware stores have been started to supply the demand in builders' and general hardware.

The hardware merchants also have their own retail association quite distinct from the Retail Merchants' Association of Western Canada, an organization of general merchants. They feel that their interests are quite distinct. There would be no separate Retail Hardware Association in the west if the general statement that the west is a general store country applied to the hardware trade.

SHOULD PROVIDE SELLING POINTERS.

Manufacturers can help in educating clerks to increase sales by furnishing them with more information regarding their goods. The maker of a saw or knife or a lock is fully conversant with the article he manufactures. He knows why a certain kind of steel or a brand of iron or a kind of wood is better adapted to the purpose than any other and why the article is made of this particular steel, iron or wood, how a mechanic can best use a tool to the best advantage; why not impart this information to the merchant and his clerk so they can understandingly describe their wares to their customers? How can it be expected that a merchant with hundreds and thousands of different articles on his shelves can talk with knowledge and point out the merits of different articles when the only guide he has is the label on the package giving quantity, size, number and name of article? Manufacturers should use their advertising space in the trade newspapers to provide selling pointers for the merchants and clerks to use when selling the goods.

VALUE OF A BUSINESS EDUCATION.

Every young man entering business with ambition and enterprise as his assets will not be satisfied to stay in a small business. The competitive spirit and the ambitious spirit constrain him to aim towards getting into a big business and become master of it. The thing needed most by such young men to help them to realize their ambitions is a thorough knowledge of those matters which always come up in business transactions.

For instance, how essential is a thorough knowledge of business law! He must know the value of a contract and all that goes to constitute a valid contract. He must know the underlying principles governing large transportation companies, as railways, steamship companies, and express companies. He must know the relations existing between consignor and consignee, between dealer and purchaser.

It is necessary for him to be able to discriminate between good and bad securities, to know what securities represent, the specific laws governing them, the financing of large concerns, the meaning of partnership, and the working of the money market. Too many financially strong merchants have had their business ruined through unwise speculations, not knowing the ins and outs of the stock exchange. A thorough knowledge of the detailed workings of the business concern is indispensable to the young man who is ambitious to better his position, to make it a more lucrative and responsible one. Those who win are the masters of their craft.

WHO PAYS FOR ADVERTISING?

Who pays the cost of advertising? At first sight this question looks easy. One is apt to say offhand that the advertiser pays it. But upon closer investigation it becomes apparent that an advertiser,

who advertises properly, gets back all the money he spends in advertising, and a good deal more—else what would be the use of his advertising?

The purchaser doesn't pay it, because he gets the goods as cheaply from an advertising firm as he could from a non-advertising firm. In many cases he buys cheaper. Then who pays the cost of advertising?

The non-advertiser does! By the lack of enterprise in bringing his goods before the attention of the public he loses customers, who buy from advertising people. The profits which are lost by non-advertisers, find their way into the coffers of those who do advertise.

As an example: If $20 spent in advertising brings you in $30 additional profit, your advertising is paid for and you are ten dollars in pocket.

THE MERCHANT'S FINANCES.

Jobbers report that many of their customers have been slow in making their payments this spring, there having been altogether too much money handed over to the promoters of Cobalt mining propositions by merchants who should know better. The money which has been used in gambling in stocks would, as a general rule, earn far more for the merchant by using the funds in buying and taking short term discounts on the many lines which have been advancing in price during recent months. But when a gambling craze is on some suckers must be caught to provide the funds for the promoters' advertising, etc., and the business men, in spite of their supposed knowledge of financial affairs, provide a fair percentage of the cash required.

On the other hand the manufacturers and wholesalers say there is a steadily increasing army of retailers who are getting out of the ancient rut of doing business on a long term basis, fully 60 to 70 per cent. of the hardware trade now taking the discounts allowed for prompt settlement. There is, in fact, a movement springing up amongst the most up-to-date retailers to pay spot cash and demand an extra half per cent. for the accommodation. For instance, a Toronto firm recently bought a $400 bill of goods from a manufacturer and instead of letting the account stand for 30 days and taking off the usual 2 per cent., amounting to $8, he settled at once, and deducted $10, equalling 2½ per cent. The manufacturer expressed himself as being well satisfied to allow the extra discount as he favors encouraging every movement towards prompt settlements. He also pointed out that the man who paid spot cash was not tied to one house, was more independent, and would often receive special favors as a result of his ability and willingness to pay spot cash. In his opinion every dealer should exercise great care in buying so that they would not overload themselves and not have ready cash to meet accounts promptly in order to take the discounts.

We recently heard of one merchant doing a business with an annual turnover of $540,000 who received $24,000 in cash discounts in one year. Would not a dealer doing a business of one tenth that sum annually find $2,400 a welcome addition to his profits? There are many merchants who are constantly receiving new goods, and to these the discounts should be, and are, a very important item. The dealer who fails to take the discounts is losing money. Go to the bank and borrow the cash if you haven't it on hand. The discounts will more than make it up. It will pay handsomely to pay interest on a loan, when you use the money to take advantage of the discounts. The man who can use his money and make 5 to 10 per cent. on it through discounts is getting the best result.

PRIZES FOR IDEAS.

The editor has been planning to announce a series of competitions in which prizes would be offered for the best letters on subjects of interest to the hardware trade. The idea is to encourage Canadian hardware merchants, travelers and clerks, to take advantage of the facilities offered by Hardware and Metal as a forum in which discussions can take place which will be educational to everyone in the trade.

It is really not necessary to offer prizes, but as mankind loves competitions of a friendly nature and it is necessary to have rules, judges and referees in every contest, it is felt that more interest will be taken if nominal prizes are held up to be striven for. The first subject on which we invite discussion, therefore, is the following:

What is the best plan a hardware merchant can adopt to increase the sale of stoves and kitchen furnishings in the fall and winter season? What methods of display and what system of advertising can be used to the best advantage? Should the dealer canvass his district for business? How can old stoves be disposed of to best advantage and what plan of selling on easy payments brings the best results?

For the best letter answering the above questions received before June 1st, 1907, a prize of $10 will be awarded, and the best letters will be published in order to be of value to the trade in outlining their fall campaign for stove business.

If the number of replies received warrant it this will be followed by other discussions for which prizes will also be awarded. There is no reason why any merchant, traveler or clerk should fail to express their ideas on the question asked.

PUNCTUALITY AN ASSET.

One of the most valuable assets of a business concern is punctuality on the part of the employes. It is always a very admirable and commendable quality, especially in a business man. It shows true appreciation of the value of one's time, and displays a scrupulous sense of honor, self respect, and interest in one's company. Apart from the fact that a dilatory clerk is a drag on a business, punctuality goes far towards increasing the business. A man who lacks this quality, punctuality, to a great extent, it matters not how well he may be equipped, otherwise, will not only suffer many losses in a commercial sense, but will be regarded as unreliable and unsafe in all business transactions involving large sums of money, and as untrustworthy in a moral sense, in matters pertaining to social and civic duty.

It is essential that the employer, also, should be punctual, for an employer who is not punctual in the performance of his own duties is not likely to arouse the enthusiasm of his employes and, as a consequence, his business will suffer in the matter of its management as well as in every other department.

POINTERS FOR CLERKS.

The fellow who is always late in coming in usually the first one to go.

Cheerfulness is catching, and there is always room in the store for a smiling countenance.

Clean hands and clean linen make a favorable impression, while the other kind doesn't.

Jobbers' Relations With Retailers

Selling to Consumers Condemned — Why Retailers Should Support Jobbers — Adjusting Errors in Shipments — Experiences of Two Retailers.

WHY DO RETAIL HARDWARE MERCHANTS FAIL?

By a Prominent Montreal Jobber.

This is a subject of deep importance to both the wholesaler and retailer. Traces of failure in the hardware business are found in a variety of sources.

Starting With Insufficient Capital.

This should never be attempted and is perhaps the main cause of all troubles in the hardware business. Young men with ability, no doubt, believe they can start, these modern days, to do business of $15,000 or $20,000 per year with $1,000 capital. This is utter madness and will only result in the old old story of failure. Great care should be exercised in raising sufficient capital to start with. Under no consideration, start with borrowed capital. This leads to an endless amount of trouble.

Want of Experience.

The wholesale jobber frequently has to refuse credit to young men, who possibly have some capital, but no experience. The two qualifications naturally go hand in hand, and knowledge and thorough training in the hardware trade is more requisite to-day than it has ever been in the past owing to the large variety of goods required to compete an up to date hardware stock. In addition to knowledge, tact and politeness, coupled with caution are absolutely necessary. Remember that this is a time of close and keen competition, and only by those who are strong in the points mentioned, will success be attained.

Tendency to Overbuy.

This is a grevious mistake. The facility of getting goods from the wholesaler to-day has never been equalled, and the retail man does not require to carry the heavy stocks which were formerly necessary. Buying too many goods has probably been the cause of more failures in the hardware trade than anything else we know of. The wholesale jobber, if he is up-to-date, must pay cash, and when the retailer asks for further credit than the usual terms, he is plunging himself into an interest account. Far better, to do a limited business on a carefully purchased stock, than endeavoring to do a large trade requiring an excessively heavy stock. While on this point, it might be mentioned that an up-to-date retailer must keep abreast of the times and be constantly on the lookout for novelties, so as to keep up an attractive display of his goods. Retail hardware stores can be made attractive, and there are many which are a credit to this country, and fully equal to the United States or any other land. There is no reason whatever why a small hardware stock should not be kept in neat order and the goods attractively displayed. This will help materially to draw customers; especially is this so in the larger towns.

Be Careful in Partnerships.

The retail hardware merchant if he enters into partnership should be very careful to select the right man. Want of unanimity amongst partners has often been the cause of failure, the disagreement often leading to a policy of war. To make it still plainer, the writer has known partners who for years hardly ever exchanged a word, the feeling between them had become so bitter; this is wrong and can be easily avoided. Be sure you select a partner thoroughly competent to bear his share of the business. In a partnership where two are concerned, it would be wise to have one an office man and the other a thoroughly competent hardware man. This should make a strong company.

The Credit Problem.

By having a keen oversight over the credits, a retail man may avoid disaster, in fact, he is almost sure to do so. A policy of as near cash as possible, should be adopted by all hardware merchants. Even if their profits appear small success will be attained. Granting of too much credit has always been a great evil, and a continual collecting of accounts and keeping them well within range will add largely to the success of many business and avoid financial distress.

JOBBERS AND RETAILERS MUST STAND TOGETHER

By Weston Wrigley.

It is said that in the New England States there is not a first-class jobbing house—that in fact, there is not such an institution east or north of Philadelphia in the United States. The reason given for this peculiar situation is that jobbers incurred the ill-will of retailers by selling promiscuously to consumers and the retail dealers in retaliation transferred their business to the manufacturers, who in this territory are able to handle the retailers' trade satisfactorily owing to the nearness of the factories to the retail market.

There is a lesson to be drawn by Canadian hardwaremen from this situation. Canadian jobbers—some more than others—are selling too freely to consumers for their own good. The writer knows one Ontario retailer who conducts more than one hardware store and who boasts of buying between 80 and 90 per cent. of his goods direct from manufacturers. The first condition will breed the second. Let the jobbers take action to preserve their hold upon the retailers by eliminating this most important evil. If present tendencies are not checked more and more business will be placed with manufacturers by the retail dealers and the New England experience may be duplicated in Canada.

There is as much need for the jobber as for the retailer, under our method of doing business to-day. Of course business could be done in a sort of "unsight and unseen" method by the large mail order houses selling direct to the consumer, but the objections to this method are too obvious to require enumeration in detail. Who, for instance, would want to buy a ton of coal, a dozen of eggs or a gallon of kerosene by mail order?

A large buyer for several stores may be able to buy most of his goods from manufacturers, but 95 per cent. of the retail hardwaremen in Canada can do business best by using the jobber as an assembler of goods in large quantities to distribute in small lots of infinite variety to hundreds of merchants in all parts of the country.

Any attempt to eliminate the wholesaler is likely to react upon the retailer. The jobbers have carried a large number of retailers in bad years and in prosperous years when the demands for credit by consumers in newly settled districts would have forced the retailers to the wall. The jobbers are men of wide experience and thorough knowledge of market conditions. As a rule they recognize that it is not in their own interest to with one hand sell to legitimate retail customers and with the other

hand sell to mail order houses or to the consumers direct. This isn't a square deal—but it is done to a considerable extent.

Without making any comparisons near at home let us take for an example the case of the recently defunct First National Co-operative Association, otherwise known as the Cash-buyers' Union, of Chicago. This institution did a large mail order trade and claimed to be able to supply anything in the hardware line from "a needle to a threshing machine" from their eight-storey building. When the sheriff took possession it was found that they carried only a $15,000 stock of hardware. But their books showed that they had been doing a big business at cut prices. Where did the goods come from? Was their big stock carried by jobbers or manufacturers? When the concern received an order for a pair of nickle-plated skates and they had only blued cast-steel in stock, was the order passed on to the manufacturer or was it given to a jobber in a direct or indirect way?

It has been clearly shown that the jobbing houses in Chicago and other places supply goods to the mail order concerns who are demoralizing trade for the retailer and now that the mail order problem is developing in Canada (as instance, the proposed parcels post legislation and the subservience of the daily newspapers) it would be well for hardware jobbers and retailers in Canada to take joint action to retain the trade in the regularly established channels. Here is work which the Wholesale Hardware and Retail Hardware Associations could take up with mutual advantage.

While there has certainly been a growing tendency towards eliminating the jobber and retailer in the United States, the former by retail dealers doing business directly with manufacturers, and the latter by the larger mail order houses buying from the manufacturers or manufacturing themselves, there are evidences to show that the movement in this direction is being headed off, one incident which might be quoted being the legal action taken by Montgomery, Ward & Co., Chicago, against the South Dakota Retailers' Association for boycotting the jobbers and manufacturers who supply goods to the Chicago concern.

The disposition to give the jobbers the go-bye and to buy direct from the manufacturer, therefore, not only weakens the retailer in his fight against the catalogue houses, the jobber being a valuable ally in dealing with manufacturers, but it also encourages the chain store idea, which tends to develop a few large firms controlling from two to twenty branch stores, much upon the same plan as the "syndicate" five and ten-cent stores or the "tied" hotels in the large cities controlled by the large brewers.

Looked at from any standpoint it seems clear that the interests of the retailer are bound up with those of the jobber and that the wholesaler is his own worst enemy if he does not do his utmost to eliminate that growing evil—the sale of goods direct to consumer.

EXPERIENCES OF TWO RETAILERS

Two Ontario retail hardwaremen not long ago were induced to outline some of the troubles experienced by the retail dealer in towns remote from the jobbing centres. One from Sturgeon Falls contended that it was the jobers duty, if only from a selfish standpoint, to protect the retailer. He contended that retailers could get along without jobbers much easier than the wholesale houses without retail customers and he gave two instances of ill-treatment at the hands of traveling salesmen for jobbers who go after business direct from consumers.

"A traveler called on me," he said, "and I ordered a quantity of iron. He then called on a customer of mine, the best blacksmith in town, and sold him a year's supply and his shipments came in the same car as mine. The blacksmith owed me $200 at the time and I had to wait about a year for it while the jobber got his cash at once.

"Another instance was even worse. A mill in my town asked me to quote on building paper and I knew that with the quantity I had already bought their order would entitle me to the ten per cent. rebate. I quoted at cost, therefore, but discovered that they had got quotations from two wholesale firms. One of these wrote me saying they had quot, but for me to secure the order as I would get the rebate. The other firm said nothing about it to me but sent their traveler who, when he found I had quoted the same figure, told the millman that I was expecting the ten per cent. rebate, but if the order was given to him the millman could have it himself. The traveler then had the impertinence to call on me for on order and while in my office the phone rang and my wife, who answered the call, was told that the order had been given to this traveler at ten per cent. less than I quoted. My wife repeated the conversation to me and, needless to say, the firm has not received an order from me since.

"There is a great deal of this work going on that we don't hear about and it injures the retailer greatly."

Took a Poor Man's Money.

The other merchant, an Essex County man expressed himself strongly in favor of the retailers organizing a strong association, and outlined his opinions on the troubles of retailers as follows:

"In these days of strenuousness in business a certain amount of leniency is allowable, everyone is pushing to do his best, to do better if possible than the other fellow. I have a case in mind in my own business experience that fully illustrates this.

"I had a call from a traveler representing a wholesale house I did business with, a firm indeed, from whom I bought the most of my general shelf goods and a house that did a good paying business, considered commercially speaking, in the very highest standing; well off, could in fact pick their customers, and enjoyed the reputation of being one of the best all-round houses in the trade.

"After a short time spent in general talk, he informed me he was going to a small town about 9 miles distant (off the railway) where there was no hardware store, but that a party who had been school teaching there, contemplated going into business in that line, having saved by many years of toil, something less than a thousand dollars. Before he went to solicit business, however, he wished to consult me as I might consider it might injure my business to have them sell this man so close by, and that they would be guided by my answer as to the wisdom of opening up an account and that they would not do so unless I was perfectly satisfied.

"I replied to him that it made no difference to me whether they sold to this man or not, that it made no difference to my business and that they could do as they thought fit. I wished, however, before he left to place before him the following facts, viz., that I knew the man in question, that he was perfectly honest; had no knowledge whatever of any business, and that they had had a good general store account in the same village for many years, and I asked him if in view of all these conditions he was justified in selling this man a bill of hardware, take all his money and probably make him lose every cent of it before the year was out.

"The traveler merely smiled, shrugged his shoulders and stated that if he didn't do it somebody else would, and gave me to understand he intended to sell him if he could, if I made no objection. I told him finally that it seemed a disgraceful piece of business that a firm of their standing should have to get down to such small means to capture trade, and that if they cared to be

placed on a level with the riff raff of the trade that had to scrape around for living by such means, he could blaze away so far as I was concerned.

"What was the result? Why it turned out exactly as I predicted, for in about 9 months, the poor man had spent all his money, and as his credit was gone he couldn't do anything but shut up as no one would trust him.

"In this instance it was entirely a case of grab, there was no judgment whatever used, and a house that stood very high in the commercial world had dropped down to the low level of a 3rd or 4th class concern that had no reputation to lose. This happened several years ago, but I have no doubt like cases could be enumerated by retailers all over the country.

"Every excuse seems to be made to make sales, for instance a paint firm with whom I was doing business to some extent, was very anxious (with several others) to sell the paint to cover a very large new building here, and in order to get down low enough to beat all the other fellows he said he couldn't afford to give me a rake-off, and in fact he admitted to me afterwards that he lost about $50 by making the sale. All this forsooth was done so he could say their paint covered the biggest building in the county.

"I could bring forward other cases similar to those, but these two serve to show that the retail hardwaremen have their grievences. Sometimes, of course, these things are done by drummers who do not display any common sense; that it is simply a grab business with them so that they can rake in a little more commission over their regular salary at the end of the year, but as long as the house agree to it the is as bad as the other.

"Now I claim that wholesale houses and manufacturers that can't exist without resorting to such unbusiness like transactions should be out of the business altogether. Competition is keen of course, probably more so at the present day than it has ever been and yet it is not possible for wholesalers and manufacturers to do a clean business? I mean, of course, houses that claim they have an established record that will always bear inspection.

"There are houses in the trade that it is a pleasure to do business with, honest and straightforward in their dealings, courteous and gentlemany in their correspondence, in fact model firms in every respect, but it will not be till the millennium comes that every jobber will have attained to that reputation."

ADJUSTING ERRORS IN SHIPMENTS

The shiper in a jobbing house, like all the rest of us, makes mistakes occasionally and sends to much to one customer and too little to another—and sometimes he sends the wrong articles through error or in substitution for lines which are out of stock and not readily procurable.

In the readjustment of these errors there is opportunity for disagreement, and while hard feeling sometimes results, there is really no occasion for it if both retailer and jobber takes up the matter of difference in the proper spirit. The jobber must, of necessity, be prepared to give and take as he desires to retain the goodwill of his customer. The retailer, on the other hand, too, often takes an arbitrary and inconsiderate position, seeing his own side of the case and refusing to recognize any other.

For instance, a Toronto jobber receives an order for three washing machines of different sizes and of a certain make for shipment to a dealer in the Niagara district. He instructs the manufacturer at Hamilton to forward the order but the latter's shipper sends one machine of a wrong size. The retailer detects the error and immediately ships the wrong machine back to the jobber at Toronto, writing the jobber of his action. The jobber is put to the expense of paying two freight bills in straightening out the order where if a letter had been sent the house explaining the circumstances more prompt and satisfactory attention could have been given the matter.

Every shipment of goods made by a jobber is checked over two or three times and yet mistakes happen. How many times will it be necessary for retailers to check over their incoming shipments to avoid mistakes? And how many devote the attention they should to this important work? It pays to watch this matter closely.

And it pays to be honest about "over" articles received wherever there is a "short" there is almost certain to be an "over." The shipper's assistant might, in checking over a shipment, place an article intended for John Smith in John Brown's pile of goods adjoining.

An instance of this occurred last fall, when a package of pearl handled cutlery was checked off and shipped, but not to the right man. The dealer who did get them had an elastic conscience, as they haven't been returned yet, although, of course, the jobber had the replace the item to the dealer who ordered them in the first place. The jobber lost between $25 and $30 by the mistake and the dealer was in this much by his neglect to report this "over" to the house.

Another incident related is of a dozen plated napkin rings being shipped to the wrong address. In this case, however, the dealer notified the jobber that he had received goods which he hadn't ordered and weren't on his invoice. But he was a wily customer and wrote thanking the wholesaler for his thoughtfulness in sending him such a nice Christmas present.

Inquiry amongst the jobbers brings out the fact that there are few dealers who take advantage of mistakes on the part of the jobbers. There are some, however, who take the view that "if the jobber is fool enough to give them goods for nothing, they are not fools enough to refuse it." And peculiarly enough these are usually the ones who consider the jobbers the least when a shipment contains some "shorts" or wrongly sent goods.

It is an accepted truth that the dealer whose's relations are the most intimate with his traveler and jobber is the one who receives any favor or special attention when it is in the power of the jobber to repay the friendship.

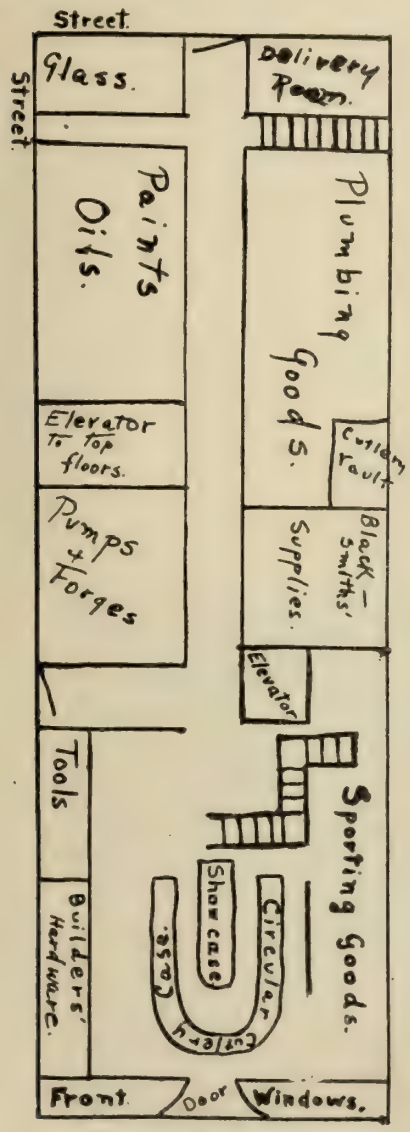
Relations existing between the wholesaler and the retailer should have for their foundation the square deal. Fair and true statements of conditions should also be given by the retailer when asking for credit and fair and square treatment of the retailer when buying goods, the wholesaler giving fair terms and right prices. Mutual trust and mutual dependence result in harmonious relations, with give and take concessions when occasion necessitates.

MR. SARGENT'S EARLY HOURS.

"Some years ago," said a traveling hardware salesman, J. B. Sargent, of New Haven, engaged a young man as private secretary, and asked him to begin work the next morning. 'I am a rather early riser, he said, 'and would like you to get around in good season.'

"The youth was anxious to please, and to make sure that he would be on hand before his employer, he showed up at 7.30 on the following morning. Mr. Sargent was at his desk at work.

"On the second morning he came at 7.00 and found the old gentleman ahead of him. On the third morning he came at 6.30, and found Mr. S. deep in the mail.



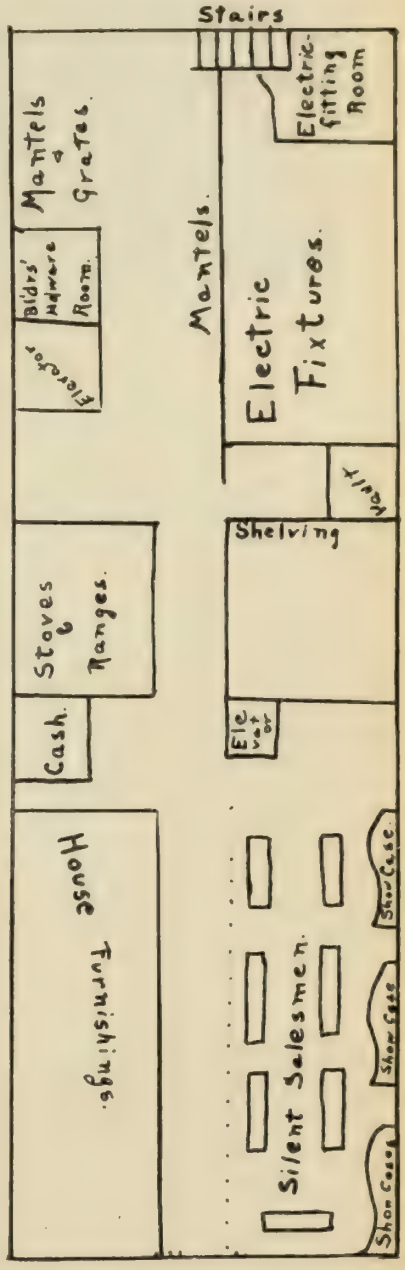
"When Mr. Sargent had opened the last letter, he wheeled around and said: 'Young man, I would like to ask you one question.' 'Yes, sir.' 'Would you be good enough to tell me where you spend your forenoons?"

Merchants and Their Stores

Some Examples of Store Arrangement—Fixtures for Displaying Goods—Business-Getting Suggestions.

ASHDOWN'S STORE AT WINNIPEG

One of the best examples of hardware store construction and arrangement in Canada is the recently constructed building of the J. H. Ashdown Hardware Company, at Winnipeg. Built on a leading corner on Main street, only a block from the city hall and Union Bank building, the location is a favorable one, giving a frontage on three streets, with a width of two stores for window display on Main street. "Canada's Finest Retail Hardware Store," is what W. J. Illsey, manager of the cutlery department of the store claims, he stating this to be the verdict of dozens of traveling men who have visited the store.



Ground Floor Plan of the Ashdown Store at Winnipeg

The wide frontage and corner location provides five large windows, divided into two main sections, the main door dividing. Here displays are changed frequently, every advantage being taken of this form of advertising. The basement is used largely for storage purposes, the front being occupied by sporting goods, builders' hardware and tools in shelves. The centre section are the nail packing quarters, nails being put up in cartons from one to ten lbs. Behind this are lavatories, an elevator shaft and more shelves for tool storage and carriage makers' hardware and blacksmith's supplies. Back of this is the heating apparatus and electric switch-board, next to this being a small tin shop for the company's own work. The rear section of all is used for plumbing goods storage and paints, while under the pavement all round the end and side of the building is storage for grate tiling and oil supplies, the "Bowser" pumps being used.

The Housefurnishings Corner in the Ashdown Store.

The ground floor is shown in the accompanying diagram. On the right is the sporting goods and in the centre the cutlery department, where sales have averaged about $60 a day. On the left builders' hardware is kept, the goods being sampled on "Bennett" boxes, finished in light oak. Above the drawer section right to ceiling are stored all kinds of surplus goods in the line. This line occupies about half the front section of the store on the left. Beyond come tools of all kinds, machinists', carpenters', moulders', electricians', masons', plasterers', etc. The tool department also occupies a part of the large central show case for finer lines of tools. Back of the elevator is the blacksmith department. Pumps also figure among this department's outfit. The rear of this ground floor contains the paints and oils and plumbing goods departments. In the rear and opening on Albert street are the delivery rooms and freight elevator.

Second Floor of the Ashdown's Winnipeg Store.

On the second floor in the front the firm carry a very large stock of enamel and tin and copper ware all displayed on two and three-deck tables, also wire goods and general kitchen utensils. The

Sporting Goods Department on the Ground Floor of the Ashdown Building.

left front (facing) is filled with silent salesmen cases containing hand-painted china, silverware, fancy Austrian and Doulton and wedgewood china, leather goods, and bronze articles. Along the left wall large showcases contain clocks, silverware, cut glass and china and silver goods. Behind the cash office is the stoves and ranges display on raised platforms, bathroom fixtures, etc. The back half is occupied by mantels and electric fixtures. In a builders' hardware showroom everything new and good may be seen in working order. Unit lock sets, front-door sets, store-door sets and such lines. The third floor is occupied by the general offices and receiving and shipping room. To really understand the interior beauty one must visit it, but the illustrations we produce will give readers who have not seen the store an opportunity of appreciating the excellence of the general arrangement.

TORONTO'S LIVE RETAIL STORE.

Every hardwareman who visits Toronto should pay a visit to Russill's store, at 126 King street east. A half hour spent in watching the methods of doing business in this store and, if possible, a five-minute chat with Frank M. Russill, the progressive manager of the business, will be time well spent if the visitor is an observing man, capable and willing to learn a few lessons in up-to-date methods of doing business.

About a dozen years ago Mr. Russill was working with his father in a crockery store known as "Russill's in the Market." The store next door fell vacant and it was decided that the premises would be enlarged. A stove salesman happened along and knowing the Russill's to be live business men, he suggested that they put in a line of stoves, offering to supply them on consignment for the first year. One of the clerks had some stove experience and said he could sell stoves, so the move was decided upon. Then some one suggested hardware and a small stock was installed and for seven years the business gradually developed in spite of keen opposition for the farmers' trade.

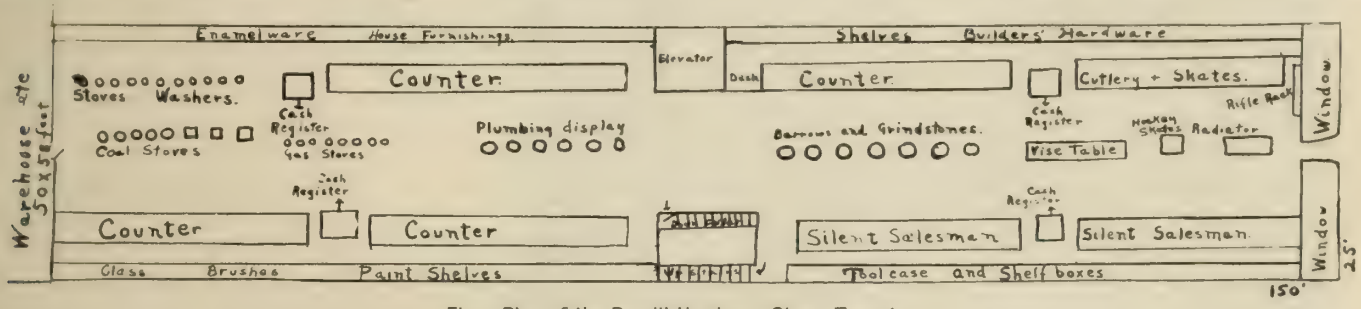
Paint and Housefurnishings Departments in Russill's Store.

One afternoon five years ago Mr. Russill saw a vacant store across the street and investigated the premises. There was a chance for expansion, he figured, and the new store would provide the space, so a lease was arranged on favorable terms. At that time King street east, near the market, was considered dead from a business standpoint, most city business centering around the departmental stores near Queen and Yonge streets. Old established hardware stores had the bulk of the farmers' business brought by the market also, and Mr. Russill was given three months as the lease of life of his new venture. For a while he catered for the farm trade, but he soon decided that other dealers could handle all the wire fencing, binder twine, wire nails, etc., at small margins, while he would try to keep busy on tools, hardware, paints and other lines which allowed a fair profit. The more business the other fellows did in the unprofitable staple lines the better Mr. Russill was satisfied, as they had less time to compete with him.

By careful advertising on lines which had been proven successful by departmental stores, Mr. Russill gradually developed a splendid business with the city mechanics. He outlived the three months and in three years was prepared to drop the farm trade almost entirely, so satisfactory had the city trade become. Advertising in the country papers was cut out and only city dailies continued. Three delivery wagons and three telephones are kept busy a large percentage of the business being done by telephone and c.o.d. Up to the present the delivery service has been done by contract, the average cost of each wagon, horse and driver per year being about $1,000. Altogether there are over 30 clerks, shippers and other persons employed in the store.

Further expansions are now under

way, $3,200 having just been spent for four of the latest electrical cash registers, the old office and cash carrier system being done away with. Under the old system both clerks and customers were kept waiting for change and there was a chance of error. The cash registers save time all round and will soon pay for themselves, says Mr. Russill, after three months' experience. An automatically printed receipt is given with each purchase, and 2½ per cent in goods is allowed on $10 worth or over of returned checks. A girl will be able to handle all the cash records from the four machines in two hours' time each day.



Mr. Russill is not an enthusiast on side lines or specialties unless they have proven their utility. "We are distributors, not drummers up," said he, "and the kind of customer we want is the one who will come in and say, 'I want so and so.' We haven't time to do missionary work, and if a man comes in with a new bread knife or a new window latch, we tell him to go and create a demand for it and then we'll buy. I believe in carrying the best lines. For instance, if a man comes in and wants a good paint, I tell him I have S.W.P. and I can recommend it to him as the best on the market. On the other hand, if a man asks for paint and price is a consideration I have a line of my own which I sell at a reasonable price."

The store is organized on departmental lines, each branch being in charge of a manager, who is expected to show results at the end of the year. Mr. Russill is very modest about figures, and declines to say how much his total sales have amounted to, but he admits that each year has seen a substantial gain, and if a department manager is not able to show an increase of from 10 per cent. upward each year, he would consider something wrong. As far as possible buying is done direct from the manufacturer, but jobbers get a fair share of the business. An average of 5 per cent. of the total sales is spent in newspaper advertising. The windows, too, are a great feature, seasonable goods being allowed to remain on display from two to four weeks. Considerable rivalry exists between the clerks regarding the windows and each is anxious to show his goods in order to boost his sales.

All forms of interior advertising is done, every article being marked in plain figures and price tickets, display cards, sample boards, etc., are used wherever possible. "We mark everything and let the goods sell themselves," said Mr. Russill. "See those vises by that display table. A man will come in to buy a hammer and he will see that little vise marked at $3, and he'll buy it also. Another innovation I'm going to adopt is regular meetings of the staff to talk over our business affairs. We will have a 'suggestion box' and any employe making a valuable suggestion will be rewarded. I believe in the clerks educating themselves, and think other manufacturers ought to do as the American Fork and Hoe Company, of Cleveland, has recently done. One of my clerks sent over and got one of the booklets they have issued explaining the talking points of their goods, and I intend sending for enough to hand one to every one on my selling staff."

The basic idea of the arrangement of the Russill store is to give a good impression. The windows are clean and scientifically dressed and the interior, while crowded with goods in every available space, is clean and neat, the silent salesmen and showcases at the front being very attractive. On the right side cutlery and sporting goods are given first place, behind this being builders' hardware and behind the elevator plumbing supplies, heating goods, washing machines, enamelware and general house furnishings. On the left are tool cases and shelf boxes, shovels, forks, horse blankets, sleigh bells, etc., and farther back the paint, oil and brush department, 12 Bowser oil pumps being in use, the Russill Company taking pride in being the first ones in Toronto to instal the system. In the centre are display tables, etc., on which are shown vises, food choppers and mitts, and behind these racks for axes, snow scrapers, etc., and then grindstones and wheelbarrows.

The sketch showing the floor plan will give a general idea of the layout of the store, while the illustration shows the back portion of the store, behind this being a warehouse, shipping office and workroom, 50x58 feet in size, with an entrance on a lane.

Floor Plan of the Russill Hardware Store, Toronto.

MONEY IN HOUSEHOLD SPECIALTIES.

"Is it not an acknowledged fact that all live hardware merchants of to-day are making their most money out of specialties?" writes a washing machine salesman. There is hardly a hardware merchant who has not clerks enough to sell at least 25 per cent. more goods than he does. We will say, for instance, that he is doing a business of $10,000 a year and barely eking out a living. This same merchant, by handling a good line of specialties, could easily increase his business to $12,500 a year with no additional expense whatever. He has done an additional business of $2,500 at a profit of not less than 25 per cent. (for there is a good profit in specialties, if properly handled), and the net results is the dealer has made $625 clear money at the same expense.

What are specialties? I call a washing machine a specialty, and am probably better able to talk on the washing machine question than any other. I find hardware dealer who says they can't sell washing machines, and that there are none sold in that locality—he has none on the floor. I leave him, I don't want him to sell our machines, because he can't sell anything. Everything that goes out of his store his customers sell themselves—they come in and ask for five pounds of nails and get them. He don't sell them anything else. Then I go up the street and find a dealer with a couple of washing machines in front of the door, I walk in and find the dealer and clerks are busy. A customer comes in and asks for five pounds of nails, and by the time the clerk has the nails ready he has got the customer interested in a washing machine, and in ten minutes time he has sold him one. He made five cents profit on the nails and two dollars profit on the washing machine. I finally get the dealer's attention for a few minutes, and I find that this dealer sells from 50 to 150 washing machines a year, which is the average sale of an ordinary dealer. This

is a contrast you will find in 99 out of every 100 towns in the country. It is the difference between the dead and the live dealer.

This not only refers to washing machines, but to every other specialty as well, and by specialties I mean such things as refrigerators, ice cream freezers, churns, gasoline engines, gasoline gas machines and a hundred and one other things too numerous to mention.

HANDSOME STORE IN ONTARIO TOWN.

Traveling salesmen in western Ontario speak very highly of the new arrangement of Fred Howes' hardware store at Listowel, which was remodeled recently. It is now most up-to-date and in an excellent location for business. The building is two storeys, 19x120 feet, with a full-size cellar, tin shop upstairs and storeroom in rear 36 feet in length. The structure is of cement blocks and the general appearance is excellent.

Interior of Newly Remodeled Store of F. Howes, Listowel, Ont.

Below the sign is nearly 60 square feet of prismatic glass, which provides a splendid light in the interior of the store. The windows are modern and the displays, as will be seen by the illustration on another page, are of a high order. The walls and ceiling of the store are neatly decorated and a skylight provides light for the back of the store.

On the right-hand side are 390 shelf boxes carefully sampled and with nickel-plated pulls. In the centre a large wall showcase has been built for displaying edged tools. On the left side the upper portion of the shelving is used for tin and graniteware, and the lower for mixed paints, a row of hanging lamps and lanterns being also shown. In stove season, rows of stoves are placed on the floor, the surplus stock in the photo partially hiding the handsome counter and showcase. In addition to the rope display and nail bins, as shown in the photo, there is a bolt rack at the rear of the shelving, where each size and kind of bolt, etc., is kept, each being properly labeled to avoid loss of time. Two three-barreled coal oil self-measuring tanks are also installed, Mr. Howes is considering the oil and lamp trade a profitable line to push.

Regarding shelf boxes, Mr. Howes says a hardware store cannot well do without them, as they save space and keep goods clean, besides acting as a silent salesman. Customers see the samples and often buy goods which they had not thought of purchasing.

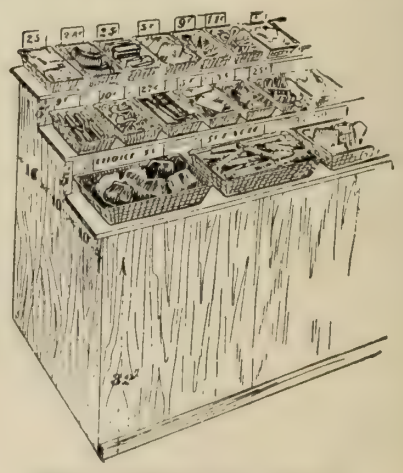
Mr. Howes was formerly a member of the firm of Anthony & Howes, Georgetown, he having bought out Zilliax & Sarvis, the former owners of the Listowel store, in March, 1906.

ESTABLISH BARGAIN COUNTERS.

There is a lesson for retail hardwaremen in the marvelous success of the "Fairs" and other 5, 10 and 15-cent stores now established on the syndicate basis in all the leading centres of population. They exist largely because of the lack of enterprise on the part of the retail hardwaremen, who might just as well as not have this business as their own if they would make a feature of bargain counters and conduct them in a business way.

In the two illustrations we reproduce suggestions are given of two methods of display adopted, but it will be noticed that everywhere emphasis is put upon the stating of the price in plain figures. The table shown is ten feet long and can be put together in a few hours' time at little expense. The other style

Cheaply Constructed Display Table.



of counter is preferred by some because of the storage space it provides.

To start a bargain counter without expending a cent for fixtures, take large packing boxes and cover them with common wrapping paper. You can do the work yourself and the boxes are probably in your basement now. A few cents will buy wall paper or some fancy cloth which will improve the looks of the counter. Three or four of these boxes put end to end down the centre of your store will make as practical a bargain table as one made of quarter-sawed oak.

SMALL RESULT-BRINGERS.

The few leading and general principles of business are familiar and fairly observed by most business men, but it is in the extra attention to small details that the careful merchant finds his best chance to get ahead and lead the other fellow.

Keep stock clean and well displayed and bring seasonable lines early to the front, before any of your competitors.

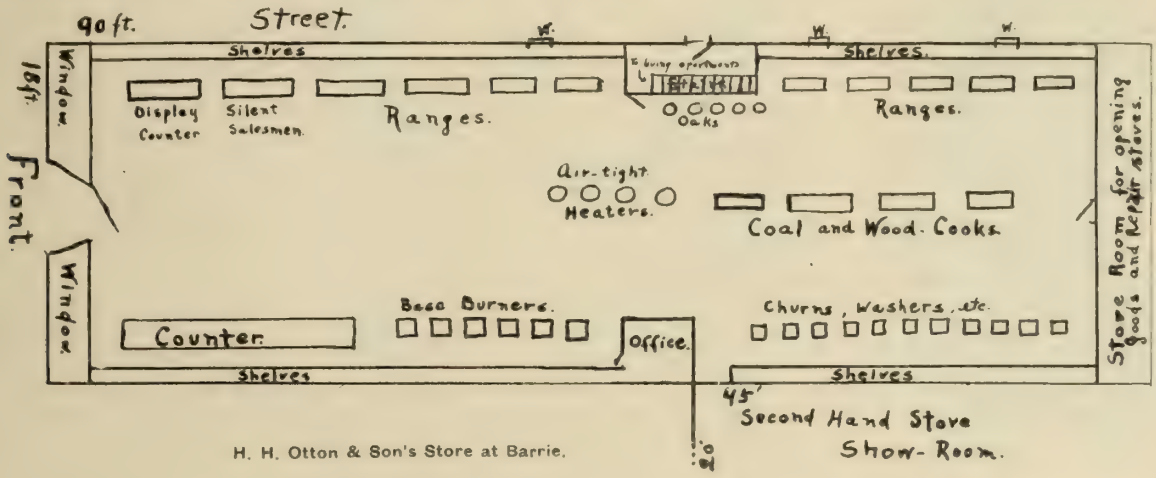
Bargain Counter Allowing Storage.

Let all your present customers know in some way that you appreciate their business and want more of it; also that

you are in better shape to serve them than ever before.

Get some good selling specialties which your competitor cannot procure and push them in your store and window display and through your newspaper advertising.

Arrange for a personal business canvass of your locality or send an intelligent representative. See that the names of prospective paint buyers are forwarded to your manufacturer so that he may supplement your work with his advertising matter, and let your newspaper advertising be terse, strong and individual in character.



DISPLAYING STOVES IN HARDWARE STORES

Fred W. Otton, of H. H. Otton & Son, Barrie, has practical ideas regarding the display of stoves, and in a recent letter outlined a few suggestions as follows:

"Where a dealer who has ample floor space and can arrange his stoves so as not to obstruct the shelving, I think it better to have such stoves as base burners and oak stoves elevated along against the wall and have all ranges and cooks on the level below and in front of them, leaving enough space for an aisle between them. In our own store we haven't got the space required for so doing and we use trucks and castors under all, excepting our light heaters.

"We consider it a great advantage to display stoves on red painted trucks or castors where the space is limited, as you can bring your stove out from among the others, turn it around and show it off to better advantage. We use stove trucks mostly our own make, made from 2x4 dressed scantling, with a narrow moulding around the top edge, and use piano castors in them. We find that these run much easier than the stove castor, the wheel being larger and having more bearing, while they are less expensive. We also use castors on our silent salesmen, so we can move it without difficulty to any part of the store for a change, and also make it easy to sweep from under it."

The plan of Otton & Son's store is shown in the accompanying sketch, the store being narrow, only 18 feet wide by 90 feet in depth. It has the advantage of being located on a corner, however, this providing several windows for light and a side entrance to the living apartments above the store. The sketch shows the store in the stove season when every available space is taken up with heating and cooking goods. In the summer season refrigerators take the place of the base burners in front of the office, and lawn mowers, etc., replace the oaks and air-tight heaters. A workshop is located over the back part of the store and there is a storeroom over the second-hand stove room, the front part of this building being a drug store. There is also a fire-proof oil cellar under the stove repair room at the rear of the store, this addition to the store making the building 120 feet in length.

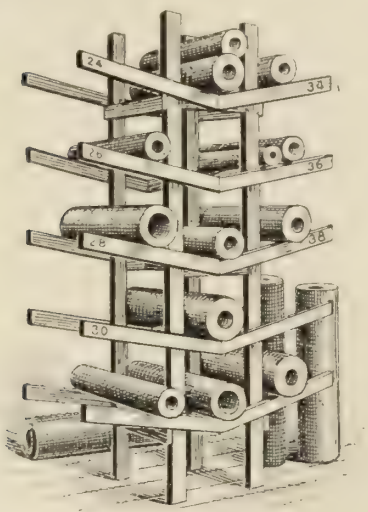
H. H. Otton & Son's Store at Barrie.

WOULD DISPLAY STOVES ON PLATFORM.

T. H. Latimer, of Latimer & Elliott, Chesley, Ont., says he prefers a long, narrow store to a short, wide one for the display of stoves, as he has done business in one of the latter kind and never could arrange stoves to any degree of satisfaction, the stoves always having a bunched-up appearance. With a long store one can range them up in line according to size, and they not only show off to better advantage but are more convenient to show to customers when making sales. He always uses castors to set his stoves on and likes them better than trucks.

"Were I building a new store," adds Mr. Latimer, "I would cut out the shelves on one side of the store, and have a platform 8 inches high by 4 feet wide placed on floor along the wall, starting at the front show window and extending back as far as I had room to go. I would then place my stoves and ranges on the platform with backs to wall and put on two or three lengths of stovepipe with one elbow so that elbow faces to wall and also put on a pipe collar so that the stove has the appearance of being connected to the chimney.

"On the wall above the stoves I would put up a shelf wide enough to accommodate boilers, dishpans, 5-gallon oil cans, tea kettles, etc. For all other lines of tinware and graniteware I would use double-deck tables placed near the centre of the store where otherwise stoves would stand. By using tables for these lines you can accommodate more than you would with ordinary shelves, and as the ladies can more readily examine the goods, sales would be increased—this being the main point to be considered."



THE BUILDING OF INDIVIDUALITY

Get people's interest aroused in the articles you sell them, not only in the advertising that creates the sale, but in conversation with them, suggests an exchange. It will get them in the habit of regarding their purchases, not as mere things, but as industrial creations full of individual interest and capable of infinite variety of quality. The customer who goes from your store thoroughly interested in some bit of hammer gossip which may be substituted for the usual comments on the weather, will take a special interest in the hammer he has purchased and, if it is a good one, will unconsciously associate its quality with the store from which it came.

There are many interesting facts about

even the smallest mechanical contrivance and by calling a man's attention briefly to something of this sort, the habit is quickly acquired of interesting each thing in the store with individual characteristics. Shelf hardware is no longer so much metal at so many cents a pound, but every piece represents a certain amount of mechanical skill and quality which wins the respect of the purchaser even when the article purchased is of the most trivial kind. This will be found another little blow against the catalogue house that is doing business at too long a range and in too wholesale a manner to individualize. A pound of nails no longer suggests merely the price at which they come, but the process of their manufacture and the mechanical difference between the perfect nail and the shop sweepings that include all sorts of imperfections.

As the habit of close observation grows there comes to the eye beauty of detail that never would otherwise have

Serviceable Rack for Wire.

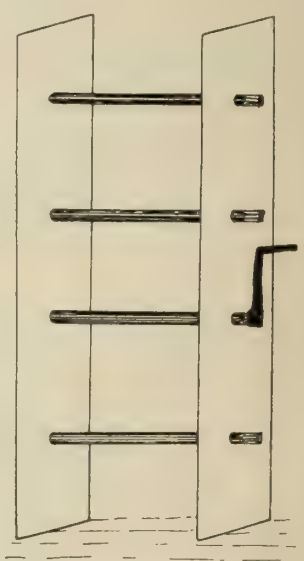
been noticed but, that, once observed is never forgotten or lost sight of. But do not forget that the customer is usually a busy man. Do not take away from him time for these explanations ; simply put the time he has to give you to good use.

WIRE CLOTH RACK.

The accompanying illustration represents a simple and inexpensive rack for holding wire cloth, which a bright clerk with a knack for using tools can readily construct in a few hours. It is made of 2x3 in. lumber, planed smooth, which may or may not be varnished or painted to harmonize with fixtures or adjacent woodwork. The four upright posts are set about 12 in. apart at the ends, and 20 in. on the sides of the rack. They are braced together at the top and bottom where the projecting arms cross the uprights. There are five sets of these arms, or crosspieces, placed about 1 foot apart and inclining towards the centre so that the rolls of cloth will stay on. The arms are 22 in. long and are fitted together smoothly where their ends meet in the middle of the rack.

Only a few rolls are shown in the cut to avoid obscuring the construction. It will be seen that the ends of the arms are marked with stencil giving the size of the cloth which they hold, 24 to 32 in. being kept on one side of the rack and 34 to 38 on the three upper arms of the other side. The two lower arms on this side are used for brass cloth, while the compartments in the centre contain landscape cloth. One advantage of this rack is that everything it holds can easily be got at from either end, so that if one end is kept clear goods may be stored all around, or it may be built in a corner or against a wall without lessening its convenience.

GETTING TRADE FROM FARMERS.



Catalogue houses, at least the larger ones, depend to a great extent for trade on the rural population, and it is to the farmers that the most of the advertising of these houses is directed. Throughout the United States efforts have been made to enlist the services of rural free delivery carriers, postmasters and others to obtain lists of all farmers and to place catalogues and other advertising matter in their hands.

The rural mail routes that have been established in many sections of the country, have had the effect of making it less necessary for the farmer and his family to go to town. Mail order papers and mail order catalogues are brought direct to his door, so that in many instances, the farmer is really in closer touch with the city establishments, and is better informed as to their offerings, than he is of the goods carried by the merchants in the towns on the rural mail route. The Ad. World says :

"If people don't come in and see what you are doing, it is up to you to go to them and tell them what you have for sale, and why it will be to their advantage to trade with you. You must keep them in mind of you, if you want them to remember that you are still doing business. Don't rely upon the county papers alone, get in direct touch with your possible patrons. Send them a circular or a letter occasionally, telling them about your goods. Do this when you have a lot of new goods come in. Do this whenever you have a bargain to offer.

"If your letter or circular comes in the same mail with a letter or circular from the far away concern, you will at least divide the attention with that concern. People will understand that you are not conceding the trade to the big Chicago mail order concerns, nor to the nearer department stores. They will see that you also claim to sell the most meritorious goods at moderate prices. If you quote prices, and they are as low, or nearly as low in price as the big stores, you will, in most cases, have the first chance of making a sale. Given the chance, it is your own fault if you don't make it.

"The reason that the big concerns are taking away so much of your trade is because they keep hammering people with the assertion that they can give the best values. An assertion made over and over again, without being disputed, is at last accepted as a fact. If you want to hold your trade, go out to your patrons in true mail order style and tell them your side of the story. There is no doubt at all that there are many effective arguments that can be used by the local dealer, and he can quote prices on many goods to back up his claims.

A Handy Rope Reel.

"The form letter is an especially effective way of sending out direct advertising. It would pay many retail dealers to put in a mimeograph or other duplicating device, and send out a letter weekly. Silence is no answer to the persuasive talk of the mail order men. You must meet them on their own ground, with more convincing arguments."

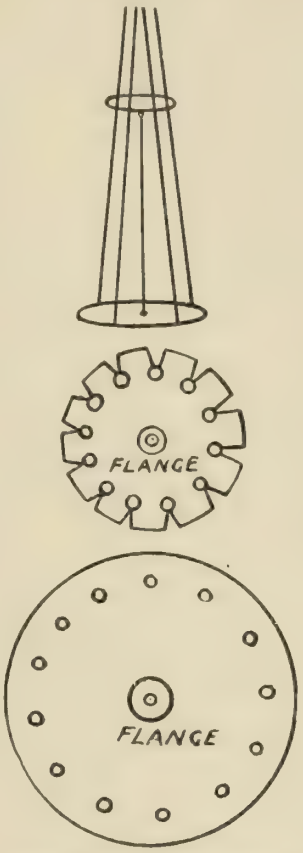
A HANDY ROPE REEL.

The sketch accompanying is of a rope reel made and used by a Wisconsin hardwareman. The reel is made by boring holes in two upright boards fastened against the wall, and running through them round wooden rods. The latter are squared at one end to fit an iron handle which can be made at a cost of a few cents at the blacksmith shop. The reel is a very convenient article, keeping the rope up out of the way, and preventing it from tangling when measuring off.

INDEX AND STOCK CARD SYSTEM

By B. A. Chambeau.

Every retail store should be indexed, very carefully and thoroughly. There are several reasons why this should be done. One is that it preserves that admirable condition expressed by "A place for everything, and everything in its place." It also helps to keep the stock up, preventing the "just out" condition. It helps to keep tab on the rapidity with which any certain stock moves. It preserves a record of prices, frequently settling disputes and often saving money on buying. The hardest part about keeping a card index is the installing. Afterward it is easy, requiring only care. But even the installation is not so hard if properly gone about, the time devoted to it being slack hours.



The card index system is much preferable to the book index system, for several reasons. It is more convenient to install, for it is more elastic. It is more complete in its efficacy, as it permits of the filing of a great deal of data that could not be cared for by the book system. It is neater, and easier to refer to. It is cheaper in the end, because it will outlast a book system, the latter having to be renewed as soon as one department becomes cramped for room, or as soon as the pages are worn out. With the cards, there is no limit to the size to which it may be stretched, if desired, and the wearing out of a card means only to replace it with a new one. Besides, with the book system, old entries are liable to be scratched off. Indeed, that is the only way to dispose of them, while with the card system, cards for stock that is out of date and cards that are too full for further additions may be filed in "defunct" or transfer drawers, where they are easily accessible.

The cards should be four by six inches in size, filed in drawers. Different colors may be used for different departments or classes of stock. The cards should be ruled, both vertically and horizontally, both front and back. No card should be devoted to more than one article.

One side of the card should carry, at the top and left-hand side, the name of the article. On the left-hand side should be placed, in the first column, under the title, the amount in stock on the date the card was filed, entering the date in the second column. Then, thereafter, whenever a new supply arrives, put down the amount, date, name of firm from whom it was purchased, price, discount allowed, price it is to sell for, and, whenever the selling price changes, date of change; condition it came in, whether good or bad, With some articles this last entry is not necessary.

The reverse side of the card should carry at the top the name of the article and its location in the store and in the storeroom. The lower three-fourths may be used as a continuation of the front side.

It is not necessary to have a column for every entry to be made. The date of the change in selling price, for instance, may be noted in the same column with the price only in another color of ink. Same with the condition of arrival when the condition is bad, a cross may be placed just above the price,

Fishing Tackle Display Stand.

or somewhere else where it is not liable to escape attention.

It is easy to see the importance of this system as far as it is used to denote location of the stock. Many a merchant has forgotten stock piled in remote corners and is ordering new. It saves time and money. The buying record it affords is highly valuable in buying, for from it you may get a line on the last prices you paid, whether the goods are moving rapidly or not, and, in fact, the complete information without which you can not buy to the best advantage for yourself.

The stock and index card system is also of great value in taking an inventory; often shortening that work by several days. And all this cost only a little time in installing, and after that not so much time as you would waste for the lack of it if you didn't have it, and, from ten dollars up, according to the size of index needed.

Never throw a card away. This is important, for you do not know when you will want to refer back to it. Cards should be filed in a transfer drawer as soon as they are filled, and the same should be done with cards of articles no longer in stock. In the case of filled cards, the new or, "live" card in the working case should bear a mark showing that a preceding card has been filed in the "defunct" drawer.

Never, not in a single instance, should the system be neglected once it is installed. A card should be made for everything in stock. Every purchase should be entered. No system is of value unless properly carried out. Do not trust to memory; put it on the card.

Of course, in denoting the location of stock, the store will have to be divided into compartments and each given a designated number or letter. The best method in most cases is to give each show case a double letter, like AA, BB, CC, and so on. The shelf compartments may be lettered and the shelves numbered. Drawers may be treated in the same manner. Then, after this is done, it is easy to tell, when the card says a certain article is at "G-3" that it is in compartment G, shelf 3, or, if it says that it is in "S. R. G. 8," that means that it is in the store-room, in compartment G, shelf 8. The method is very simple.

With this method should be a record on each shelf, wherever such a record would be of assistance, giving a list of the articles belonging on the shelf. This may be placed back out of the customer's sight. It is very convenient in preventing any article from being out of stock, and by its use any person who can read is capable of stocking up the shelves. In the case of drawers, the articles they are supposed to contain may be written on the sides.

FISHING TACKLE DISPLAY STAND

A very useful stand for displaying fishing poles can be made of two circular boards one inch in thickness, as shown in the accompanying drawings. The bottom piece should be bored part of the way through to prevent the butt end of the poles from sliding off, while the top board should be bored through, as illustrated. The two boards are connected by a piece of iron pipe about 5 feet long threaded at both ends and screwed into flanges attached to the circular boards. If desired castors can be added. Any handy clerk can make the fixture in his spare time.

Make Business Produce Profits

Cost of Doing Business—Business that Don't Pay—The Cash System in Operation—The Retailer's Credit—Bookkeeping Suggestions

COST OF DOING A RETAIL BUSINESS

Only four or five in a hundred of the people who go into business succeed. The other ninety-five or six either go to the wall or eke out a bare existence.

Ninety per cent of the retailers don't know the cost of doing business. If this be true, and the view is strongly held by a great many business men, it is time to make a thorough study of the cost of doing business. The old school definition that profit is the difference between the cost and selling price of an article is wrong. The expense of doing business must be subtracted from the profit.

There are two reasons for this lack of knowledge of the cost of doing business. The first is bad or inefficient methods of bookkeeping; the second a failure to include in the cost of doing business all the items of expenditure that go to make it.

An Example.

To illustrate: Suppose a man is doing $12,000 business per year with $3,000 invested, we would figure the cost something like this:

Interest on capital, 3½ per cent.	$105
Rent	200
Salary to proprietor	800
Wages to employes	850
Insurance	50
Taxes	30
Horse keep, repairing rigs, etc	75
Light and heat	50
Telephone	20
Depreciation in value of fixtures....	25
Postage, etc.	25
	$2,230
Now suppose he figured 20 per cent. profit on selling price of goods, $12,000, we have	2,400
Less	2,230
Net profit	$170

The first item is interest on the capital invested. If a man were working on borrowed capital he would pay interest. If a storekeeper borrowed half his capital, the interest on his own money would be as legitimate an item of expense as the interest on what he had borrowed. This should include also interest on the value of stock not paid for. It should include also interest on all outstanding accounts owing him. If a firm has $1,000, or $25,000 open accounts on their books the interest on that is assuredly a legitimate cost of doing business.

No Doubt About These.

Then there are items that leave no room for questioning—rent, taxes, fuel, light, wages, advertising, insurance. If a storekeeper owns his premises he should include rent, or what is the same thing, interest on the value of the property.

If the storekeeper employed a manager, the business would have to pay the manager's salary. If a man manages his own business he should have a salary just the same.

Some people might say "his profits are his salary." Not at all. That is putting him in a worse position than his hired manager. If a business failed, the worst that could befall a hired manager would be the loss of a position. He risks nothing. The storekeeper risks all he puts into the business.

Fixtures Wear Out.

Depreciation of stock and plant is not a myth. Scales wear out, horses get old. The loss of goods in weighing is a case of "many a mickle makes a muckle." It is a very natural tendency in salesmen to appear liberal and the effort to fight against it is not likely to be so strong if one is dealing with some one else's goods. Some people will rashly assert that what is given away in over-weight won't amount to a hill of beans in a year. Suppose that on an average a man gave over-weight of an ounce every time he sold a pound. Many sales would be more than one pound, many would be less. The best cure for over-weight is to have goods weighed up in advance wherever possible.

No one will dispute bad debts as a legitimate item in the cost of doing business account, but some may not have the courage to make a clean breast of it and admit the loss.

Repairs are constantly necessary. Every person utilizing any kind of plant should know the percentage of depreciation and provide for it. If a horse lasts five years, in one year a fifth of his value is used up, has gone into the cost of doing business.

The cost of delivery would surprise some merchants if they would give it careful consideration. Here is how a merchant in an Ontario city doing a business of $125,000 a year figures it out. He keeps eight delivery wagons:—

Interest on investment, 6 per cent:

Barn	$1,300	
Rigs	1,000	
Horses	1,200	
	$3,500	$ 210
Wages of drivers		4,000
Keep of horses		1,162
Taxes on stable		33
Repairs		400
Total		5,805

This is just a little over 5 per cent. on the turn-over and shows that it costs this grocer $725 a year to keep one delivery wagon. It will cost the man who keeps only one more.

A man in business is not in business for fun, or for a mere living. He should accumulate a certain sum each year to the good that would keep him from want by the time he is 55 or 60 at any rate.

The temptation to cut prices is the curse of business, and it is ignorance that is at the root of all cutting, the lack of knowledge of the cost of doing business. It is the principal reason for failures. The result of cutting is that a man's family suffers. He is not able to give them a proper education. He is not able to take the recreation due himself.

The proportion of those who succeed in the hardware business is very, very small, probably not over five per cent. It doesn't necessarily follow that all the rest fail; they simply exist.

We place the cost of doing a retail business at 22 per cent. of the total turn-over, and suggest the following as legitimate charges: Interest on investment, interest on open accounts, salary, wages, rent, fuel, light, taxes, advertising, depreciation of stock, loss in overweight, bad debts, delivery, repairs and renewals, paper and twine, incidentals, telephone, etc.

Hardwaremen who have given this subject some thought are invited to write the editor expressing their opinions regarding this estimate and the items included.

WHY I STARTED THE CASH SYSTEM

By A. E. Code, Morris, Man.

It was during the winter of 1904-05 that I first began to investigate the cash system of doing business. During the previous fall and the early part of that winter, I had collected all the accounts that I was liable to get that year, and found that there was a considerable amount still owing to me that I stood a good chance of never getting.

After I paid up the wholesalers for my stock, with the exception of a few odds and ends of accounts, which were not due until February or March, I found that I had more stock on hand than the previous year, and thought I was doing all right. The only thing that bothered me was that there was no visible surplus in the bank. There were also those small accounts to be provided for. There were lots of goods on hand, but the trouble was to turn these goods into money.

It was the case over again of "The Ancient Mariner" thirsting for water in the middle of the ocean. I was literally surrounded with goods, but had very little ready money.

Dealer's Money Paid for Mail Orders.

Just about that time some of my gilt-edged customers came in, bought their goods, and said, "charge it." It was going to be the same old story; nothing but "Charge! Chester, charge!" all along the line for another long, weary year. I knew that those customers could afford to pay for what they were getting.

I knew that at that time about one thousand dollars a week was going out of this small town to departmental stores. And whose money was it? Certainly it was my money, or money that should have legitimately come to me in payment for the goods I had sold.

The departmental stores were offering "bargains," in which the sacrifice was generally taken from some hardware line, graniteware, cooking utensils, etc., and they were selling under the cash system.

Now, whose fault was it that some of this money did not come to me? I take it, it was not the customers'. I was selling under the credit system, and was the customer to blame if he merely fell in line with that system which I must have preferred, else why did I adopt it?

Three Objectionable Alternatives.

Meanwhile goods were going out on credit and those small accounts with the wholesalers were still unprovided for. How also was I to replace the goods being sold?

There were, as far as I could see, only three courses open to me. First, I might borrow from the bank; second, I might endeavor to induce some wholesale house to relax their terms of credit, and supply me with goods until fall; or, third, I might allow my stock to run down.

Each of these plans was objectionable. If I borrowed from the bank I would have to drop seven or eight per cent. at the outset. Buying on long time from a wholesale would place me at the mercy of somebody else, who might at any time request that the account be reduced. Besides, this method precluded any possibility of my being able to buy some articles at better prices from other firms. The last method of allowing my stock to run down and thus losing sales, was too objectionable to be seriously considered.

Why should I be compelled to adopt any of these courses?. Simply that I might procure goods to hand over to people who would not pay the cash for them. Why should I place all I owned at the caprice of a wholesale house, or why should I borrow money in order to lend it against my will?

This idea seemed to suggest the fact that, we, of the credit system, are really doing a "private banking business," or rather, a "private loaning business," in which we do not take the ordinary security taken by those businesses.

The risks taken in credit sales are too great for the returns. If I buy an article for seventy-five cents and sell it on credit for one dollar, it simply means that I have lent the customer seventy-five cents, and he in effect says to me, "Now if the crop is good, if it is not injured by hail, or rain, or hot winds; if my profits are greater than my expenses, if the implement men or thresher companies do not get it ahead of you, if everything turns out as well as I expect, and if I remain perfectly honest, I will come in at some future time and give you one dollar."

Of course, some one may say, "That is an extreme case," but those who have been there know that the above type of customer is by no means rare, and if credit sales were confined to those financially strong, there would not be nearly so many entries in the ledger. Those who were well-to-do did not need to buy on credit. They could borrow from the bank, and could make on the deal by buying at a much better price. Let those who needed the money do the borrowing.

The Risk Too Great.

If there were any to whom the bank would not lend the money, why should we take the risk?

The only solution of the problem seemed to be to insist on cash. But could it be done? We already sold some goods for cash. Considerable more cash was turned away when we were out of goods, they having been sold on credit, and we could keep a better stock.

I recently asked an adherent of the credit system why he still continued it and what advantages it had, and he said "that it was easier to sell goods," and "better profits could be had." Not very powerful arguments. Let me here enumerate what I consider the advantages to be gained by the cash system.

Advantages of Cash System.

In the outset I would save the amount paid to the bank in interest. I would avoid the risk of being at the mercy of a wholesale house, and I could replace my stock as soon as sold. I would thus be enabled to make several profits on each dollar by keeping it thoroughly alive.

In addition, I would save the price of a new set of book-keeping books—nearly fifty dollars.

I would make two per cent. per month in cash discount, which for the year would amount to twenty-four per cent.

I would save the loss by bad debts.

I would improve my standing with jobbing houses and thus put myself in line for any snaps that might be going.

I could compete with catalogue houses by adopting their weapons.

I could adopt modern methods, such as bargain sales, etc.

I could sell cheaper.

Instead of wasting time writing up accounts and rendering them, I could use it in improving store displays and in selling.

I could save a waste in postage and stationery.

Each night it would be known just what profit was made during the day, and failure could be entirely avoided by keeping expenses below net profits.

There would be no loss by mistakes in book-keeping and there would be no enemies made by disputed accounts.

I could go after the poor-pay man for business as readily as the others, because I was talking from behind the cash wall. Under the credit system the doubtful customer was rather shunned.

I could cut out the worry, because almost all the worry of business is over accounts or a shortage of money.

A Dream Worth Realizing.

This seemed to me a very alluring picture, a sort of "Ellysian fields" for business men, in fact it reminded me of a picture of the "Gates Ajar." I decided at once to adopt the cash system for all time.

I went over my accounts, picked out

those I was anxious about, sought out the men and had a heart-to-heart talk with them. In almost every instance they were in accord with me in the advantages of the new system, for the customer as well as the retailer.

This done, I occupied my time on Good Friday, 1905, with painting some large banners and streamers, red on white. In each of the windows I hung a sign, "We sell for cash only," and farther back in the store another large one proclaimed to all the self-evident truth of "Do not ask for credit and you will not be refused."

They did their work and I found myself finally launched in the new system, the system of cash.

THE CASH SYSTEM IN OPERATION

By A. E. Code, Morris, Man.

When a merchant has finally decided to adopt the "cash system" of business his next step must be to take precautions to guard it. In my own case the first move I made was to render every account on my books. The object of this was to convince the customers that there was more in the new movement than mere idle talk. It certainly had its desired effect. Some people fairly stood aghast at the audacity of the thing. They reasoned: That, while the rendering of accounts in the fall might be pardonable, the sending of them out in March! "Well, that seemed too much!" The most surprising result of sending out these accounts was the number of them that were paid. Many were paid that I did not expect till fall.

Realizing that it was considerable of an innovation that I was inaugurating, I was prepared for any number of surprises. As a matter of fact, the change was effected without causing scarcely a ripple. To be sure, some rather shied at the signs in the window—they were somewhat loud—but in a few days they got used to them and the new order of things.

Some of my best friends came in and enquired if it was so what they had heard that I was attempting to run a cash business. On being answered in the affirmative, they gravely shook their heads, looked at me with that compassionate, pitying, "another-good-man-gone-wrong" sort of expression, and assured me I was attempting an impossibility. Especially was it impossible when there was a credit store in opposition. But I found that I retained the trade of a large number of my hitherto credit customers and those, who found it necessary to go elsewhere and buy under the old system, bore no ill-will. During that summer a considerable number of the cash purchases of these people came my way, and in the fall I got an increased share of their trade.

It is pleasing to relate that during the infancy of the new method, I received, I believe, the hearty co-operation and moral support of the rest of the business men of the town, including the opposition hardware. To be sure this was nothing but right, as it was an experiment in which all were equally interested.

It seems to me that the old credit system was ever contrary to the laws of nature. The first law of nature says that "to every action there is an equal and opposite re-action." This truth applied to the commercial world, means, simply, "Value for value."

Let us look at an ordinary credit sale; one in which a note is not taken in payment. The storekeeper hands out the goods, writes out a counter-check slip, and the customer goes out of the store with the goods in one hand, and in the other a receipt showing that he got them. The merchant has certainly given value. What has he got for it? Simply the privilege of making an entry in his day-book, and a vacant space on his shelves. He doesn't get even a receipt from the customer. In short, he does not seem to have gotten "value for value."

I found that my posters and the general circulation of news had spread the tidings pretty thoroughly, and that I had to refuse very few people. Even in this most difficult duty the cash system helped me, and the refusal lost most of its sting. Refusal to sell a man under the "cash system" is merely a pleasant announcement to him that the new method prevents your selling in the old way. That the "cash system" has taken possession of the business and the cash system is practically inexorable.

At this point show the customer some of the goods in which you have reduced prices.. Small articles of well-known value.—The customer readily grasps the advantages and can bear no ill-will, as he realizes that he is up against a "system" in which everyone is treated alike. This is the great point; treat them all alike. Draw the circle complete. In short, maintain the system at all hazards. This done will win the respect of the buying public, and eventually "those who came to laugh" may be induced to "remain to pay." On the other hand, refusal to sell a man goods under the "credit" system is equivalent to telling him that he is dishonest or incapable and is thus practically an insult. This creates an enemy in the district whose presence is a menace to your business.

In actual operation it is less often necessary to refuse customers under the cash than under the credit system. The line had always to be drawn somewhere—between the good and the poor pay—but the trouble generally was that it was not drawn soon enough.

Let it not be supposed that it is an easy thing to guard the new system. More than once my line has been broken down and it requires constant alertness to repair the broken places.

And what a number of different methods are employed by customers to get goods without pay! There is first the man who has "forgotten his purse," and his relative who has "forgotten his check book." After him comes the man who has been sent in for goods by "Mr. Jones," and "Mr. Jones" will pay for them, in fact, "Mr. Jones" is even now hastening down with the money." Next is the man who maintains that "thirty days is cash." Then we have the man who has to see if the article will fit, and closely following him is the man with the "order." Probably the worst of all, though, is the man who deliberately walks off with the goods. I have a case like that now in which a well-to-do foreigner has gone off with a stove. I find it impossible to make him understand the necessity of conforming to my system, and it looks as if I would have to wait until he gets a better grasp of the English language. If he acquires the new language with the same celerity with which he absorbed the stove, I trust to have not long to wait.

It is now nearly two years since I first started the cash system and I am thoroughly satisfied with it. It has done all I expected of it. Many times I have had occasion to be thankful for the protection it gives. Probably a better expression of opinion, as regards the success of the venture can be seen in the fact that after a few months the other stores began adopting it, until now the whole town is cash even the blacksmiths joining it.

Let no one fear to adopt the cash system, in opposition to a credit business. The cash business, if at all well managed, will win every time. From the time, when the first merchant discovered the possibility of running a store for cash the credit system has been doomed. The catalogue house and departmental store have helped the work. The shortening of terms of credit by wholesales gave the old system a severe blow. In a few short years it will be considered antiquated, and will disappear in that evolution in which "old things pass away and all things shall become new."

BUSINESS THAT DON'T PAY

In spite of the general prosperity of the past year and a marked increase in trade, there are some merchants who, after taking an inventory and totalling up their balance sheets, find that the net profits have not grown proportionately and, in some cases, in spite of an increase in business and a rising market, profits show an actual decrease. Much of this is undoubtedly due to pushing unprofitable lines. In speaking of this fact one hardwareman says in an exchange :

"We are all doing too much business for nothing—selling goods for glory, rather than for profit. Often I used to think that there was business I ought to get, even at a small profit, that would be a help in the course of a year—that could be had without adding to my expense of doing business—and thus would be 'velvet' for me."

"We had a small part of the trade from a certain mill, which amounted to from $35 to $50 a month, in small items —files, saws, paper and emery cloth. The mill is a large one and I knew that these supplies they used in large quantities, purchasing from me only to fill in when entirely out—simply using my stock as a convenience. We charged them fair prices with an average profit of about thirty-five per cent. My prices were never questioned by the purchasing agent, who knew that in buying thus in small lots he had to pay a higher price. Their bill was paid the tenth of each month.

"I figured that if I could get their entire business it would be a big thing for me, but also knew that in such a case I would have to meet close prices. But that the additional business would be velvet for me, I started out for their entire business in my line. We were good friends and they would be glad to give me the business, but I must meet prices. I went into the matter carefully and after some figuring and a good deal of correspondence I secured their next month's supply.

No Money in Big Order.

This first order was about $400. Some goods I had to sell actually at cost. But I knew that by having their trade I would be enabled to purchase larger quantities and felt that thus I would secure lower prices. On this first order of about $400 my profit averaged only about seven per cent. Still I was proud of the order and felt it quite a feather in my hat. From a business of only $35 to $50 I was soon selling this mill about $275 monthly. But my stock increased in these lines. I purchased larger quqntities in order to buy as cheap as possible—and to have the stock on hand when called for. Expenses also increased ; I found quite often that I was obliged to wire for some supplies, and in a number of cases had to get the goods by express—as I had to purchase from a manufacturer to get prices, and I found the makers did not ship as promptly as did the jobber.

"Most of my profit of thirty-five per cent., which I had formerly made on the small business, had now been sacrificed to get the large volume—as I found the mill people expected to buy small odd lots or odd sizes of files, etc., at same discount as on the larger quantities. In these various lines I increased my stock from a few hundred to several thousand dollars.

A Lesson Well Learned.

"Some business don't pay, and the sooner a hardwareman can find which it is, the sooner he will become wealthy. It would have been better for me to have held the small pick-up trade of that mill at a fair profit than to have reached out for this larger business which finally tied up a lot of money and which I've really been handling at a loss. In 1906 it actually cost me 13½ per cent. to transact business."

This hardwareman had a brisk business with that mill, but as he himself now figures it, it was a losing trade. Each part of the business done by a merchant should carry its proportion of the expense. Volume of trade without profit enough to cover this expense is of little value to the merchant. Add to the business if possible, make it grow ; but add profit-making lines. Cut off "close business" during 1907 and the balance sheet of 1908 will look better and the hardwareman will have more real satisfaction in his business.

BAD BOOKKEEPING AND ACCOUNTING.

Statistics are often quoted which show that only a very small per centage of the men who embark in business on their own account succeed. From three to five per cent., it is usually said, though I question if the average, counting those who achieve a moderate success, is quite as small as that, but all the same the percentage of those who do not make good is very large.

One of the chief reasons for this enormous business death rate can be traced to bad book-keeping and accounting—to the ignorance of the cost of doing business as a merchant, or to the cost of production as a manufacturer. Many me accounted shrewd, having no knowledge of accounting themselves, despise it, and utterly fail to appreciate its real purpose. They act on the assumption tha any boy or girl fresh from school wh can be hired at the smallest salary, an who is wholly lacking in business train ing, is competent to do their book-keep ing. These green hands might be so i the only function of book-keeping wa to see that sales were properly charge and accounts collected when due. Thes points, of course, are essential, and mus be done correctly if a merchant is t remain solvent, but they are by n means the chief functions of book-keep ing. Books of accounts should be s kept that at any stated period a state ment of the business in each departmen can be presented in detail, and it is no enough that costs should go into genera accounts, but they must be so sub-divid ed that comparisons can be made fron year to year. No accounting system i worthy of confidence which does no classify and locate every dollar that ha passed through the books. That deadl averaging of costs must be eliminated and they must, as far as possible, b wrought out on an accurate and specifi basis. If costs are increasing compari sons will reveal the fact, and if ther are leaks, good book-keeping will detec them, and steps can be taken to sto them.

Work of this kind requires brains an business training, and the money pai for the employing of a competent ac countant is an investment that will yiel large returns in giving to the manage ment facts, instead of guesses, at th costs of running the concern.

Guesswork No Longer Goes.

The demand of the twentieth centur will not admit of guesswork. The man agement of the future must have defin ite, not vague and indefinite, knowledge Success by the rule of thumb process i no longer possible, but can be won onl by exact and definite knowledge. Th cost of running the business is, wit only too many firms, a matter of guess work, and guesswork no longer goes Old Gordon Graham clearly sets fort the changed conditions in his letters t his son when he says : "We started busi ness in a mighty different world ; w were all ignorant together, and we did n't have to know fractions to figure pro fits, but now to see profits you have t study astronomy, and when with a pow erful glass you do finally locate them they are away out of the five point deci mal place." Never were truer word spoken, for though now-a-days we thin in large units, there never was a tim when the decimal counted for so much.

It is useless to equip a store wit every modern improvement and then solely through ignorance in the office, t throw away the results, and yet this i just what many business men are doin

to-day. The fact is, whatever they may profess in their hearts they look upon book-keeping as unproductive labor, and as the book-keeping of many of them is done they make no mistake in taking this view, for it provides no guide to them in the conducting of their business. Money they will spend on store equipment—they can see its use—but it never occurs to them that money spent on office equipment is just as necessary. The store end of many a business in a general way of speaking now is far away ahead of the business management, looked at from the office end. Many office staffs are past the stage when suggestions of change are welcomed, they may even be past the time when they have a desire or even a capacity for growth. Their special business now is to hold their jobs, and one way to do this is to fight changes, and try to keep things as they are. Such a spirit on the part of the staff can nulify the best accounting system ever installed, simply because it is to be operated by a staff who are bound, to hold their situations, to make it a failure.

THE RETAILER'S CREDIT HIS GREATEST ASSET

An Address by J. D. Campbell, Secretary of the Spokane Jobbers' Association.

No member of your Retail Hardware Association has a more valuable asset, either on your shelves or in the bank, than your credit. Startling as it may seem, it is a fact nevertheless that over 90 per cent. of the business is done on credit. During the year 1905 the manufacturers of the United States did a business of over $13,000,000,000, upon an actual cash investment of $500,000,000, 96 per cent. of all the business done by the manufacturers of the United States was done upon credit. Now that seems startling, and yet sit down some day with a pencil and figure up yourselves the amount of business you do on time—on credit—and the amount you do in cash, and see if it does not startle you.

So I say the most valuable asset you have in your business to-day is your credit; an asset which should be most carefully taken care of; an asset which should be nurtured and not abused. I think also that I can say without fear of contradiction there is no asset you have which is more often abused than that of credit. Not perhaps your own, but the man who buys from you. Because you sell on credit, you must do business on credit. If you do not take care of the credits that are due you, sooner or later you are going to have trouble with those you owe. At least 50 per cent. of the failures reported in one year can be traced directly to bad credits.

Just about a month ago we had occasion to close an unfortunate debtor and take over his business. He had started in business about three years before with an invested capital of $4,000. That was all the cash he had. He has on his books to-day over $7,500, nearly double the amount of his invested capital, standing out on his books. In going over his business for November, 1906, we found his cash business amounted to $1,200 and his credit business $1,500. He had collected on his old accounts during the month $800. So for the month he was $500 behind on his credit business. I said to him, "How soon can you get in the $1,300 of credit in the month of November?" He replied, "I cannot hope to get in a dollar of that until next fall." Now just think of that! How could that man expect to do business and succeed in that manner? He had tome notes, it is true, but he had not tried to collect them, and the great majority of his accounts were standing there without drawing any interest and without anything coming from them.

The Retailer's Fault.

I believe that a farmer, or other persons buying goods of you, has no more right to ask you to carry him for a year without interest and without security than you have to go to your home bank and ask them to advance you money to pay your bills without interest and without security. And I believe the credit system is largely the fault of the retailer. I know the farmers can be educated to pay their debts promptly, just as well as any one else. The strange thing to me is that some of the largest accounts on your books are of men who are absolutely good, who can go to the bank and give their note and get the money and pay you? But you have not asked them to do that for fear they will get mad and leave you and go to that man across the street and buy his goods. Isn't that a fact? If this association will pass a hard and fast rule that any man who comes to you for credit should be required to give his note, bearing the legal rate of interest which you have to give at the bank, and make that a bankable note, it would be only a little while until the whole credit system would be changed, and changed for the better, so you could meet your bills promptly and discount them if you pleased by taking the farmers' note to the bank and getting the money.

I have gone over the books of various retailers at various times to find out their condition, and it is astonishing to see the amount of money standing on the books not drawing interest, while you merchants are having interest added up on your past due accounts for them. It is only a question of time when those principles carried out as they have been in the past, are going to involve all of you do a credit business. You cannot help it.

Merchants Should Get Together.

It has been in the past a fact without doubt that if you crowded some of your collections some of your good farmers or neighbors in town, would get huffed and go across the street to buy. But if you all combined and made the same rule when such people go across the street the man over there will hold up a stiff upper lip, and say: "I do not want to sell you on any different terms than Tom Jones would across the street." You would then find out he would be mighty glad to give you his note and pay his bills when they became due. The very system of credit is a matter of education. It is so in all lines of business.

The credit system is more prevalent in the farming districts than in the cities, because the large stores in the cities do practically a cash business. But you who have to carry your neighbor from one year's end to another have to do the credit system; but there is no reason why you cannot inaugurate the system that if you carry a man he must give you good, bankable paper, and that you carry him in that manner.

I believe the wholesaler and retailer should work together to this end. I believe it would be a kindness to the retailers if the wholesalers always insisted on bills being met when due according to the terms of sale. If that was done you would push the man owing you, and he would settle up so you could pay.

What you want is co-operation in this matter; and you must show people dealing with you that you must have your money; that you have your bills to pay, and that if you must carry them to the next fall, you must get a bankable paper so that you can take it to the bank and get your discounts, instead of paying 8 per cent. on your past due accounts.

SELLING GOODS WITHOUT PROFITS.

"I have been behind a retail counter counter for 27 years, and in all my experience I find as a rule the selling of merchandise without profit is largely due to not knowing the cost of doing business," writes C. C. Howell. "How many of you can tell the exact per cent. of cost of selling, or the per cent.

of profits on gross sales of your business last year?

"If you cannot turn your stock at least four times during the year you are not getting the per cent. of profit out of capital invested you ought to. In my experience I have never found one who knew what his cost of merchandise was at the time of delivery to customer. We often find a merchant who says, "That cook stove cost me $19.60 at the factory, and I get $25 for it.' A pretty good profit, he thinks. But let us see when he figures his freight, drayage, blacking, one joint of pipe, damper, delivery and setting up, together with his store expenses, we find his stove cost him nearer $23.50, leaving him $1.50 for profit. This same merchant will wonder where his profits are gone and why he failed in business.

Again, some of us get the idea that we will sell every customer who comes in, regardless of circumstances or price, just to show the fellow down the street that he is not the "only one." A customer comes in and says he can buy a 10-in. strap hinge from Jones for 15 cents a pair. You tell him he certainly is mistaken, that it must have been a 6-in. He assures you that he knows a 6-in. from a 10, and you, after using your best arguments to change his mind sell him a pair of 10-in. for 15 cents, only to find out later that the fellow down the street refused to sell him at that price, and he took this means to 'work you.'"

THE CREDIT MAN'S WORK.

When a credit man represents a concern which carries a large assorted line of goods, and covers an extended territory, he should have a general knowledge of the business, so far as it is associated with the line of credits. He should know the amount of stock on hand, and the stock which it is advisable to move, and amount of profit that the different lines make. He will then be better able to judge whether to accept or reject an order. It is most important that the credit man be familiar with the towns in which his company solicits business, as local conditions vary widely; for illustration, one section may depend upon the farming district for its cash, therefore its cash would only be in circulation during certain months of the year; another town has manufacturing concerns, and, as a rule, pays at least twice a month. Then we have the college town, which only has money during the school term.

The credit man should go over the entire territory at least once a year, and meet personally the customers of the concern, for one can not always judge a man by the letter he writes. He should also see the man's place of business, judge how large a stock he was carrying, the class of goods, and whether they were kept in good order or not, and last, but not least, the opinion of the local banker and fellow townsmen. All of this information would be of particular value, if customers got into trouble.

The salesman's watchword is "Sell Goods!" while the credit man is there to get the money, and he should get his own information. The mercantile agency is good as far as it goes, namely, for a statement of the firm's resources and liabilities, in figures, but they very seldom give any personal information in regard to the man's true character or details of his stock, both of which are most important.

SYSTEM IN THE RETAIL STORE.

When store system is mentioned we should not fall into the error of thinking that it is always some big enveloping thing which covers the whole business like a blanket. Few general merchants can boast of as much store system as that. But nearly every merchant has some system applicable to some particular feature of the business, and it is in comparing notes on these and selecting one here and one there that we finally arrive at a plan for the better handling of the entire business.

The Hardware Trade recently told of a merchant who by checking his freight bills carefully had saved himself in overcharges about $150 in one year. This merchant may be strong on system of this kind and weak on system for other features of the business. Let a merchant take special interest in some particular feature of the business and he will soon evolve a system for handling it which will mark an improvement.

The merchant who saved the $150 on freight overcharges has a penchant for that feature of his business. He has studied freight classification. He has a place for filing his rate records or tariff sheets. He makes sure that a fourth-class item of freight is not elevated to third-class with a proportionately higher rate, by some error-breeding freight clerk in the city freight house. There is much of this done. Thousands of merchants pay these overcharges and never know the difference.

Store system means nothing more than labor-saving ideas and business short cuts. At the same time system furnishes corks to stop up the loss holes. Many stores would be better off if an extra clerk were hired and the proprietor devoted all his time to planning, overseeing and building a system which will save expense and loss.

Out-of-Date Bookkeeping.

It is a wonder that more merchants do not pay more attention to office system. One would think that if there was any place in the store where the merchant would want to see things right at all times it would be in the office the books. Instead, the big majority of merchants are guilty of carelessness in this most important particular. Many of them seem to think that anything in the shape of bookkeeping system will do. They will spend hours and hours over an out-of-date system when an investment of fifty dollars would save them that much in valuable time every month. Credit men who are on the road a great deal say they strike many antique systems of bookkeeping in retail stores. They do not wonder that so many retailers cannot tell where they are at financially after following the devious paths of such a system.

There are numerous men in every business who seem to cling with a leech-like affection to antique methods. They are the fellows who are sure everything is going to the devil and themselves with it, just because things are not as they were in the days when they made their money more easily. About every ten years a grist of these fellows is run through the hopper and dropped on the dump outside the breastworks, and the trade is benefited that much. That means progress. They take their old accounting ideas along with them.

If nothing else is done it is easy and of primary importance to keep the window glass clean and the show space neat and orderly. Be on the lookout lest any gods or advertising matter in the window, while appearing normal from inside the store, has faded into unsightliness from the street side. Set aside the trimmings of a display for use at a future time. Gradually in this way quite a property outfit will be accumulated. Money spent on crepe paper, ribbons, artificial flowers and other trimmings aids is a good investment.

* * *

The clerk that always has the cash register in balance has a good friend in the head of the house.

How Publicity Helps Retailing

Making the Window Pay Rent — Effective Hardware Advertising — Some Selling Suggestions.

WINDOW DISPLAYS THAT MAKE BUSINESS

By W. J. Illsey, a Winnipeg Hardware Clerk.

Let me in the beginning lay down a few solid rules which should govern so far as possible all displays made. Make a display of one line of goods at a time. Study how best to make each so that all will harmonize. Price cards and uses of articles cards to be used always as much and as elaborate as the merchant may chose. My idea is plain, white, with black lettering. Always study to have a good background more than the filling in front.

Change displays frequently. Some displays will do good work for a longer time than others. Always have the window glass bright and clear as a dirty window detracts rather than attracts. Don't spend too much time on building in a display. Time is too valuable, and the time it will remain is or should be but short.

Next in importance is "which kind of display is the profitable kind to make" No merchant, large or small, but hopes to gain by putting in window displays. If he does it just for a change he'll make by it.

Fancy, catchy displays which attract a big crowd do some good. They make people speak of your store and acknowledge that you are trying to make things go, that you are energetic and enterprising. But in my mind the window display of seasonable goods well exhibited and enough prices given to enable the passer-by to learn what a few of the lines are worth, is the window advertising which brings in the dollars to the till, and that's the object of going into business, ins't it?

Why doesn't the "catch" display bring in just as much? Let's take an example, common in every city or town: Mr. Jones, in walking to business in early Fall, sees in 'Horn and Hill's' window a very fine display of a miniature home. The little house, yard, woodpile, barn, etc., all faithfully carried out in small form. Near the woodpile is an axe, bucksaw and sawhorse, which suggest that someone is in the habit of taking an amount of healthy exercise at this woodpile. No display cards can very well be used in such a window as they would look out of place. Mr. Jones stops, smiles, says to Mr. Smith, who also is looking, "Fine window, that, Mr. Jones." Mr. J. replies in the affirmative and they both pass on and soon forget all about the display. Probably each or both were needing a new axe or saw, but were not tempted to come in and ask the prices. They pursue their course a few blocks when they come to "Blank & Son's" store in whose window is displayed a neat line of bucksaws, saw bucks, and handled axes. Prices and names of each are given and if Mr. Jones or Smith does no buy a saw or axe at this place it's peculiar. They know in an instant what they have to pay for each one and if they do need one just take about 3 minutes to pay the clerk and leave their address and his business is done.

Another example is that of the ab-

WM. J. ILLSEY, WINNIPEG

Who Won First Prize in Hardware and Metal's Recent Holiday Window Display Contest.

sent-minded man. His wife has made him promise a dozen times to bring her home a good pair of shears. He promises and means to keep his promise. Business, however, drives all thought of it from his head and so it goes for days or maybe weeks. But one morning he goes on his way to business and in "Blank & Son's" window he sees shears and scissors of all kinds displayed with cards saying that 50c will buy a good family size of good quality. There's just what he wants and 29 cases out of 29 1-2 he will go in and buy.

In our business here we have such cases almost all the time. And just an instance of what a display of razors, straps, penknifes, etc., will do. Last year I think I had in altogether five such displays and all very similar, and could you but know the extra amount of business we did while they were in (not after so much) you would say, "it pays, doesn't it?"

Too much cannot be said, about window displays of goods. 'Tis the best means of advertising any store can have. The newspapers are good and do good work, but the window as "eyes of the store" show what's inside and invite the public to enter. The people come, too, into the store of the live man who attends to the changing of his window displays and who keeps them interesting to look at.

One point which I will mention in closing, when you wish to show, say, nickel-plated or silver goods, don't show it on yellow or some discordant color. Study harmony of colors and your displays will be vastly beter.

PLANNING A WINDOW.

There are a great many ways of planning a window, writes G. E. MacFadden. One of the best methods is to draw a rough sketch of the framework, or arches, whichever you may decide on using; another way is to go into the window and gradually add to your display until you have completed the trim. Both ways are practised throughout the country by the better trimmers.

At a first thought it might seem best to make a working plan of your window, but sometimes the result will not look so well when completed as the plan promised.

Then, again, if you decide to build your window without any forethought, it is more likely to be a failure than a success.

In my experience, I have always made a rough sketch and have it so firmly impressed on my mind that I can see the finished display before I have really started it.

Working along these lines you often see little points, as you go along, the adoption of which result in a great improvement upon your original plan, and the finished trim may be entirely different from your first sketch; but you started right, working from a fixed plan.

At all times, you should use a centre

piece; this is necessary. It may be an arch, or some other set piece with tools arranged in an artistic way. Circles of different sizes are good to use. Children's rolling hoops and wagon rims are very good articles to arrange tools on, making fan-shaped arches, etc. The sides and back of the window should be covered with plain cloth. Canton flannel is about the best to use, and most inexpensive, and red is one of the best colors for showing up tools.

Large double-headed tacks can be used to good advantage for fastening the different tools to the background. You can first draw out a design, on fan-shape, and tack the various small articles flat against the background.

Don't forget the fact that the eyes of the observer rests on the centre piece of your display. Spend more time and thought on that than on any other part of your window.

This is the reason a small window is often as effective as a larger one. It is true that a large window will hold more goods, but will it make more sales? It all depends upon the arrangement of the articles displayed.

The principal idea of a large window can always be reproduced in a smaller one—this means the centre piece again. It is always the most prominent feature of the window. It must be reduced in size, but the same idea is carried out in both windows. Circles are better than squares or triangles, as the latter are usually stiff and are very much more difficult to trim. Circular steps also make a good centre piece and are much better than triangular or square steps. The pillars or posts that you may use should always be round, as they trim to better advantage. They will support your arches or platforms and can be trimmed in a very artistic way.

As a general rule, the heaviest part of your trim is the centre. Between the centre and the ends of the display should be the lightest part, but this depends considerably on the shape of your window and the character of the trim.

If you have no taste for artistic effect, do not attempt to trim windows.

Do not place your goods too near the window pane; it spoils the effect of the best display. The farther away from the glass the goods are removed, the better they will look, unless they are very small.

Fill tin pans, or wire backets, with small articles, such as tacks, tack hammers, pincers, and various other small articles, and place them at vantage points, and do not forget the price tickets.

If you use signs in the window, see that they are always raised a little from the floor, because they attract attention more readily and are much easier to read than if they are resting on the floor.

If you have any special lines of goods that are not moving fast enough, make a display of them. If you cannot think up an idea, write to me, and I will gladly give you a little help in the matter. If you make frequent changes, you will in a short time, I am sure, see the inestimable value of your window displays.

Attractive Display of House Furnishings.

A HOUSEFURNISHINGS DISPLAY.

In the spring and early fall housefurnishings are a good line to push and one of the most effective methods is to arrange a window display of a novel and striking character and draw attention to the display in the local advertising. If he is asked, the editor of the local paper will be glad to write a reading notice describing the display.

The design of the display shown in the engraving is striking, the arrangement of the spoons in the form of a horseshoe and star having a pleasing effect, which will encourage an inspection of the innumerable household articles shown in the display. Try a similar display, use price cards, and watch results.

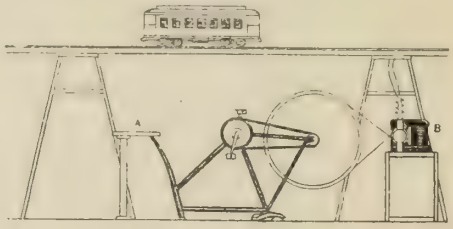
When metal letters come off the window, it is easy to cement them on again with a mixture of one part gum mastic, two parts litharge (lead), one part white lead, and three parts linseed oil. Melt together in a homogeneous mass and apply hot. The letters should also be heated to a temperature at least that of the cement.

MECHANICAL DISPLAYS ATTRACT ATTENTION

Mechanical moving displays of one kind and another are becoming more and more popular with merchants. One of these is a farmyard scene with a painted background, a windmill in operation, and cattle, horses, etc., moving around. Another is a fortress apparently engaged with a fleet at sea, while a squadron of soldiers manoeuvre in the foreground. Hunting scenes, with riders following the deer; breweries in operation, and other familiar scenes are also reduced to mechanism and used in window displays.

Popular Mechanics tells how a bicycle can be utilized to make a moving display in the window: Remove the front wheel from the bicycle and in its place fix a seat as at A in the sketch. Take the tire off the back wheel and run a small leather belt around the wheel to transmit power to the dynamo, B, which is connected up, as shown, and causes the little electric car to run when the wheel is operated.

Another novelty is a little mountain made of papier-mache, about two feet square, on the top of which is a little imitation lake made of glass. Around this lake a skater glides without apparent means of locomotion.



Still another one is the hand and blackboard device. It consists of a long shallow box finished in hardwood, between six and eight feet in length and between eighteen inches and two feet high, and so lighted that a blackboard at the back can easily be seen, at the lower right-hand corner of which is a hand. The electric mechanism by which the device is operated, causes this hand to move over to the opposite side of the board, and with a piece of chalk to write rapidly on the blackboard some sentence arranged for by the advertiser. When the sentence has been completed the hand crosses the space with a sponge, erasing what has been written, and then writes a second sentence, which is also erased after time enough has elapsed for it to be read. This device can be placed in the window or other place inside or outside the store in such a position that a spectator can see that no human being operated the hand. The device will write any two sentences continuously.

One of the most striking things in electrical decoration is a cluster light for store illumination, composed entirely of corrugated glass. Readers are well acquainted with the utility of prism lights to reflect and disseminate daylight. These glass prisms are scientifically constructed to produce the same result with artificial light. The reflector mentioned will hold a number of the new high-efficiency lamps, each one in the centre of a corrugated reflector, with a large reflector above which assures that the light rays will be disseminated downward over a considerable space. It is claimed by the manufacturers that this reflector will do the work of an arc light and it certainly has a very handsome appearance. For decorative effects the bulbs can be dipped or striped with colors and the reflection of the prisms will produce a very brilliant and uniform colored pattern, which gives a striking appearance.

A cheap little attachment for the ordinary-sized incandescent lamp is a colored glass cap made to fit over the end of a lamp, being held in place by a spring. This saves the trouble and expense of dipping lamps and produces the same effect.

Another cheap little attachment for an incandescent lamp consists of a cylinder which is divided into different color sections. The cylinder rests on top of a 16-candle power incandescent lamp. The slight heat produced by the lamp causes the cylinder to revolve, flashing different color lights.

One of the most attractive displays is

Bicycle Power for Electric Railway.

the large line of shades for covering electric light bulbs. These can be had in numerous shapes, some of the most popular being those representing bunches of grapes, wistaria blossoms and other flowers. A new and pretty incandescent lamp shade is made of oak leaves, both in green and Autumn colors. These leaves are fireproof and semi-transparent.

SOME SELLING SUGGESTIONS.

"Place in one of the show windows every Tuesday morning, some one particular item with a large card stating that on next Monday morning that particular item will be sold for a certain price and the sale continue until the stock is exhausted," suggests a successful retailer. "This must be an absolute bargain and the merchant must figure to lose money on this sale. For instance, a lamp complete that he would usually sell for 25c. or 30c. and which would cost complete say 15c. or 18c. should be sold for 10c. and a lot displayed during the week. The following Monday morning would result in a big crowd at the store and would be the greatest advertisement he could get at a small expense. If fifty lamps were set aside for this purpose the loss on each lamp would not exceed 7c., or a total of $3.50 actual loss. This could be carried out the following week with a row of pictures nicely framed, the next week with a cup and saucer that would cost about $1.80 per dozen and so on indefinitely, allowing the people to know that every week on Monday morning there would be some great bargain."

A practical window display for the spring season was recently arranged as follows: In the centre was a washing machine, and up the sides, at the back and on the floor were clothes pins, wire and cotton clothes lines, wringers, sad irons, plain irons, wash boilers, tubs, ironing boards, wash boards and other things used on wash days. In the centre was a large card lettered "Bargains for Washday." He said that about every woman who passed stopped to look at the window. Of course he had price tags on the articles to complete the story to all who were attracted by the display.

A western hardwareman recently fitted up one of his show windows as a complete kitchen. This sign was in the window: "We will furnish your kitchen complete, including every article shown in this window, for $33.50."

Heap an ordinary bushel basket with some popular sellers and set it in the window. Beside it put a single one of the same kind on a low box to show it off well. Over the basket put a show card reading, "We buy by the Bushel," and supplement it with another over the solitary article reading, "So we can sell for 5 cents each."

THE CHEAPEST ADVERTISING.

It has been said that the show windows of a store should pay the rent. This is no exaggeration of their importance. Well trimmed and kept clean, the windows are a very important part of the store's advertising. They are, perhaps, the cheapest advertising that there is. How much does it cost you to trim a window entirely of goods from the stock? It takes perhaps an hour's time, or possibly two or three hours. This is usually time in which you have nothing else to do—in the evening or in the early morning before business gets brisk. Is that very expensive, and are not the returns adequate?

Most merchants will say that the results of window trimming are more than equal to the expense involved. Occasionally you will find a man who regards window trimming like some other men regard newspaper advertising—as an ex-

pense—not an investment. These men have the wrong idea. Advertising is not an expense. Or, if it becomes an expense it is not the right kind of advertising. The proper sort of advertising is that which brings returns commensurate with the money expended. If it does not do that it is not the

Attractive Tool Display.

right kind. And the right kind is not rare by any means.

AN ATTRACTIVE STORE FRONT.

As a rule space is not given to photos of store fronts in Hardware and Metal, but the accompanying illustration has sufficient merit to warrant its reproduction. Above the prismatic glass is an attractive sign below the cement block front of the second story. F. Howes, of Listowel, Ont., whose store is shown, is standing in the doorway.

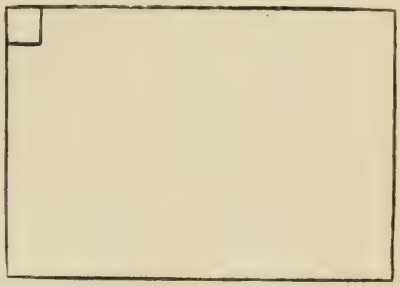
The displays, both in front of the store and in the windows, are neat and not overdone. A variety of seasonable goods is shown, but taste and good judgment are exercised in

An Attractive Store Front—F. Howes, Listowel, Ont.

the arrangement. Some hardwaremen neglect their window displays for months at a time, while others try to jam as much as possible into their displays. Mr. Howes appears to have struck a happy medium and women buyers can have no objection to entering such an inviting business establishment.

ATTRACTIVE TOOL DISPLAY.

In the small illustration we reproduce a very neat display of mechanic's tools is shown. The arrangement of the back ground are such as can be put together in any ordinary hardware store, and during the next couple of months such a display should bring good results.



ILLUSION ATTRACTED ATTENTION.

A display that brought results was arranged by an enterprising druggist in a Michigan summer resort a year ago. Sporting goods were to be had only from the lone hardware establishment and four or five drug stores; fishing tackle was practically the only goods in demand. The store of the druggist in question was on a prominent street, and he generally gave over one of his small windows to the display of bathing suits, fishing tackle and similar lines. In order to attract particular attention to the window he rigged up an illusion that fooled nearly everyone. A 2x4 wooden beam from the end of which a triangular piece had been sawed was leaned carelessly against the glass window from the inside as if it had fallen from the ceiling. The triangular piece that had been sawed off was glued to the glass on the outside in such a way that it appeared to be a part of the beam extending through the window. To complete the deception, several jagged pieces of glass were glued about the supposed broken place on the inside so that it required a very close inspection to detect that the beam had not fallen against the window and broken through. Almost every passer-by stopped to lok at what seemed to be the peculiar result of an accident, and the druggist's business during the time of the display was noticeably increased.

KEEPING FROST OFF WINDOWS.

An eastern Ontario retailer who had trouble with his windows frosting over overcame the problem in a very simple way. A hole about a foot square was cut, through a pillar, at the upper left hand corner, and a grate, such as used in a hot air register, placed on the outside. The back of the window was made as near air-tight as possible, so as to keep out the warm air. So long as the temperature inside a window is the same as that of the outside air there is no chance of it frosting over.

In other windows this firm tried boring holes around the sash, but could not get sufficient ventilation. It happened that these windows had transom bars about eighteen inches from the top. The glass above them was put in frames and made to open up. In this way a great amount of cold air can be admitted in

a few moments. Of course it is necessary in this case also to have the back of the window air-tight or almost so.

HOUSECLEANING WINDOW SUGGESTION.

A practical suggestion by a paint manufacturer for a spring window is to place a mop pail, scrubbing brush, and piece of soap on one side of the window and a well arranged display of floor finishes with color cards on the other side. A display card in the background with the words, "Use the scrubbing brush less and the paint brush more," should be a catchy phrase to attract attention and bring results.

NOVEL ADVERTISEMENT.

A United States merchant furnished free to the publishers of the local daily papers all the paper needed for one certain issue if they would allow him to furnish a distinctive color. Without previous announcement the paper came out one day printed on pink paper instead of white. The explanation was given on the reading pages. He also carried a big ad. in the advertising columns. He made big sales and was talked about for weeks as the man who "got out the pink paper."

Effective Hardware Advertising

HOW TO PRODUCE IT

By T. Johnston Stewart.

To advertise, or not to advertise; that
is the question.
Whether 'tis wiser in a man to suffer
The wants and worries of an unprofit
able business:
Or—to sling some ink into a telling
ad
And make things hum. To drone—to
sleep—
Perchance to dream of dollars when the
milliner's bill
Just hangs fire and all the babies in
the house
Are crying loud for frocks—when a few
words
About the values of our wares would
make our stores
The marts of all the people in this
town and change
These antique-laden shelves into a
silver stream
And boost our bank accounts. This
surely is
A consummation devoutly to be wished
for. Then,
Let us advertise and keep on advertis
ing.

* * *

To grunt and sweat under a weary life
But that the dread of something not
to eat
Makes us keep hustling. The lack of
advertising
Explains the weary routine of our days
and the game
Of checkers in the back store. Let us
shuffle off
Old-fashioned methods and attune our
ways
Like unto those of shrewd players of
the game
And enterprises of great pith and
moment,
In this respect, will no longer turn
awry—but
Be what they were meant to be—a
source
Of affluence for us and our posterity.
Then,
Let us start advertising and keep on
advertising.

* * *

Now wouldn't I be a first class chump if I were to step to the front of the platform and solemnly declare that the shade of the late Mr. Shakespeare was responsible for the hardwareman's soliloquy. On the contrary, I apologise to the immortal William—not because the parody is inapt or untimely; but because I have turned the idealistic ravings of Denmark's incomparable dreamer into common-sense, twentieth-century, business philosophy. Besides, the only ghost that disturbs our slumbers is—a delicate treasury aad if I can impart a few hints which will be useful to my hardware friends here and now I'll take chances on being able to mollify Brother Bill hereafter.

* * *

The last quarter of the nineteenth century demonstrated beyond the shadow of a doubt that printed salesmanship would be the mightiest lever in the commercial life of the twentieth. Incidentally that just explains why I am an advertising man. This century will revolutionize business methods so thoroughly that the astutest business men of the east—men who have heaped up millions—would be hopelessly outclassed could we fling them unprepared into the year 1920. I tell you there is joy in being alive to-day. Because, it does not matter how insignificant your business may be this vast country of ours will call strong men from every department of commerce and the lesson of all the ages is that the practical, sagacious young man of to-day in any line of endeavor will be the big man and the leader of to-morrow. There can be no doubt about such an assertion because history makes it good. Moreover, I think that Canada's hardware men stand to win big prizes during the coming years. Since the Dominion is destined to be the granary of the world that is assured. This immense country cannot be developed without making thousands of wealthy hardwaremen. You can be one of them. Save your dollars, use common sense and advertise—advertise.

* * *

Let me dispel the fears of the man who imagines he cannot "get up an ad." This fact cannot be emphasized too much, viz., you do not need to be a first-class scholar, a master of language to advertise and advertise pretty effectively. The best of us are merely finding out things as far as the advertising game is concerned. The intellect of no one man can comprehend it in all its fulness. We are simply standing on the threshold of a new world which offers huge rewards to men of versatile and creative genius. Set down the advertising man who knows it all as a nonenity in the advertising world.

I intend to reproduce a few ads by amateurs, ads written by hardwaremen and the longer you consider them the more you will be convinced of your own ability to produce good strong advertising copy—copy with a jingle to it—just the kind of copy that sells goods. There are specialists (so-called) who might study the advertising of many country and small city merchants very profitably. You know your business, you know the value of your goods and their selling points, you know the wants of the people in your section and because of that knowledge you can produce good advertising—just the kind of ads which will clear your shelves. Get out your copy, take it to the printer, tell him to arrange it properly and gently hint that if he can help you to make your ad a paying investment you'll be inclined to buy large space regularly.

Material interests sway the business world. The newspaper man dreads the milliner's bill et cetera. Scratch his back and he'll scratch yours. And banish for all time the idea that you cannot produce an ad that will sell goods. You can. Every business man can. At least 99 dealers out of every 100 can do so because there is nothing intricate about retail salesmanship. Try it now. Advertise!

* * *

Running right across the page we have an ad. which simply couldn't keep selling goods. Of course this is granting the truth of practically every statement made in that ad., and although hardwaremen do not belong to even collateral branches of the Washington family my experience has taught me to place implicit faith in their veracity. Now I do not know Taylor Bros. But I do know that the man who is shrewd enough to write an ad. like that is shrewd enough to recognize the value of truth in business. The man who swears fervently that advertising does not pay, because he has tried it, has either wandered from his truth in his advertising, or expected the whole community to make a bee-line to his store after his first ad. or two. Wooing business is pretty much like wooing a girl and we all know enough about coy damsels not to try rushing tactics. You would not drop on your left knee, place your right hand on your heart and pour forth your song of adoration to the "dearest girl on earth," after the first, second, third, or even sixth visit. You cannot make her Mrs. Jones that way and you know it. You see the happy day approaching every time you look into her darkly, deeply, beautifully blue eyes; but there's a glint of resistance still there which says plainer than words, "Don't rush things. Don't expect too much."

Some dealers expect a great deal too much from their advertising and expect it a good deal too soon. Not so with our friends, Taylor Bros. The Carle-

ton Place Herald has been coming in pretty regularly for some time and we notice an ad., right across the top of the editorial page just like the one we have reproduced and, of course, greatly reduced in size, which goes to show that Taylor Bros., not only know how to write an ad., but they also know how to dicker for one of the best locations in any paper. There are few editors who would surrender the whole top of the editorial page to advertising. That's the second best location in any paper published and, when the editor is an interesting writer, it is probably the best. But as a rule the upper right hand corner of the first page is the best possible location—the most valuable space in any daily or weekly. It is always in evidence. It is the first part of the paper to fall under observation and as a rule we glance at that corner just before destroying the sheet.

You can study every item of Taylor Bros. ad. carefully and discover that there has been juts enough said in nearly every instance. Jack Frost is a pretty fierce looking gentleman and when you look at him the second time you begin to feel the absolute necessity of a temperature you can regulate, according to your pleasure. There are three strong words about that item which lifts it above common-place advertising. The man who produced the copy considered his customers, and he wrote "careful, tidy delivery." Rest assured that his consideration was amply rewarded. The particular housewife was sure to note the words we've quoted. She drew the attention of her husband to Taylor's way of delivering coal, and you can depend upon it that the Taylor way in this particular was mighty pleasing to all concerned.

I have just one criticism to make about this ad., viz.: It is not arranged nearly as well as it might be and I am sure that Taylor Bros. will agree with me. Let's take the pretty washerwoman and place her and "Wash Day Necessities" at the extreme right of the ad. Next to the lady placed the bathroom talk and the item on metallic ceilings. That forces the double column talk about the Taylor business principles and the address right into the centre of the ad., and leaves the whole as thoroughly balanced as an ad. could be. Place your little editorial in the centre, gentlemen, have your name and address clearly displayed and it's a certainty that you stand to win in the hardware business. The ad. as it is was bound to sell goods. A little attention to arrangement will make the valuable space more valuable.

* * *

C. Wise & Son's ad. carries out and emphasises our talk on arrangement. It is prettily arranged and the effect is pleasing in the extreme. The eye of the probable customer is captivated at once. There are 'special prices" at Mr. Wise's place and the shrewd buyer decides to read the ad. However, this ad. resembles lots of pretty women. One expects a good deal from a pretty woman, you know, and generally one is greatly disapointed. Because there's nothing decisive about her conversation. This, "How-cute-don't-you-know-gush" makes us weary, and we expected so much from Mr. Wise's ad. It looked so beautiful.

Mrs. Smith wanted a chafing dish. She sees at a glance that Mr. Wise has pretty good chafing dishes. So has the other fellow—and—the other fellow tells the prices just as plainly as printer's ink can. Bill Jones wants to buy a gift for Marie Jenkins on the occasion of her wedding. Marie used to be Bill's steady, and he wants to show her that he has no hard feelings because she changed her mind. Bill feels grateful for this interposition of providence and resolves to do the gift act good and proper. His eyes falls on Mr. Wise's ad. These silver knives and forks would please Marie and fill her soul with vain regrets and yearnings for what might have been. This begins to look tragic. And it is. But neither for Bill nor Marie. But for our dear unknown friend, Mr. Wise. Because he has omitted the price. Bill is not impressed. He follows in the wake of Mrs. Smith. And the other fellow does his business.

Mr. Wise I very much fear, that it's 23 for yours—if you don't wake up? It is not enough to produce a pretty ad. It must also be effective. And no retailer's ad. can be effective unless price talks clearly and distinctly all through it.

* * *

You think I am using Mr. Wise pretty roughly. Cheer up! I cut this ad. from an American paper in order that I might give you an object lesson without hurting the feelings of the said Mr. Wise. Few men can swallow a straight-from-the-shoulder criticism in the spirit in which it is given. Mr. Wise lives somewhere in the United States, he's no particular friend of mine, and I am cut loose without putting a drag on my feelings. The point I desire you to assimilate is this, that if there is another dealer in Mr. Wise's town, who cannot ararnge or write ads. nearly as good, but who advertises nevertheless, then that other dealer is reaping the benefit of Wise's advetrising. Mr. Wise is far more philanthropic than any respectable American citizen intends to be.

* * *

Mr. Dealer! You can't afford to advertise for the benefit of the other fellow. Don't do it. There is a certain amount of mutual advantage accruing from all advertising; but when a man writes, arranges, and pays for an ad. which will inevitably be more advantageous to his competitors than himself, then that man is not a wise man and the sooner his son realizes this the better.

The Americans certainly do get out

HARD COAL

JACK FROST HAS BEEN KING all week outside Inside Taylor's Hot Stuff has displaced him. He has no place in the homes where our Coal is used

All the Sizes at All Times.

NUT EGG
STOVE GRATE

The quality will always be remembered
Our price is the same as common grades
Careful, tidy, delivery

Wash Day Necessities

Our stock is always complete in this line. We have

Washboards, Tubs, Clothespins, Clotheslines.

Wringers and Washing Machines. The latter from $3.50 up to $7.15

No trouble to show goods Come in

DID YOU EVER

Think what a privilege and comfort it would be to have a

BATHROOM

in your home The cost of an outfit is not so much that anyone in ordinary circumstances cannot afford it We have just completed a first-class job for a farmer They can easily have a complete Bathroom put in and no trouble with the sewerage

Information on this subject cheerfully given

We are also Booking Orders for Metallic Ceilings.

This is the modern way of finishing a kitchen

No plastering required and hence none to fall off

We have a fully equipped Tin Shop ready to do any work required

Let us figure with you for anything in our line

WE GIVE CREDIT to Responsible parties as freely as ever.

TO THOSE WHO HAVE THE CASH and are willing to part with it the same day as goods are delivered we give

5 p.c. Discount.

This is far more than the money can earn for you in the bank.

This is only one of the many reasons it pays to trade at Taylor's.

CARLOADS

Due to arrive this month

Wire Nails	3 Cars
Barb Wire	1 Car
Black Wire	1 Car

AXES

Any Weight. Correct Shape.

Take an edge and keep it

For $1.00

Yes, we have some as low as 75c and they stand pretty well, too

To see our line is to buy one

TO ANYONE PURPOSING BUILDING IN 1907.

We would say be on the move at once

The Hardware prices are advancing so rapidly that in many cases our prices are less than similar goods could be laid down for from Montreal.

It will pay you to get our prices before purchasing elsewhere.

Taylor's Sell for Less.—This we are prepared to prove to any one By this we mean that anyone who keeps a record of the cost of a year's Hardware will find it less from us than from any other source We don't have leaders that look good on the surface and then charge exorbitant prices to make it up We are building a trade on a solid foundation We set the pace and it keeps others busy to keep it up The newest goods that we consider reliable are always found here Quantity buying enables us to sell the same goods for less or better goods for the same price We then reasonably expect that 1907 will be the largest year in the Taylor name.

One Price Stores.

TAYLOR BROS. & CO.

CARLETON PLACE AND ALMONTE

pretty advertising. They arrange their ads. better and, as a general rule, in a more eye-catching way than either Canadian or British advertisers. But the Americans are short in common sense, as far as their general advertising is concerned. Big American firms are doing immense businesses because of their advertising; but, in many cases, they are not doing all the business their advertising appropriation could land directly or indirectly. The point for the retailer in this is that it is possible to pull just as much business by spending $500 judiciously as by spending $1,000 a little less judiciously. Most retailers could cut out the circular, which they print every now and then because most circulars simply cannot land the business. A mimeograph or type-written letter to all probable customers drawing their attention to your special advertising in the columns of your local paper will be appreciated and prove effective. If your citizens read the local paper then it will pay you best, 99 times out of 100, to place your advertising with them. The only time the man of the house sees a circular is when it it's on fire. He lights his pipe with it. If your circular isn't pretty it has no attraction for a woman. If it is prettily arranged and illustrated, she gives it to the heir-apparent to play with. The court decides in favor of the local press. Use it judiciously and your advertising is bound to pay.

Mr. Retzlaff has struck a happy idea. He realizes that the mail order houses are his keenest competitors; but this knowledge does not seem to worry him in the least degree. He views the situation quite calmly and issues a challenge to the catalogue houses, while he talks straight and interestingly to his fellow citizens. He makes a square proposition and the folks of his town are bound to be impressed by that kind of talk. Read Mr. Retzlaff's ad. Read it again. What does it suggest to you? It seems to me that Mr. Retzlaff figured it out this way: "There are carloads of catalogues pouring into this town and district annually. They are mighty good catalogues too—just as pretty as strong talks and nice illustrations about easy-priced, quality goods can make a catalogue. The people of this community will read those catalogues. I don't blame them. They will be impressed—interested up to the buying point again again and again and I can see my profits going to the fellow who can pay a gang of ink-slingers to write up that selling talk for him."

* * *

Mr. Retzlaff reviewed the situation rather dejectedly until that happy idea struck him. And he went on in this cool, argumentive way: "Well, things are not so bad after all. My interest in the game has not petered out yet—not by a jugful. I sell the things those fellows advertise in their dandy catalogues. I can sell at the same price any article in my line that a probable customer may read about in any catalogue. The catalogue houses are simply advertising the stuff I sell and I'm going to let the people of this community know it."

Mr. Retzlaff did let the folks in his neighborhood know all about it. He practically says in his ad., "You people know me. You would vouch for my honesty. You saw an article described in Messrs. So-and-So's catalogue and you want it. That description is perfectly correct. Come to my store, bring your catalogue with you and I'll let you have the article you desire at the same price. If I cannot make good then, by all means, get your goods from Messrs.

A Proposition Worthy of Your Consideration

Why should you buy your

Cream Separator, Buggy, Stoves and Hardware

from a Catalogue House, when you can buy these same articles from a home merchant at the same price?

Did you ever hear that a Catalogue House paid taxes at your county treasurer's office?

I wish to ask the public, who want to buy goods in my line, to

Bring Me Their Catalogue

with their prices, and make out a list of the the goods which you may want and I will furnish you the same articles as described in your catalogue at the same price. This will save you the trouble of writing and the risk of getting goods damaged or lost in transportation. Instead of driving with your team to the depot, to get these goods, you can get them right out of my store, without any trouble whatsoever to yourself

Yours very respectfully,

F. H. Retzlaff.

So-and-So." Are there any retail hardwaremen in Canada who have the grit to print a talk like that and the ability to make it good? Can you afford to do it? Then do it and do it now and let us know the results.

* * *

A sense of fairness compels me to state that Mr. Retzlaff is also an American retailer. Probably you will be surprised to learn that out of 100 hardware ads. sent to me by our clipping bureau, and clipped from Canadian papers published all over the country there was only one which I considered fit for reproduction. Admitting that the young ladies in the clipping bureau overlooked many good ads, yet, I think the fact stands out clearly that there is room for improvement—lots of it.

Now there must be at least 100 hardwaremen in Canada who advertise and advertise effectively every now and then. We would like their ads. forwarded for our mutual benefit. I will promise that my criticism, while remaining effective and profitable, will be as gentle as a summer zephyr playing o'er the bosom of a placid sea. Besides, any ad. we reproduce is bound to come in for a good deal more recommendation than criticism, as a general rule. The moral of all our talk is: Advertise principally in your local papers and keep on advertising.

Samples of ads. are always greatly appreciated.

Meeting Mail Order Competition

Practical Methods which have Proved Successful — Retailer in Small Maryland Town Publishes a House Organ — Iowa Man's Experience — Five and Ten-Cent Stores

WOMAN THE PURCHASING AGENT

Realization of changes necessary before you can hope to compete resultfully with retail mail order houses can hardly show to more immediate advantage in any single direction than in the way you display your goods. And nothing more certainly than his store arrangement indicates whether a merchant appreciates or not that men almost completely have ceased to figure in the day-to-day household buying.

The retail mail order houses show in their every move thorough recognition of the fact that woman has become the "purchasing agent for the American home," says Butler Bros.' drummer, and if you continue to run your store without attempting to find out what women want and the way they want you to offer it, should you complain if they do trade with retail mail order houses and other competitors of yours, who with goods in every-day need cater to those who do the actual every-day buying?

Woman Enjoys Looking.

A woman enters your store as one willing to be interested in your offerings even to the extent of buying things other than those for which she came. The store that makes looking easiest and its display freshest and most varied goes a long way toward inducing her to confine her shopping to that one store. As an up-to-date retailer make sure that the displays in your windows and in the store itself are always such as will interest women. Show a variety with prices clearly indicated in plain figures. Make looking easy and then let shoppers look undisturbed, for in the process they will develop new wants for you to supply.

The retail mail order houses give a hint in this direction. Their immense catalogues are but a display of their wares and can be studied for suggestions as to how the actual goods may be displayed effectively and attractively. You know that though those houses work from a distance, ask payment in advance and talk in print about mere pictures of the goods—you know that, in spite of their disadvantages, retail mail order houses do interest and convince by means of the display in their catalogues. If, working under such disadvantages, the retail mail order houses can create new wants and supply old ones—imitating them, without their disadvantages and working in person among your personal friends, what is not possible for you in this direction?

Go After the Trade.

To sell goods nowadays, it is not enough merely to buy a stock of goods, pile it on shelves behind counters and sit down to wait for trade to come to you. The up-to-date retailer is persistently asking people to buy his goods. That does not mean that he is constantly boring them with the spoken or written question. Words need not be used at all. The display of your goods can be made to ask the question and, perhaps, all the more effective because the asking is wordless.

Frankly criticize all your displays and do not be satisfied with any store arrangement short of that which comes nearest to indicating all the wants you can supply and to suggesting the most new wants to those who enter your store.

Do you let your odd lots accumulate? Or as fast as they appear do you put tickets on them quoting plain figures prices that will make those odd lots part of your bargain ammunition?

Is there a price ticket on every article that can be plainly seen by customers so that lookers get the whole story when they do the looking?

Have you such a thing as a bargain counter in your store?

Do you trim your windows with goods at bargain prices?

Do you run a special sale now and then?

Or, though hard hit by retail mail order houses, are you still running your store in what was the approved way when people came in. asked for what they wanted and went out without looking around at all?

Don't Hide Your Goods.

The ideal store arrangement, remember, is that in which as nearly as possible everything is shown in the attempt to take full advantage of the tendency of people to buy a great many things on sight which they did not have in mind at all when they left home.

In your store people cannot buy on sight unless you make sure that they see your goods. Keep your wares up near the ceiling or under the counters and have you any right to be disappointed because they stay there?

Hundreds of popular priced novelties are on the market and the number is being added to almost daily. Have you ever tried to display some of these novelties on bargain counters in order to learn how freely they sell to women? You may have some of these novelties in your store right now—may even be complaining that they do not sell. But are you justified in expecting them to sell so long as you keep them where they will not be seen?

Get down the old goods, give them a thorough cleaning and then put them where they will be seen by people likely to want them. Go through the entire store with the determination to fix your display as quickly as possible so that people will know without asking that you do have this or that thing. Get things out where they show and to make the story complete, be sure that you fasten price tickets to them. Add as many specialties as you can handle successfully and don't put them so high up that they become shelved goods which is another name for profit-eaters.

Buy and sell for cash. Or if you do give time, include say five per cent. that can be given as a rebate in one form or another to those who do pay cash. Come as near as you can to showing everything you have. Keep changing the display for an atmosphere of newness is most attractive. Study your lines for ability to talk about them so intelligently that people will choose to buy goods you orally describe instead of goods the pictures of which are explained in print by strangers.

Learn Lesson From Opposition.

Study how to make your whole store attractive. Get a reputation for running an attractive store where customers are made to feel at home and to understand that their business is appreciated and you will find that people generally like that way of storekeeping well enough to go blocks out of their way to make even trifling purchases.

Take a lesson from exclusive 5 and 10 cent stores which are seldom advertised by printed matter and in which therefore all the features of up-to-date merchandising are specially emphasized. The 5 and 10 cent stores keep their places bright, clean and attractive. Their goods are always well displayed and their show windows are always kept filled with the best values and the most attractive goods in the store—with prices indicated in plain figures.

All clerks are required to be neat and to attend strictly to business. Trays and merchandise are all wiped or dusted every morning. Window trims are changed weekly or oftener. And in every place and every move you will observe constant studied effort to give prominence to real bargains.

So skilfully does the 5 and 10 cent store use most unmistakable bargains that the average merchant as well as layman takes the suggestion and jumps to the conclusion that the store must own its goods cheaper than other stores own theirs.

Yet when you come to walk up and down the aisles and observe how many articles are priced at 10 cents that you know cost from 48 to 72 cents a dozen, and how many things are marked at 5 cents that you know can be retailed with profit at 3, or even 2 cents—then you begin to realize the power of a few bargains unquestionably big. One can well afford to lose money on a single article if the result is to increase the sales of twenty articles, the other nineteen of which pay a profit of from 33 to 150 per cent.

Turn to any of the retail mail order houses' catalogues and careful study will disclose how identical their merchandising is with that of 5 and 10 cent stores and every other retailer using modern methods. The hints for you in the 5 and 10 cent stores, successful department stores of large cities and the catalogues of retail mail order houses are obvious. Your buying public in general is the same as theirs. And none of them has a monopoly of the courage to pay $1.50 per dozen for goods to retail at a dime nor of that still rarer courage to get a juicy profit on 90 per cent. of his wares.

RETAILER FINDS HOUSE ORGAN PROFITABLE

An interesting address on the subject of House Organs for Retailers, delivered by Charles S. Davis, Oakland, Maryland, at the meeting of the West Virginia Retail Hardware Association last month, was as follows:

Advertising has become a necessity to all classes of business men, so much so that the successful business man is considering every plan and method that will help him place before his trade to the best advantage the various lines he is handling. Catalogues, bulletins and circulars in various forms are now sent broadcast by the thousand to all classes of trade and consumers, so that to-day the man that does not advertise or publish some kind of a circular or bulletin that will advertise his line is not keeping up with the advanced methods that are becoming so prominent throughout our country.

With this thought in view we were led to adopt a system of advertising during the past year which has proven of more than ordinary interest to our friends and to us, publishing a house organ called "The Hardware Bulletin," of 28 pages of regular magazine size, and containing articles of interest to our trade, advertising the various lines we are handling, and at the same time advertising for other merchants some lines that are not handled by us. The plan has been very successful. Not only has it increased our business, but it has had the desired effect of offsetting advertising by catalogue houses and keeping at home a large percentage of trade that would otherwise have gone to the catalogue houses and department stores. The demand for a publication of this kind has been clearly demonstrated to us during the past year. We have received many requests for sample copies, and quite a number have expressed their intention to adopt a more definite plan of advertising the present year.

How to Publish a House Organ.

The first point to consider is what amount you are willing to spend in advertising. Two per cent. of the amount of goods bought is a rule that many dealers have adoped. This, of course, depends on what plan you adopt, and the access you have to printing offices. So far as possible I believe it would be to your interest to contract with your home printers, especially if you are in a small town. This creates a good feeling and often, as in our case, leads to the copying of articles from your publication in your town or county papers. This not only advertises you to a large extent, but is advertising and creating a demand for your paper free of cost.

The size and style depends on the amount of advertising you intend to do and the lines you expect to advertise. A four-page circular of good size, with letters to the trade on first page and advertising ads. on balance of pages, nicely illustrated by the use of electrotypes that you can secure from the manufacturers whose lines you are selling, has proven to be one of the best and cheapest plans for the small dealer. For the larger dealer a monthly, bimonthly or quarterly publication, nicely illustrated with the various lines you are handling and new goods that you are receiving from time to time, put up in catalogue form and mailed regularly to a carefully selected list of customers and friends will yield a greater influence and go farther to offset catalogue buying than any other form of advertising.

Expense and Mailing List.

Circulars can be furnished by the thousand very cheaply, but a 20 or 30-page magazine or bulletin, including cover and back printed on good paper, weight not to exceed 2 ounces, so that it can be mailed for 1 cent, and size not to exceed 7x9 in., and you furnishing all the data and cuts for illustrating, should be printed, folded and stapled ready to mail for $25 to $35 for the first thousand, and from $15 to $25 for each additional thousand. Where monthly publications are furnished, you will find quite a number of ads., such as of ice cream freezers, screen doors, oil stoves, gas ranges, spring and fall goods, that you will want to reproduce several times or change very little. This is to your advantage and should be taken into consideration by the printer when contracting.

This can be compiled in various ways, and all depends on your location. In small towns where papers are published, the editors can usually furnish a list that will take in a large class of the best people. Mailing list on free mail routes where they can be obtained is a plan that some have used, especially catalogue houses. Another very practical way is to select a leading man or farmer from any section that you want your advertising to cover, and for a small compensation you can usually get a list of post office addresses of the people in that section of the country.

After your own advertising and publication has gone so far as to bring the customer or inquirer to your store, then it is that you want to use every argument possible to make the sale and to place in the hands of your customer printed matter as furnished by the manufacturer to clinch the argument already set forth, and to more forcibly impress on his or her mind the many good qualities of the article in question. Another good and very effective way is to mail with your publication manufacturer's advertisements. This is especially true of new goods, and has the effect of keeping you in the lead on new goods with your trade.

Manufacturers' Co-Operation.

Manufacturers can assist the local merchant by writing ads. of their various lines, placing one or more each week or month in the hardware publications, as they are published and furnishing electrotypes to those who are willing to use same in space they have arranged for in their local papers or organs of their own. Merchants as a rule cannot write their ads, as well as the manufacturer, who is fully acquainted with his line of goods and its many advan-

tages. We are glad to say quite a number of the manufacturers are furnishing the dealers with ads. to publish, but the practice ought to be more general. As a result merchants will not only advertise more largely, but will necessarily have to carry larger and better stocks. This will have the effect of keeping local trade from sending away for many goods now furnished and advertised by the catalogue houses.

This article is based upon our own experience as hardware merchants in a small town, feeling the necessity of some plan to offset the influence of the catalogue houses and city depattment stores, and while the plan has been a success we find it necessary to adopt many of their methods. A good and well-selected stock of goods suited to your trade is required, and in many lines some cheap goods. This is especially true in 5 and 10 cent household goods. This permits you to make comparisons and to advertise some low-priced articles.

After carefully studying and planning we felt that as our trade was largely with farmers and people of limited means it would be impossible to do a cash business, but we have adopted a plan of putting our store on a cash system. If a party wants to open an account, say, for 30, 60 or 90 days we have an agreement signed in which the party receiving the credit gives us his note payable at a specified time, said note to be credited to an open account less 1 per cent. per month charged against the note until paid for credit allowed. At the same time we give receipt and contract to the party against the note, stating that the note is to be credited on open account less the 1 per cent., and when the note is due if the full amount is not paid we also agree to credit back the difference between book account and note, according to our books. This avoids opening any account, except on a cash basis, and puts your cash and credit customers all on equal basis, with all book accounts payable at a specified time. The plan is new with us, but so far has worked very nicely

USING THE OTHER FELLOW'S WEAPONS

Sidney Arnold in American Artizan.

A man whom I have watched pretty closely for the last five years recently started in the hardware business in a fairly good-sized town of Iowa. Previous to that time he had been employed by one of the large hardware jobbers. I recently had an opportunity to interview Charley on the success of his venture and I found him well satisfied. He started in a town rampant with catalogue-house competition, and was successful in fighting this form of competition, so his methods may be considered carefully.

When Charley started in business he looked over the field and discovered a firm belief in his community that the retail catalogue houses offered better values than the local dealers. He looked up the history of the largest of these concerns and noted that their methods were legitimate, using the word in its proper sense. He saw that their growth was to be accounted for by an examination of the laws of nature. In other words, Charley believed that the retail catalogue house system was lawful as lawful as what is known as the regular method of distributing merchandise. He regarded Beers-Sawbuck & Company as a natural, able and righteous competitor. He put them in the same class as his own competitors in the same town. The classification as such was accepted and the facts taken as they existed. There was no hedging; there were no excuses; there was no denying actual circumstances. The question was not: "How can I drive retail catalogue houses out of business?" but "How can I gain and hold the trde of my community?"

The work of fighting the retail catalogue houses in the matter of supplies, Charley left to what is known as the Joint Committee. He read of their work in the trade papers, but aside from that took little interest in the matter; nor had he much sympathy with their fight. He realized that if the retail catalogue houses feel a demand for certain articles they will find a means of supplying that demand, whether sentiment is against them or not. Charley realized that if a man is starving, he will get food even though the nurse refuses to offer it to him in the form of a milk bottle or a bowl of pap. As will be seen, Charley attempts to minimize campaigns of the retail catalogue houses in his territory rather than to reduce their purchasing power. For all Charley cared, the retail catalogue houses might store their warehouses from basement to ceiling and then build additional ones to hold their goods. It was determined simply that these retail catalogue houses should not empty their warehouses into Charley's community.

How to reduce the retail catalogue houses' sales in his territory was then the question. Charley footed up the balance sheet. To his own credit he placed immediate delivery, personal inspection of goods on the part of the customer, quality, convenience of delivery, proximity of source of sale, unquestioned guarantee, oral rather than written salesmanship. The sole argument for the retail catalogue houses found to be price. Even that was a doubtful advantage.

The premises were laid down and Charley knew where he stood. He could now proceed scientifically. Charley's formal store opening was much as other openings. There was an orchestra hidden behind the conventional palms, a sweet-voiced damsel dispensed biscuits nicely browned in a standard steel range. Mrs. Hogitall of the village gossip shop came in for her share of the advertising novelties and pronounced everything perfect. The youngsters were well taken care of by pocket knives and dolls. Altogether the offer was much as a great many others, only perhaps more successful.

Charley quickly discovered, as he had expected in advance, that the buying public of the community had a most disagreeable tendency toward accepting all the favors to be distributed by local retail stores, to ask them to perform all of the gratuitous, or almost gratuitous, jobs that devolve upon the retailer, and sending to the mail order houses for those goods which netted a good fat profit and which were paid for in cash. This is natural. Charley had noted its presence early in life and realized that people were inclined to help themselves even to the detriment of others.

Sound Logic in This.

Charley did not try to boycott the people of his community who sent their juicy orders to catalogue houses and left him to do the repair work. He aimed not to force his best customers to buy of him but to make them want to buy of him. Consequently he aimed not to show his customers that they ought to buy of him for religious reasons, that the retail catalogue houses were extending and growing tremendously at the expense of the retail merchant, but that he himself, the retail merchanat was growing proportionately faster than the catalogue houses—that he was growing so fast because te was offering better values, that his customers were better satisfied, and that it was up to the people in the community to come to his store and place their hard-earned sawbucks on his counter for their own selfish sakes and not for anybody else's.

He began an advertising campaign that was pursued consistently and scientifically. Every week his custo-

mers get a circular letter describing some novelty to be purchased during the succeeding week at a reduced price. The name of the retail catalogue houses was not omitted through fear of advertising. After describing the certain novelty that was offered as a leader for the succeeding week, Charley went on to explain why he could offer this article and all other goods he handled at lower prices than the mail order houses. He commented upon their immense number of clerks, upon the greatly increased freight charges for articles shipped singly rather than in bulk. He referred to the immense sums of money annually thrown away for expensive catalogues and other advertising. He proved that the mail order houses expected a much bigger profit than any retail dealer and showed figures to prove that they are one of he greatest gold mines that financiers have discovered in some years. These and other points were brought up. In addition to this Charley took care to name in the circular letter that while some of the mail order houses offered a good quality, these were exceptions. He mentioned the famous "cheapness at any cost" motto of these concerns. Then he brought up his other points all in a brief way and all hinted at rather than proclaimed broadly.

Common Sense Plans Won.

This work Charley left to an experienced advertising man for the first three or four months. Then, after getting a general idea of what good advertising is like, and having gotten together a kind of guide book, he proceeded to do the work himself, giving it his personal attention. The letters were carefully worded and were the product of perhaps six or eight hours' study at first.

The matter of advertising in the daily papers was done as carefully. Here Charley was helped to a great extent by the manufacturers. These furnished ideas, technical and comical cuts. He was assisted by his advertising man, who sent him proofs of the stock advertising cuts kept on hand by some of the large printing and engraving shops. These advertising cuts can be had at small expense and are, as a rule quite original and satisfactory.

On every occasion Charley distributed souvenirs. His souvenirs were absolutely unique in one particular—they contained absolutely no mark showing who the donor was. Charley had gone to hardware conventions and had received souvenirs from the manufacturers and jobbers who offered displays at these places. In looking over his list of souvenirs one day, the fact struck him that almost all were unavailable for decorative purposes because of the brand or the name of the donor appearing conspicuously on the most prominent part. It occurred to him at the same time that this nullification of beauty was entirely unnecessary. Charley could tell without looking at the trade mark just who had given each of these souvenirs and what that company manufactured. He decided that by giving away a pocketbook his customers would remember that Charley had given it and would remember it longer than if he should have engraved in a prominent part the words Charley's general hardware, Lonesomehurst, Iowa. Charley's argument was good. Try it on yourself. Unless your memory is remarkably poor you will recall who gave you a pearl-handled pocket knife that you carry around, the rule with which you measure short distances, the hand-painted plate which you hang on the wall, or the hundred other things you have received. Moreover, Charley was right in realizing that if one souvenir out of the thousand lacks the name of the donor, the recipient is all the more curious and will himself strive to ascertain the donor and remember it.

All this means that Charley is fighting the retail mail order houses at their own game. Charley realizes that his position is the more logical. He knows that he has more advantages, true advantages, to offer the consuming public in one day than the mail order houses have in a year of fifty-three weeks. Advertising is the strong forte of the catalogue houses. It is a system by which these concerns were started and through which they have grown from ramshackle junk shops into tremendous concerns unrivaled in this or any other country.

Charley is successful because he does not attempt to change nature's laws. He accepts nature as it is and uses it to his own best advantage. While he realizes that the retail mail order houses are here to stay, he feels that his own business is establishd to stick also. And Charley will see that it does stick.

DISPLAY THAT BROUGHT RESULTS.

Concerning the value of window displays in the small town, sporting goods dealers are almost unanimous in declaring that this is their most effective method of gaining publicity for their goods. The experience of one firm will serve to show what benefits are to be derived from this practice. One of the cheapest and most attractive displays heard of recently was put on by a Southen hardware company. It consisted of a mechanical negro's head—one that rolled its eyes from side to side—placed on the stuffed figure of a boy dressed in blue blouse and overalls. The dummy was made very life-like by stiffening the arms and legs with wires which allowed them to be bent in any position. It was placed in the centre of the window with a 6-foot fishing rod fastened in the hands. A pan of water about of five feet long was placed on the floor of the window space so that the line dipped into it, surrounding the pan were rocks, moss and other substances to give the appearance of a river bank. A string of fine, bright hair wire was run from the tip of the rod to the ceiling and thence through a screw eye to some place in the back of the store. By means of this the rod could be raised and lowered as in fishing. Some small catfish were placed in the pan and gave the whole a very natural apearance. It is said that the effect, when the negro rolled his eyes and raised the rod, was very humorous and striking and crowds were gathered before the window during the greater part of the day. That the display was productive of results was proven by the sales which totalled about three times as much as during the previous season. Customers coming into the store frequently asked about the display.

A WASTE OF TIME.

So it is with window trimming. The man who throws a few steel goods or cans of paint into the window and then leave it there until it is fly-specked and covered with dust does not believe in window trimming. He has never received any returns from the trims (?) that he has put in. The only reason he puts them in at all is because his competitors do. He thinks it is a waste of good time.

Contrast this man with the merchant who makes it a point to see that his windows are always clean, are changed frequently—every week anyway, and who sees to it that the displays in the window goods that he is anxious to dispose of—stuff that has dragged or something that is so new to the trade that it needs every sort of pushing to get it started. He will tell you that his windows are the best advereising medium he has—considering the expense. Newspaper advertising is indispensable, but for the outlay a good window will often discount the newspaper ad badly.

After all, like almost everything else, the virtue of window trimming lies in the man who does it. The man who does it because he believes in it, and who puts his heart in the work and takes pride in it will tell you that it is an indispensable adjunct to the business. The man who does it in a haphazard manner, merely because the rest of the merchants do, will say that it is a useless expense and he wished he did not have to waste his time doing it.

With the Men Who Sell

How a Jobbing House is Conducted — Best Method of Posting Travellers — Burning the Candle at Both Ends — Stories of Success and Obstacles to Avoid.

MACHINERY OF A JOBBING HOUSE

By C. C. Fee.

A brief outline of the internal mechanism of the large hardware jobbing house, where goods are sold by the dozen and gross where the retailer sells a single article, should prove of value to quite a number of dealers.

The first thing that crosses the mind of a visitor to one of these large establishments is how on earth things can be kept running smoothly without getting jumbled up. Put the question to any of the employes and they will answer, "System, sir; every man in this house has certain duties to perform, and, by doing his part, he supplies one of the spokes that goes to make the complete wheel."

For the purposes of this article, we will take as our model one of the largest and most up-to-date houses in Canada, as the others are run on the some general principle.

The Buyer's Department.

The man who looks after this important department is a man of wide experience in the hardware business. He must know how any article will sell, so as not to run short, or, more important still, not to have any stock left over at the end of the season. This is the department upon which, practically, the whole success of the firm depends.

The head, with the assistance of two or three "under buyers," interviews all traveling salesmen from the manufacturing houses, and between them keep the stock in the warehouse up-to-date. In this department notebooks are kept for every stock floor of the warehouse, and each morning they are brought around by an office boy and left with the managers of the different floors. In these books the head of each department must enter every day the goods that are beginning to run short in the department under his jurisdiction, and the books are then gathered up in the afternoon by the boy, who brings them all to the buyers. They go over the list of shorts and cross out or place repeat orders according to their judgment, and in this way it's almost impossible for a line to run short unless there's an exceptional demand or the manufacturer is unable to ship the goods in time. Of course, there are always such delays as shortage of cars, congestion of freight, etc., which sometimes put the buyer off the track, but generally this loss of time is allowed for by placing the orders early. This is a point on which many retailers could improve their system, instead of waiting until their shelves were empty before ordering from the wholesale.

The Receipt of Goods.

When a shipment of goods is received at the warehouse it is divided up into lots and sent up to its separate floors, via heavy freight elevators. There are three of these elevators, measuring about 15 by 8 feet; so that goods may be received and sent up on two elevators while the other one is used for orders being sent out. In this way there is no delay by congestion, and the game of "give and take" goes on without interruption.

The Sales Manager.

Goods successfully bought would be of no use unless they were successfully sold. By "successfully," we mean sold at a price that satisfies the customer, and, at the same time, leaves enough profit that the firm may pay its running expenses and have something over to help the banks along. The sales manager is a man who has had wide experience on the road and in the warehouse. He knows about all there is in the art of selling goods, can write beautiful letters, talk like a diplomat, has the stock and prices at his finger tips, keep an enormous army of clerks and stenographers constantly employed, and still find time to see anybody who calls on business. Somewhere round his desk you will find a card saying that social calls may be made after 6 p.m., or some such gentle hint that "gas bags" are out of order. He is in charge of the traveling force, which in any large house will number between 15 and 30. Figure out for yourself whether he has any time to discuss the hockey situation, and next time you call on him judge yourself accordingly.

The Order Department.

The head of this department is over all the warehouse employes, and also looks after the stock and sees that the packers holds no orders over. When an order is received in this department it is handed over to a clerk, who divides it up into sections. Each section is then handed to the managers of the floors on which the different goods are stored. The manager enters the order, number, time, and date received on a form supplied for this purpose, and then hands the order to one of the clerks on his floor to be filled. The goods are laid out and then placed in a truck with the order on top and sent down to the packers, who collect all the goods belonging to one complete order, box them up and send them to the shipping department, where they are delivered to the carters, who ship them off by freight or express, or, if they are city orders, deliver them at their final destination within 24 hours of the time the order was received.

If the dealer on opening his goods finds he has been overcharged, or the goods are short or have been damaged, he writes the sales manager, who turns the correspondence over to the claims clerk. He, in turn, looks into the matter thoroughly: traces the shipment from the time it left the warehouse until it reaches its destination, and finds out upon whom the blame should rest. He then turns the matter over to the financial department, which fixes the matter up with the merchant by either refunding him or placing the overcharge or damage to his credit, to be deducted from his next purchase.

The Sample Room.

Every large wholesale house has a sample room in connection, where prospective buyers may go and look over a sample of almost every line kept in stock. The clerks in this department also make up and keep in order all the travelers' samples, which is no slight undertaking. This department is in

charge of a bright clerk, who, himself, is directly under the eye of the sales manager.

The Advertising Man.

The advertising man in a large jobbing house is generally looked upon by the other employes as a being favored by providence. He is, in the first place, only responsible for his actions to the head of the firm, and, on account of the difference between his work and that of a general clerk he is allowed a great deal of freedom which the other employes don't enjoy. He makes up all the advertisements which the firm runs in the different trade papers, besides looking after the printing of catalogues, circulars, etc. His position looks like a golden dream of happiness to the uninitiated, but—well, just get up against it for a while. Far away hills look green.

The Financial Department.

On account of the tremendous amount of bookkeeping necessary in a large house, it would be utterly impossible for one man to look after the books, so everything is done in sections, each clerk having some particular part to look after, for which he is responsible to the head of the department. When a firm has two or three thousand accounts on its books, you can imagine the work it would be to balance them up every month and send out the statements, etc., and this is only a tithe of what is done by this department every month.

The Mail Department.

If the office boy in some small firm were to see the mail that this department gets through every day, he would die of heart disease, but great as the piles of mail are they disappear by magic. Every labor-saving device that can be thought of in this line will be found here. Invoice letters are not addressed by some jobbers, as by folding them in a certain way the name at the top of the invoice shows through the front of the envelope, which has enough cut out of the front of it to show the address, but, at the same time, not enough that the invoice itself can fall out. One of the things that would likely interest a visitor is the envelope sealing machine. This machine is attached to one of the electric light sockets, and is run by its own motor. As fast as a clerk can feed the envelopes into the machine it wets the gum and seals them up.

The Time Keeper.

In a firm employing, say, 150 clerks and warehousemen, it is necessary to keep some kind of a check on their movements, not only in the matter of their arriving in the morning and leaving at night, but also that they don't "duck" out during the day. The warehouse is so constructed that any person entering or leaving must pass a man who has his quarters by the front door. This is the door through which he must go out (or stay in), as no person is allowed to go in or out via the shipping department. This man has his instructions as to who may pass out during business hours. Among the privileged ones are all clerks whose duties consist of outside work, such as banking, buying goods, etc. The ad. man also has a free hand (or foot), and may travel in and out as many times a day as he desires without interruption. All other clerks must show a pass or be reported. The time keeper also goes over the records twice a day and reports "lates" and "absents," besides acting as information bureau to any who have business with the firm. He keeps out book agents, pedlars, etc., who, if they got the chance, would overrun the place and keep the different members of the staff from their duties

The above sketch gives some idea of the work in a jobbing house from day to day. Of course there are many things that occur in a day's work that we have not referred to, but the work of the chief departments has been outlined, and, in a general way, some idea given of the work carried on by each.

THE COMMERCIAL TRAVELER.

Ella Wheeler Wilcox, in New York Journal.

First in the crowded car is he to offer—
This traveling man, unhonored and unsung—
The seat he paid for, to some woman young
Or old and wrinkled. He is first to proffer
Something—a trifle from his samples may be—
To please the fancy of a crying baby.
He lifts the window and he drops the curtain
For unaccustomed hands. He lends his "ease"
To make a bolster for a child, not certain
But its mamma will frown him in the face;
So anxiously some women seek for danger
In every courteous act of any stranger.
Well versed is he in all the ways conducive
To comfort where least comfort can be found.
His little deeds of thoughtfulness abound.
He turns the seat unasked, yet unobtrusive.
Is glad to please you, or to have you please him,
Yet takes it very calmly if you freeze him.
He smoothes the Jove-like frown of the official
By paying the fare of one who cannot pay.
True modesty he knows from artificial;
Will flirt, of course, if you're inclined that way.
And if you are, be sure that he detests you;
And if you're not, be sure that he respects you.
The sorrows of the travelling world distress him;
He never fails to lend what aid he can.
A thousand hearts to-day have cause to bless him,
This much-abused, misused "commercial man."
I do not seek to cast a halo 'round him,
But speak of him precisely as I've found him.

To polish your show windows, making them as clear as day, use the following paste, applying with a soft rag, and rubbing off with another soft, dry rag:—Take of prepared chalk, nine ounces; white bole, one-half ounce; jeweler's rouge, one-half ounce; water, five ounces; alcohol, three ounces. Mix thoroughly.

BEST METHOD OF POSTING TRAVELING MEN

By W. L. Sanford.

Traveling men are a tremendous factor in the success of all jobbing houses, and to underestimate their worth is a grave mistake. In character and ability they are equal to the men of any profession, and in resource and energy they outstrip them all. The unsuccessful soon drop out, while those who fully measure up to the standard requirements are men of force, sound judgment and broad business views, who in many instances are superior to the men under whom they work. They receive the best pay of all employes, because they earn it--and when there is an important vacancy in the house, it is generally filled by a man who has served a term on the road.

The office man, treading daily the same worn path; performing the same routine of work; surrounded by the same people, and hedged in by the narrow limitations of his little workshop, frequently becomes dwarfed in his views and narrow in judgment—while the traveling man out in the busy world, in constant contact with the representatives of other houses, both in his line and others, meeting people of all kinds and from many sections, with their various and novel ideas, mingling with the consumer, the retailer and the railroader, viewing men and measures from a higher point, becomes himself broader every day of his life.

These facts should be ever borne in mind in dealing with the salesman. Many of his mistakes are from lack of information for which his house, and not himself, is responsible. He is susceptible of business education and is anxious for it, and if he is not well informed, it shows that there is something wrong with the system in the house. He occupies a position different from that of any other employe. While the house shapes a general policy and establishes rules for his guidance, still the details must be left to him, and away from the house he must exercise his own judgment and meet the ever changing conditions as he finds them. The war office plans the campaign, but after all it is the men in the field who win or lose the battle. No matter what stock the house may carry, how great the size and assortment, nor to what advantage it has been bought, it will stay on the shelves and prove a bad investment if the salesman cannot bring these advantages in a convincing manner to the attention of the trade.

Knowledge is Power.

In the sale of goods the posted man is always master of the situation. I found this true in my ten years' experience on the road, as well as in a subsequent and equal experience as buyer and manager of a business. If the buyer knows more of the details of manufacture, of freight rates, and market conditions than the salesman, the latter is at a decided disadvantage; and the opposite is true, when the situation is reversed. It is also a fact that the best posted salesman, all else being equal, invariably controls a larger business than his competitors.

We are all prone to yield our judgment and patronage to those who know more on a subject than we do, and are slow to give a hearing to those whom we think know less. This is especially true in the purchase and sale of goods. Now, if these statements are correct, and I am sure that no one will challenge them, it follows that the thorough posting of salesmen is a matter of vast importance to a house, and so fully am I entrenched in this belief that I devote more time and thought to this work than to any other part of our business.

When freight rates play an important part in the purchase and sale of goods, as is the case in the west especially, the salesmen should be made familiar with both the distributing rates and the shipping weight of goods. The price of an article in Montreal may be 25 per cent. less than the local price, but when the transportation charges are added it may be shown that the local price is 10 per cent. less.

The shrewd and unscrupulous competitor may sell goods for direct shipment from factory, stating that they weigh about so much and take fourth-class rate, when in fact they weigh more than stated and take possibly first-class rate.

The salesman should be in a position to show up such false statements, and such unfair competition, and by so doing secure the business to which he is entitled by reason of having a lower delivered price. The profit of a local jobber is practically the differential between carload and less than carload rates, and as this difference is diminished, so is his profit. Therefore, the salesman must be a freight man also, and watch that rates be not lowered by sharp practices.

Know the Goods You Sell.

The salesmen should be given all information possible relative to the manufacture of goods, and the methods employed by manufacturers, and used by competitors to cheapen the cost of goods. If his competitor is selling a forty-five pound vise stamped fifty pounds; or seven ounce wagon covers stenciled ten ounces, or tinware made of eighty five pounds, instead of 100 pound plate; or patent grass snaths labeled patent bush; or stamped instead of drawn steel rakes, or lighter than standard gauge corrugated iron — he should be able to detect and expose the fraud.

A large number of local salesmen actually believe that large jobbers manufacture the goods bearing their trade mark; while, as a matter of fact, they are the same goods which their own houses are offering for sale, the only difference being in the paper labels which they bear. Furthermore, many old patents have expired and many imitation goods are being placed upon the market constantly, and it is very necessary that the salesmen be kept informed on the subject, otherwise we find him trying to meet with the genuine article the price on the imitation.

This can be accomplished by putting before him whatever information the buyer may gain by his visits to factories, or by conversation with their representatives. And here it might be stated

RULES WHICH WILL ENSURE SUCCESS.

Written for Hardware and Metal by H. Styles, Montreal.

If your object is to build up a business very large,
Be certain that politeness rules the salesmen in your charge.
Let your customers be certain they'll be always treated well,
Then you'll find them ever flocking to whatever goods you sell.

If you wish for reputation with the people far and near,
Give good value for their money, let your statement be sincere.
If these lessons you will practise every day with might and main,
You are reasonably certain fame and fortune to obtain.

that a buyer can make no better investment of his time and means than by visiting as often as possible the factories from which he buys. He gains information that cannot be obtained in any other way, and this becomes doubly valuable when imparted to his traveling men, and this should be done at every opportunity.

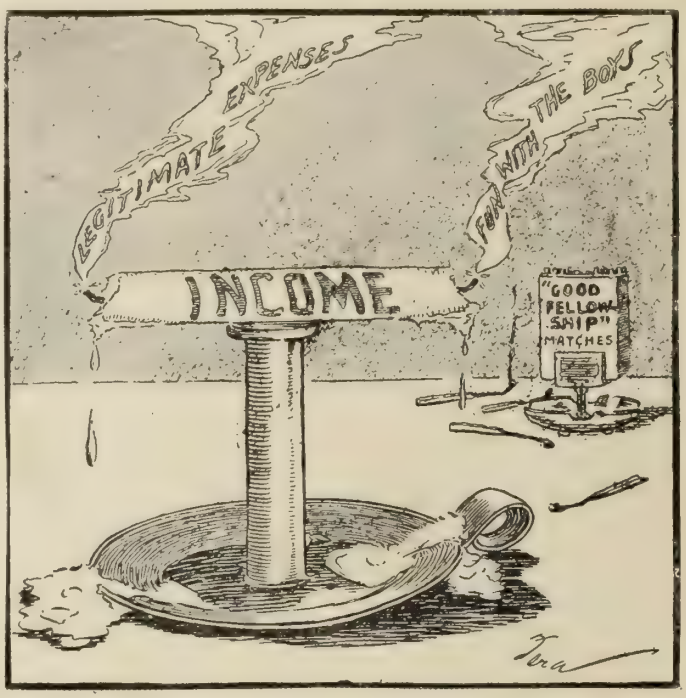
The salesman of local jobbing houses should be given the actual delivered cost of the goods. I know this policy will meet with much opposition, but I would rather rely upon a man's intelligence than upon his ignorance. It is true that a salesman having the correct cost will more often cut the selling price, but it is also true that in many cases he will fail to secure the business by not having the actual cost. It is just as easy to educate a salesman to get 20 per cent. as 12 per cent. profit, or 30 per cent. as 20 per cent. profit, and when you have educated him to get the profit your business demands, you have accomplished something worth while. You have attained an object that will be of service to the man, and through him a vast benefit to you. Pardon this illustration:

Easier to Lead Than to Drive.

It is a whole lot better and safer to drive a horse with open bridle, having him become accustomed to the cars, than to anchor your safety on the fact that he has on blinds and cannot see the things that might frighten him. It is all in getting a man started right in getting his sights elevated to the proper height. The salesman gets a big profit on razors, not because he doesn't know the cost, but because he is educated to it.

I believe in appealing to a man's pride, intelligence and ambition, in having him feel that he is a part of the business, and that the success of the business depends upon his effort and judgment; and this is quite true so far as his own territory is concerned. I believe in winning his confidence by freely imposing confidence in him. But, if you find a man that is insensible to such an influence, then it is best to let him go. I believe in sitting down with a salesman and having a frank, informal talk, swapping experiences, exchanging ideas, discussing policies and reviewing conditions, getting his views on plans and prices, and then adopting them if they are better than mine, and they frequently are. After such a conference, he will hgve learned a great deal, and so will the manager if his mind is not clouded with self importance and self-assertion. A salesman that cannot be entrusted with the actual cost of goods is not worthy of the place he fills, and the quicker you get rid of him, the better.

In this paper I have endeavored to emphasize the matters upon which a salesman should be posted, viz., freight rates and classification; shipping weight of goods; manufacture of goods; light weight and immitation goods; cost of goods.



Just what means shall be employed in conveying this information is a matter of individual preference. In our own business, we supply our salesmen with condensed tariff sheets giving the competitive rates into their territory; we issue weekly change sheets giving the actual delivered cost and selling price, and if the goods on hand have advanced we give both the actual cost, and in parallel columns what the goods would cost to-day, This encourages them to make a profit based on the advance, and at the same time puts them in position to meet competitors who continue selling at the old cost, as many frequently do. We also file in a regular and convenient place for their inspection all letters that we think will be of interest and benefit to them; and these letters they usually look over whenever they come to the house. This puts them in a position to talk intelligently to the trade on all subjects relating to the hardware business. In fact, it educates them, and that is the object toward which we strive.

Other houses have successfully followed the plan of encouraging their traveling salesmen to read the trade papers, some even subscribing for each one on their staff.

NOT WORTH GOING AFTER.

The clown at the circus is the man who makes a fool of himself for the amusement and entertainment of other men, points out the Salesman. Wilder, and ever more reckless grow his pranks as the audience cheers him on. But when at last the show is over—when the lights are out and no one is left to laugh with him—then he is forlorn enough.

How many of us make fools of ourselves by burning the candle at both ends, spurred on by the applause and laughter of the other reckless spenders and "good fellows" in our crowd. But when the show is over—when the candle of income is exhausted—when ... fire is out—then we are left forlorn. The crowd of "good fellows" who cheered us on during the burning won't come round afterwards with fire and light when the fun over. Burning the candle at both ends! There's nothing in it that's worth going after.

Burning the Candle at Both Ends.

DICK FAIR'S LUCK.

By C. C. F.

"Pretty nice order, that of Fair's," said the bookkeeper of a large machinery house, to his assistant, speaking of a contract to fit up the plant of a large power house in Western Canada. "Yes," said the assistant, "old Dick's out on top again; he's a lucky beggar."

"Old Dick," was the pet name allotted to the star salesman of the house, not because he was old, but just because.

"I'll admit that Dick certainly is

lucky," agreed the bookkeeper, "but it's his long head, and eye always on the lookout for business that bring him up against these things. Many of Dick's sales that the uninitiated attribute to luck, are the result of a carefully thought out plan. There's one time though, that luck stepped in and saved Dick his job. He had only been on the road for the house about a year, when on coming back from a trip west, he seemed queer. Used to go round in a kind of a trance, and you'd have to speak to him twice before he'd hear you. Well, one day one of the boys caught him looking at a picture in the back of his watch, and after continual digging, we got out of him that he'd met her in Toronto on his last trip. She was there visiting some cousins or something. Well, anyway, Dick had it bad.

"Next time he went west, was in the Spring. He started off in fine spirits, and we all expected that he wouldn't come back alone, so when one day we got a wire from Dick saying he'd finished his trip and wanted two weeks holidays, with money up-to-date we weren't surprised. Now it just happened that we were pretty busy at the time and the 'old man' said he couldn't spare Dick, and wired him to report at the shop within two days. The only reply we got was 'send my money at once.' We sent him his money and heard nothing more from him when a week had gone by the 'old man' had worked himself up to fever heat, and everybody in the office knew that Dick Fair's goose was cooked.

"About two days leter, we got a big order from him for a complete new set of machinery for a large grist mill in G—. This was Dick's record sale and the chief was tickled to death. Dick landed home about 4 days later and was received with open arms.

"How did you get it, Dick, my boy?" said the chief. What passed between them in the private office, nobody knows, but Dick's salary took a good jump up next week.

"In telling us about his wedding, he said, 'Fellows, that was he narrowest squeak I ever had in my life. If I hadn't got that big order, I'd have been a married man without a job. I knew as much before I started for G—, after getting the 'old man's' wire, but I figured that there were lots of jobs in this broad land waiting for me, but only one girl, so I kissed the job goodbye, and started for the girl. Her daddy took a shine to me first shot and when he heard what my line was, and the scrape I'd got myself in to come up and ask him for his girl, he slapped me on the back so hard that I though I was kicked by a horse and said: 'Young man, you're the right sort. I'll not only give you the girl, but I'll give you such an order, that your boss will sit up and notice things. I own the largest grist mill for miles around here, but the business is so large that the old machinery isn't good enough. I've been thinking for quite a while about ordering a new set, and now you get it.'

"That's what you can call real unadulterated luck fellows. I just ran into that order and it saves me my job, but I wouldn't advise any other chap to do the same thing on prospect, as every nice girl in the land hasn't got a father that owns a mill."

STAND BY THE TRAVELER.

Not long ago several Ontario retail hardwaremen were discussing trade conditions and drawing some comparisons between the present and the past.

One Toronto man spoke of how, in his early days as a retailer, it was necessary to make buying trips to New York and to read United States trade publications in order to keep abreast with the times. "How changed things are now," he said, "by reading our Canadian trade paper I can keep posted, and instead of having to go to New York I can get better satisfaction by doing business with the travelers who call at my store. I know them well and could trust some of them with anything I have. They value my account and realize that the better they serve me the better they are serving themselves."

"Of course," he added, "I could go down to the warehouse but I wouldn't know the young fellows in charge of the sample room as well as the more experienced traveler who calls at my store. Anyway, the jobbers do not seem to encourage buying at their warehouses as their sample rooms are not so complete as in former days and we retailers can get any special discounts that are going by buying through our regular traveler, whereas we are apt to pay a longer price by buying at the warehouse. If we go to New York matters are even worse, as the sample rooms are practically bare and the stocks are carried in some warehouse in the outskirts of Brooklyn or at the factory in Massachusetts or Connecticut. I beileve in standing by the traveler wherever I find he tries to treat me fairly."

Merchants from outside the city, however, said hey found it of advantage to visit the sample rooms at the warehouses two or three times each year, particularly at fair time or during conventions of the Retail Hardware Association when the jobbers look for many of their customers to call and usually have their travelers off the road and in he sample room where they can give personal attention to their customers. One retailer who lived near Toronto told how he had been over-canvassed by traveling salesmen and when one day he received cards from six or eight commercial men, notifying him that they all intended to call on a certain day he made a flank move and run into the city and placed an order at the warehouse of his favorite jobber.

COUNTRY OFFERS BEST CHANCES

"You may talk to me all you please about the advantages of the city, says a man who has clerked in both places, "but I will take my chances in a comparatively small city. I went to work for a big wholesale house in the city once. I had an idea that if a man would get up and hump that his merits would soon be recognized and that he would be pushed right to the front. I rather expected that the head of the establishment would be 'round in a few weeks and ask the foreman who that capable and industrious young man was and that the foreman would introduce me to the head of the establishment, who would commend me and tell me that he had his eye on me and that if I went on as I had started, there was a great future before me.

"Well, I got the hump on myself all right, but the head manager didn't come 'round. I worked for him a year and he never gave the slightest indication that he had ever heard of such a being as me, and what is more, I don't think he knew or cared who I was or where I came from. I didn't even get any commendation from the foreman, but I did succeed in getting several of the rest of the fellows who worked in the same department hot at me. They plainly intimated that I was a fool for doing any more than my regular work called for and by and by I came to the conclusion that maybe they were right. I felt that I was getting to be simply a little bit of a cog in a great big wheel. If I stayed there long enough I would be worn out just like any other cog that is located in a wheel that is running all the time and then it would be to the scrap pile for me.

"In the store in the small city or town it is different. The head of the concern usually takes a personal supervision of the whole establishment and actually gets to know all the people who are working for him. He notices the ones who are attending strictly to their jobs and pushes them ahead. There is some encouragement for a man to get a hump on himself under those conditions. But in the department store or wholesale house in the great city the individual doesn't amount to much. He has so much work laid out for him to do. If he does it gets no credit, if he fails to do it he gets fired and that is all there is to it."

THE AWAKENING OF BUTTS

F. H. O Hara Tells How a No-Account Boy Found Success in a Dingy Hardware Basement.

Not many years ago in the Central High school of Detroit, Mich., a lad, called "Butts," in recognition of his small, stout build, was causing his teachers much annoyance. "Butts" was a typical little sport and used to skip classes daily to smoke cigarettes in the vicinity of the school or to pursue other inclinations quite foreign to study. He was an amiable little fellow, the sort you can't help liking in spite of yourself.

A crisis in the career of "Butts" came when he was a junior. He had made no progress and was a source of irritation to the faculty. Now, the grade principal happened to be one of these good fellow men whom a boy likes naturally. He had played handball with "Butts" a good deal and if there was one person who might have influence with the boy, it was this principal. But it was no use. The teacher tried every method that ever had been employed by him in his long experience. The boy would take everything—scolding, pleading, threats—quietly, even good naturedly; but never mended his ways.

Was Dropped From School.

Then the principal placed him on "schedule." Being placed on schedule is a simple process of elimination. If a student's standings do not become satisfactory in a certain study in one week he drops the study. So with another study the next week, until within a month or six weeks the student has no classes and must bid farewell to the institution.

"Butts" left. His father was a clerk in a hardware store and was provoked with his son. He secured a job for the boy in a large wholesale hardware company, asking that "Butts" be given the "dirtiest job they could find." His request was granted. The lad was placed in charge of a great heap of files in the basement. The place was musty and the light of day never penetrated into the room. Besides, the files were rusty; and, since they were unassorted, when an order came to him from above "Butts" was compelled to rummage through the big pile in order to find the particular files wanted. It was a gloomy job, and the boy felt downcast. But he was resolved to "stick," so he determined to make his position as pleasant as possible. He noted that certain kinds of files were ordered more than others. He found some boards and soon erected a neat case along one side of the dingy room. He labelled each department. Then he placed the files in the case, and found his job less dirty.

One day the manager chanced to pass through the room where "Butts" was working. He noticed the case and the neat arrangement of files, but said nothing. He merely raised "Butts'" wages a trifle—and forgot.

Meanwhile, "Butts" frequently was bothered by orders which he did not understand thoroughly. He did his best. Instead of asking questions, the boy went to the public library and secured a large volume on the subject of files. This he read carefully. Then he rearranged his case and wrote out new labels.

Soon after this, a traveling salesman happened into the office and inquired what was needed in the file line. He was sent down into the basement to investigate. He talked with "Butts" for a time, then went back to the office and exclaimed:

"Where the dickens did you get that boy? Why, he knows ten times more about the file business than I do—the whole thing, from A to Z."

This was in April. They sent "Butts" out on the road selling files. He made good, and more. He was getting a good salary. But in September, shortly after school had re-opened, "Butts" called on his old grade principal. The teacher saw there was something the boy wished to say. 'Butts" left without saying it. However, he returned a few days later.

Went Back to School.

"What's the matter, "Butts?" the principal said. "I can see there's something you want to say."

"Yes, Mr.—," "Butts" began, "there is something. I tried to tell you the last time I was here, but now I'll make a clean breast of it."

"What's the trouble?" inquired the man, thinking that "Butts" was involved in some "scrape."

Then the boy told him that he wished to return to school.

"What?" cried the principal.

"Well, I'm doing fine now—couldn't hope to do better—but I've been thinking about it, and I believe I know the reason. I've simply been applying myself, and I know I can do that in school."

Then he went on to say that if he could complete his studies and be graduated in June he would remain in school. It meant hard work—seven studies one term and eight the next—but it was arranged, and "Butts" was graduated.

The father was poor, but wanted "Butts" to continue his studies. So "Butts" worked, his father aided as much as possible, and four years later the boy who found success in a heap of files in a dark basement was graduated from the Michigan College of Mines. To-day he gives promise of becoming an exceedingly successful mining engineer.

KEEP TO THE POINT.

The gift of closing a bargain is by no means a common one, and it is left out of the composition of many clerks who are otherwise well equipped. And without this gift all others are of no avail. No matter how skillfully the negotiations may be conducted up to the "sticking point," unless they go beyond that point they are useless. Though indecision on the part of the salesman is the besetting sin which generally causes his failure, there are other elements which contribute to this undesirable end.

One of these is the inability to shut out other matters from the conversation of the moment. Only the unskillful salesman will allow his customer to drag him into general conversation when he is actively engaged in displaying goods and attempting to get his patron's decision. This does not mean that it is not wise to chat pleasantly with customers about social and personal matters, but it does mean that this should not be done when once the business of selling is really in hand. Anything that distracts the mind of the customer from the vital point at issue is always to be avoided. Let all the "visiting" be done before the display of goods has begun.

CONFIDING IN THE CLERK.

There is good opportunity for the employer to exercise diplomacy with his clerks, to keep on good speaking terms and thereby elicit from them goodwill, which goes a long way to make successful and useful clerks. Clerks are human, as are their employers. They are sensitive to praise and blame, and the amount of work they do is greatly governed by the relations existing between them and their employer.

By diplomacy sour temperaments can be easily sweetened, frowning brows can be smoothed out, furrows of care can be erased. On the other hand, self-assertion can be corrected and carelessness in details be corrected. The levity so common with clerks, which always carries an uncomplimentary impression to customers, can, with a little diplomacy, be eradicated. All flaws in the demeanor of clerks may with the least exercise of diplomacy on the part of the employers be corrected and a business institution be put on an unassailable basis.

HOW ONE CLERK SUCCEEDED

By Weston Wrigley.

One clerk in a Toronto store recently won promotion by keeping track of the percentage of sales he made in comparison with his wages. He liked clerking and he worked faithfully enough, but he was kept at one counter for nearly two years and was getting discouraged when a bright idea suggested itself to him.

He was thinking one night of looking for another job but he didn't like to leave surroundings which he had grown to like, and in thinking the matter over he commenced to figure out why he hadn't won promotion. He thought he was selling a good lot of goods, but he didn't have any figures to work on, so after considerable thought he decided to stay where he was for a while longer and keep track of his sales. He was earning $9 per week and wanted more and so each day for a week he kept an account of his sales and at the end of the week found that they totalled up to about $170. He divided this up and found that his daily average was less than $30, and his salary figured out at slightly under 5 per cent. of his sales.

With this information he determined to try and increase the percentage. He kept closer tab on his customers, attended to as many as possible, cut out gossiping with other clerks, and with customers, and at the end of a month he found his average nearer six than five per cent. He kept at it, and found that in the past he had merely been taking orders, that by using a little judgment he could develop additional sales. Instead of letting a customer go after she had bought the article asked for, he could induce her to buy other goods by tactfully suggesting and drawing attention to the good qualities and advantages of buying the line now.

The clerk followed his plan up. Every week he compared the figures of his sales with his wages and nearly every week saw an improvement. Inside of two months he had moved away off the counter he had stuck at for two years and in the course of a year he had been promoted three times, he being now working at over double his former salary, with good chances of being promoted into a partnership in the business.

What this clerk did can be done by any wideawake salesman. Too many clerks get discouraged and move from one job to another. It doesn't pay to change too often. In the eyes of almost any business man a salesman doing well in a job is worth almost double as much as one out of a job. Stay with an employer until you have climbed as high as you can. Then, if he is slow to recognize your merit, have a talk with him before looking elsewhere for a position.

And take care of the little things. Keep your section of the store as clean as a pin. Have a place for everything and keep everything in its place. Don't give either overweight or underweight. Be patient with customers who don't know exactly what they want. Try and save as much expense as possible, remembering that a dollar saved the store is worth as much or more as a five-dollar sale. Be faithful in your service and endeavor to make friends for the store, and before long your opportunity will come—some opening will develop for you—your employer may find it advisable to take in a partner or some other merchant may be quick to recognize merit.

Attention to business is bound to win, while careless or thoughtless service will not open any doors of opportunity for you. He who wishes to climb the ladder of success must know how far apart the rungs are.

RELATIVES NOT ALWAYS BEST.

As a general thing, the employment of relatives is to be avoided. Traveling salesmen are agreed upon the fact that when they find a storekeeper whose whole force is made up of his sons, daughters, nieces and nephews, he is considered as struggling under a distinct handicap, and his progress is watched with especial care. This is, perhaps, only another way of saying that the man who selects his assistants because they are relatives is not at liberty to make the selection on the broader line of their real qualifications for the work in hand.

HOW BUSINESS IS LOST.

A correspondent in an exchange mentions two cases which occurred to a customer within a short time. In one instance he wished for a few pieces of sandpaper and went to the hardware store of his neighborhood and paid two cents a sheet for them. The next day he wished a coarser sandpaper and went to another store which was more convenient for him at the time, and handed two cents to the clerk. One cent was given back to him. He remarked: "I thought the price was two cents a sheet," and was answered, "Sandpaper is a cent a sheet, 10 cents a dozen." In the other instance there was a purchase of cheap hooks at still another hardware store. The customer wished one hook and was charged three cents for it. Having decided that the hook was what he wanted, he went to the same store, to the proprietor as it chanced, and was charged 10 cents a dozen for the same hook, the original purchase being shown as the sample. Naturally he complained, and the explanation was not satisfactory But two cents were returned to him. These are very small matters, but they affect business. Supposing that this customer were to buy a large amount of hardware, or were to recommend a friend who had such a purchase to make, which merchant would be likely to get the business?

CLERKS MUST BE CIVIL.

"It don't always do," said an old hardwareman recently, "to size a man up by his looks. A sporty-looking man with an English accent came into my store and said to a young clerk, 'Say, my boy, can I see some shoes?' 'This ain't no shoe store,' snapped the clerk. 'Can't you see the sign?' 'Is that so?' responded the man. 'I'll look at it from the outside,' and started for the door.

"I had overheard the conversation, unknown to the clerk. I caught the man at the door and asked him to wait a moment. 'Come here, Tom,' I called to the clerk. When he came I said, 'Apologize to this gentleman for your bad manners.' 'I am sorry,' he said. 'I meant it for a joke.' 'One more such joke,' I said, 'and you'll leave this store for good.'

"I opened a conversation with the sporty individual, and found that he was the new owner of our livery stable and wanted horse shoes. I jollied him up, made good friends with him, and in the next five years sold him several hundreds of dollars' worth of goods, which my fool clerk would have thrown to the other store.

"At another time I saw another clerk waiting on a quiet little woman, with a bored manner, as though he had no use for her. I edged up, opened a conversation just as she showed signs of leaving without buying, and found that she was fitting up her home for a boarding-house, as her husband had recently died. I showed my interest in her case, and before she left sold her $87 worth of goods, for which she paid spot cash. She became a steady customer, and is trading with me yet.

"When people come into my store I always show an interest in them and get them to talk about themselves. That's the best way to make friends of strangers. After a man has talked one of my legs off, and I have listened with attention, he begins to feel warm towards me, and would like to do something for me. It's easy enough to sell him goods if he has any notion of buying. If not, he comes around when he needs something. The personal equation is a big thing in the retail hardware business."

Advantages of Profit Sharing

Written for Hardware and Metal by Fred C. Lariviere, Wholesale Hardware Merchant, Montreal

In my endeavours to equip the company of which I am president, with the most modern and up-to-date business methods, I have visited the principal cities in the United States and Canada. In every city I was most cordially received, and every merchant and manufacturer seemed most happy to exchange views. Amongst other things, I was particularly surprised at the great interest and attention paid to the laboring class and the salesmen, everybody seeming to be devising some means of interesting their workers sufficiently to prevent the good ones from searching position from some other house or even paying attention to the tempting offers of competitors.

Objects of Profit-Sharing.

In a recent address on this subject, E. F. DeBrul, secretary if the "Keystone Driller Co.," Beaver Falls, Pa., expresses himself as follows: "We find in Cincinatti, where we have extended the premium system and similar attractions for the men, that by hitting them in their pocket books, we have made unionism an unattractive thing to the average machinist."

The increase of profits has a very good moral effect on the employees, it shows the men the consideration they enjoy from their employer, in placing them above the ordinary salaried employee by becoming interested in the company for whom they are working. They are intimately connected with the welfare of the concern, for the more the company will realize the more the employees will receive, so that this joint interest gives incalculable increased progress. The principal object of profit-sharing is better returns of profits for the employer and higher salaries or compensation for the employe by remunerating properly every moment given for the interest and prosperity of the employer.

Manufacturing Concern Plan.

In the South Metropolitan Gas Company, London, England, profit-sharing has been established seventeen years, the last distribution taking place in July, 1906, and the sum divided amounting to £43,262. By the terms of agreement half of this sum must be employed in buying shares in the company and the other half can be distributed to the beneficiaries or, more properly speaking, to the co-partners, but most of these prefer to invest in the shares of the company, as £41,603 out of £43,262 were placed in 1906.

The shares of profits to the employees has increased 800 per cent. in fourteen years. For 1892 the sum belonging to the employees amounted only to £5,-697; eight years ago the accumulated capital which had been exchanged for shares reached £100,000, but to-day the sum is £337,192. The company gives work to 4,998 hands, and the share of each in the accumulated profits is £66.

Crane Co.'s Annual Gift.

Following a custom adopted in 1900, the Crane Company, of Chicago, generously shares the fruits of its success with the employees. The basis is a donation at Christmas of ten per cent. of the earnings of each employee. In December, 1906, the distribution amounted to $330,000; this being $25,000 more than in 1905, and making a total of $1,500,000 thus distributed to date. Every employee, irrespective of his position or length of service, receives ten per cent. of his year's earnings in a lump sum, accompanied by a card bearing the good wishes of the company and a bit of wholesome advice as to the wisdom of preparing for the inevitable rainy day. Six thousand employees were the beneficiaries in the last Crane Company's gift.

FRED. C. LARIVIERE.

Keystone Driller Co.'s Plan.

The Keystone Driller Co., Beaver Falls, Pa., has a combined savings deposit and profit-sharing plan which is working to the complete satisfaction of all concerned. It is simple, complete and self sustaining and the benefits have been pronounced. The conditions were as follows:

1. A stock company managed by a regular board of competent directors.
2. Doing a fair business that was capable of some extention.
3. A small amount of treasury stock which could be issued from time to time as desired to workmen.

About $10 was spent in printing blank certificates and the company was ready to introduce the system.

These certificates set forth on its face that it is issued only and exclusively to employees of the company. It is ruled to provide for 20 or more entries, has blank spaces for the computation of earnings, withdrawals, cancellation, and final receipt.

The stub from which the certificate is detached remains in the book and has blanks for corresponding entries, this comprising all the bookkeeping necessary to keep the system running. On the reverse side of the certificate all terms, conditions and limitations are clearly set forth. Briefly and mainly these are:

A Business Proposition.

1. That the owner may withdraw the deposit at any time by giving due notice.
2. That if withdrawn before one month no interest will be paid.
3. If after one and before expiration of four months, interest at four per cent. per annum will be paid.
4. If withdrawn after four months six per cent. will be paid.
5. After the expiration of six months, and if the owner so desires, the deposit shall become profit-sharing and for the time the money is in the hands of the company it will participate upon an exact equality with any other capital invested in the company; the company, however, guaranteeing that the profit shall in no case fall below six per cent.
6. That the amount of profit-sharing

certificates held by any employee at any one time shall be limited to $1,000.

7. That the profit-sharing certificate is at the will of the holder at any time after six months exchangeable for regular corporation stock.

8. That until so exchanged the owner shall have no voice or vote in the management of the company's affairs; but when so exchanged it becomes in all respects equal with the regular corporation stock.

9. That prior to exchange for regular corporation stock it is not transferrable except for purposes of immediate redemption.

10. That all interest or profits, as the case may be, shall be suspended during the existence of any strike in which the holder participates.

11. That the company arbitrarily reserves the right to redeem the certificate at the end of five years, or, in case of the death or disability of the owner, at the end of three years thereafter.

12. That the ownership of $50 or over the profit-sharing stock, other things being equal, shall entitle the holder to preference of employment.

13. That the owner may add to his holding on any regular pay day any amount he sees proper.

Not a Philanthropy.

It will be observed that the plan provides for no so-called charities. It does not propose to offer something for nothing, but, on the other hand, it is a simple, straightforward, business proposition. The interest allowed upon deposits is about what should be paid to the bank for the borrowed money, and for the sake of encouraging thrift and the cultivation of habits of economy, the company can easily afford to favor its employees instead of the bank in this matter. The guarantee of a profit whose minimum shall be at least equal to the current rate of interest is only just, while the depositor has no voice in management. So soon as an employee's certificate amounts to the limit, $1,000, he may surrender and exchange it for regular corporation stock. He is then free to take out a new certificate.

Applied in Jobbing Establishments.

Most of the jobbers seen take as a basis one or two years' record of a traveler, taking into consideration his sales, salary and expenses and the gross profits realized. To make myself clear I submit the following example:

A. sold in two years $200,000 worth of goods, realizing a gross profit of $30,000, or 15 per cent. He received for his salary $1,500 for two years, while his travelling expenses were $3,000, a total of $7,500, or 25 per cent. of the gross profits. In re-engaging this traveler with a view of encouraging and interesting him more, the employer will say: Mr. A., during the last two years you have cost us 25 per cent. of gross profits, or $3,750 per year. We guarantee you this amount as salary and expenses for the coming year, and in addition the difference you will realize between 25 per cent. of the amount of your gross profits and your salary and expenses shall be yours.

I understand that on this basis city travelers are paid 17½ per cent. to 25 per cent., and country travelers from 25 to 40 per cent., according to territory.

Other Plans.

Other employers give a fixed salary and expenses, plus a commission on a certain class of goods, such as cutlery, razors and similar goods carrying a good margin of profit, these bonuses or commissions carying from 2½ per cent. to 7½ per cent, or even 10 per cent. In addition to these commissions, there is also a sharing of profits after the gross profits have covered salary, commissions and traveling expenses, plus say $800 to $1,000 for the employer. After all these are covered the salesmen begins to participate in the profits, on a basis of 40 to 60 per cent.

Still another plan is to guarantee the traveler a fixed salary and expenses with participation in the net profits, varying from 50 to 75 per cent., the traveler's sales bearing its proportion of administration expenses, covering all expenses and losses except salaries of selling staff, interest on capital invested and bad debts. A difference of percentage of expenses must be made for direct shipments from factories and from one's own warehouse.

Applied in Retail Stores.

One method is to establish departments with a manager for each, but in this case the manager is the only one participating in the profits. The profits are made up as follows:

The department is charged with the value of the goods carried in stock. Charges are also made for insurance on the same basis, rent according to location occupied, salary of all clerks in the department, except the manager, salary of travelers making the sales of goods of this department, advertising, donations, telegrams and a certain percentage based on the volume of business to cover the expenses of the office staff, purchasing department, advertising department, fuel, light, stationery, taxes of all kinds, stamps, telephones, delivery of goods and petty expenses.

These expenses are all deducted from the gross profits and the balance divided with proportion of 30 per cent. to 10 per cent. for the manager, from which deduction is made of the amount advanced the manager, and the difference is, his sharing of profits, the employer keeping the 50 per cent. to 70 per cent. as his share and taking the risk of the accounts.

Benefits the Manufacturers.

In the manufacturing industries the first practical result is to avoid conflicts between capital and labor. In these establishments strikes are unknown, for the simple reason that nobody has ever seen strikes amongst capitalists interested in the same enterprise. The employes being shareholders or certificate holders can no longer complain that capital is the exclusive privilege of a few, This fact alone should be sufficient to induce manufacturers to adopt some plan of participation with their employes, but there are other good results.

The employes being directly interested give much better attention to their work. They save waste in supplies and workmanship, devise means of executing the work more quickly, or of cheapening the cost of production. Therefore, it pays the employer dollars and cents to adopt this modern system to say nothing of the high satisfaction of giving a chance to rise to every employe.

In case of dispute the employe is better disposed towards the employer, whom he knows as his friend and is naturally led to discuss the subject with care and good sentiment. An employer who uses his subordinates well is soon known and he never has difficulties of securing good help and always has the most desirable class of workmen.

Jobbers Get Good Results.

Judging from the experience of those who have adopted the premium of profit sharing system the change has been simply wonderful. Salesmen who formerly stayed in the store on Saturdays or Mondays are no more to be found and there is no waste time on the road. Routes are made accordingly, for the salesmen receiving remuneration for every effort and minute used, the prosperity of the house is now his. With this system private detectives are not needed to find out what employes are doing, for the days are not long enough for them to work.

To use the expression of a very able salesmanager of a large jobbing house in the New England states, "Most of us are selfish and the travelling salesman is no exception to the rule." In other eords, place a man in a position that the more he will work, the more he will be interested and the solution of the

problem. How to handle salesmen" is solved.

Of course there would be exceptional cases where it is advisable to pay salesmen a fixed salary, such as working new ground or territory that was tributary to other jobbing centres or when putting out young men who have no connection of established ability as salesmen.

Analysis of the Plans.

I am not in a position to say which of the three manufacturing plans is the best, my studies and experience do not permit me to express an opinion.

For the jobbing houses I do not hesitate to say that the third plan outlined is the best and most equitable, and will try to prove my recommendation. Plans one and two have for a base salary and expenses reduced to percentage on gross profits and should be termed premium propositions. A profit sharing system, to maintain its proper meaning, should place the traveler on the same basis as if he was a partner. His sales and the net profits (not the gross profits) establishing the proportion of his interest. To justify what I have just said, I call attention to the following:

When you subscribe stock in a company, is it not a fact that dividends are only declared on the net profits after expenses are paid? The same rule applies in an ordinary partnership and why should not the same application be made in a proposition with travelers?

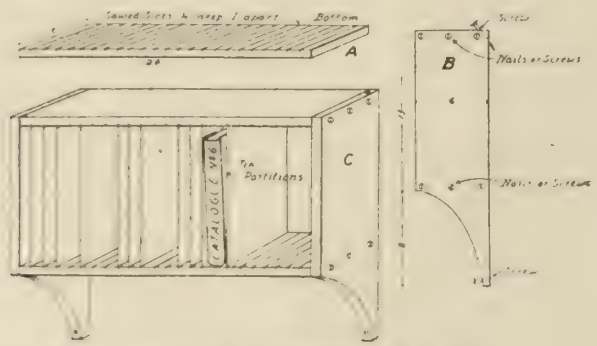
The volume of business of a traveler should be charged with a corresponding percentage of the amount of expenses of administration to be deducted from gross profits. To make my views clear I will submit the following example:

Interesting Examples.

C sells $100,000 on a margin of 14 per cent., or $14,000, gross profits at 40 per cent. profit sharing receives $5,600.

D is also a country traveler, but devotes all his energies to the sale of the most profitable goods and only secures $50,000 of business at 25 per cent., or $12,500 gross profits, at 40 per cent. receives $5,000. All will admit that D. is the better man, the one that obliges his employer to carry less stock, with less handling, at less cost of administration and with less risk of credit. Still C. would receive $600 more. Is this to the advantage of the employer? I do not hesitate to say no.

On the other hand if you make the "profit sharing" on the net profits the result would not be the same. The traveler selling $100,000 would pay for administration expenses double the amount on the one who sold $50,000, which is only just. But the percentage on the net profits should be larger than that on gross profits and I estimate that a 40 per cent. sharing proposition on gross profits would be equalized by 55 per cent. on net profits, and I now make the following comparison on the basis of gross profits:



A. sold $100,000 worth of goods at 14 per cent., equalling $14,000, at 40 per cent., equalling $5,600, while B. sold $50,000 worth at 25 per cent., equalling $12,500, at 40 per cent., equalling $5,000.

Let us figure on net profit after deducting share of expenses.

A. sold $100,000 at 14 per cent., equalling $14,000, less 7 per cent. for expenses, $7,000, leaving $7,000 at 55 per cent., or $3,850.

B. sold $50,000 at 25 per cent., equalling $12,500, less 7 per cent on $50,000 for expenses, $3,500, leaving $9,000 at 55 per cent., or $4,950.

Does it not appeal to you that the man who brings the better percentage is the best man and should get the greater remuneration?

Home-Made Office Catalogue Case.

A difference would have to be made for percentage of expenses on direct shipments from factories, and shipments from one's warehouses. The 7 per cent. referred to includes all expenses of administration except those of the selling staff, whether indoor or outdoor.

The plan submitted for retail stores should give all necessary advantages and very good results, inasmuch as where used it gave very satisfactory returns.

I believe I have proven without the slightest doubt that premium or profit sharing system deserves the very serious attention of all those interested in business, either as manufacturer, jobber or retailer, and if the few remarks I have made are helpful to some I will be more than paid for the trouble I have put myself to in writing on this very important and interesting question of "profit sharing."

CHEAP DISPLAY RACK.

The display rack shown in the accompanying cut is both handsome and practical and can be made for less than half a dollar. The centre rod is made of a bamboo fishing pole, while the cross-pieces are ordinary brass sash curtain rods. By using a 5-16-inch drill bit and boring through the pole close to the joints splitting can be avoided. The upright pole should be gilded. The fixture can be hung from the ceiling or made permanent in the window by fitting in a hole through two 2x4's arranged in X shape.

Cheap Display Stand.

AN OFFICE CATALOGUE CASE.

Many hardware merchants have too many catalogues, directories and reference books lying around loosely in the office, on top of desks or under shelves. The following sketch shows a simple arrangement for a case to hold such books. Have one of the clerks procure two boards 6 inches wide and 2 or 3 feet long, or just the proper length to fill up some vacant space on your office wall. Square these boards up, commence at one end and with the square draw lines across the boards 1 inch apart. Then saw slots in these boards 1 inch apart and ¼-inch deep, as shown in A. These boards form the top and bottom of the proposed bookcase.

The boss is proud of every clerk who helps him, and soon gets rid of those who don't.

Pioneers of the Hardware Trade

Interesting Career of Winnipeg's Mayor – Other Notable Examples of Long and Faithful Service —Sketches of Men who have Helped to Develop the Hardware Trade in Canada.

WINNIPEG'S HARDWARE MAYOR.

It has been well said that to write the biography of Jas. H. Ashdown would be to write the history of the commercial development of the Canadian West. Although still in the prime of his mental and physical powers, he has seen the development of Winnipeg from the small collection of huts clustering around Fort Garry and the Hudson's Bay trading to its present proud position as the third city of the Dominion and the commercial capital of the Canadian West. All this is in the short space of 41 years. In those years he has built up on of the very largest wholesale hardware businesses in Canada from the smallest beginnings, and has amassed a very large fortune. The tinsmith of 1866 has become the merchant prince of 1907 and mayor of his city by the larges majority ever given in Winnipeg to any candidate for the office.

They who see no romance in business should learn the story of Mr. Ashdown's career. A plain, modest, somewhat retiring man, few would imagine that his is one of the most interesting business careers in Canada. Born in England, he came to Canada when eight years old and he started in life a young friendless boy without a cent to his name and with no prospects except those which were promised by his own native ability and strength of purpose.

When eleven years of age he was serving behind the couner in his father's store in Weston near Toronto. A little later he worked on a bush farm in Brant township and the rough labor of a pioneer lift developed a rugged constitution which has stood him in good stead ever since.

When eighteen years of age, he became a tinsmith's apprentice for John Byrd, of Hespeler, and for three years he worked steadily at his trade in that village. He then went to Chicago and from that city to Kansas. Perhaps it was in Illinois and Kansas that he first began to realize the possibilities of the western half of the continent, but he had not forgotten Canada, and in June, 1866, he entered the Red River settlement.

It was not a prosperous time for the ditsrict which now includes the western metropolis and the Red River Settlement was no place for a faint hearted pioneer. It was the troublous time before the first Riel rebellion, discontent was rife and the country was in financial straits. The story of Mr. Ashdown's connection with that rebellion and of his imprisonment in Fort Garry by the rebels is interestingly told in a quaint old book, Beggs' "Ten Years in Winnipeg" (1869-1879) but space will not permit of an extended account here.

Beggs tells of Mr. Ashdown's financial losses during the rebellion. His shop was closed for the proprietor had no assistant and while he was imprisoned by the rebels his business was at a standstill. It is amusing to read in the quaint old chronicle of the growth of Winnipeg in 1871: "We see about this time an evident reign of prosperity in the business of J. H. Ashdown, for that gentleman, finding his trade increasing so rapidly, had to engage an assistant tinsmith."

JAMES H. ASHDOWN
Mayor of Winnipeg and for 41 years a Hardware Merchant in that City.

From such small beginnings has grown with the development of Winnipeg and the west the big wholesale hardware business of The J. H. Ashdown Hardware Co., and for that growth, although Mr. Ashdown has associated with him many able business men, he himself is mainly resposible. He had always attended strictly to his business and has been in touch with almost every detail of it.

In later years Mr. Ashdown has found time to devote to public duties. As a member of the Transportation Commission he did good work not only for the west but for all Canada. A few months ago he was appointed chairman of the last December, when the city of Winnipeg decided that none but a first-class business man could be entrusted with the control of civic business he was elected Mayor by the largest majority in the history of the city.

THE TRADE'S GRAND OLD MAN.

To see a man eighty-five years of age with a perfectly preserved mentality and physique going about and transacting business with which he has been identified for sixty-eight years and in an establishment with which he has been connected for nearly fifty-one years is assuredly inspiring to all directly or indirectly concerned with the hardware trade. Such a man as above described is S. S. Martin of Rice Lewis & Son, wholesale and retail hardware merchants, Toronto.

Hale and hearty, with a noble and kindly face, which reminds one of William E. Gladstone, Great Britain's grand old man, and with a mind stored with interesting and instructive reminiscences, with ability to re-state them, Mr. Martin is indeed an interesting man to converse with. His reminiscences are not confined alone to the hardware trade of Canada, he having served his apprenticeship in England and spent sixteen years in the trade there. What Mr. Martin doesn't know about the various phases of the hardware trade is hardly worth knowing.

Mr. Martin was born in Lincolnshire, England, in 1822 and at the age of seventeen became an apprentice to a hardware merchant. After serving a short period with this merchant who was rather cynical and little calculated to advance the interests of his employes. Mr. Martin's father thought it wise to change his position. From this time until the year of his coming to Canada, Mr. Martin led a gregarious life. In his youthful wanderings he practically covered the whole of England, working for short periods in Devon, Gloucester, Leicester, Peterborough, Cheltenham, Berkshire and Nottingham, at the last being engaged in taking stocks for valuators. Mr. Martin considers that those years spent in traveling about the old land have been of great value to him in that he thus gained valuable insight into the ways and cross currents of the hardware trade in England.

In 1855 Mr. Martin came to Canada, and on May 4, of the same year he engaged with the Rice Lewis & Son. Mr. Lewis met me at the firm's former

S. S. MARTIN, SENIOR

For 51 Years with Rice Lewis & Son, Toronto and 68 Years in the Hardware Business.

Sketches of Pioneers Wanted.

A few months ago E. C. Atkins & Co., saw manufacturers, Indianapolis, Ind., drew attention to an employe who had for 41 years served that firm faithfully and well. In looking over the Canadian trade several even more striking examples of sterling worth were noted and it was decided to present to readers of HARDWARE AND METAL a few sketches covering the long careers of usefulness of these honored men in the trade.

While it is doubtful if there are any who can show longer terms of service the editor invites letters telling of any in the trade who have been for 30 years or longer engaged in hardware manufacturing, jobbing or retailing. Information regarding firms which have been in existence for half a century or longer is also solicited. A series of articles on old-time hardware men and business would be interesting to readers of HARDWARE AND METAL.

A REMARKABLE RECORD.

John Ritchie, whose likeness appears below, celebrated the sixty-first anniversary of his birth. Of these sixty-one years, just forty-five have been spent in the employ of Caverhill, Learmont & Co., Montreal, and by that fact Mr. Ritchie probably holds the Quebec record

JOHN RITCHIE

For 45 Years with Caverhill, Learmont & Co., Montreal.

for continuous service with one firm. Such a career is remarkable for a young country like this, but, when it is mentioned that Mr. Ritchie's father before him, was also an employ of Crathern & Caverhill, pioneers of Caverhill, Learmont & Company's business, a chain of service is linked which to the best of our knowledge cannot be equalled in Canada.

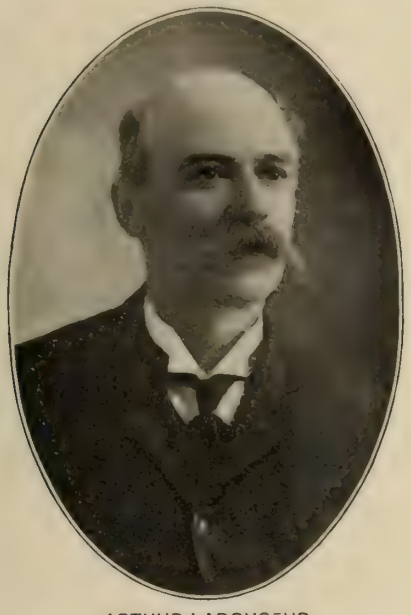
In 1861, when young Ritchie began his long hardware experience, the business was small, in comparison with its present proportions. Almost the whole stock of Crathern & Caverhill was carried in the St. Peter St. warehouse, and Ritchie entered the storeroom there. Later on, it was found necessary to take over a large warehouse on Colborne St., to accommodate the heavy goods and John Ritchie was detailed to this branch as head storeman.

That his duities were faithfully performed, the mere fact of forty-five years' service amply proves. In every deal, he was found to be strictly honest and thorough-going, and no man ever worked harder for his firm. Strong of frame, and robus in health, he was an ideal man for his position. Even in spite of advancing years, he continued to perform his duties in the most faithful spirit, until, a short time ago, he contracted heart trouble, and was sometimes forced to absent himself from his

being no large tinware factories as at present.

In regard to the capacity which Mr. Martin himself filled, he said with a [illegible] of satisfaction: "I had the department that made the money. I bought and sold all that came into the place, never having anything to do with the office." "There were good profits in those days," he added with a sparkling eye.

Fifty years ago practically everything was imported from England, there being almost no home manufacturing with the exception of the Jones firm of Gananoque, who made a line of spades and shovels.



Mr. Martin has never had much faith in paint as a commodity to be handled by wholesa,e hardware merchants. The company, he said, had about twenty five years ago taken up the trade in paints, continuing it, however, for only three or four years, the business then being made unprofitable by the competition of the wholesale druggists. Later on, however, the trade reverted to its natural source, the retail hardware trade.

"Rice Lewis & Son made its reputation," said Mr. Martin, by keeping things that no other houses had. I am strongly in favor of a combination, wholesale and retail business as it is the retail business that allows the firm to carry such a variety and meet the demands of the people."

James Ross, president of the Dominion Coal Company, in conversation with Mr. Martin a year or so ago, asked him to what he attributed the fact of his old age and extraordinary vitality. Mr. Martin said: "I attribute it to the fact that I have always endeavored to live a godly life."

That was sufficient reason. He bears no dishonorable marks of over-indulgence. He has lived a clean, useful life and is at 85 years of age looking forward to the opening of Spring so that he can again enjoy riding down to the store daily on his bicycle. May such a "grand old man" live long enough to pass the century mark and retain his interest in the hardware trade to the last.

duties. He struggled bravely against his weakness but finally he was compelled to give up, a few short weeks ago and, since then, his health has rapidly failed. He is now confined to his bed, but his friends are hoping that his fine constitution will pull him through to see still further expansion of the business in which he has spent his life.

ARTHUR LADOUCEUR

For 39 Years an Employe of the Canada Horse Nail Company, Montreal.

Mr. Ritchie has always been a strong temperance man, and he is a member of the Fairmount Methodist Church. In his early years, he lived on Ann St., but of late years he has resided in Ontremont, a pleasant suburb of Montreal. "Hardware and Metal" takes pride in showing to its readers so splendid a type of the pioneer hardware employe.

LONG TERM OF MANUFACTURING.

When an employe has remained in the service of one firm and their successors, for such long period as thirty-nine years, that fact should reasonably satisfy most people, first, that the employe was a faithful and deserving person, and second, that the employers were fair and considerate in the treatment of their employes.

We have had lately brought under our notice a worthy example of the good relations which have existed between Arthur Ladouceur, an old employe of the Canada Horse Nail Company, who are the successors in the business of manufacturing horseshoe nails of the firm of W. M. Mooney & Co., who commenced in the year of 1865 at Sault Aux Recollett, eight miles from the city on the north side of the Island of Montral, where water power facilities were obtained. W. M. Mooney being the practical managing partner. The late Honorable James Ferrier, M.L.A., who was at one time mayor of the City of Montreal, and otherwise identified with some of the largest commercial and financial enterprises in Canada, was financially associated with him.

It was a day of small beginnings; the firm commencing with only one machine, and adding to it before the close of the year three others until at present these have been increased five fold. This firm were the first to introduce in Canada the manufacture of horse nails by any mechanical process.

Mr. Ladouceur entered the employ of this company, as a boy of thirteen years of age, and with the exception of two intervals of about one year each time, has been ever since in their service, which represents the long and exceptional period of thirty-nine years, all of which was spent in their forging department, where the nails are hot-forged from Swedish nail rods. Mr. Ladouceur has been a joint foreman in this department for some years, and latterly in entire charge.

Fortunately he has always been of a thrifty disposition and has always managed to save a portion of his earnings, which he wisely invested in productive real estate in the suburbs of Montreal. The returns from this enabled him to decide last September that as his health was not satisfactory he would retire and take a well earned rest from his years of hard work. In accordance with this resolution, he left the employ of the company October 1st. His employers took advantage of the occasion to present him with a "Birks" gold watch and an address in the assembled presence of all the employes of the company.

Such an incident as this, reveals in part, that during the 40 years of its existence the company made more than good horse nails, having made good fellowship amongst its employes.

THE "DEAN" OF THE TRAVELERS

It is doubtful if there is a younger "old man" amongst Canadian travelers than W. H. Dean, a member of the Hamilton Executive Board of the Commercial Travelers' Association, and who for over a quarter of a century has been a traveler for Wood, Vallance & Co., of Hamilton. Judging from the accompanying portrait, forty-five years of strenuous activity as a traveler selling hardware rest remarkably lightly on Mr. Dean's shoulders, and it is safe to say that absence from the road would make him feel like a duck out of water.

Mr. Dean served his apprenticeship to the hardware business with Fuller Bros., of Stratford, sons of the late Bishop Fuller, getting a thorough training and making his first trip in 1862 while in their employ. Leaving them he went to Montreal and engaged with Mulholland & Baker to represent them west and north of Toronto, and other sections at different times for eleven years, afterwards traveling for Frothingham & Workman for two years. For nearly twenty-nine years Mr. Dean has represented in Western Ontario, Wood, Leggat & Co., and their successors, Wood, Vallance & Co.

Mr. Dean has never dissipated and has preserved remarkably well his vigor and vitality, and his general appearance and deportment give one the impression of intellectual muscularity and strong powers of endurance. Mr. Dean has only effected this well-nigh perfect preservation of vitality by having laid down certain and rigorous laws of health when young, and observed them invariably throughout his entire career. Being affable and unassuming in his dealings with his fellow-men, he has won a large number of friends, and, as he himself says, it is a source of pleasure to him in his later days to meet his friends, old and new. In confirmation of the fact that his patrons place great confidence in him, many of his older customers allow him to go behind the counter in their stores and allow him to look over their stock and write out an order for what he thinks they need. Such a privilege accorded to a traveler is enviable to the highest degree. We

W. H. DEAN

Of Wood, Vallance & Co., Hamilton, for 45 Years a Hardware Traveller.

are sure that we express the sentiments of all who have had dealings with Mr. Dean that we wish him many more happy and useful years. His very name is capable of quite an appropriate application. He is veritably the "Dean" of the hardware trade in Ontario.

Hardware Retailing in the West

The Hardware Business Stands by Itself and is not a Part of the General Store as Generally Supposed.

It is a common delusion in the east that trade in Western Canada is almost entirely confined to the general store. Whatever may be true of other branches of trade this is not the case with the hardware business, which is conducted almost entirely in special hardware stores. Hardware retailing is a big business in the west, and it attracts to its ranks a class of men who are second in ability to no other body of retailers in any part of the Dominion. Even the smallest and newest hamlet on the newest branch line of railway is pretty sure to have its straight line hardware store established by some enterprising merchant who sees in the new village great possibilities in his own particular line of trade. He is usually a practical hardwareman who has learned the business as a clerk either in eastern Canada or in a store in the older settled portions of Manitoba. In most cases the hardware dealer in the west in a business man in the best sense of the word, and that means much for the successful conduct of his business.

A Specialized Business.

The hardware business is thus specialized in the west and attracts a fine class of business men for the reason that it is perhaps the biggest retail business in the west. In a new country where the incoming settler has everything to build he is of necessity a heavy buyer of hardware. Builders' hardware finds a ready market in the west and the hardware store in the smallest of the new towns finds a profitable trade in this one branch alone.

Settlers Buy Liberally.

Western hardware dealers have the reputation of being liberal buyers. Life in the west gives men big ideas and western business men are apt to buy accordingly. Their business horizon is as wide as the horizon on the prairies and they are accustomed to plan great things. They not only plan, they execute. The western hardware merchant may not have so many customers as his brother hardwareman in the east but their purchasing capacity is much greater. They want six times as much hardware as they would have wanted had they remained in the east. The western customer is a newcomer who has brought little with him from his former home and he has practically everything to buy. He settles on his quarter or half section and it has to be buildings, fences, and improvements of any kind. His fencing he is apt to postpone until a later day, but buildings he must have and he is therefore a heavy buyer of builders' hardware; he has brought very little with him in the way of household supplies, and therefore he must buy his supplies of household and general hardware. The newcomer in the west has practically everything to buy, while the customer in the east is pretty well supplied. It is the old story of the difference between business conditions in a new country and in an old.

Must Carry Large Stocks.

The western hardware dealer buys heavily, partly because he has to and partly because he has learned the habit. He is a long distance from his source of supplies and, particularly in the winter months when freights are apt to be uncertain, it is necessary to carry large stocks. Under the best conditions the wholesale centres of Winnipeg, Montreal and Toronto are far away and it takes time to get goods. Orders are accordingly placed farther ahead than is the case in eastern Canada, and they are placed for larger quantities. For this reason, and for the reason that the western dealer finds it absolutely necessary to give long credits--or thinks that it is absolutely necessary to do so, which is the same thing--larger capital is required to conduct a hardware business in Alberta, Saskatchewan or Manitoba than is required in Ontario, Quebec or the Maritime Provinces. Probably it would be quite within the mark to say that at least 50 per cent. more capital is required to finance a hardware store in a Saskatchewan town with an annual turnover of $50,000 per year than is required for a business of the same annual turnover in the east. But if more capital is required, it is also true that the rewards are greater for the amount of capital invested. The western dealer gets bigger profits than his brother in the east.

Not in the Cent Belt.

Because he buys and sells in larger amounts and conducts a growing business in a rapidly growing country it is only natural that the outlook of the western hardware dealer should be widened and his vision enlarged. He is a big man among retail business men, a man of big ideas, a man of buoyant optimism and withal a man of wide business experience and keen business acumen. He is not usually a man to haggle about prices; he is prosperous and liberal and he buys without wasting time to quarrel over a few cents. Until recently the five-cent piece was the coin of least value in circulation in Winnipeg. The advent of a big department store with its 38-cent and 98-cent articles has changed all this and people in the towns farther west now refer with gentle and pitying contempt to the Manitoba capital as a town within the "cent belt" of the effete east. Coppers are dispised in the west and the liberal disposition of the average westerner makes it easy to do business with him. Not that he is in slang parlance an "easy mark." Far from it. Like the man from Missouri, he must always be "shown" that your goods are right, that your proposition is a good one.

No business man in any part of Canada will display a keener insight than will the westerner when he inquires into the merits of your goods or your business proposition. But if you convince him and he wants your goods he will waste little time haggling over a few cents in the price. He makes a good profit himself on all that he sells and he expects you to do the same. He is not in business for his health, and he takes it for granted that you are in business yourself to make money. He expects nothing else. This makes it comparatively easy for a salesman with a good line of samples and representing a reputable well-established house to sell more in the west in a week than he could sell in the east in a month.

SALESMEN'S OPINIONS VALUED.

The commercial traveler's opinion is valued highly by all with whom he comes in contact, for the reason that he has unusual opportunities to acquire information, backed by keen appreciation of current events which enables him to formulate ideas that attract attention, always insuring a respectful hearing.

THE RAILROAD SANDWICH.

The other day an employer asked his traveling man if he always paid fifty cents for his meals on the road. "No," said the traveling man, "we get some for twenty-five cents, but when we are compelled to eat those meals we earn a quarter and are entitled to the extra quarter." And that ended the talk on cheaper meals.

THE MAKING OF TURPENTINE

The work in a turpentine orchard is started in the earlier part of the winter with the cutting of the boxes. Until some years ago no trees were boxed of a diameter less than 14 inches; of late, however, saplings under 10 inches in diameter are boxed. Trees of full growth, according to their circumference, receive from two to four boxes, so that the 10,00 boxes are distributed among 4,00 to 5,00 trees on an area of 200 acres.

The boxes are cut from 8 to 12 inches above the base of the tree, 7 inches deep, and slanting from the outside to the interior, with an anle of about 35 degrees. In the adult trees they are 14 inches in greatest diameter and 4 inches in greatest width, of a capacity of about three pints. The cut above this reservoir forms a gash of the same depth and about 7 inches of greatest height. In the mantime the ground is laid bare around the tree for a distance of 2½ feet to 3 feet, and all combustible material loose on the ground is raked in heaps to be burned, in order to protect the tree against danger of catching fire during the conflagrations which are frequently started in the pine forests by design or carelessness. The employment of fire for the protection of the turpentine orchards against the same destructive agency necessarily involves the total destruction of the smaller tree growth, and if left to spread without control beyond the proper limit often carries ruin to the adjoining forests.

During the first days of spring the turpentine begins to flow, and chipping is begun, as the work of scarification is termed, by which the surface of the tree above the box is laid bare beyond the youngest layers of the wood to a depth of about an inch from the outside of the bark. The removal of the bark and of the outermost layers of the wood—the "clipping" or "hacking"—is done with a peculiar tool, the "hacker," a strong knife with a curved edge, fastened to the end of a handle bearing on its lower end an iron ball about 4 lbs. in weight, to give increased force to the stroke inflicted on the tree, and thus to lighten the labor of chipping. As soon as the scarified surface ceases to discharge turpentine freely, fresh incisions are made with the hacker.

The clippings is repeated every week from March to October or November, extending generally over 32 weeks, and the height of the chip is increased about 1½ to 2 inches every month. The resin accumulated in the boxes is dipped into a pail by a flat trowel-shaped dipper, and then transferred to a barrel for transportation to the still. In the first season from six to eight dippings are made. The 10,000 boxes yield at each dip 40 barrels of "dip" or "soft gum," as it is reckoned in Alabama to be, of 240 lbs. net weight. The flow is most copious during the height of the summer (July and August), diminishes with the advent of cooler season, and ceases in October or November. As soon as the exudation of the resin is

How Turpentine Sap Is Secured.

arrested and the resin begins to harden under the influence of a lower temperature it is carefully scraped from the scarified surface and the boxes with a narrow, keen-edged knive attached to a long wooden handle.

The Distilling Process.

In the first season the average yield of dip amounts to 280 barrels, and of the hard gum or scrape to 70 barrels. The first yields 6½ gallons of spirits of turpentine to the barrel of 240 lbs. net, and the latter 31 lbs to the barrel, resulting in the production of 2,100 gallons of spirits of turpentine and 260 lbs. of resin of higher and highest grades. The dipings of the first season are called "virgin dip," from which the finest quality of resin is obtained, graded in the market as water white (WW) and window gloss (WG). In the second year from five to six dippings are made, the crop averaging 225 barrels of soft turpentine and 120 barrels of scrape, making altogether about 1,900 gallons of spirits of turpentine.

The resin, of which about 200 barrels are produced, is of a lighter or deeper amber color, and perfectly transparent, of medium quality, graded as I, H and G. In the third and fourth years the number of dippings is reduced to three. With the flow over a more extended surface, the turpentine thickens under prolonged exposure to the air and loses some of its volatile oil, partly by evaporation and partly by oxidation. In the third season the dip amounts to about 120 barrels, with the scrape to about 100 barrels, yielding about 1,100 gallons of spirits of turpentine and 100 barrels of resin of a more or less dark color, less transparent, and graded F, E and D.

Abandoned After Four Years.

In the fourth and last year dippings of a somewhat smaller quantity of soft turpentine than that obtained the season before and 100 barrels of scrape are obtained, with a yield scarcely realizing 300 gallons of spirits of turpentine and 100 barrels of resin of the lowest quality, classed as C, B and A. After the fourth year the turpentine orchard is generally abandoned. Owing to the reduction in quantity of the raw product, it is not considered profitable by the larger operators to work the trees for a longer time. It is only in North Carolina that the smaller landowners work their trees for ten or more successive seasons, protect the tree against fire, and, after giving them a rest for a series of years, apply new boxes on spaces left between the old chips—"re-boxing."

The process of distillation requires experience and care in order to prevent loss in spirits of turpentine, to obtain the largest quantities of resin of higher grades, and to guard against over-heating. After heating the still somewhat beyond the melting point of crude turpentine, a minute stream of tepid water from the top of the condensing tube is conducted into the still and allowed to run until the end of the process; this end is indicated by a peculiar noise of the boiling contents of the still and

the amount of quantity of volatile oil in the distillate. On reaching this point the heating of the still and the influx of water have to be carefully regulated. After all the spirits of turpentine has distilled over the fire it is removed, and the contents of the still are drawn off by a tap at the bottom.

This residuum, the molten rasin, is first allowed to run through a wire cloth, and is immediately strained again through coarse cotton cloth, or cotton batting made for the purpose, into a large trough, from which it is ladled into barrels. The legal standard weight of the commercial package is 280 lbs. The finest grades of resin are largely used in the manufacture of paper, for sizing of soaps, and of fine varnishes; the medium qualities are mostly consumed in the manufacture of yellow soap, sealing wax, in pharmacy, and for other minor purposes! and the lower and lowest quantities are used for pitch in ship and boat building, brewers' pitch, and for the distillation of resin oil, which largely enters into the manufacture of lubricating agents.

INTRODUCING PAINTS IN A HARDWARE STORE

H. A. Johnson tells in The Iron Age how he introduced a line of paints in a country store which had not carried them in stock.

Upon being advised by my clients that they contemplated putting in a line of paint I was requested to suggest plans and methods covering its introduction in all ways. In my preliminary survey of the entire situation I took into consideration the time of the year that was best suited to the subject of paint, and I argued that while summer was the ideal time to use paint, it was not necesarily the best time to introduce the subject. Human nature makes its plans and when ready to act follows beaten paths. Therefore the public mind needed to be disillusioned somewhat. Never before had a hardware store in that town sold paint. Heretofore the paint trade had been in the hands of druggists, decorating establishments and regular paint stores.

Thus I reasoned I would need to inaugurate a campaign of education to rid people of old notions as to who sold paint. In fact, not so much to rid them of old notions as to burn into their minds the fact that paint could be bought in another place. I also reasoned that when the fall sets in people have to stay indoors, and it is then that floors and trim are painted, curtains put up and homes made tidy generally. (That applies more particularly to city homes.) Last, but not least, I felt sure the country people—who once they use it, use lots of paint—did their painting after crops were sold. Their money once in hand they would get ready for winter and their ideas would be centred on getting things sung and dry, and the fall, then, would be the ideal time to hammer a paint proposition at them.

If the truth be told, I cared more about the country trade than I did about about the city trade, because people in the country not only use more paint, but more important fact, there are fewer "renters." Preserving property means a vital something to the man who owns it. To the renter it means nothing—as a rule.

All told, my reflections resulted in the conviction that the best time to bring out the new line was in the fall. That determined, the plans for advertising were laid as are hereinafter set forth.

Using the County Fair.

Even before the paint was in my client's store I learned that the county fair was but a fortnight off, so I immediately urged that space in the exhibition hall be secured. This was done, and a telegram sent off to the paint people telling them a big exhibit was planned for the fair and requesting them to send their exhibition demonstrator to take charge of it. He came forthwith, took full charge of the matter, trimmed the space attractively, so shelving as to display the cans to good advantage, each size of can by itself, and arranging it all in a way that gave the impression of there being far more paint in the space than was actually the case. Among other things, he arranged to have on hand a quantity of boards of various sizes for purposes of practical demonstration.

The week preceding the opening of the fair I saw to it that all the city county newspapers had an announcement to the following effect in a 5-in. single column space, and during the progress of the fair this was printed on cards and distributed from hand to hand on the grounds:

"You are cardially invited to visit our booth at the county fair. We will serve liquid refreshments free. of charge."

I was born and raised in the country, so I knew county fair traits well enough to know all who attended them are looking for souvenirs; in fact, something for nothing. I knew if we advertised something free we would not lack audiences. And my deductions proved true. Naturally, many who came to our booth expected something to eat or drink. Alas! Paint was good for neither purpose. I had promised "liquid refreshments." Was not paint a refreshment? We heard of no annoyance over the town. The majority of people saw the demonstration and asked for color cards. Small sample tins were given out free. Actual orders were booked more than enough to cover the cost of the exhibition and we took the names and addresses of all the onlookers that we could get.

After the fair was over the following advertisement was inserted in local and county papers:

The Liquid Refreshment

that we "served" at the fair occasioned no end of comment. Many thought they were going to get something to eat and we were sorry to disappoint them; many others saw the point and came to know what good refreshment our new line of paint is. Stop to think—paint is refreshment—now, isn't it? This is about the last chance you can have to get your house, fence or property in proper condition to withstand the elemental rigors of winter. When water gets into wood it means rot and rot means that your property decreases in efficiency, strength, looks and value. So paint seems to be just plain horse sense. For property indoors, such as floors, trim, etc., we have——, an elastic, transparent, durable varnish that even heels cannot mar. That sounds like an extravagant claim, but let us prove it and so "show you."

The names and addresses taken at the fair were next carefully transferred to a card and the following leter was sent to every name in the file:

A Personal Letter.

Mr. John Hanson,
Pleasant Plains, Ind.

Dear Sir—We were sorry you could not spare more time while you were in town for the fair. We should like to have shown you even more of the good points of ——— paints. But you were good enough to give us your name, so we will explain it more fully by letter.

There was a time, Mr. Hanson, when paint was just white lead and coloring matter, with just enough oil to make it run freely and smoothly. But times have changed, and to-day the paint manufacturer has to go into the chemistry of it, as he has also to go into the chemistry of wood and the changes that the weather brings about it and on it. The good doctor does more than merely bandage a wound. He cleans and antisepticizes it first, before he even thinks of covering it with a bandage. Just so the modern paint maker. The latter must be as thorough.

——— Paint penetrates the pores of the wood. More than simply closing the vent, it solidly fills the pores and worm holes. When ——— paint sets the surface of the painted wood is genuinely poreless. This means that snow and and rain can no more injure the wood after it is coated with ——— paint than they can harm glass.

We have gone into the subject thus because we know you are alive to the difference between good and poor paint, be-

cause we know you have buildings on your place that need painting, because we hope to sell you a bill of paint.

That's why we are inclosing a color-card and price list, showing all discounts. Note the quantity discount. If you can get your neighbors to buy their paint when and where you buy yours, no matter what colors they want, you can all get an extra discount. Should you need putty or glass we will buy it for you and ship it with the paint. Brushes we keep in stock. Hardware, too.

Of course we will ship by freight to ——, which will be a much shorter drive for you than were you to come clear into the city here. Oh, yes, we will pay the freight charges. Your order only can mean a small profit to us. But it'll mean to you the trebling of life and value of every square inch of wood surface that you use it on. Do we get it?

Very truly yours, etc.

One other follow-up goes out a week after the above, containing a cleverly executed carbon copy of the first letter, along with an urgent bit of salesmanship. The letters are doing good work.

Street Car Cards.

Realizing that "he who runs may read," I also planned that he who rode might read as well, the topic being ————paints. So in the street cars of the city were cards of which the following are typical, the display lines being in red, and the text in black ink:

PAINT—A SERMONETTE

Paint is physical insurance. It prevents decay. Property that isn't painted soon deteriorates. The wood decays and its value shrinks. But the wise man uses paint, keeps the wood-pores closed and his property increases in value.

ARE YOU OF THE WISE MAN'S CLASS?

If not, you can join it by getting your paint of

—— —— —— ——

JOHNNIE'S "ESSAY" ON PAINT

"Paint is used by men and women. Some use it on the house, others put paint on their faces. My Ma says the women next door paints Her nose is nice and red. (Not Ma's nose). I painted something the other day. He was a dog. He ain't a dog no more, He's dead."

WE DON'T KEEP PAINT—WE SELL IT

The "essay" attracted a good deal of attention, and therefore developed comment, which proves that in street car advertising an ounce of pleasing is worth a good many pounds of instruction. It likewise sold paint and since that is what it was designed to do, it may truthfully be said to have accomplished is purpose.

Keeping it Up.

We have been keeping it up all fall long, striking while the iron was hot, and going after city folks who might have interior woodwork that needed retouching, or outbuildings, fences, etc., that paint might improve. In the meantime we have had a man working on the owners of property, particularly new houses nearing completion. The owner might employ whom he chose to apply the paint. All we wanted was to sell it. We will work that selling plan next year, too, when there is more building going on. It looks good to us.

The opening stock of paint cost about $350, on 90 days' time. It was in stock hardly a month before a good big hole had been made in it. One color, in popular size cans, was gone. And I think that by the time the bill became payable my clients were very willing to meet it. A bill that is willingly met is one that has pleasing thoughts connected with it. And pleasing thoughts nowadays are profits.

THE DESTRUCTIVE POTATO BUG

By W. H. Evans, Canada Paint Company, Montreal.

It is said that a farmer's son at the annual school examination was requested to recite Tennyson's "Queen of the May." Being more practical than poetical and having in mind the "yeoman's burden" that was in store for him, be broke forth as follows:

"You must wake and call me early,
Call me early, mother dear,
For the 'early roses' are all planted
And the potato bug is near."

Eternal vigilance is the only price of safety. Unless repressive measures are taken early by the husbandman his vines will be eaten, and in less than twenty-four hours the field will look as if a Sirocco or hot blast had struck it and blighted the whole potato patch.

The Colorado beetle, or, to give him the Latin term, doryphora decemlineata commonly known as the potato bug, is an undesirable immigrant from "Uncle Sam" who dos not respect the boundary line or the Alien Act, nor does he pay any head tax. Like the lily of the valley, it "toils not neither does it spin"; but unlike the lily, it is not famous for its beauty, and, being a vagrant, he wears ten stripes after the manner of the penetentiary bird. Moreover, the bug hath a voracious appetite, which, as Shakespeare says, "Age does not diminish or custom stale."

Herein is the potato bug's weakness; it devours the tender leaf of the succulent potato, and at the same time, encompasses its own destruction, provided the vine has been sprinkled with Paris green.

Potato Bug or Colorado Beetle.

A number of substitutes have been tried, but, so far, no insecticide has been found so efficacious as Paris green, which is a combination of sulphate of copper, arsenic, soda ash and acetic acid. It is sold in a dry powder, and is applied

WM. H. EVANS.

by first mixing the Paris green into a paste with water and then placing the green paste into a bucket or pail, and stirring well. It can then be sprayed on the vine or poured by means of a watering can through the perforated spout or nozzle.

In Canada alone about 350 tons of Paris green are sold annually, at an average price of, say, 25 cents per lb. This comes to $175,000. The output in the United States must also be enormous, as Paris green is also largely used to control the destructive cotton boll weevil.

Unchecked, the Colorado beetle commit fearful ravages amongst the potatoes. It was first discovered in 1824 by Thomas Say. It is an oval creature, as may be seen from the cut. The larvae and adults live on the potato plant, and before Paris green was dis-

covered to be a remedy for their depredations, they would sometimes completely destroy the entire potato crop in some sections.

That pass the winter under ground, and early during their hiding places in the beginning of May. The female lays many hundreds of eggs in groups of twelve to twenty on the under side of the potato leaves. The larvae which emerge in about a week are reddish and afterwards orange. They grow quickly, and produce a second and third generation in the same summer.

The home of the Colorado beetle is in the Western States. From Nebraska and Iowa it traveled eastward, favoring Canada with its patronage, until in 1873 it reached, as did Sherman's march to the sea, the eastern shores of America, and like John Brown's soul, the beetle "keeps marching on!"

PROFITS IN FURNACE CONTRACTS

Probably 90 per cent. of the complaints about furnace work are caused by:

1. The fact that competition, architects' specifications or manufacturers' inflated claims of capacity of the furnace caused the dealer to put in a furnace that was too small.

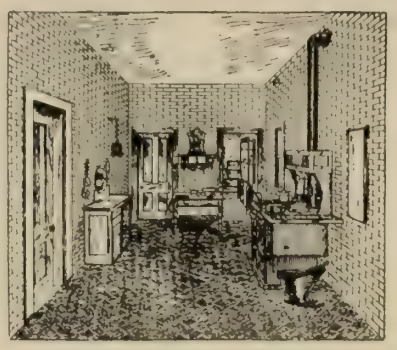
2. Improper proportioning of the cold air supply or hot air pipes or poor workmanship on the job, or,

3. Careless handling of the furnace by the users.

For the first two dealer is to a certain extent responsible, if the work was not done under specifications of an architect. If too small a furnace was specified by the architect, it relieves the dealer from blame, provided he calls the architect's or owner's attention to the fact before starting the work.

If the contract is done under an architect's specifications and under a general contract for the completion of the building, the notice should be sent to the general contractor, but if the contract is let by the owner the notice should be sent to the architect, because he drew the specifications.

The second complaint—improper proportioning of the system or poor workmanship—is entirely within the jurisdiction of the dealer. For improper workmanship there is no excuse, and if the dealer hires incompetent help because it is cheap, or fails to give it proper supervision, he deserves all the trouble that results.



The foregoing separates the various complaints into their proper places, and shows which should be charged to the furnace job and which should not.

The cause of the greatest complaint and expense is the incapacity of the plant to heat the house properly. Taking all points into consideration, it would seem to be an easy matter for a contractor to note what relation the year's expenses, figuring and superintending the furnace work and making good the defects for which he is responsible, bears to the business done. This gives the proper percentage to add to the cost of labor and material when figuring new work, and leaves nothing more to add, except the allowance for general expense, to give the actual cost of prospective contracts.

A percentage should be added for profit, not a lump sum, as $100 added to a job costing $200 will result in losing the contract, while the same amount added to one costing $1,000 is unreasonably close. If 25 per cent. were added to the small jobs, or 20 or 15 per cent. to the large ones, it would seem more reasonable and would probably result in securing more business and a better average margin of profit. If the conditions suggested are observed this 15, 20, or 25 per cent. is a real profit and not a fictitious profit out of which must come an allowance for general expense, making good defects and just complaints. The allowance is small enough and in some places can probably be increased. The difficulty in a number of places is that the cut rate dealer makes it impossible to secure a reasonable amount of business at a living price.

Upstairs Stove Salesroom, Cupar Hardware Company, Cupar, Sask.

Model Kitchen Display Room.

A Model Pantry.

FURNITURE A GOOD LINE.

The Cupar Hardware Co., Cupar, Sask., whose stove salesroom is shown in the accompanying illustration, are sufficiently discerning and enterprising to realize the great advantage to be gained by combining the hardware and furniture trade. This company have a double store on the ground floor and upstairs have two showrooms, one for stoves and

ranges, and the other for furniture. These two lines can be advantageously combined, keeping in mind the fact that newcomers in a town wishing to furnish a home would secure, if they could, their entire furnishings from one company, kitchen range, pantry utensils, dining-room, and bedroom furniture. Morover, home builders, when wishing to buy stoves or furniture, etc., do not wish to look over the stock in the presence of a crowd of customers, and this opportunity afforded by upstairs showrooms to look over the stock privately is a great inducement to them to trade in that store.

The hardware business and the furniture business are becoming combined more and more because they are lines intended for the same purpose—furnishing the home.

A HOUSE HEATING PROBLEM.

An interesting problem which offers an opportunity for some constructive thought is presented in the design of the house shown on this page.

The bedroom in the upper story, marked No. 1, faces the north, and, owing to the stairway being almost enclosed, the cold air does not travel down to the cold air register at the foot of the stairs. In consequence, when the temperature on the ground floor is 74 degrees, it only averages 59 upstairs in No. 1 chamber.

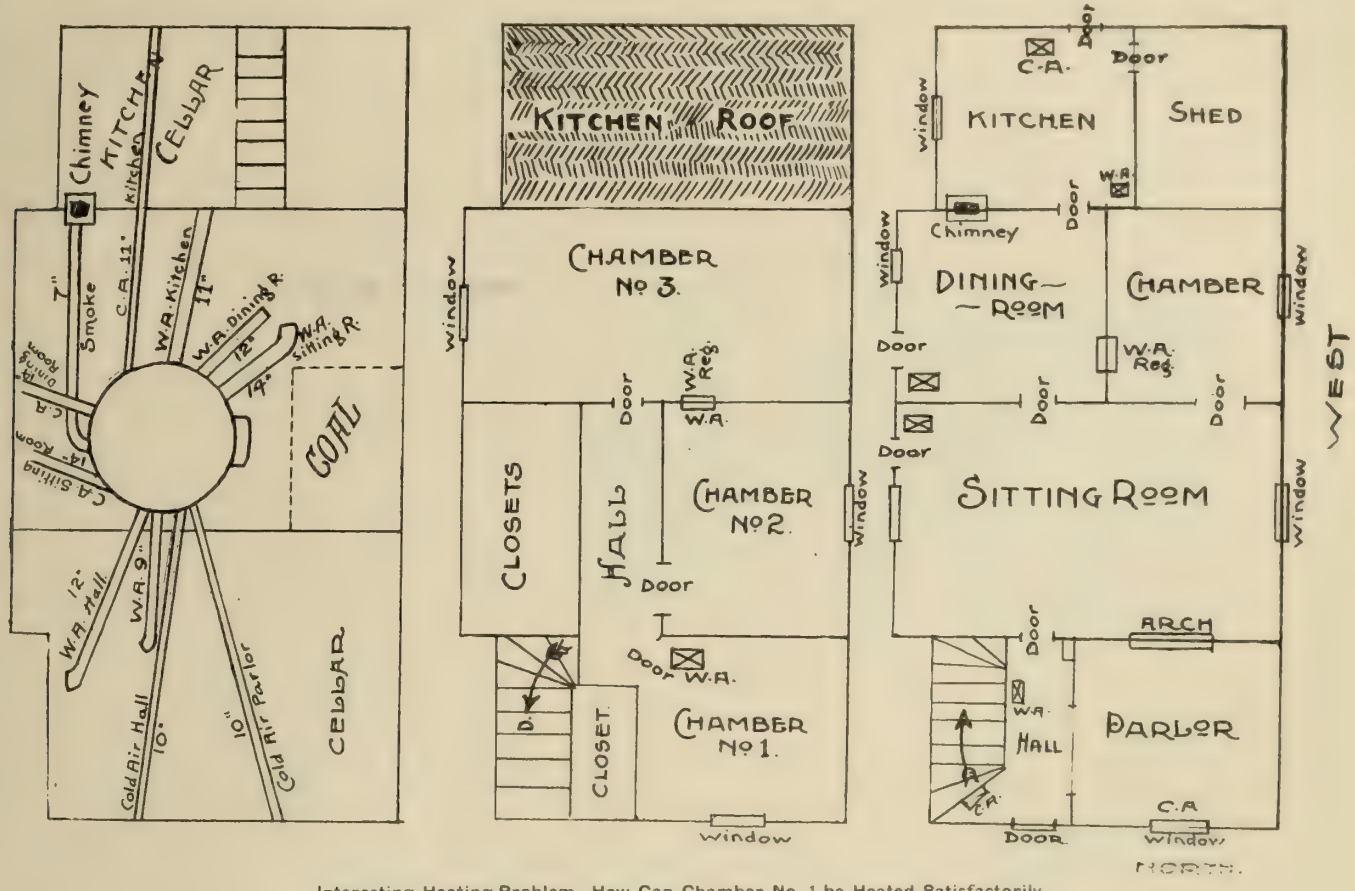
The firm which installed the furnace has found difficulty in overcoming this trouble and we present the problem to our readers. Stove dealers and travelers for furnace manufacturers are requested to write us, explaining their solution of the problem.

"MODEL" KITCHENS AND PANTRIES.

Although the business done and the store capacity in a large city departmental store is very much larger than that done in a hardware store in a town there are, however, ideas carried out in the departmental stores which could be carried out in a smaller store very profitably, although, of course, on a smaller scale.

Provided the room over a hardware store is not occupied, it could be very profitably fitted up by the hardware merchant and rooms arranged to represent a kitchen or pantry making it as much like these as possible, completely furnished, if it be a pantry, with shelves and drawers, with all the various kinds of tinware and enamelware arranged on the shelves; if a kitchen furnished with a range, gas stove, sink, etc. Advertise these furnished rooms as special features of the store and arrange for certain days on which ladies may visit and inspect these pantries and kitchens, and the plan will surely prove interesting and remunerative.

PRICE CARD MAKES A SALE.



Not long ago I had on display in my window a steel range with high closet and reservoir, writes Geo. M. Evanson, a western hardwareman. Leaning against the range was a white piece of cardboard upon which I had painted the price $33.50. There was a net profit of $4 in the price for me.

The second day the stove was in the window a man and his wife were passing by the store. They noticed the stove and the price, stopped to carefully examine it, then came inside and the man wanted to know if we warranted that range—"Yes," I replied, "as much as any one can warrant a range for that price."

During a short conversation I discovered that these people were going to buy buy a range and that they had decided to send to a mail order house for it and that seeing the stove in the window and the price being about the same as the one was to cost that they had planned to send for, they thought they would step in and inquire about it.

Beats Out Catalogue House.

I discovered to what catalogue house they were going to send, produced the

Interesting Heating Problem—How Can Chamber No. 1 be Heated Satisfactorily.

catalogue, asked the man to show me the stove, and then I had my inning. I picked that catalogue stove so completely to pieces and laid bare to the eyes of these two people all its hidden imperfections, showed them the size of the the oven of the catalogue stove and the size of the oven of my stove, let the coal into the fire box end of my range and then showed him the catalogue stove weighing but 325 pounds. In short I sold that man a range—then and there; why? Will anyone deny that if I had not had a price card on that range I would not have sold it?

Every time I head off an order to a catalogue house I give the item to the local papers and see that all of the publicity posible is given the item. Then the next time I see the farmer I ask him if he will sign a statement of the facts and see to it that every farmer in his neighborhood gets a large postal card with this statement printed thereon.

STOVE SALESMANSHIP.

Good stove salesmanship is rare but invaluable to a large firm. A salesman makes no impression on his customers by simply stating, "this range sells for $45," and then waiting to see this effect on the customer's mind with nothing more to say. To be a successful salesman he must have visited the foundry and carefully inspected every step in the manufacture of the stove, know the materials out of which it is made and be able to point out any special and valuable features.

SPORTING GOODS A BUSINESS BRINGER

By Edward D. Ibbotson.

You may know the story of the man selling soda water fountains. He worked hard to sell one to an old druggist; and could only get he response that the druggist had never had any call for soda water. The up-to-date druggist on the opposite corner put in a soda water fountain and in a few weeks, and during the hot summer days, the profits from it paid the rent of the store. The old, fossilized druggist would not put in the soda water fountain, because he had never had any call for soda water. It's so with many hardware merchants—they do not put in stock, good paying lines, which belong to their business, simply because people do not come and ask for the goods as they do for nails or hammers. The business, however, is there, and it is only ready for the hardwareman to reach out and take up if he knew it.

The story of the druggist and the soda water fountain applies well to many hardware stores with the line of sporting goods—baseball supplies, fishing, tackle, guns and ammunition are just as much hardware as they are anything and belong to the hardware stock and in the hardware store.

Hardware Store a Men's Store.

The best proof that the average hardware dealer has found sporting goods profitable is in the fact that it's very rare that the line is droped, when once taken up, and it's always found to be a positive business bringer. Brings customers into the store—men customers, the buyers of hardware; men buy sporting goods and the hardware store is a man's store. This is one reason why department stores have been and usually are unsuccessful in selling fishing tackle or other sporting goods; because the department store is not a man's store, and women seldom buy their husband's fishing tackle or his gun goods, although they may buy his shirts or even his neckwear. But when it comes to picking out his fishing outfit or camping goods he draws the line; if he's a sportsman he finds as much pleasure in buying the goods as in using them. So it comes about that men are the buyers of sporting goods—and, as before stated, the hardware store being the man's store, is by far the best store to handle the line.

And so it is, that the hardware dealer will find the handling of sporting goods will bring more men and therefore more prospective hardware customers into his store. The more customers a dealer has coming to his store—no matter for what they may come—the more trade that dealer is going to have in hardware. It may be only a fish line or a box of cartridges, the customer buys to-day. He may formerly have been buying what little pick-up hardware he needed at another store—but if he is well waited on gets a good fish line or box of cartridges at the right price, sees a good display of hardware—a well arranged and well-kept store—you can rest assured that it's only a question of time that man will become a regular customer of the store. So it's true that the selling of sporting goods, more than any other side line, will prove to be a business bringer for the hardware merchant.

Goods Must Be Displayed.

I went into a store the other day, and, seeing but a very small display of fishing tackle, thought my customer must have sold out well. In reply to my question how the trade had been, he said: "It's been very poor this year; I'm only selling the very cheapest grade of goods." "But where is your stock?" I asked. We were shown the stock, away back in the rear of the store, in a dark corner, tucked back on the shelf. That dealer was complaining about poor trade—said that there had been nothing but cheap goods sold in his town—but right across the street is another store. That merchant said his trade had been good; at first flush it seemed as though he had a big trade—two large cases filled with fishing tackle. "A good display you still have there," I remarked. "Yes, but do you know, right there in those two cases is all the tackle I've got in stock; and I've just had to string it out, and even put those trunk and vest pocket rods, and some cutlery in one of those cases to make a show during the past two weeks. We have had the best season yet, and sold more high-priced stuff and all our fancy tackle." And the order he made up proved what he said was true.

AUTOMOBILE SUPPLIES.

During the past two or three years the automobile industry has developed very extensively. In large centres of population exclusive automobile supply stores have been established to take care of the growing demand. To those closely in touch with the automobile industry it became apparent that in the smaller towns where the exclusive automobile dealer could not command sufficien trade, automobile owners were unable to secure such supplies without inconvenience of ordering same from the nearest supply house, frequently fifty to a hundred miles distant. As hardware dealers are expected to carry in stock almost any article made of metal, they have been approached by automobile owners for the supplies most frequently required, only to be turned away for want of having same in stock. A number of the large hardware jobbers throughout the country have gradually taken up the handling of automobile supplies, and as a consequence, a fair percentage of the dealers have been convinced that they may as well share in the profitable trade that can be secured by catering to the ever-increasing number of automobile enthusiasts.

It may also be noticed that several of the manufacturers of automobile appliences have recently taken steps to directly interest the hardware dealers and therfore it may be expected that in localities where automobile supplies have heretofore been bought to fill specific

orders only, will in the near future be found as part of the regular stock of the wide-awake hardware dealers who watch the development of the modern period of motoring. The Hardware Dealers' Magazine suggests that hardware dealers encourage their jobbers to catalogue the most useful and best-advertised automobile appliances so that when it becomes necessary to order same, no time will be lost in lengthy correspondence for the articles wanted.

HOW TO ADVERTISE SPORTING GOODS

By T. J. Bowler.

Baseball goods, fishing tackle, lawn tennis goods, footballs, etc., as well as guns and ammunition, all belong legitimately to the hardware trade, and any hardware dealer who neglects this end of the business is doing himself an injustice. If he does not handle this class of goods, his competitor either does or soon will, or perhaps some little fellow will come along with a $200 stock of five and ten cent goods and the first thing he knows he puts in a little line of sporting goods and before long has a nice trade built up. And why? because the the hardware dealer neglected this profitable line and another wide-awake dealer who recently came to town, or moved into the next block, saw where he could increase his line and at the same time make a good profit. As the amount of profit, this depends a good deal on the class of goods you handle. However, the profit should run from 33 1-3 per cent. to 50 per cent.

How to Create Demand.

You could soon create a demand for baseball goods by having your son, your tinner or your clerk join one of the local teams. Get the boys to buy their uniforms from you, even if you are obliged to sell them for absolute cost. They then will buy the rest of the outfit from you. Put up a backstop on the ball grounds with a nice, attractive sign on it setting forth the fact that Smith & Jones Hardware Company are headquarers for all kinds of sporting goods.

You can also create a demand for tennis goods, such as rackets, balls, nets, etc., by having your daughter or your wife organize a tennis club.

Make a nice display of sporting goods in one of your windows early in the season. Get the people of your town talking about what a good time they will have this summr playing lawn tennis, baseball, croquet, fishing, etc. They will know that Smith, the hardwareman, has a nice line and they won't have to send out of town to some catalogue house to get a tennis racket or baseball bat. This is the great difficulty in small towns where dealers do not carry a line large enough to meet these occasional demands and the people get into the habit of sending to the mail order houses.

The dealer might also put an "ad." in the local newspaper. Your jobber will furnish you with a cut of a baseball, catcher's mit, fishing rod or tennis racket. The reputation gained through advertising these goods, though you sell but a few of them, is well worth the price. The people in your neighborhood will soon begin to say, "Well, this man Smith, the hardware dealer, is certainly up-to-date," and a reputation for being up-to-date will hurt no man in business.

You have less competition from catalogue houses on baseball, tennis goods and fishing tackle than any other line that I know of, for the reason that most ball players and tennis players want to see the article they going to buy.

It requires but a very little capital to put in a nice, clean stock of well selected sporting goods, outside of guns and ammunition, and I would advise the exclusive use of one window for sporting goods for the months of May, June and July. By this time your customers will all know that you are the headquarters for sporting goods and that Jones is a baseball and tennis enthusiast as well as a good fisherman.

About 75 per cent. of the hardware dealers in the small country towns and about 99 per cent. of the dealers in the large cities are neglecting this branch of the business and letting it drift into other channels, when it rightfully belongs to the hardware trade just as much as stoves or other such hardware.

If this were not a profitable and desirable line, why would the wholesale dealers be carrying such large stocks?

Tobogganing in High Park, Toronto.

Any line that is profitable to the jobber should be likewise profitable to the retailer.

MONEY IN FISHING TACKLE.

All merchants, no matter what line of business they are engaged in, know that it is not so much the amount of trade that they handle as the profit on their goods that will make them rich. As a corollary to this it may be stated that the more profitable a line of merchandise, the more difficult it is to handle successfully. Goods in which the competition is most keen must be sold on a close margin and consequently they bring the smallest margin of profit. Some goods must be sold close. Much of the stock in any store must be sold with little profit. For example, it would be hardly possible to conduct a hardware store without carrying a stock of nails, and it also would be impossible to sell these goods to large buyers—to contractors or to builders—anywhere in the east, at a profit large enough to pay the running expenses of the store.

This being the case, the wise merchant is the one who is constantly on the lookout for any line which pays a good profit, and at the same time will find a ready sale. The sporting goods and hardware dealers must also realize that each year their fields are being encroched upon by dealers in other lines—the modern house, the general store, the department store, and in some cases the competition is making itself felt from the jobbers in nearby towns. The dealer therefore, must make an effort not only to hold his present trade, but to take advantage of changing conditions.

Profit Making Lines.

"How to enlarge my profits without noticeably increasing my expenses?" This is a question, says the sporting goods dealer, that nearly every thoughtful merchant is asking himself, and this best can be accomplished by gradually

adding profit making lines to his business.

One such line is fishing tackle. In the hardware business no branch pays a better profit than sporting goods, and nothing in sporting goods can be made as profitable as fishing tackle. This branch of the business has great possibilities. The trade is only in its infancy. Each year the ranks of the old enthusiasts are being added to by a large number of boys and young men, who are for the first time taking up the sport of fishing. Unlike many other outdoor sports or games, fishing is not a fad. A man who has once been a fisherman always remains so.

Another reason for an increase of these goods is because good fishing each year is made more possible. The millions of fish that are being planted every year by the government is having its effect now in making it more easy for a sportsman to find a place to use his tackle. A few years ago if a man was run down from over-work or worry, his physician would recommend a sea voyage. To-day he would be told to take a trip in the woods—to spend a few weeks camping, and this is giving men an opportunity to find the rare sport in fishing and is consequently making an increased and large demand for the goods.

Men Are the Buyers.

Men are buyers of fishing tackle and men are customers of the sporting goods and hardware stores—consequently it is these dealers who can best handle this line of goods, and it is the most natural place for the sportsman to look for his tackle.

It is also true that the larger the assortment and the better the display of fishing tackle that is made, the greater the amount that will be sold. It is possible for a boy with a 5-cent line and a pin fish hook to catch fish. Every man realizes this; also he realizes that the best sport can be had not in the number of fish that he gets as much as going after them and preparing for the trip. So it is that the better display that is made the more goods will be sold, as fishing tackle more than almost any other line of merchandise is largely purchased because the fisherman thinks that with it he will have better sport. If it appeals to the eye it will find a sale and it can not appeal to the eye unless it is well displayed.

In putting in the line of fishing tackle it is of great importance to start right—to have the goods that are best adapted to local trade. A dealer being located in a country where most of the fish are trout would be very foolish to put in a stock of heavy bass or salt water tackle. It would not sell and he would soon become discouraged with the trade. It is, therefore, of great importance not only to have a well assorted line, but to have one that is made up of goods that are used in the locality in which the dealer is. Also in putting in a new line of fishing tackle, like my other class of merchandise, it is of great importance to have the goods at the right prices. Therefore the line should be purchased of a manufacturer who would be able to put the dealer in a position to meet any competition and yet the dealer should not over-buy. Fishing tackle being seasonable goods, the stock should be kept fresh. Each year new articles are brought out and, therefore, the stock should be purchased with care.

HOW TO DEVELOP BUSINESS IN METAL ROOFING

By James G. Lorriman, Advertising Manager the Metal Shingle and Siding Co., Preston, Ont.

A catalogue, and a reasonable amount of push and hustle are the stock-in-trade required to boom the metal roofing business. Moreover, it belongs, logically, to the hardware trade, for hardware dealers are not only in closest touch with building activities, but, as they usually employ a staff of competent sheet metal workers, they are in a peculiarly favorable position to handle the various lines of metal building goods.

The hardware merchant who desires to get the most out of this branch of his business, must keep his eyes and ears open all the time. In this growing time with new buildings going up, and old ones being renovated, in all parts of the country, his opportunities for making sales will be frequent. He should keep himself well informed about what is going on in his town and district, and at the first inkling of a new barn, residence, factory or store, he should hunt up the prospective builder, and begin his campaign.

It is certainly advisable for the hardware dealer, from time to time, to make the round of his district, calling on customers and prospective customers, and learning their needs in the hardware line. It is on these trips that he will be able to find out where new buildings are contemplated, and to work in a few introductory remarks on the metal roofing question. Thus, all the time devoted to "talking up" metal roofing, will be a very small item— in fact, simply incidental to the dealer's regular canvas.

The average man takes a long time to decide how he is going to spend his money in building. He is not inclined to expend a large sum for any purpose, without giving the matter most careful consideration. So the dealer can hardly expect to take his man by storm, and sell him the goods right off the reel. He must nurse his prospect until he has secured his interest and then ask for the ever-ready co-operation of the manufacturer.

This latter item is of immense assistance to the dealer. The wide-spreading advertising, for several years past, has familiarized the public with the advantages of metal roofing, and the missionary stage is over. In addition to large trade catalogues, the leading firms issue attractive and convincing booklets, which are freely distributed among prospective builders, and finally their travelers are always available, to help the dealer close sales.

Considering the fact that the hardwaremen need carry no stock, but invest only his personality, in developing the metal roofing trade. It must be admitted that no branch of his business will better repay him.

SEWING MACHINES.

There is no reason why a hardware merchant should not deal in sewing machines. To the housewife he sells stoves, brooms, sweepers, churns, and kitchen utensils. Sewing machines are in just as good demand, and in such a line there is good opporunity for a wide-awake merchant to make something. Why, then, should he not make use of such an oportunity. They are very saleable articles and afford a fruitful channel for profit.

Discrimination, however, should be exercised by the hardware merchant in choosing the kind of sewing machine he intends to handle. An inferior machine will give him endless trouble, but a first-class machine will afford him pleasure and profit to handle.

The retailer has an advantage over the mail order house. He can show the goods and demonstrate their superior qualities and be in a better position to sell the goods.

PUMPS AS A SIDE LINE.

Opportunity exists for the hardware merchant to do a much larger and much more profitable business than is being done at present. There is business in pumps being done but of a very inferior grade, done mostly by dealers who carry a small stock of the cheaper grades which can be sold like a pail or wash tub when anyone calls for them.

There is room for a larger business, one giving more room for profit. That opportunity presents itself to the merchant doing business on a larger scale. It is a line which will amply repay the

efforts made. The greatest difficulty is that hardware merchants are unwilling to push the trade at all; simply care for the trade as it comes to them.

Many manufacturers express regret that the general market has been flooded with so many cheap pumps on which the margin of profit is very small. The reailers can greatly improve this condition if they will. They can co-operate with the manufacturer in handling only first-class goods, enlivening and strengthing the business by coming out from behind the counter and mingling with their customers and personally supervising the installation of the pumps they sell thereby gaining the confidence of their patrons and laying good foundations for future business. The catalogue method of sales would be the easiest and most profitable way of dealing in them.

HANDLING STRAP IRON.

A United States hardware merchant advises that the problem of handling strap and hoop iron has been solved to his satisfaction by running it on reels whenever there is occasion to break bundles. He states that when strung along in the order of their width the various sizes occupy but little space. He also explains that there is no difficulty in making the reels in the store, without giving the job to outside mechanics.

Another dealer says his method of handling hoop and band iron is to separate the bundles on receipt into smaller bundles or lengths of about 25 feet, which are tied up with tarred lath yarn strings, and put into the iron rack, which most dealers in heavy hardware probably have. These small bundles the merchant has found to be most convenient for retailing, as customers will usually take one of them unbroken; otherwise they can be cut with but little trouble.

Two classifications are generally made in referring to this line, a distinction being drawn between the smaller gauges called hoops, and bands, the terms applied to larger sizes. Hoops run from 12 to about 24 gauge, which is the lightest usually carried, while bands include 12 and heavier gauges. Bands, and also hoops down to about 16 gauge, come in scroll bundles about 12 feet long, consisting of several lengths strapped together to make them as compact as possible. Hoops of 16 gauge and smaller come in coils resembling a watch spring, no wider than the iron, and having a large central opening, because small coils could not readily be straightened out when the iron was to be used. Some merchants prefer to order 16 and even 14 gauge hoops in coils, but there is danger that the metal will get waves in it, which must be pounded out at considerable pains before it can be used for some purposes.

An excellent method to accommodate band iron in bundles is to stand it on end against a wall. Most storehouse walls are unfinished, so that there is nothing to scar or damage. Iron rods projecting from the studding or pieces of plank nailed diagonally between the studding and the joints overhead, may be used to form skeleton bins, which should be labeled with the size of iron that they contain. Another form of wall rack adapted to the use of a merchant who carries a small stock of band iron is made by setting up 2x4 joists between floor and ceiling, about 4 feet apart. At intervals of about a foot holes should be bored, in which are driven pieces of round iron to lay the stock on. The projecting ends of the pieces of round iron should be turned up to prevent the iron slipping off. This form of rack is not practicable where a merchant carries more than two or three bundles of a size.

A convenient way of keeping hoop iron is to make a reel, the drum of which is long enough to accommodate a coil of every size carried. This may be constructed roughly, as there is no advantage in having the drum round. Coils should be separated from each other by pegs projecting from the drum, and whenever a coil is cut it should be tied up, to prevent its getting loose or unwinding when the reel is turned for some other coil.

SHOT MAKING.

Manufacturers of shot use a tower about 300 feet in height, in order that the melted lead (which is dropped from the top of the tower) may become congealed before reaching the bottom.

The lead, in the form of "pigs," is taken to the top of the tower and there melted in kettles, and upon becoming liquid is poured over a sieve through which it falls in drops. These drops, as they fall through the air, take a spherical shape, and upon reaching the bottom are received in a vat containing either water or oil. From this vat the pellets are removed to a machine which separates the different sizes. This machine, which somewhat resembles a bureau in appearance, and is so arranged that it will rock, contains a series of shelves, each of which is perforated to allow shot of a certain size to pass through. The arrangement of these shelves is such that the largest shot will stop on the first shelf, the next size on the second, and so on downward until the bottom is reached, where the smallest size is received. The size of the shot can also be governed to a certain extent by the size of the perforations in the sieve at the top of the tower.

KNOW THE TOOLS YOU HANDLE.

At the fifth annual convention of the New York State Retail Hardware Association at Syracuse, N.Y., in February last a very instructive address was given by W. M. Pratt, of Massachusetts, on "Tool Topics." The point he emphasized was the necessity of hardware merchants to know the tools he handles, how they are made, what materials are used, which are cast iron, which malleable, which machinery or Bessemer steel, and which crucible steel. To be well posted on the salient features of the tools they handle, they can't do better than visit the manufacturers themselves, or if they have managers in charge of the tool department they cannot spend a little money to better purpose than by sending these managers to learn how the tools are made and exactly what materials the tools are made of.

IRON FENCING.

Hardware merchants who are enterprising and aggressive and on the lookout for opportunities to expand and strengthen their business will do well to look into the opportunities presented by the iron fencing and ornamental lines. This is a rapidly expanding line and should and does prove profitable to all who take it up.

Quite a number of merchants have already been dealing in tree boxes hitching posts, iron flower vases, and lawn furniture specialties and found such lines attended by excellent financial results. Orders are taken uniformly by catalogue and the specifications sent to the manufacturers. Such a method of dealing in these lines ought to be very profitable and not at all cumbersome.

EVOLUTION OF THE NAIL.

A common nail, it has been said, is an excellent illustration of the difference between old and new methods. Formerly the metal was cut in strips and then forged into shape with hammers, and an expert took about one and one-half minutes for each nail. To-day they are made of steel, and are lighter and stronger. Strips are cut with steam shears and fed into an automatic nail machine. One man tends three machines each machine dropping a nail every second. He turns out a hundred-pound keg of nails in less than two hours, a work that once would have taken him twice as many weeks.

POCKET CUTLERY.

The ambition of every boy with his first pants is to have a pocket and a knife to carry in it. Anything that looks like a knife will do, but as he grows older he yearns for knives with three, four, five or six blades, knives with corkscrews and tweezers in their backs, knives with tortoise-sheel and ivory and mother-of-pearl handles, pen knives, file cases, bowie points, big knives and little ones in endless variety. His commercial acumen is early exhibited in knife swapping, his carefulness or lack thereof in the number of knives broken or lost annually. Later in life this character and temperament may be accurately judged by the knife that he carries, whether designed for ornament or service, bright or rusty, sharp or dull. There are day laborers on starvation wages who carry $2 knives in the pockets of 50-cent overals, just as the old-time Texas cowboy cinched a $75 saddle on a $15 pony. And, on the other hand, there are millionaires who, year after year, rust their pockets with knives that no self-respecting street urchin would pick up out of the gutter.

FUN, FACTS AND FICTION

A FIGHT FOR LIBERTY.

A fable by George Ade about sizes up the situation with regard to the dry towns. It is entitled "The Fable of the Single-Handed Fight for Liberty," and is as follows:

"A traveler landed in a blue-law town on Sunday morning and found it as dead as a mackerel. There were only two horses hitched at the Square, and in every window the curtains were down.

"'Why and wherefore this funereal hush?' he inquired of the hotel clerk.

"'The Sunday closers have been at work,' replied the clerk 'You can't get a nip to-day for love or money.'

"'I can't, can't I?' demanded the traveler, indignantly. 'Do the enemies of personal liberty think that they can deprive me of my just rights?' not on your dreamry eyes! Watch me.'

"He cut for an alley and began trying every back door. He would rap three times on a bluff and say, 'It's me,' but there was nothing doing.

"However, he was not to be thwarted. In the absence of the blind pig and the speak easy, he fell back to the prescription gag. Inquiring his way, he walked eight blocks to a physician's residence, and caught the doc. just as he was starting to church. He gave the doc. the Elk's grip, and begged him to save a life. He said he had cramps, and nothing but a large slug of the Scandinavian joy-producer would relieve his agony. Doc. wrote: "Spirts frumenti—Take as directed,' and said it would come to one dollar.

"Then the sufferer went out to find a drug clerk. After a long search he found Mr. Higginson, of the People's Pharmacy, down at Main Street bridge, pushing a baby carriage. At first the druggist balked on opening up, but the traveler said he was a dying man, and handed over a good ten-cent cigar.

"At 2 p.m. he went back to the hotel wearing in his pistol pocket a flask of squirrel whiskey the color of kerosene. He was flushed and happy, for he had made a monkey of the law. He invited two other drummers up to 62. They pulled down the curtains and tapped the poison, and nobody could talk for five minutes.

"Two months later the same traveler struck the town one Sunday, and found a baseball team giving a parade.

"'Everything is wide open since the April election,' said the clerk. 'I can get you whatever you want.'

"'All right,' was the reply, 'send up a pitcher of ice water.'

"Moral—Thirst follows the prohibition clause."

* * *

DIDN'T KNOW WHICH BAR.

"Where's the bar?" asked a dirty looking stranger of a waiter at a hotel the other day.

"What kind of a bar?" asked the latter.

"Why the liquor bar, of course; what do you suppose I mean?"

"Well," drawled the boy, "I didn't know but what you might mean a bar of soap."

* * *

FORGOT THE AUTOMOBILE.

"Why do the poor persist in running down the rich?" shouted the new sociologist. "We never heard of the rich running down the poor."

"Gosh, mister," retorted the thin man in faded trousers, "you ain't never seen an automobile, have you?"

* * *

TOOK IT FOR GRANTED.

"I hear the newsboys yelling 'extra!' on the streets. Shall I buy a paper?"

"No, my nerves are in such a condition to-day I couldn't bear to read about a railroad wreck."

* * *

MIGHT HAVE FARED WORSE.

R. J. Cluff, of Cluff Bros., Toronto, tells of the experience of a young eastern woman in the west. She had left the train at a station in New Ontario one afternoon, and asked the only man in sight how she could get to her destination, far out in the country.

"You'll have to wait for the stage in the morning," said the man; "you can't get any rig here."

"But where am I to stop," inquired the young lady; "there's nothing here but the station, and I can't sleep on the floor."

"Guess you'll have to bunk with the station agent,' he replied.

"Sir," she exclaimed, "I am a lady."

"So's the station agent," said the man.

* * *

DIDN'T WAIT FOR THE HATCHET.

Francis J. Torrance, first vice-president of the Standard Sanitary Manufacturing Company, related a funny story at a banquet in Philadelphia recently. Said he: In a certain town in western Pennsylvania there is a house the door of which must be raised a little to be opened, and for this purpose the hatchet is generally used. One night lately a knock came to the door, and a youngster was sent to see who was there.

"Who is there?" he inquired.

"Me," said a voice outside.

The youngster, knowing the voice, shouted back in such a tone that the person outside could hear him:

"It's Mrs. Murphy. Get the hatchet."

Needless to say, Mrs. Murphy didn't wait.

* * *

COULDN'T FOOL THIS CLERK.

J. Walton Peart, of St. Mary's Ont., who sells bird cages and bird seed got a new clerk from the country not long ago. A customer came in shortly afterward and inquired for bird seed. "No you don't, smarty," replied the new clerk, "ye can't joke me. Birds grow from eggs, not seed."

* * *

HE WAS THE BOY.

A Toronto hardwareman directed one of his clerks to hang out a "Boy Wanted' sign at the street entrance a few days ago. The card had been swinging in the breeze only a few minutes when a red-headed litle lad came in with the sign under his arm.

"Say, mister," he demanded, "did you'se hang out this here "Boy Wanted' sign?"

"I did," replied the contractor sternly. "Why did you tear it down?"

Back of his freckles the youngster was gazing in wonder at the man's stupidity. "Hully gee!" he blurted. "Why I'm the boy!" And he was.

Plumbing and Steamfitting

PARAGRAPHS OF INTEREST

By C. E. Oldacre, Toronto

Plumbers who have interested themselves in the septic tank sewage disposal system have opened new fields and found application for their work not otherwise obtainable.

The operations of such tanks are mervelous and of far-reaching benefits to all communities and in application are innumerable.

They are adapted to residences, hospitals, schools, factories, barracks, villages and towns.

Plumbers who have advocated them have added materially to their business, besides conferring great blessings on the public. Those who have not looked into their benefits will find a valuable means of extending their field of operation in old and newly-settled sections.

Septic tanks meet with the highest endorsement of the medical fraternity, and plumbers will find physicians ardent exponents of their use.

Good Rule to Follow.

In single pipe steam work probably fitters have had occasion to note uneven and varying water lines on steam boilers on some heating installations. This is caused in the majority of cases by too small sized mains; that is, either too small flow or too small return, or perhaps both. Where either one or both are present, the water is liable to disappear from the gauge glass. A fairly safe rule to follow in moderate-sized jobs for the size of steam main flow and return is to multiply the diameter of the pipe by itself and this result by 100 and this will give you the number of feet of radiation that can be carried on the main, and then for the return make it one pipe size larger than one-half (1-2) of the diameter of the flow. Example: How many feet of radiation can be placed on a 1-inch main ordinarily? Multiply thus, 4x4x100, equal 1,600; showing 1,600 square feet of radiation as the maximum amount of one-half of four bring two, let the return be not less than 2½ inches.

Reducing Size of Pipe.

It is the best practice in steam work to connect the boiler with the full-sized outlet at the boiler, and if any reduction is required do so by means of a reducing elbow at the top end of the nipple leading from the boiler, instead of using a bushing immediately at the boiler. This will reduce friction and give much better results in many cases.

In hot water heating, to give equal circulation it will be found to advantage to take the branches off the side of the main, instead of from the top, especially for runs to upper floors.

Are House Traps Dangerous?

Knowing the great effect of currents of pure, fresh air on health-destroying germs, have plumbers fully determined whether the usual "house-trap" is of value? Many contend they are of no value, and their use should be prohibited by law, as it stops these very currents and at once defeats the object for which they are placed in position. Pure air is one of the greatest enemies of infectious germs.

Wall Radiation Best.

Wall radiators give off the greatest amount of heat for every square foot of heating surface of any radiators used to-day. One hundred square feet of wall radiation is practically as good as one hundred and twenty-five feet of radiation of the usual type. They are, however, not compact, and take up too much wall space, and hence are not capable of adaptation in the majority of cases, but where conditions permit will be found very effective.

In a good many sections of this country, as well as other parts of the world, great difficulty is experienced with the domestic water supply from the stoppage of pipes, water-fronts and connections by incrustations. Many cases of clogged, burnt or poor operating hot water connections and water-fronts have been brought to the attention of Canadian fitters. These are due to the solid matter held in solution by the water, and gives to such water the term or appelation "hard water." The amount of solid matter held in solution varies from 10 to 300 grains per gallon. These solids consist mostly of sulphite of lime and other salts held by the water in solution and are precipitated in various degrees of heat. The temperature for precipitation varies from 170 degrees to 300 degrees Fahrenheit. Where 60 gallons of water containing only 30 grains solid matter per gallon, are used in a day—not a very large amount—for one week, it means nearly 2 pounds of this solid matter that may be deposited. With this going on for any length of time it takes only a short while for the containing pipes, water-front and connections to become thoroughly clogged. How to avoid these incrustations is a very important question and brings to notice the necessity of using liberal sized connections. Referring to this question from an economical standpoint, it might be interesting to note that it has been stated that London wastes one-third its tea through the hardness of its water. A thousand gallons of London water contains three and one-half pounds of chalk. Calculating from the total population of London it has been figured out that it looses from this cause alone £6,000,000, or approximately, $30,000,000 per annum in extra tea, soap, fuel and labor.

Good Sized Sewers Needed.

Sewers of liberal dimensions are necessary, not only to meet the demand of future conditions, but also to provide ample space for the sewage to be carried away and abnormal quantities of water from sudden down-pours of rain and sudden melting of snow and ice, and as well, that ample space may be provided for a proper circulation of air at all times throughout their entire course. Air is the great destroyer of microbes causing diseases, and perfect ventilation secures plenty of air. The air in the sewers of Paris—some of the largest in the world—is regularly tested, and the investigations show that no disease germs are contained in the air of these sewers. Likewise, the air of the Berlin (Germany) sewers shows that no such amount of disease germs is carried in the air of the sewers as is found in the air of the streets.

Early Heating.

It may be interesting to know that the first hotel in the United States to have steam heat was the Eastern Exchange hotel, of Boston, Mass, installed in 1845.

The first hot water radiators were patented by Thomas T. Tasker, Philadelphia, Pa., on March 9th, 1858. The first modern type of cast iron radiators were patented by Nathaniel H. Bandy, September 22nd, 1874.

WATERWORKS BY-LAWS.

Wetaskiwin, Alta., ratepayers have voted favorably on the following by-laws: To provide for the raising of the sum of $140,000 for the construction of a municipal system of waterworks and sewers. For the raising of the sum of $30,000, for improving and extending the municipal electric light and power plant. For $2,500 for buying a hospital site, and $10,000 for the erection of a hospital.

PROGRESS OF SANITATION

By W. S. Stansfield in The Sanitary Journal of January 1950.

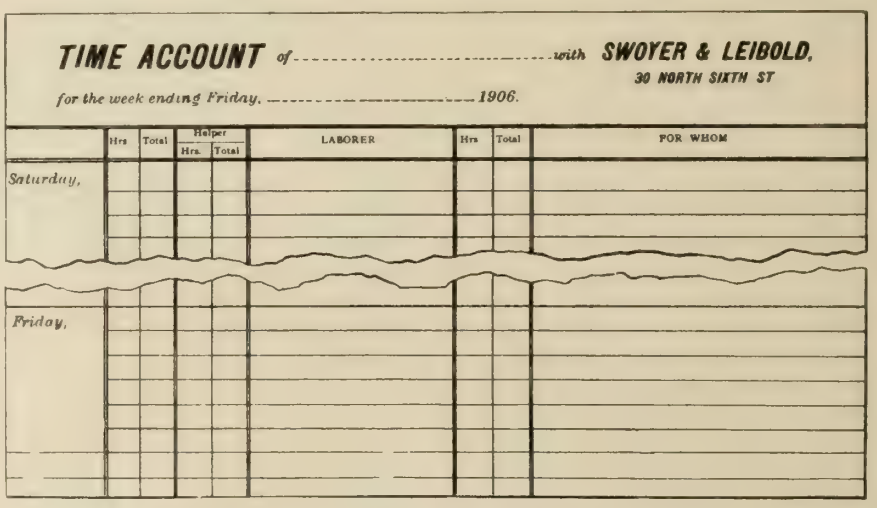
The advance of sanitation during the past fifty years has been more than sufficient to justify the most sanguine expectations, and the pioneers of the period, who labored during the first decade of the period, would perhaps be as much astonished as gratified could they look around to-day and realize the vast changes and improvements which have taken place within such a short space of time. From comparative statistics we learn that the average span of life has been lengthened by nearly ten years, 9.87 to be exact; that the weight of the people has been increased by about eleven pounds per individual, and the stature advanced by 1¼ inches. The chest measurement has expanded by at least two inches, while the people enjoy robust health invariably to a good old age. During the early part of the century a whole range of zymotic diseases were prevalent; these have disappeared. Consumption was regarded as a fearful scourge—now almost extinct. Cancer research was in its infancy—to-day an isolated case of cancer is a rarity.

If we turn to the newspaper files of 1906, we find that the popular mind was sorely exercised about physical deterioration and decline of the birth rate. Public meetings were held, when a number of little Daniels came to judgment gravely propounding remedies, which, when taken in the light of subsequent events, serve only to provoke a smile.

In a newspaper dated 1899, we read that "out of the 11,000 recruits who offered to enlist in Manchester for the South African war, 8,000 had to be rejected at once on account of physical defects, and of the remaining 3,000, only 1,000 could be passed into the army." This is hard to realize when we look around and reflect that to-day one could scarcely find a man unfit for the service.

And how have these changes, so vast, and so far reaching, been brought about?

So far back as 1900 it was realized that the rising generation of females, especially among the leisured classes, were improving in stature and erectness of carriage, while the men remained stationery; in three more decades the improvement was general and all round. This effect was partly due to the development brought about by the drill exercise in schools—while the vagaries incidental to this improvement need not now concern us, we merely note the result.



About 1920, the last prosecution for smoke nuisance took place, the change being brought about by the storage and transmission of electric force, while improved house construction and artificial heating have almost superseded the domestic fires, the result being that we have now very few fogs, and these not of a dangerous character.

Next came the systematic regulation of the distributive industries and the elimination of competitive waste, with the result that food adulteration disappeared, and the people were enabled to buy commodities at two-thirds of the previous prices. The last prosecution under this head occurred during the thirties.

Coincidently with these changes it had been noted that we appeared to be breeding two distinct races of children; those in water closet towns being healthy, robust and free from infantile sickness, whilst in those centres where conservancy methods were still retained the juniors showed unmistakable signs of feebleness and decrepitude.

To the present generation it might be necessary to explain the term conservancy. Some thirty years ago it was the custom in some towns to store the human excrement in pails or tubs, and sometimes in pits, called middens. The former were supposed to be emptied weekly, and the latter at less frequent intervals, and as in every case these receptacles were housed at the rear of the dwellings, the people lived in a reeking stench, unavoidably inhaling filth and infection; indeed, the wonder is that they survived at all. This condition of things was operating like the vulture at the nation's vitals, undermining and sapping the vitality of the people, and it is astonishing that while governing bodies paid attention to minor details, this overwhelming cause of sickness and debility should have remained so long in force.

Not that they could plead ignorance, for medical officers were emphatic in denunciation. The explanation seems to be, that along that period the press was in the hands of the capitalists, the capitalists were the property owners they dreaded a change because of the expense, and hoodwinked the people with the threat of higher rates, although years before it had been ably demonstrated by a sanitary inspector, called ———— (here the name is blurred, but never mind), that water carriage was the cheaper method.

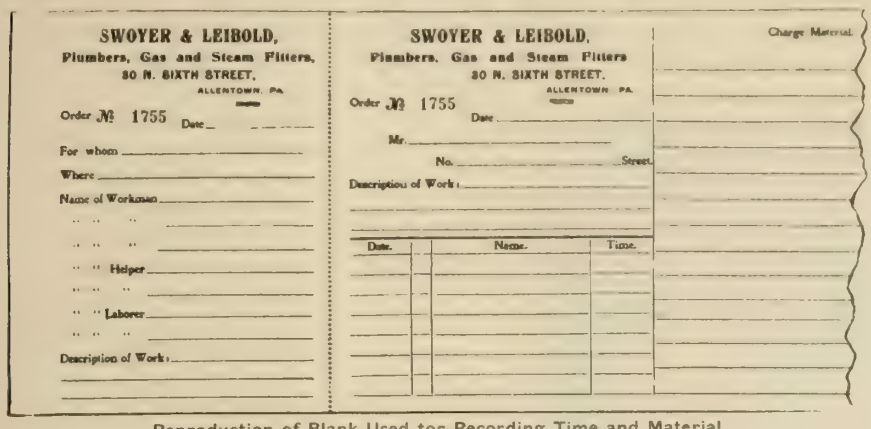
Reproduction of Part of Blank for Recording Each Man's Time.



At last the state took the matter in hand and dealt with the remaining plague spots in a summary manner, and from that time forward we note a gradual, but marked, improvement in the health of the nation.

All this is now ancient history.

THE PLUMBER AS A BUSINESS MAN.

No more important work confronts the business concern than that of keeping track of the actual cost of doing work cannot be intelligently set. Keeping the cost of doing business means business or of doing any piece of work. Without being informed on both of these costs the price on any piece of

keeping a record of everything for which an expenditure is made, including that which does not bring in a direct profit. Such items include insurance, taxes, water rent, horse feed, shoeing the horse, the office boy and a host of other items which will never be included in the time and materials used in putting a heating system in one building or the plumbing system in another. Whether a man keeps his own books or employs a bookkeeper, it is indispensable that a correct account be kept of all these items. Then, if in a year they amount to $1,000 or $10,000 worth of business is being done, it is evident that 10 per cent. must be added to the time and material which enter into the base cost of any job, before the true cost is found and the profit added to form the price to a customer or the bid for contract work. It is equally essential that some system be devised so that whether the workman is doing jobbing or engaged on a piece of contract work his time and the material he uses will be reported to the office. Some benefit may be derived by our readers from an explanation of part of a system used by Swoyer & Leibold, Allentown, Pa., as outlined in the Metal Worker.

Description of Work

SWOYER & LEIBOLD,
Plumbers, Gas and Steam Fitters
30 N. SIXTH STREET,
ALLENTOWN, PA.

Order № 1755 Date

Mr.

No. Street

Description of Work

Date.	Name.	Time.

Charge Material.

Reproduction of Blank Used for Recording Time and Material.

One blank, it is very evident, is intended to be used in a book with the page perforated, so that a record is kept in the book. From this record the bookkeeper may demand from the workman the other portion within a reasonable time, so that a proper charge can be made. It is arranged to have the date, the name of the customer and where the work is to be done, with space for a brief description of the character of the work at the bottom and for the names of the workmen and help sent to do it. The other portion of the blank provides for the workman a duplicate of the necessary information, with space for him to keep a record of his time and for an enumeration of the materials used or the material returned. A shop which has never had such a system will find some difficulty in putting it into operation when the first effort is made, but as the effort is persisted in the proprietor will soon discover that without its use many items of expense never find their way into the charge as they should, but by their omission effect substantial inroads in the profits of the business.

The second blank will be found invaluable in discovering where the time paid for has been spent. Every conscientious workman is willing to lend his assistance in this work, both for the protection to himself and his employers and customers. We have reproduced this blank only for two days of the week, but the full size blank is 9½ x 12 in., and provides space for every day of the week, with spaces at the bottom for making totals.

PAY ATTENTION TO DISPLAY.

Plumbers' establishments, as the majority of them appear at present, can hardly be called business places or stores. More properly speaking they are shops. The word "shop" does not convey to us the idea of size or attractiveness. A large number of plumbers' establishments have fallen into a disreputable condition. No thought is now taken by them for cleanliness, attractive displays, or convenient arrangements. The plumbing business would be put on a stronger and more lucrative basis if more attention were paid to the details and the things of apparently lesser importance.

Plumbers could very easily make their stores (for we should be able to call them by that name) more attractive by arranging a display of their goods either in rows and on shelves, in the front part of their shops, or by partitioning off a little apartment to represent a bathroom and array as many plumbing goods as possible in this little room. The accompanying illustrations, kindly loaned us by the Domestic Engineering of Chicago, show a very neat and attractive arrangement of goods for a modern kitchen and bath room. It would involve very little work, and the efforts made would be well repaid by an increase in business and visitors to the store. Plumbers cannot ignore the presence of strong competition, and the fact that the only way to attract customers is to have an attractive display of goods.

Exhibition of a Modern Kitchen and Bath Room at a Pure Food Show at Lewiston, Me.

PRIVATE 'PHONES.

The hardware dealer in a small country town, where the long distance telephone in the post office or largest hotel is the only one in town, could do something in the line of private 'phones.

There are many prosperous farmers in the surrounding country who would be only too glad to chip in with their nearest neighbor, and install a private wire between their houses. The cost for two instruments, together with wire

and batteries enough to work them, is not great, and after the system is once installed the expense, with the exception of renewing the batteries once in a long while, ceases.

There's no reason that in a town where there is no electrical contractor, the hardware dealer should not make a lot of money in this way. Write any of the electrical supply men whose advertisements appear in this paper for

Attractive Window Display made by a Plumbing Firm at Lewiston, Me.

prices and information, then get after the farmers and interest them in the scheme.

Installing such a system is very simple, if you follow carefully the rules sent with the outfit.

You not only make your profit on the telephones, but also what you charge for putting them up.

Sit right down now and write the supply man. If you put it off, you'll very likely forget all about it. Might as well inquire about electric bell outfits while you're at it.

ELECTRIC FLASHLIGHTS.

These articles have passed the novelty stage and have on their merits established themselves as live sellers, for which there is a growing demand.

The hardwareman who will devote a small space in his store to a good variety of them could coax many an elusive dollar out of the main line past his door and sidetrack it in his own till. The electric flashlight is in great demand at summer resorts, where there are times that one would be extremely handy, especially when Mother Moon is on strike.

The writer remembers one particularly dark night at a popular lake-shore resort not far from Montreal, when it was impossible to see your hand in front of your face, yet alone pick your way over a very questionable sidewalk. As there was a dance on that evening, many people who would otherwise have been contented with their own front verandahs, found themselves groping along, hanging onto a fence, which in many cases happened to be barbed wire.

One youngster who had a small one dollar flashlight sold it to a man who had to make the late train to town that night for three dollars.

If the hardware dealer near that resort had been an up-to-date man he could have done a pretty nice little business in flashlights.

This is only one instance in which these little articles are useful, but it's worth your while to think the matter over.

A stock will take up very little room and make a good display. They sell from one dollar up.

Method of Displaying Electric Fixtures in the J. H. Ashdown Hardware Company's Store at Winnipeg.

DISPLAYING LIGHTING FIXTURES

A very attractive display of lighting fixtures is made in J. H. Ashdown's store at Winnipeg. The lighting fixtures department is divided up into little rooms for the purposes of display, the switches being so arranged that the lamps may be shown individually or all together. It is one of the finest displays of fixtures in the west and can be copied to advantage by hardwaremen who go after the electric fixture trade—even if they do not have to carry so elaborate a stock.

ELECTRICITY IN THE HOME.

In a $3,000 or $4,000 house, it is a very common matter to wire for electric lights; but by giving the subject a little further attention with your electrical contractor and the architect, it is possible to arrange for socket heating devices at very little extra expense. Such receptacles would be taken off from the lighting wires in a very simple manner. The cost of operating later at lighting rates, would not be large, for the reason that the electric devices which will be used on such a circuit consume only a small amount of electricity and are generally used for only short intervals.

THE POWER OF TO-DAY.

The fact that electricity is fast supplementing steam as motive power is becoming more clearly demonstrated day by day. That electricity is immensely superior to steam for almost all kinds of work is becoming known throughout the length and breadth of this broad land. Electricity in manufacturing plants does not only do away with an immense amount of dirt, but economizes greatly in the way of space. Electric machinery is more compact, and the same horse power can be obtained from a small electric motor, set up on a shelf out of the way, that with a steam plant would necessitate a great engine room with unsightly boilers.

It will take time, no doubt, before our railways adopt electricity in place of steam for the motive power in their

locomotives, but that this will be the case nobody seems to deny. The greatest trouble will be the tremendous cost that the change will involve.

Practical tests of electrical apparatus in the leading industrial centres, factories and mines, show that electricity not only does more work, but better work, and with less trouble and expense than is possible with steam.

A GOOD SIDE LINE.

Hardware dealers will do well to keep abreast of the times by getting in a stock of all electrical appliances and get in samples to display and keep a hold on the trade in electrical appliances, as electrically heated ovens, flat-irons, and electric heaters.

The accompanying cut shows that in the summer time the ironing need not be done in the hot, oppressive kitchen; the ironing table may readily be moved to the back porch, or even to a shady spot under the trees nearby. Under such conditions the work will be more satisfactory, both to the laundress and to her mistress.

The mistress of the house sometimes has a little pressing which she can conveniently do herself, or perhaps a dainty bit of lace or embroidery to be ironed, which she does not care to entrust to other hands. In such a case it is not necessary for her to go into the kitchen or laundry. The work may be done in the sewing room, or in her own chamber.

The quality of work done by the electric flat-iron is said to be superior to that done by the ordinary iron. There is no danger of getting soot or smut on the iron, and it does not have to be waxed. There is no difficulty in keeping the iron hot. The heat is easily controlled, and may be regulated to a nicety, insuring first-class work done. There is no reason why this electric flat-iron, as well as other simple electrical appliances, should not prove a great success, and hardware dealers will do well to get in this line of goods and endeavor to hold the trade.

ELECTRICITY'S REMARKABLE USES.

In the modern New York house electricity has become domesticated and transformed into an efficient servant who never "talks back." On the electric stove in the kitchen pots begin to simmer and bubble without apparent cause as in the enchanted castle of old. The invisible current sets an electric coffee machine whirring in unison with a meat chopper and both have finished in a jiffy tasks which would have cost the housewife of former days many minutes and much effort. With the perfection of electrical refrigeration carried on in one's own house ice famine and importunate icemen will be but a dream of the past. In the laundry, wash tubs, driers, flat-irons, and water heaters, all operated by electrical currents, almost force one to believe in fairies.

For the bedroom an electrical comfort is, perhaps, the latest, as it has been introduced within a short time. In appearance this differs not at all from the ordinary bed covering, but beneath the familiar surface is a thickness of asbestos containing a mesh of wire, which, when carrying current provided by a neatly concealed feed wire, heats this electrical cover and makes it efficient in the coldest weather. A pad about two feet square, heated in the same manner, may be used for "cold feet" in place of the troublesome water bag. One of these pads is put to an unusual use by a naval officer. On bleak

Ironing by Electricity.

nights while pacing the bridge of his ship he has one neatly tucked beneath his coat, so that the zero winds hold no terrors for him. Because of the fact that this heating pad must be connected to the ship's electrical supply by a wire his brother officers have dubbed him "Monkey on a String."

Other appurtenances of the "electric life" include a clock whose face may be illuminated at night by pressing a button at the head of the bed, a milk warmer which prepares milk so rapidly that a protesting baby is appeased long before its temper is dangerously aroused, a shaving cup, hair drier, and a movable electric light which may be carried about as were candles in bygone days.

A house to be built in Schenectady to replace the famous "house without a chimney"—so-called because electrical appliances were used for all heating and cooking purposes—will not only contain the devices enumerated above, but its doors will open and shut mechanically, carpets will be swept, and the lawn mowed by electricity. A burglar breaking into the house will start a general illumination and such a jangling of bells as to cause him to decide that in his case the electric life is not the simple life after all.

ECONOMICAL LIGHTING.

Experiments were recently made in Munich to determine the cost and relative advantages of indirect illumination for school and draughting rooms. The arc lamp was found to give the best results, but intensifying gas burners more economical. This method of lighting has been strongly recommended to the school authorities.

PLUMBING INVENTIONS.

J. A. Frey, Washington, D.C., has secured a patent on an automatic steam and hot water safety cock for use as an attachment to domestic water heaters and steam boilers or generators for relieving pressure of steam when it exceeds the limit of safety. It is adapted for use in the usual way for discharge of water from a heater or boiler to come into action only when the usual operating spigot is closed or adjusted to cut off discharge.

SITUATION AT MORRISBURG.

The article published in Hardware and Metal of March 9 regarding the delay of the Canada Tin Plate and Sheet Steel Co., Morrisburg, in commencing operations, has been contradicted and although the information was received from a supposedly reliable source, it seems to have been not in accordance with the facts.

The delay, it appears, has been entirely beyond the company's control, being due to the failure of the manufacturers of the large driving wheels ordered by the company last June, to deliver them, they having miscalculated the time it would take to turn out the wheels, which are the largest ever cast in Canada, weighing 75 tons and being 30 feet in diameter. A statement giving the present situation at Morrisburg will be published in our next issue.

W. R. Hobbs, a prominent hardware merchant of Tillsonburg, died suddenly last week.

W. Ilsey, of the Ashdown Hardware Co., Winnipeg, won the $50 cash prize offered by the Asbestos Sad Iron Co. for the best trimmed window with their wares.

Hardware Manufacturing in Canada

New Plants Being Established in all Parts of the Country—Few Lines Not Now Made in Canada.

Half a century ago practically every article sold in Canadian hardware stores was imported from Great Britain, the lines of goods produced in Canada being exceedingly limited and the manufacture of hardware for export having not yet reached large proportions in the United States. Gradually, however, conditions changed, the civil war in the United States and the settling of the Western States aided American manufacturers in developing their industries, while the Confederation of the Canadian Provinces, followed by the construction of the transcontinental railway and the adoption of the National Policy by the Canadian Government, helped to make possible the establishment of numerous hardware manufacturing plants in Ontario, Quebec and the Maritime Provinces.

To-day the situation is that hundreds of plants are in operation in Canada making goods for sale by retail hardwaremen and each year sees many new factories start their wheels in motion as well as many enlargements made to existing concerns. It would be easier now to name the articles not yet produced in Canadian factories than to enumerate those which are manufactured.

A Bright Future.

The development which has been going on for the past half dozen years seems certain to continue for the next quarter of a century, the work of pushing the frontier line of civilization northward and of irrigating the prairie wastes in the west being impeded but slightly by industrial depressions in the United States. Canada's undeveloped lands are the safety valve for present day immigration, and the valve will stay open until the country is filled up. Without attempting to describe every new plant established or to outline the increases which have been made to existing plants, casual reference will be made to a few of the changes made in order to give an idea of the expansion of the hardware manufacturing industry in the older portions of Canada.

Following their well-known aim of supplying "Made-in-Canada" goods wherever possible the Canadian Fairbanks Company have, during the past year, established new factories in both Ontario and Quebec. Jenkins Bros., who have been supplying the Canadian market from their factory at Boston, have found it necessary to manufacture in this country and have extensive works nearing completion at Montreal.

In the same line the Kerr Engine Works, Walkerville; the Penberthy Injector Company, Windsor; the James Morrison Brass Manufacturing Company, Toronto; and the Monarch Brass Works, Port Colborne, have all been extending their operations. The Mann Brass Works have been established at London; two new brass factories are being established at Galt, and Somerville, Limited, are to erect a large factory at Toronto.

Expansion in Heating Trade.

The McClary Manufacturing Company, London, have erected a magnificent new plant at London, and new stove foundries have been established at Welland, Niagara Falls, Ottawa, Morrisburg, and other places. The Acme Can Company, Montreal, have enlarged their plant to a capacity of 150,000 cans per day. The Ontario Steelware, Limited, have entered the field with a full line of kitchen enamelware and it is understood that the Canada Tin Plate Company's plant, now being erected at Morrisburg, will be partially utilized in manufacturing tin and enamelware. E. T. Wright & Co., Hamilton, have added many new lines and are enlarging their plant by one-third.

The Taylor-Forbes Company, Guelph, have made large additions to their plant, particularly in their radiator foundry. The American Radiator Company's plant, at Brantford is now in operation; the Warden King and Son foundry at Montreal has been doubled in size and plans are prepared for their new radiator works at Toronto; the Dominion Radiator Company is moving into a new $250,000 plant; Cluff Bros. and the Pease Foundry Company, have erected fine showrooms in Toronto; the Star Iron Company, Montreal, is enlarging its plant and the Canada Radiator Company, Lachine, have taken over the lines of the Ottawa Furnace Company.

The Montreal Rolling Mills have enlarged their plant and are to instal much new machinery. The Belleville Rolling Mills have been re-opened and greatly enlarged with new furnaces and machinery for making nuts, bolts and horseshoes. New iron industries are also being established at Welland and Fort William with the works at Hamilton being more than doubled in size.

In the lighting field the Montreal companies have all been expanding their business. The R. E. T. Pringle, Robert Mitchell, and Munderloh Companies, have all increased the size of their plant or have made plans to do so. The International Gas Appliance Company, Toronto, have occupied a magnificent new building and the S. F. Bowser Company have established a fine new factory at Toronto.

Several New Paint Factories.

In the paint and oil field there has been an even greater growth, the new Brandram-Henderson white lead works at Montreal being possibly the greatest expansion of the year. The Sherwin-Williams Company have erected a new linseed oil mill at Montreal and are planning new factories at Winnipeg; the Canada Paint Company have taken over the Ontario Lead & Wire Companys' lead business and are otherwise extending their capacity; the Francis-Frost Company have been merged into the big Benjamin-Moore Company, of New York and Chicago, and have erected a magnificent new plant at Toronto Junction; the Blanchite Process Paint Company have established a large business at Toronto; the Canadian Oil Company are enlarging their recently burned works; the Standard Paint Company have erected large works near Montreal, and the Standard Paint and Varnish Works, Windsor; the Imperial Varnish and Color Co., Toronto; A. Ramsay & Son Company, Montreal; the Martin-Senour Company, Montreal; Berry Bros., Walkerville; and P. D. Dods & Co., Montreal, all report increases in their factory output.

Hardware Manufacturing on Increase.

In general hardware a similar development has taken place, a new factory at Windsor being erected by the Lufkin Rule Company; the monster plant of the Plymouth Cordage Company, at Welland; the opening of the McGlashan-Clarke cutlery factory at Niagara Falls; the enlargement of the Canadian Steel Goods Company plant at Hamilton; the doubling in size of the combined Canada Screw and Ontario Tack Companies' factories at Hamilton; the commencement of operations of the Ross Rifle Company, at Quebec; the extensions undertaken by the Sanderson, Harold Co., at Paris; and Ham and Nott at Brantford; the establishment of a branch factory at Montreal; and the erection of

a new shop at Preston by the Metal Shingle and Siding Company; the enlargement of the business of the J. H. Still Manufacturing Company, at St. Thomas, the erection of a new factory by the Brantford Screw Company; and the establishment of a glue making plant at the same place; the enlargement be being made by the Dowswell Manufacturing Company, Hamilton; the installation of much new machinery by the Capewell Horse Nail Co., Toronto; the Peterborough Lock Manufacturing Company, Peterborough; Canada Cycle & Motor Company, Toronto Junction; Shirreff Manufacturing Company, Brockville; Cumming Manufacturing Company, Renfrew; Greening Wire Manufacturing Company, Hamilton, and many other concerns indicate the rapid growth of this branch of trade.

We could go on indefinitely describing the developments being made, but the few examples quoted above give some idea of the work that is continually going on. It is safe to say that half the population have no idea of the place Canada is making among the nations of the world. The discontented man who thinks he can do better in the States, is sadly mistaken. Canada at present offers a better chance of success to mankind, young or old, than any land on earth.

MANUFACTURING POSSIBILITIES OF THE WEST

Hardware manufacturing in western Canada is still in its infancy, the investment and output being still very small. Lack of coal and distance from supplies of raw material have combined to retard the growth of this branch of manufacturing, and, although it is, perhaps, foolish to prophesy, it does not seem likely that hardware manufacturing will ever attain to any great importance in the prairie provinces. At Fort William and Port Arthur it seems probable that big industries will be established, and it is not unlikely that British Columbia will soon develop some large concerns engaged in the manufacture of hardware and allied lines; but at present this line of manufacturing is very little developed.

Western branches of eastern enamelware and tinware factories manufacture some of their lines in Winnipeg for sale in the west. The foreign population supplies unskilled labor, and in some lines of manufacture this can be utilized to advantage. During the last year the Kemp Mfg. and Metal Company have doubled their manufacturing capacity at Winnipeg.

During the last year the Canada Paint Co. have acquired the linseed oil mills in Winnipeg, have added to the plant, and are now manufacturing linseed oil and paints in Winnipeg. The Manitoba Linseed Oil Mills, Limited, has recently been incorporated with a capital of $200,000 to manufacture linseed oil. It is expected that the plant will be in operation to handle the 1907 crop. G. F. Stephens & Co. have enlarged their plant in Winnipeg during the last year and their manufacturing capacity has been greatly increased.

A rolling mill has been built in Winnipeg to make bar iron from the vast supplies of scrap iron now going to waste in the west for lack of an available market, and prospects for its success are considered bright.

Vast Metal Resources of B. C.

Natural conditions favor the development of industries in the line of metal manufactures in British Columbia. Her geographical situation with reference to the rest of the Dominion would also tend to promote such development. Present economic conditions, as relating to manufacturing in the eastern portions of Canada, whence come a large part of the province's supplies, would also further incite interest in the possibilities for manufacturing locally.

A mild climate, rendering the shut downs forced by more severe weather in other parts, unnecessary to large extent in B.C., would favor the operating of many different industries, especially in which metals are largely used. The existence of natural resources from which may be taken the raw material for manufacture; the possibility of bringing from all the markets of the world raw materials not obtainable locally, and bringing them cheaply by water; the existence of large industries, such as the lumber, canning, fishing and mining industries, demanding large supplies of hardware and metal manufactures; these are natural conditions which favor local production of many articles.

Geographically, British Columbia stands at the western gate of the great Dominion, and is, therefore, furthest away from eastern source of supply. That, and the fact that the territories adjoining her can easily be served from here, should be an immense factor in the production of metal manufactures.

Eastern manufacturers have not used British Columbia at all well; not altogether from neglect, but from inability to handle the enormous amount of business offering in the past few years. Manufacturing in the east has been unable to keep stride with demand, and the demand nearest home has most naturally been given better attention. This should have given greater impetus to local manufactures than it has so far done.

One of the most important considerations acting against the development of local metal manufactures is that these metals are not produced in finished state from the ores being smelted and refined in the province. The only exception to this statement is the lead refining at Trail, the blister copper produced at some of the smelters, and the zinc refining plant at Nelson. Even here the refining is but in its infancy. The greatest lack is, however, in the entire absence of even the mining of the vast ore deposits of Vancouver Island. Iron is still master of the metal world. Vancouver Island on its northern and northwestern shores has deposits vast enough to build up an iron and steel industry the equal of the greatest in the world. The coal deposits of the eastern side of the island furnish the necessary complement, and these have been exploited for years, but not yet for the reduction of iron.

Varied Products of Coast Cities.

Notwithstanding all handicaps, there is yet a great deal of manufacturing carried on in the province. The canning of salmon has been responsible for two or three can-making plants and tin plate is a heavy import item. The lumber industry has brought with it the establishment of a saw works, which is thriving and growing with the parent industry. In the city of Victoria a very large plant is operated in manufacture of mixed paints. There is also a large chemical and fertilizer plant there, and the manufacture of excellent stoves and ranges is carried on by the only stove-making plant in the province. The Portland cement plant of the Victoria Portland Cement Co., close to the city of Victoria, is a very large establishment producing an excellent quality of cement.

On the mainland are a number of manufactories tributary to the hardware and allied trades. At Vancouver

a can-making factory, and at New Westminster another, supply large quantities of tins for many salmon and other canneries and for syrup and other factories. A glass works is being equipped at New Westminster for the manufacture of bottles in large quantities. Sheet glass will not, as yet, be attempted.

A wire nail works has been located at Vancouver for some years, but, unfortunately, it was burned two years ago, and, though re-established, has suffered from the reverse. Tent and sail factories are prosperous, as both lines are much in demand. Tarred building paper and felt roofing is manufactured by one plant in Vancouver.

One foundry for the making of cast iron pipe, and a small brass foundry, are numbered among the industries supplying the trade. Wire springs and mattresses are largely manufactured locally, one factory in particular turning out large quantities.

The making of wood stave water pipe has been established as an extensive and growing industry in the past three years. The magnificent British Columbia, or Douglas fir, is used, and heavy gauge galvanized steel wire is used for wrapping the sections of pipe. There are now three of these factories competing for the business offering in this line in the west.

Vitrified tile, fire brick, and similar products of the pottery are manufactured by two large plants, one at Victoria and the other at Clayburn, some miles up the Fraser river above New Westminster.

Metal Production Increasing.

The expansion of lode mining in British Columbia is the greatest industrial development of the immediate future. The present progress being made is satisfactory, and the recovering of metal values from the ores is being carried on side by side with the mining. Smelters in the various mining districts run full time and are constantly enlarging their plants. Coal for coking purposes is available in many parts of the province, chiefly the Crow's Nest Pass, the Similkameen, as yet in stage of development, and on Vancouver Island. Electric power, generated by water, is largely applied in the Kootenay and Boundary districts for mining and the operation of smelters.

With the very great increase in metal production which is bound to come and the extension of the refining of these metals within the province, the establishment of many lines of manufacture in which the metals are used may be fairly expected. No use is yet made of copper in any line of manufacture. Lead is only used to manufacture some lead pipe, and that in small way. Silver and zinc, which are both being produced, are not yet used in local manufactures. As stated previously, no iron industry yet exists in which the natural resources of the province are drawn on. Every ton of pig iron used in the foundries of the province is imported. There is no rolling mill, all wrought iron being imported, largely from England. With conditions such as described, it must be the conclusion that following the continued expansion of mining will come the investment of capital in metal manufactures, using the products of the country instead of, as at present, importing even the pig iron, rolled iron, sheet and plate iron and steel, the sheet lead, and largely the lead pipe now consumed. Then the manufacture of tools, of iron, copper and brass work, must engage the attention of those who study the situation with a view to investment of capital in industrial lines. Recently a movement was set on foot for the establishment of a car works, and it is anticipated that the company will be formed. Here, again, the lack of local production of iron is felt.

INDUSTRIAL DEVELOPMENT IN NOVA SCOTIA

By James Hickey, Halifax.

The outlook for a busy season in the hardware and metal lines in this province during the coming season was never brighter. Extensive building operations are planned, and many large manufacturing firms contemplate extending their plants. In Halifax things never looked better for a prosperous season. The erection of the Silliker Car Works, the new roundhouse, which the Government is erecting at a cost of $300,000, and the new machine shops to cost $150,000, will boom things in the building lines. Besides the above large contracts there is a lot of other build-contracts, there are a lot of other buildings proposed, and the possibility of a big electrical power plant to operate an electric railway from Halifax to Bedford is hinted at, although no steps so far have been taken to secure a site. The company has been organized and it is stated propose to start operations this year.

From North Sydney comes a report that the ship chandlers anticipate an exceedingly busy season this year. The enforcement of the Newfoundland Bait Act will very materially help North Sydney. Both the Gloucester and French fishing fleets will be forced to depend largely on North Sydney for their supplies, and the big bait freezer, which has been erected there, will draw the fishermen. Both the American and French fleets are good customers and the supplies which they find necessary to purchase during a season's operations amount to a large sum, and with that port made the headquarters of both fleets, business generally will be greatly benefited.

The Malleable Iron Company of Amherst, N.S., is doing a rushing business and a ready market for their product is found. As fast as the company can turn out the malleable castings are shipped off in carloads, Montreal being a particularly good customer. The company now finds that their present plant is altogether too small for their increasing business, and as soon as the weather permits, they will commence the erection of a new structure. The proposed new building will be 280 feet long.

An Important Merger.

The forward movement in the matter of building up manufacturing establishments has struck the town of Dartmouth, N.S., and there promises to be a boom in the ambitious town as a result of the shareholders of the Starr Manufacturing Company unanimously deciding to amalgamate with the Dartmouth Rolling Mills Company. The decision to unite the two big companies means much for Dartmouth as it is the intention to enter upon new lines of manufacture. The details of the amalgamation have not yet been announced, but sufficient is known to state that the united concern will be operated with a view to future expansion and equipment. The shareholders have decided to increase the authorized capital stock of the Starr Company to $1,000,000. At present the capital is about $100,000, and the capital of the Rolling Mills is about the same. Five hundred thousand dollars' worth of new stock will be placed on the market at once, and the remainder of the new stock retained in the treasury. The directorate of the company has been increased from five to seven. Both companies at the present time have orders booked for months ahead, and are working full time. The rolling mills employ over eighty men, while the Starr works have over one hundred on their pay roll.

Markets and Market Notes

THE WEEK'S MARKETS IN BRIEF.

MONTREAL.

WIRE NAILS—Advanced 5c. per keg.
WIRE — Base price advanced about 5c. per 100 lbs.
TURPENTINE—Advanced 2c. per gal.

TORONTO.

COPPER TACKS AND NAILS — 12½ per cent. advance.
WIRE NAILS—5c. a keg advance.
WIRE—5c. per 100 lbs. advance.

BRIGHT MARKET OUTLOOK.

Business prospects were never brighter with the western hardware trade than they are now at the opening of the spring of 1907. This is the case in spite of an unusually severe winter, with the consequent tie-up of the railways and blockade of traffic of all kinds. It is the case because the prosperity of Western Canada rests upon so sound and substantial a basis that it is not to be seriously affected by temporary drawbacks of the kind indicated and because the programme of railway construction alone is so big as to ensure a busy season for all classes of trade. At the present time there are almost 6,000 miles of railways under contract between the Great Lakes and the Rocky Mountains, the Canadian Northern having 1,500 miles under contract, the Canadian Pacific 1,400 miles, the Great Northern 1,000 miles and the Grand Trunk Pacific 1,900 miles. What this means to the hardware trade and to every other branch of trade in the West can be understood and appreciated to the full only by those who are acquainted with western conditions and have some knowledge of the rapidity with which new towns spring up in the districts through which new lines of railways are laid. In the east the railway follows the villages and towns and is the connecting link between towns and villages already established; but in the West the railway is the pioneer and the new towns soon follow the introduction of the railways. Witness the number of new towns along the main line of the Canadian Northern between Winnipeg and Edmonton. More than one hundred new towns will be founded during 1907 along the line of the Grand Trunk Pacific. This announcement has been made by the officials of the new transcontinental upon which work has been carried on in certain districts during the whole of the winter. Towns have been projected along some 790 miles of the G. T. P. line and it will be the policy of the new road to keep the towns about seven miles apart.

This development means great things for all branches of trade in the West and it accounts for the cheery optimism of the wholesale interests in spite of the hard winter, from the effects of which business has not yet quite recovered.

It means new supplies of all kinds, new building supplies, new builders' hardware. It means new accounts with new merchants, a new territory to be exploited by the wholesale and manufacturing interests. Small wonder that the wholesalers are optimistic; small wonder that they are building new and large warehouses.

In all lines of hardware the market is firm and the last year has seen advances in practically all lines.

Toronto Metal Markets

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, March 22, 1907

Basic of all markets are the metals and the position of these to-day is one of exceptional strength. During the week no changes have taken place in quotations and as the close of the winter season approaches stocks are rapidly being narrowed down to the minimum, the shortage in black and galvanized sheets in finished materials and in copper ingots being particularly marked. Much trouble is still experienced with the railways, jobbers being put to endless trouble and expense in following up delayed shipments. The railways are being aided, however, by the open weather.

During the past year there has been a tremendous consumption of ingot metals, with very marked advances noticeable on every one. On finished materials the advance is not so large as, while the cost of the raw material has been much higher, the greatly increased output has enabled manufacturers to produce cheaper, the savings in this direction going to keep down the price of the finished article.

The change in the tariff has had little effect on the market, as while duties have been adjusted to keep out all American metals and bring in the British articles on a free basis, this has been counteracted by the higher freight rates necessary to the inland points and the general advance in prices.

A few weeks ago there was much talk of a break in the American iron market. As the year opened there was talk of railroads stopping buying, contracts being cancelled and shipments postponed. Pig iron was to drop heavily, according to the report, but the market withstood the efforts to break and every week that has gone by has added to the strength of the situation. The iron business is trading on its prospects for the balance of this year, but after that little can be said with confidence. It is safe to say, however, that the railroads, which are the greatest buying factors, cannot stop purchasing, as it will take them years to catch up with the demand for rolling stock required by the wonderful expansion of trade and pioneer work being done in opening up new territory.

A year ago Hardware and Metal predicted that for iron, copper and lead, "higher prices will have to be paid later on," while for tin we said that "present prices will be well maintained." That our view of the situation at that time was very accurate can be seen by the figures we give in the table which follows. It will be seen that there has been a steady advance all along the line, the comparison of the figures ruling to-day, with those of two years ago showing the remarkable jumps which have been made and the reason for the increases in the hardware, paint and plumbing markets. The figures for the past three years for the current week are as follows :

	1905	1906	1907
Summerlee pig iron.	$20.00	$25.00	$25 50
Middlesboro do	21.00	21 50	23 50
Londonderry do	16.50	21.50	24 00
Bar iron	1.80	2 10	2.30
Ingot tin	.32	40	.45
Bright coke plates	3.50	3.75	4.25
Ingot copper	16 50	20.00	27 00
Sheet copper	21 00	25.00	35 00
Brass sheets	23.00	23.00	30.00
Imported pig lead	3.50	4.50	5.60
Zinc spelter	7.00	7.25	7.50
Antimony	9.50	18.50	27.00
Black sheets	2.70	2.90	3 00
Canada plates	2 50	2.65	2 90
Galvanized sheets	3 90	4 50	4 50
Boiler tubes	8 50	8 70	9 50

With the market at its present high position it requires nerve to predict anything but a decline. We can see no reason, however, to look for a slump and while realizing that some metals, iron for instance, can hardly be expected to maintain its present position for the year 1908, we feel that the various ingot metals will hold firm and there will be not much difference in the prices quoted to-day than those which will rule a year hence. Copper, which has been the great feature of the markets of the past year is very scarce and in steadily increasing demand for electrical purposes. Lead is also scarce, with Germany and Great Britain buying from

Canada and other markets. The tendency of tin is still upward, and antimony is scarce with the demand on the increase. It is a sign of the times to note that consumers do not raise any serious objection to the advanced prices that have to pay, nor does it appear to be more difficult to effect sales in consequence. Possibly this is due to the fact that the boom in the metal trade has been widely published in the trade press so that almost everyone knows that metals have gone up, both in this country and in foreign markets.

The volume of business being done just now warrants the prediction that 1907 will be a monumental year with the greatest total on record.

Montreal Metal Markets

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, March 22, 1907.

When will the end come? Everybody seems to be asking the same question. In looking over the metal market reports for the past year, it's quite a surprise to see the actual advances that have taken place. It's only natural that this should be so, as the advances have been gradual, and not so noticeable as when we sum them in a bunch. Last year about this time we were quoting copper about 6 cents per pound less than we are at present. This is enough to make anybody who is interested in this metal sit up and take notice, as six cents on every pound bought makes quite a difference in the cost of a large shipment. Copper is not alone either in its mad course, ingot tin holding up its own end, with an advance of 4 or 5 cents during the year. Zinc spelter has also jumped up considerably in the past 12 months and the high figures are well maintained. Pig iron last year was also quoted at 3 or 4 dollars lower than at the present time.

There are no changes to report this week, most lines remaining firm. Tin fluctuated slightly during the week, but has steadied down again and prices remain as last quoted.

Copper remains firm and unchanged, with the shortage just as marked as ever. The past year has seen an advance of about six cents per pound.

Ingot tin has also jumped up considerably during the past year, an advance of 4 or 5 cents per pound being recorded. There are no changes to report this week, prices remaining the same and very firm.

Pig lead also jumped up considerably during the year, present prices showing an advance of about $1.10 per 100 lbs. over the same period twelve months ago. Prices this week remain firm and unchanged, although they weakened a little during the past week.

Toronto Hardware Markets

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, March 22, 1907.

Hardware trade conditions at present compare well with those of a year ago, demands are just as strong and profits are better. Advances in the prices of all lines have been made; wire nails and copper goods experiencing the greatest advance, mechanics' tools the least advance. Considering advances in price of all lines the average rate would be about 12½ or 15 per cent. Higher prices have not affected the demand and even greater demands are looked for this year than last. The hardware business was the best last year in history, and still a greater volume of trade is confidently expected this year.

The prices in silverware have advanced by 5 to 10 per cent., the advance being caused by a raise in the price of raw material and increased cost of labor. The demand for this line at present is as good, if not stronger than that of a year ago.

Cutlery also has advanced by 5 to 15 per cent.—15 per cent. is a conservative figure, as in one or two particular classes of goods the advance reaches nearly 25 per cent. The demand for this line at present is, if anything, more active than a year ago.

Tinware and enamelware have advanced in price by 10 to 12½ per cent. Copper goods have experienced a big advance, in most cases reaching 25 per cent.

Mechanics' tools have advanced very little, in any case not more than 5 per cent. The demand is strong and should, with the renewal of building operations, be much stronger. All heavy goods manufactured from iron have advanced in price, owing to a raise in duty, averaging about 5 per cent. A year ago there was a shortage in the supply of mechanics' and gardeners' tools, manufacturers being unable to supply the jobbers.

In many cases last year retail dealers repeated orders with the wholesalers, who had repeatedly to send back notices to them that the manufacturers were unable to fill the orders. Jobbers, therefore, had to hold over the orders. This year the situation is more favorable, retailers generally getting in their orders early, thus giving the manufacturers a better chance to get the orders filled.

There is a serious situation in the trade in bolts at present. Large orders are coming in to the jobbers who find that the manufacturers are able to fill only a small part of the orders, owing to the scarcity of raw material. The prices over last year have advanced very little. In some cases there is no change. 7-16 machine bolts a year ago were quoted at a discount of 55 and 5 per cent. The same discount is given at present, the scarcity not having affected the price. The prices of heavy hardware, as vises and anvils, have not changed.

Wringers, washing machines, and churns have been raised in price about 7 per cent. Screen doors have advanced from $6.50 for the walnut stained, 4-inch style, to $7.25, a raise of over 10 per cent. All lines of tinware, such as pails, lanterns, and stovepipes, have been raised in price, galvanized pails 5 per cent., stovepipes, 10 per cent., and lanterns nearly 50 per cent. A year ago the prices in lanterns were cut to pieces during the lantern war.

There has been little advance in the prices on binder twine. The demand is steady, a little stronger than last year, and the trade on the whole is in a very satisfactory condition.

There have been further advances in the price of copper nails and tacks. The new discounts are 30 per cent. and 25 per cent. respectively, making a difference from the discounts a year ago of 22½ to 25 per cent. Wire nails now are quoted at $2.45, making an advance of about 25 per cent. over that of a year ago. Wire has been raised about 10 per cent. over last year's price.

Prices on all lines of hardware have been raised, but the advances have not affected the demand and all prospects point toward an even greater business this year than that of last year, which was the greatest of all previous history.

It has been rumored that a 10 per cent. advance will be made soon in the price of hinges.

Montreal Hardware Markets

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, March 22, 1907.

In looking back over our hardware quotations for the past year, we find almost every line showing advances in prices. One man in a large Montreal jobbing house says that about the "only line in the hardware business that hasn't shown a big increase, is the salary line, which remains firm and unchanged at last year's figures." Most jobbers seem to think that the end is not yet and complain that they can't drive this fact into some retailers' heads. Dealers could often save quite an item on an order, if they would anticipate their wants a little beforehand, instead of waiting till they were completely out of the goods desired.

This week an advance has taken place on all lines of plain wire, the base price having gone up 5 cents per 100 lbs. This also puts up the price of wire nails 5 cents per keg.

Manufacturers are getting ready now to ship their twine orders, which have

been mostly all booked for the coming season. Prices remain firm and unchanged.

TORONTO PAINT MARKETS.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, March 22, 1906

The conditions of the paint and oil trade as a whole are at present more satisfactory than they were a year ago. Prices in every line with the exception of glass have advanced and the trade is in a stronger position owing to increased demand, with the prospects of greater building operations the coming summer. A great slump was experienced throughout the trade during January and February of this year, and a big trade must be done during March, April, and May to counterbalance this. The falling off was, of course, due to the enormous booking of orders last fall.

The prices in varnish have been advanced over those of a year ago. Pure orange varnish in barrels a year ago cost from $2.40 to $2.50. At present the prices quoted are from $2.80 to $2.90, an advance of over 16 per cent. The prices of No. 1 orange a year ago were from $2.35 to $2.45. The price at present is $2.50, an advance of about 5 per cent.

Turpentine has advanced in price, and with the scarcity in Georgia and the high cost of labor, there the prospects point toward a still greater advance, one prediction being that prices will reach $1.25 per barrel within twelve months. A year ago the price per single barrel was 98c. a gal., then considered a record figure, but now it is $1.02, an advance of 4 cents. Owing to the great scarcity and advancing cost, painters are looking about for substitutes. As a result, many substitues have been coming on the market, some of them being very inferior in quality and dangerous to handle, as they contain large mixtures of kerosene and benzine.

The prices in linseed oil also have advanced over 16 per cent. For 1 to 4 barrels, raw, a year ago the price was 55 cents, now it is 64 cents. The price of boiled oil has also advanced over a year ago about 10 cents.

A big advance has been made in the price of white lead, reaching almost to $1, over a year ago. With the advance in the price of leads there has been an increased demand for ready-mixed paints.

The tendency of prices on all lines in the paint and oil trade is upward with the exception of glass. The trade in glass is in a very unsatisfactory condition at present. Prices on both sheet and plate glass have declined. If there had been a decline in prices, that alone would have been sufficient to demoralize the trade, as it has done, but the conditions have been aggravated by advances in the cost of material. The selling price of plate glass now is 30 per cent. lower than a year ago, and sheet glass has declined 15 per cent. in price. The cost of material in the European market has advanced on sheet glass 15 per cent. and on plate glass 20 per cent. The reason for the price cutting by the wholesale dealers is that a great deal of friction exists and they seem unable to co-operate. At present, with the high cost of material and the price cutting, the wholesalers say there is little money in the business.

With the very notable exception of glass, the paint and oil trade at present is in a much better condition than a year ago.

MONTREAL PAINT MARKETS.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, March 22, 1907

The past year has been characterized by a buoyancy in almost every line. There is scarcely an article in the paint, color and varnish departments that has not yielded to the lively conditions of trade and stringency or shortage in the primary markets.

Paris green started off with an advance of about 10 cents per pound over the average figures of past years. White lead, the greatest staple in the paint market, was forced upward by the advance in pig lead and changed customs conditions.

Linseed oil pursued the even tenor of its way without notable change for a long time, but owing to the duty being placed on flaxseed, and a sharp increase in the tariff on the oil itself, figures jumped 5 cents per gallon on the oil itself, and this naturally gave a strengthening disposition to liquid paints, varnishes, putty, zinc, ground colors, and all the sundry items into which linseed oil enters.

Trade has been forced to meet these changed conditions. Some dealers have been tardy in making their advances, but it is generally conceded that the advances were justified and inevitable.

A fair amount of linseed oil is being shipped and as stocks are light, it is just as well that there is not a heavy call.

Turpentine has advanced 2 cents per gallon, bringing the price of single barrels up to $1 per gallon, and a fair movement is reported.

Window glass, putty, ground white lead and shellac gums and varnishes are all in active demand at this season.

TORONTO PLUMBING MARKETS.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, March 22, 1907

On the whole there is very little difference in the conditions of the plumbing trade now from those a year ago. With the advance of about 10 per cent. in the cost of material and labor there has come to counter-balance this increased building operations and demand for a higher class of work.

The most striking feature of the markets this past year has been the increasing scarcity of iron pipe, and if the scarcity continues the trade in a short time will be confronted with a very serious difficulty, as serious almost as a scarcity of food supplies. With the scarcity have come advances in the price of iron pipe. A year ago one inch black pipe was quoted at $4.37 per 100 feet; at present the price quoted is $5.12, an advance of over 17 per cent. On galvanized pipe a year ago the price quoted for 1-inch pipe was $6.02, at present the price is $6.77, an advance of 12½ per cent. Great difficulty was experienced by Canadian producers last fall in procuring skelp from Pittsburg, and owing to this they are now from 4 to 6 weeks behind with their orders. During the slack months January, February, and March the supply houses always endeavor to fill up their stocks in anticipation of the spring trade, but this year they have been unable to secure deliveries and stocks are remarkably low for this season of the year.

Lead pipe also is scarce, and prices have sharply advanced. A year ago the price quoted was 7 cents a pound with 20 per cent. discount. Now, the list price is the same, with only 5 per cent off.

The price in soil pipe and fittings has changed very little. There has been a good deal of cutting. Owing to the high prices in iron an advance has been made since the first of this year.

Iron pipe fittings have, during the past year, advanced in price. The discount quoted a year ago was 65 per cent., now it is 57½ per cent., a decrease in discount of 7½ per cent. Malleable unions quoted a year ago at 65 per cent. are now quoted at 55 and 5 per cent. discount, making a stiff advance in price.

Galvanized iron range boilers quoted a year ago at $4.75 for the 30-gallon line, are now quoted at $5.00, making an advance of about 5 per cent.

Prices of solder have advanced from 23 cents for half-and-half bar solder in Toronto, to 27 cents, making an advance of about 20 per cent. Wiping has advanced from 20 cents to 23 cents, an advance of 15 per cent.

Advances have been made in enamel ware, owing to the increasing cost of

iron and other materials as well as the advance made in the duty last fall from 30 per cent. to 35 per cent. A year ago the regular price for 5-foot standard sheet plate E I bath tubs was $20.65; now the price quoted at present is $21.55, an advance of about 3 1-3 per cent. The discount on enameled closets and urinals a year ago was 20 per cent., at present the discount quoted is 15 per cent.

On nearly every line of plumbing goods there has been an advance, with the exception of radiators, the prices of which have experienced a good deal of cutting owing to the strong competition resulting from new manufacturers coming into the field. The same condition has prevented hot water boilers from being advanced in keeping with the higher cost of iron. It is said that radiation materials are now being sold at the lowest price in history.

MONTREAL PLUMBING MARKETS.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, March, 22.1907.

During the past year, all lines of goods, the plumber has occasion to handle, have jumped to a figure previously unknown in plumbing circles. The prices on the sheets from which iron range boilers are made have advanced about 25 per cent. during the year, not to mention the material from which the copper article is manufactured. Spelter also influences the manufacturing of galvanized boilers, as the galvanizing depends greatly on this material.

In lead pipe there has also been a pretty stiff advance, the prices in 1905, in the English market, being £12 17s. 6d. as against £19 10s., or an advance of about 30 per cent. in two years.

One year ago, iron pipe was quoted at a base discount of 73 1-2 per cent. against 69 per cent. to-day, with prospects of higher prices in the near future. The same advance applies to pipe fittings, soil pipe, etc.

In brass fittings, the advance is even more marked than in the case of iron. A few years ago, brass was selling at 12 cents per pound, to-day it costs 27 cents, and even at this high price there is a decided shortage.

Manufacturers were never so crowded with orders as at present. They are practically independent. It's a case of pay the price or leave it, orders being booked as far as six months ahead.

The advance in iron also affects all lines of heaters, boilers, radiators, etc., and even here the brass valves, etc., cost more than formerly, so it's easy to see that these lines cost the consumer quite a lot more than formerly.

All the sheets used by range makers for the manufacture of steel ranges, camp outfits, etc., have advanced about 25 per cent., or 25 per cent. on the steel sheets, and about 20 per cent. on the tin ones.

The pig iron used for making the castings for enamelware has also advanced about 25 per cent., not to mention the chemicals, etc., entering into enameling process, which have also been boosted up.

We mentioned last week that all lines of iron pipe up to 3 inch had advanced about 4 per cent. The exact figures are not made up, but the advance will not quite reach the 4 per cent. mark, being exactly 3¾ per cent.

Nova Scotia Hardware News

Halifax, March 13.

The stove trade was brisk all the year, and the outlook is excellent. There is a general demand for stoves and ranges. James Hillis, of the firm of James Hillis & Son, who operate a large foundry at Halifax, says that business was never better. The firm has been rushed so that the present plant is not large enough for the business, and they contemplate extending it as soon as possible. The firm has lots of big orders, work being in sight for the best part of the summer. Among the big contracts on hand are iron stairways for the six story Canadian Bank of Commerce, and iron stairways for the four story Chronicle building. In addition, the firm has the contract for the iron work at the new railway roundhouse, a portion of which includes 150 iron columns weighing a ton each.

Jobbers report that enamelware is finding a ready sale on this market. As the quality of the various lines improves, the demand increases.

Reviewing the trade of the past year a leading jobber states that the business broke all records. Trade was good in all lines, the increase in builders' materials being most noticeable. There was a falling off in the sales of mining supplies, but otherwise the business was most satisfactory from every standpoint. Up to the present, no large shipments have been made, but the bookings ahead for the spring give promise of equalling those of last year.

The jobbers are now busy filling orders for lobster supplies, large quantities of which are sent out from Halifax during March and April. Most of the buyers had been holding back for the new price on rope which was made a week ago, and as a consequence, this line of business is a little slower than usual. Rope for lobster traps only is quoted at 14¼ cents base, for the best Manila, and to obtain the rope at these figures the seller has to make a declaration to the Consumers Cordage Co. that the rope is for lobster purposes only. The size of the rope is from six-thread to one-half inch. The Consumers Company is forced to quote the above figures to meet the competition of the American rope manufacturers, since the coming into force of the new tariff. The lobster men also use large quantities of ingot tin, which is quoted at 47½c. Pig lead, English, is quoted at $6 per hundred, I. C. 14 x 20 coke is quoted at $4 per box.

It is reported on good authority that the Sydney Foundry and Machine Works anticipate adding to their present works a steel plant for the manufacture of all kinds of steel castings and the putting of the entire works under the head of a joint stock company. This will give employment to a large number of Sydney men.

The electrical business is good. Nearly all new buildings now erected in Halifax are wired for electricity. The severe frosts of the winter have made business brisk for the plumbers. The large number of new buildings which will be erected during the summer will also keep the plumbing trade to the front.

Western Ontario News

London, Ont., March 20, 1907.

Local retail hardware dealers, busy men though they are these days, are not without their trade grievances. Not the least of these is the habit certain jobbers have of selling direct to housekeepers at wholesale prices, thus coming into ruinous competition with the retailer. Discussing the matter with your correspondent, a Dundas Street merchant said: "Almost every housekeeper has a friend in some jobbing house or other, and those who haven't have a friend who possesses such a friend. Consequently when some article is needed in the household a deal is worked with the jobber, directly or indirectly. Why, I was in a certain jobbing house recently, and heard one of the head men shout to a clerk: 'Send to Mrs. ——, —— Avenue, a Bissell carpet sweeper at once,' and—this to the bookkeeper—'Mrs. ——, one Bissell sweeper, $2.' Now, I am forced to take a dozen of these sweepers before I can get them at that price, and have to wait the pleasure of the jobber before they are delivered. And, mind you, these jobbers are far less accommodating to the trade than they are to the private inhividual. Only recently, when I had sold a good order to a customer, and asked the jobber to deliver it to the purchaser instead of my store, he refused to do so. But in the case of a private buyer, the delivery is most

prompt. The result has been that so far as I can, I am now buying at wholesale from the manufacturer."

Another grievance aired by this dealer was the methods of a certain city merchant who, besides dealing in notions, carried quite a line of hardware. His plan is to sell certain goods—such, for instance, as nails, lock-sets, etc., at cost price, merely as a bait and an advertisement of other goods. "Oh, I tell you," concluded the merchant interviewed, "this business of ours is not all cream and peaches."

Jobbers, however, are not the only sinners in this respect. A city plumber delights to tell the story of a certain citizen who purchased a force pump from the manufacturer. The latter of course would not undertake to put it up and the buyer himself couldn't do it. So he went to the plumber, who sent up a man to do the work. "A new pump, eh?" remarked the workman. "Where did you get it?" he innocently asked. "At So-and-so's," naming the manufacturer. "And I tell you," grinned the plumber, "that man paid dearly for his pump by the time we got through with him."

Such is business!

There is also a possibility of a rolling mill being started in Amherst by the Rhodes Curry Company. This company uses an enormous quantity of nails during the run of a season, and it is stated that they have for some time past been purchasing as much as eighty tons per week from the rolling mills of Dartmouth.

PUBLIC SPIRITED HARDWARE MERCHANTS

NO. 10

In the recent municipal elections in Ontario there were several well-known hardwaremen elected to help guide the destinies of the different towns and cities. Amongst these was J. J. Coffey, of Barrie, known to many of his fellow-tradesmen on account of his acting as guard of one of the doors at the big convention of the Ontario Retail Hardware Association in Toronto last May. If Mr. Coffey guards the interests of his Barrie constituents as faithfully as he looked after retail association interests at the convention he will do credit to the hardware trade and to himself..

Mr. Coffey guaduated from the hotel

J. J. COFFEY, Barrie

Elected Alderman in that Town in the recent Ontario Municipal Elections.

business into the hardware store he now conducts, circumstances making it necessary for him to look after an investment he had made and take over an already established hardware business about a year ago. His hotel interests were transferred and he is now devoting all his time to the hardware store. Having learned the advantages of associations in his former vocation, Mr. Coffey lost no time in affiliating with the newly-formed retail hardware association.

HARDWARE TRADE GOSSIP

Ontario.

F. G. Deustadt, Gorrie, has sold out to R. Carson.

H. Ellison, hardware merchant, of Port Stanley, is on the sick list.

J. M. B. Stephens, Bradford, is opening up a hardware store in Newmarket.

The works of the McGregor, Banwell Fence Co., Walkerville, were destroyed by fire this week.

McDonald & Cragg, hardware merchants at Florence, are succeeded by Cragg & Sinclair.

W. O. Greenway, of Montreal, called at the Toronto office of Hardware and Metal this week.

Burglars stole about $100 worth of goods from the hardware store of F. C. McMaster, Havelock.

W. L. Allen, hardware merchant, Cobourg, has awarded the contract for the erection of his new residence.

W. Craig, of the Yokes Hardware Co., Toronto, is leaving for the west to accept a position with a Winnipeg hardware firm.

J. A. French, of Langtree & French, implement dealers at Stirling, will retire from the business, owing to ill-health.

J. A. McDonald, of Tara, has purchased the interest of his late partner, J. H. VanDusen, in the hardware business.

I. Huffman, a prominent citizen of Kingston, and traveler for E. Chown & Sons, of that city, died suddenly on Tuesday.

Frank R. Oliver, formerly of Saskatoon, has been appointed provisional liquidator for the winding-up of the Perrin Plow Co., Smith's Falls.

A. Desmarchais, manager of the plumbing department of Carter Bros.' store, Picton, was in Toronto this week attending the A.O.U.W. convention.

E. B. Fowler has been appointed manager of the Rapid Tool Co., Peterboro. He was formerly secretary-treasurer of the Canada Cordage Co.

H. L. Cameron, of Cameron & Cameron, hardware merchants, Beaverton, is running for the presidency of the Canadian Lacrosse Association. May he win "hands down."

Mayor Ashdown, of Winnipeg, is in Toronto this week on a business trip.

F. R. Oliver, manager of the Perrin Plow Co., Smith's Falls, has purchased the Gould foundry and plant in that town.

The Ontario Plate Glass Importing Co. have commenced business at 20 Wellington street west, Toronto. Chas. Gray, formerly of the Queen City Plate Glass Co., is at the head of the new concern.

Quebec.

G. R. Hutton, hardware merchant and grocer at Richmond, is dead.

F. Malouin's tinshop, at Coaticook, was destroyed by fire last week.

The Damphouse Hardware Co., Louiseville, has been registered.

The Colonial Engineering Co., Montreal, has been incorporated, with a capital of $125,000, for the manufacture of electrical machinery and fixtures. The promoters are: V. E. Mitchell, E. F. Surveyer, A. Chase-Casgrain, J. W. Weldon and S. J. LeHuray, all of Montreal.

Western Canada.

J. L. Evans & Co., hardware merchants, Miniota, Man., are selling out.

Hamilton Bros. & Co., hardware merchants at Tantallon, Sask., have sold to Hooper & Co.

NEW CANADIAN FACTORY.

The Hardy & Dischinger Co., Toledo, wish to start a Canadian branch for the manufacture of paints and lubricating oils. They wish to locate in Toronto, and if the city will give five and a half acres, they will invest $20,000 or $25,000 and employ fifteen or twenty men.

CURRENT MARKET QUOTATIONS.

Mar 22 '07.

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate.

This is the Mark that Means Something

It is the distinctive brand of genuine Armstrong Stocks and Die and Pipe Fitters' Tools.
No "Armstrong pattern" or "just as good as Armstrong" have this stamp. Don't buy anything in this line that hasn't this brand as it is the mark of genuineness.

THE ARMSTRONG MANUFACTURING CO.,
292 Knowton Street, Bridgeport, Conn.

A Certain Sense of Satisfaction

goes with every MERRELL PORTABLE HAND MACHINE, PIPE THREADING and CUTTING MACHINE. We build them that way.

For doing ALL kinds of threading—under ALL conditions—labor trouble and faulty material included—where speed, durability and ease of control count for something, our word to you is to investigate the MERRELL.

Whether it be stationary or portable—hand or power driven—30 DAYS FREE TRIAL must prove conclusively that your choice should be the MERRELL.

This Portable Hand Machine has encased gears, MERRELL standard quick opening and closing die-head, and the latest improved Cutting-off Knife.

Let us tell you more about this machine—The Chasers, Vise and the large range of work covered.

Success Insurance

Mr Dealer! You are not in business for glory—but money. If it were possible for you to take out a policy assuring success would you do so? You certainly would. You can secure a guaranty of success in your line of business by featuring

ARK BRAND PAINT and MURESCO

(Twin Trade Winners)

because they have demonstrated their trade-pulling qualities beyond the shadow of adoubt.

Ark Brand is something infinitely superior to the ordinary paints—it matters not how loudly they are announced. It is the product of a combination of pigments which most exhaustive tests have proven to be the most durable for painting purposes combined with Pure Linseed Oil, which assures lasting and lustrous beauty to any surface to which it is applied.

Muresco is simply incomparable to any other Wall Finish on the markets of the world. Since it was launched on the market eulogy after eulogy from practical men have poured into our three offices.

Muresco is used by the best decorators in Canada and the United States and every user strongly endorses our Wall Finish right over his signature. The Quality and Durability of Muresco lifts it far above the next best Wall Finish on the market.

It does not matter how prosperous your business may seem, we guarantee that it will become far more prosperous if you happen to be one of the few who have failed to send along that trial order. Do it now.

Ark Brand Paint and **Muresco Wall Finish** must make good all our claims or we lose. You take no chances. Can you suggest a fairer way of doing business?

Now's a good time to send us your address for the actual evidence of the real goodness and durability of **Ark Brand** and **Muresco.**

BENJAMIN MOORE & CO., Limited

(Formerly The Francis-Frost Co., Limited)

New Offices and Works: TORONTO JUNCTION, CANADA

NEW YORK, CHICAGO, CLEVELAND, CARTERET, N.J.

AN IMPORTANT CHALLENGE

"WORDS ARE GOOD IF BACKED UP BY DEEDS"

Just remember Roosevelt's famous utterance and if we fail to give you reasonable proofs of the solidarity of our claims, well — pay no attention to this pronouncement.

We manufacture ***Varnish Turpentine,*** and we challenge one and all competitors to place any other turpentine on the market nearly as good.

Our ***Varnish Turpentine*** is produced by a secret and patented process and we guarantee it to be absolutely free from benzine or naphtha. Our

VARNISH TURPENTINE

dries as quickly as Spirits of Turpentine, by the same process of oxidation and evaporation, and positively cannot leave tacky varnish.

Our ***Varnish Turpentine,*** having a fire test forty degrees higher than benzine, naphtha or kerosene, is absolute and convincing evidence that it contains none of these. It works just like spirits but is infinitely safer.

We guarantee that every barrel of our ***Varnish Turpentine*** will do any work that spirits will do. If not–

RETURN AT OUR EXPENSE

We will mail you a long list of names of men in your business who have used it for years, and ***they are using it to-day.***

A FREE TRIAL—Prove the virtues of our ***Varnish Turpentine at our expense.*** It's heads you win, tails we lose. Can you suggest a fairer way of doing business?

WRITE TO-DAY—IT WILL PAY YOU

The Defiance Mfg. and Supply Co.

TORONTO - - - - ONTARIO

BLANCHITE

In the **UNITED STATES** Blanchite has in competitions and tests defeated all other paints. **We have the proofs.** Just take a few instances where tests of highest authorities have resulted in our products being specified :

The Hotel Belmont, N.Y., **and many other big N.Y. hotels.**
The New York Subway.
The Pittsburg Filtration Plant.
The Automobile Club of America.
AND VERY MANY OTHERS.

In **ENGLAND** Blanchite has been successful with the largest corporations, shipbuilders, decorators and others.

In **CANADA**, where we are an independent company with the same process, our factory did not open until after beginning of this year. Already the demand is keeping us hustling. We know what our goods are and we intend to place them with the highest class dealers in the Dominion. Some get in the habit of sticking to the same old brand, but even then we can convince, no matter how conservative. The most successful man is always on the lookout for **SOMETHING BETTER.** You, yourself, can be the judge and you know how much a superior article increases your business and how much easier it is to sell. We will co-operate in every way to increase our customers' business.

WRITE US FOR INFORMATION. A FEW AGENCIES LEFT.

THE BLANCHITE PROCESS PAINT CO., Limited

785 King St. West, Toronto, Canada

THE
Standard Paint & Varnish Co.
OF WINDSOR, ONT.

Acknowledged Leaders in the Manufacture of All Kinds of Paints and Varnishes.

The Jap Varnishes

Can be used in almost any case where a good elastic varnish is required for interior or exterior work. They will be found A1.

The Best is Not Too Good We Have It. Try us.

New Era House Paint

is an absolutely pure paint composed of carbonate of lead, oxide of zinc, linseed oil, turpentine, turpentine dryer and the colors necessary to produce the various tints and shades. It's as good a house paint as can be made. One gallon will cover 350 sq. ft., two coats. It wears the longest and appears the best. If your dealer has not got it, send direct to the factory for it.

All kinds of barn and machinery paints and varnishes. We solicit your enquiry.

Wagner's Carriage Paint

Is one of the articles that has no equal in Canada. It is made for repainting vehicles, "or any old thing" in doors or out doors, requiring a durable gloss finish.

Once tried always wanted.

You will be more than pleased with our

"Standard"

quality, price and durability.

Advertising that Hits the Mark

80% of ***SHERWIN-WILLIAMS ADVERTISING*** is aimed directly at the paint consumer. We do not shoot into the air and trust to luck that the shot will hit someone interested in paint. We single out each possible buyer and *make sure* of reaching him personally. ***THE SHERWIN-WILLIAMS ADVERTISING*** is to the individual, not to the crowd. It is personal advertising, not just general publicity. Thirty years of active paint advertising have shown us that this direct, personal method is the best for getting business in each community. Of course, we believe in general publicity, too, and each year we are using it more and more; but we first take care in our appropriations of the personal, direct advertising that reaches the real paint buyers in a town. General publicity can never take the place of this kind of work in its effectiveness.

All this leads to the point we want to make and we want you to appreciate—that *The Sherwin-Williams Agency* is growing more valuable every year. The dealer who handles our line not only sells the highest standard paints and varnishes, but has behind him all these advertising forces to help him build up a big, profitable business. Good quality goods, backed by our forceful and consistent advertising, have placed us and those who handle our products away ahead of all competition.

Here are the advertising shots that will *hit the mark and land orders for you.* Read these carefully—no other manufacturer is in a position to help you create sales with such advertising and selling helps.

SHOT No. 1—*To All Possible Paint Buyers.* Just before the painting season we mail to list of property owners furnished by the agent, a Calendar bearing his name. The calendar runs from one painting season to the next, and contains, besides the plates of colored houses, an envelope of paint samples. Each year there is a new design and our agent is given plans and methods for opening the paint season with a rush when the calendars are mailed.

SHOT No. 2—*To Those Who are Planning House Painting.* All through the year our branch advertising departments in the office nearest the agent send letters, booklets and mailing cards to all names he sends in of persons who intend to paint. The letters are not cheap, but are mailed under two-cent postage. They are a personal appeal and make sales.

SHOT No. 3—*To Those Whose Houses Need Painting.* The agent frequently sees houses badly in need of paint. The owners don't know it or are putting it off. When he sends their names to us we write them personal letters, and follow them up to induce them to see him about painting. These letters very often go where the agent cannot go himself.

SHOT No. 4—*To Painters and Contractors.* We want our agent to keep us supplied with lists of painters and contractors. To them we mail direct, good attractive advertising for our painters' specialties. We do this at regular intervals during each spring and fall. Besides we are ready to write personal letters and send literature to the painters at any time of year on any line of our goods that the agent may be anxious to push.

SHOT No. 5—*To Architects.* For these men, whose help and co-operation the agent so much needs, we publish a monthly magazine. It is artistic, humorous and practical. It's one of the few advertisements that architects really read. Many of them keep every issue on file.

OTHER SHOTS—Besides these five leading "shots," we work personally with our agents in many other ways to help them get "next" to the paint buyers. Here's a partial list:

Two big special paint and varnish campaigns—Spring and Fall—for local use.

The handsomest line of store advertising in the field.

A big assortment of electrotypes for newspaper, hand bill and program advertising.

Posters, fence signs, field signs, etc., for outdoor advertising.

A monthly magazine, brimfull of useful hints for building business.

An 80-page book of catchy and up-to-date window trims.

Special cut-out displays for windows.

The special service of our editorial and art departments in the preparation of any advertising the agent may be doing for any department in his store.

MORE SHOTS—Besides all this (and dozens of other direct advertising features not mentioned), we keep up a big campaign of general publicity—railway bulletins, posters, etc.—to help make The Sherwin-Williams Co. widely known to all people. Within another seven months a national magazine campaign will be added to this.

This describes briefly our advertising helps and how we go after business for you. Write us *at once* for our agency proposition. Let us tell you what an *attractive offer* we can make you and how you can get the paint and varnish business of your locality with *The Sherwin-Williams Line.* Address:

THE RIGHT PAINT TO PAINT RIGHT!

ALABASTINE

is a high-grade proposition.

ALABASTINE

is the most saleable Wall Coating in Canada. "We keep it, but don't sell it," is never said of **ALABASTINE**. You can win and keep the confidence of customers with **ALABASTINE.**

ALABASTINE

is standard, the demand is increasing, and this season every Canadian home in which a paper or magazine is read will have **ALABASTINE** brought to their notice as never before.

ALABASTINE

obtains new and retains old customers.

Our publicity campaign also includes a liberal supply of tastily printed literature, handsome show-cards, hangers, etc.

In our 32-page pamphlet **"HOMES HEALTHFUL AND BEAUTIFUL,"** we show illustrations in colors of actual **ALABASTINE** decorations. This is without doubt the finest advertising booklet in the trade. Dealers receive copies free, the public pays 10c a copy.

ALABASTINE

is the best, and the best is the cheapest.

Have you ordered yet? The season is now on, and a well assorted stock assures good sales.

Manufacturers of

HIGH-GRADE

BRONZE POWDERS and LIQUIDS

Montreal Toronto

Works at VALLEYFIELD, QUE.

The superiority of **"Sterling" Pure Prepared Paints** is explained by the materials used and method of their manufacture.

THE BASE.

White Lead. For body, density, free-working qualities.

Zinc White. For temper, weather-resisting properties.

Not a "slap-dash," "hit or miss" mixture, but the scientifically correct combining equivalent of each.

THE VEHICLE, or Thinner.

Kettle Boiled Linseed Oil. For toughness, elasticity.

Turpentine. To assist in making the paint easy-flowing.

Japan Dryer. In sufficient quantity only to secure proper hardening.

THE COLORS USED IN TINTING.

The purest, strongest and most permanent to be found in Canada, the United States and Europe.

The best machinery, modern processes, intelligent, experienced workmen, competent supervision.

The net result of all of which is that **"Sterling" Paint** is **"Sterling" in name, "Sterling" in quality.**

Sell Your Paint at a Profit

Refuse to sell paint that you can't make a good profit on.

No use to sell inferior paint, either. This might pay you for a while, but you lose in the long run.

To make a success of your paint department, you must remember one important point at least. That is, to sell paint that leaves you profit enough to pay for your trouble, and at the same time, of such a quality that your customers get their money's worth.

Jamieson's Floor Enamels

We make these enamels in any color desired. Their beautiful finish, wearing qualities, and freedom from that stickiness which is common to most floor **PAINTS**, put them in a class by themselves.

Ask our prices on the following lines:

Are You After More Business?

We have made a Book of Unique Cuts for Advertisers

It contains proofs in color of the quaintest, oddest and most original cuts you ever saw.

Intended for people in search of the unusual or something different that attracts attention and holds the interest.

For the use of advertisers who would appreciate dashy, brilliant and artistic illustrations for pamphlet covers, circulars, mailing cards and newspaper advertisements.

They have been prepared by our Mr. Gibbs who for 10 years designed the world famous National Cash Register advertising.

There are 32 pages to the book, showing about one hundred cuts, together with suggestions for reading matter to use with each cut. The printing of the book alone is a work of art, as it is made in combinations of brilliant colors.

Price 25c (send stamps). It is easily worth ten times that amount for the ideas and suggestions alone that it contains. One advertising man in Chicago saw the rough proofs of this book and ordered $50.00 worth of cuts on the spot. To quote his expression:

"I never saw such remarkable cuts in all my life. I can easily use $200 worth. They are not only beautiful and most unusual, but they have strong advertising value."

The cuts sell for $1.00, $2.00, $2.50, $3.00 and $3.50 each in sets of two-color plates. They are all ready for the printer.

Send your 25c for a copy of this book. Get the book even though you may not need the cuts. If you are fond of good advertising and admire the unusual, you will find the 25c you pay for this book an excellent investment.

The Patterson-Gibbs Co.

Advertising Engineers

Heyworth Building, Chicago

Wa-ko-ver Floor Stain

A Stain and Varnish Combined

This is a line every dealer should have for his Spring Trade. Not because we say so, but because it is a line that you can absolutely guarantee to give entire satisfaction.

Wa-ko-ver Floor Stain is essentially a colored varnish of such remarkable toughness and elasticity, that although wood treated with it may dent under a blow, the finish will give without cracking.

Write for booklet showing assortment of shades. Our proposition mailed free on request.

ADVERTISING IS THE "ADVANCE GUARD" OF BUSINESS

Let us go "On Duty" for you.

Why are you reading this?

The **Illustration** and **Heading** caught your eye?

Well, we can make **YOUR ADS.** so strong and attractive that **THEY** will catch the Public's eye and help to increase your sales.

OUR BUSINESS

is to produce IDEAS, ILLUSTRATIONS and COPY along any line of advertisement.

Send us particulars about your business or the special article you want to push, and in a few days we will mail you finished sample ads. along your line and then you can judge for yourself if we could help you. This costs you nothing.

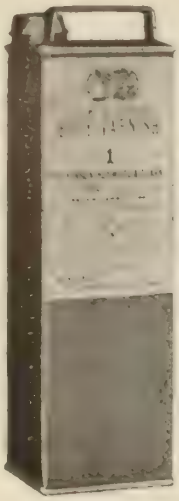
We can advise you what special line to go in for, or if you have made up your mind already, you can tell us whether it is

Newspapers Trade Journals Mailing Cards Advance Cards
Street Cars, Booklets or Posters, Etc., Etc.

REMEMBER

The more details you can give us the better chance we have of getting you up something really good. We can't quote prices now, as every job we get is so entirely different but we send prices with samples.

IT COSTS YOU NOTHING to test our work right along your own line and we will be able to save you a lot of worry over your advertising.



ALL OUR WORK IS ORIGINAL and we keep nothing in stock; any job done for you is done absolutely for you alone.

Write to-day, or if you are in TORONTO, ring us up.

LIQUID MARINE PAINTS

ANCHOR

Anchor Liquid Navy Inside White

This flat White Finish is specially prepared for Yacht and Cabin use. A snow white Paint with no gloss.

Anchor Liquid Marine Zinc White

dries hard and has great lustre and covering power. It withstands the action of sea water, and is an absolutely permanent White, unaffected by the gases of the atmosphere.

Anchor Liquid Marine Black

s the glossiest, blackest and most permanent, quick-drying ship's black in use to-day.

Marine Light Green,
Marine Green,
Marine Green Boot-Topping,
Marine Dark Green Verdigris,
Anchor Liquid Marine Greens

constitute the greens that are usually required for Marine purposes. They dry quickly with a fine lustre, and are as durable, both as to wearing properties and as to color, as they can be made.

Anchor Liquid Marine Mast Color

dries quickly, forming the smooth, elastic, durable coating so necessary for this purpose.

Anchor Liquid Marine Seam Paint

The best Composition for filling Vessel seams after being caulked. Being elastic, it will expand and contract with the swelling and shrinking of the wood.

Anchor Aluminum Paint

produces a lasting surface of silvery white. Is being more and more used for marine purposes, being specially adapted to use on ventilators, gas fixtures, furnaces, pipe coils, cabin fixtures and the like. It does not tarnish.

Marine Red Boot-Topping,
Marine Salmon Boot-Topping
Marine Buff Funnel,
Marine P. & B. Funnel,
Marine Plant Indian Red,
Marine Battle Purple,
Marine Lower Hold Composition,
Marine Red Oxide.

ANCHOR MARINE PAINTS are put up in cases of 10-1, 20-½, or 40-¼ Imperial Gallons. 6-Gallon Cases furnished when necessary.

Oxidized Deck Paints

These Paints are made to withstand exposure and the wear of washing

Pearl,
Light Slate,
Dark Slate,
Light Nile Green,

BIGGER OIL PROFITS

Are you making any profit on your oil business? Are you making all the profit you ought to make? Or are you losing oil and money through leakage, evaporation, over-measurement and other causes that always accompany the use of the old-fashioned tin tanks or leaky barrels?

Cut No. 1---Cellar Outfit
For kerosene and similar oils.

You can stop these losses at once and make a good profit on your oil by simply installing a BOWSER SELF-MEASURING OIL STORAGE OUTFIT. With the Bowser these losses are impossible, because the tank is leak and evaporation proof and the pump accurately measures any desired quantity and pumps it directly into the customer's can.

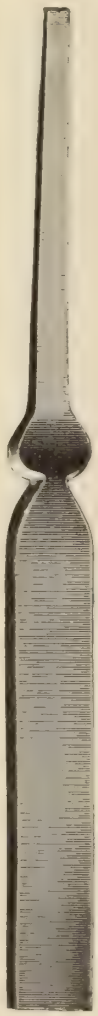
If you want to sell clean oil from a clean store, and at the same time make a good profit, you want a Bowser. Write for free catalogue V. which has full descriptions of the many Bowser Outfits.

S. F. BOWSER & CO., Inc.

66-68 Fraser Ave. **Toronto, Can.**

HORSE THE "C" BRAND NAILS

The Material



we use is a special quality of steel nail rods, made for our purpose in Sweden, where the best and purest iron ores in the world are obtained. From these high quality ores our nail rods are made, by the Siemens-Martin process, using wood charcoal as the fuel—that being the finest; the highest quality of material obtainable is the result.

All our nail rods are subjected to exacting chemical and physical tests to ensure their being up to our required standard. The tensile strength of the nail rods used by us, is indicated by the average tests, to be equal to 55,000 lbs. per square inch, with an elongation of the test piece of 35% before being ruptured.

Forty years' experience in the use of Swedish iron and steel for the manufacture of horse nails, confirms us in the belief, that there is no better material known, or used for the purpose of making horse nails, by any maker in the world.

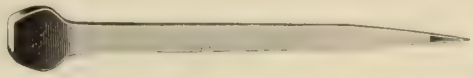
Canada Horse Nail Company
MONTREAL

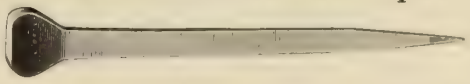
HORSE THE "C" BRAND NAILS

The Process

we use for our **"C"** brand horse nails, is the old reliable and most natural one, known as the "hot-forged" process. The nail rods are first heated to a white heat, and then forged by a mechanical process from the end of the rod. This process is distinguished from that used by some other makers, by which the nails are drawn or reduced to the required size from the rod while cold—no heat being used. In the latter process, the head has to be "upset" cold, and the mechanical force which is necessary to form the nail from the small section of rod, causes the material to crystalize at that point, with the result that they break off more easily in the neck, and will not stand the hard usage, or give as long service as "hot-forged" nails made from an equal quality of material.

Canada Horse Nail Company





MONTREAL

HORSE THE "C" BRAND NAILS

The Nails

we have been making in Canada for the past forty years, afford the best testimony to their merits. They have always been accepted as the standard for pattern and quality, and commanded the largest sale.

We claim without boasting, or disparaging the product of others, that there are "no better horse nails made in the world" to-day.

Our Oval  pattern still has the largest sale, but for those who prefer the "Countersunk"  pattern we invite a comparison between it and the " Regular " head of others, especially in a comparative test of quality at the most vital and important point,  the neck of the nail. You cannot get equal results from any "Cold-Process" nail. We make all sizes, from No. 1 to No. 14 inclusive.

Our nails are only sold in boxes bearing our name in full, and registered trade mark, the single letter **"C."** Refuse all substitute brands said to be "just as good." Insist on getting what you order.

Samples and quotations on application.

Your preference in ordering **"C"** brand respectfully solicited.

Canada Horse Nail Company

SATISFACTION

comes from the use of an article that is made to suit.

A satisfied farrier is always the result of the use of

"M.R.M." HORSE SHOES

The reputation they have earned is due to the strict supervision maintained throughout the process of their manufacture.

MATERIAL used is the best that can be procured for the purpose.

SHAPE required in a perfect shoe has been our special study, and the farrier has less fitting to do in shoeing a horse with "M. R. M." Shoes than is required with most other makes.

CREASING and **PUNCHING** are done in such a way as to insure the proper setting of the Nail.

FINISH of our shoes is clean and smooth, and stamps them as a high-grade article.

"M. R. M." HORSE SHOES are as near perfection as human ingenuity can bring them.

When placing your order for Shoes, specify "M. R. M." and you will get the best.

Amatite Should cover every FARM BUILDING

If you are looking for a substantial and satisfactory ready roofing you will find that Amatite answers your requirements better than any other.

You will also find that it costs *considerably less* than most of its competitors. Other roofings add to their cost every year or two, because *they require constant painting*. Amatite *costs nothing* to keep up. It has a *real mineral surface* on the outer side, which

takes the place of the usual waterproofing coat of paint. You do not have to examine your Amatite roofs every year for leaks, or paint them after a hard winter. Amatite will protect your buildings thoroughly and perfectly year after year, winter and summer, without any attention or bother after it is once laid.

If you have roofings now on any of your buildings that require painting every year to keep them in good repair, the cheapest thing to do is to cover them over completely with new roofs of Amatite as soon as they begin to leak. Amatite is easy to lay and costs so little that it is better economy to put it on and be free from bother, than to worry along with the kind of roof that requires constant attention.

FREE SAMPLE Let us send you at once a SAMPLE of AMATITE and a Booklet of information about it. We want you to see how much better it is than the kind that has to be painted

SEE THE KNOT ?

The principal feature of any woven wire fence.

Wonderful for its simplicity and effectiveness.

Overcoming the faults found in other fences.

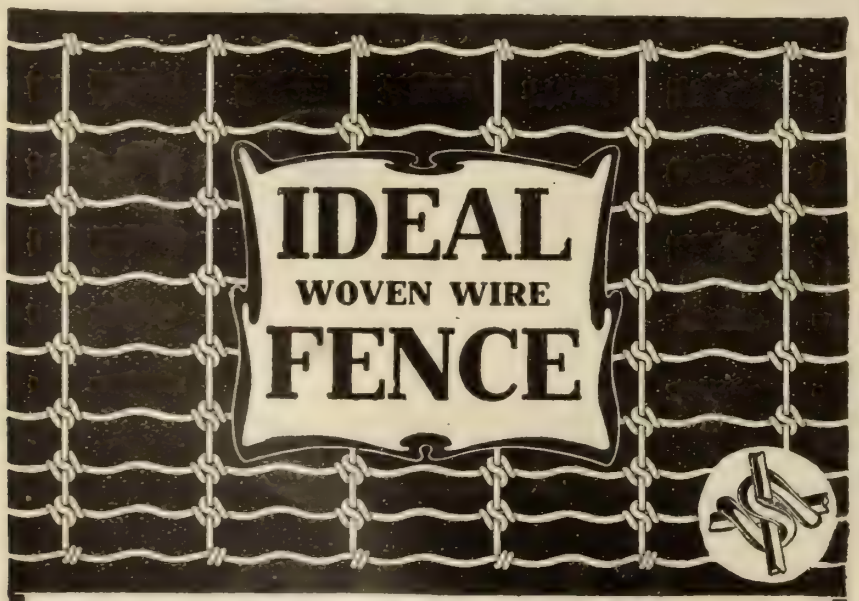
Without a weak feature. Staple as nails.

Exclusive territory to pushing hardware dealers.

Apply at once, and we will tell you how some merchants double their sales.

The Anthony Fence Company
Limited
Walkerville, Ont., Canada

Medium Temper Stays Never Break



Of course they don't! It's the "extremely" tempered stays that break.

You only have to feel a piece of **DILLON FENCING** and then feel a piece of other make to note the difference in the "Dillon".

The strand wires all being High Carbon Hard Spring Wire and 500 lbs. stronger than is ordinarily used, provide against the possibility of breaking. The stays being a little softer than ordinary hard wire also insures their not breaking and makes the "Dillon" the strongest fence on the market.

THE OWEN SOUND WIRE FENCE CO., Limited
OWEN SOUND, ONT.

Sold by {**Messrs. Caverhill, Learmont & Co., Montreal**
{**Messrs. Christie Bros. Co., Limited, Winnipeg**

Why not sell a fence that will advertise your business? Ideal Fence makes people stop and take notice, and it stands inspection.

Ideal is the standard Farm and Railroad Fence of Canada. Big, strong wires—all No. 9,—heavily galvanized and firmly locked. See how the patent lock grips uprights and horizontals together at every crossing. No chance for slips. Wires are gripped on five bearing points.

Good margin in Ideal. We want one live man in every locality. Write for catalog and Dealer's Terms.

ONE CENT

Is it worth one cent to know well not only the paints and brushes you are selling but also those your competitor is selling? A Post Card sent to our advertisers will bring you full information about their goods.

Persons addressing advertisers will kindly mention having seen this advertisement in Hardware and Metal.

THE PEERLESS WOVEN WIRE FENCE

The regular styles of **Peerless Fence** are made of heavily galvanized all No. 9 hard drawn steel wire because this grade has been found to be the very best for the purpose. It is not too hard nor too soft, but strong and elastic. An extremely hard wire breaks easily at a sharp bend, but very soft wire will stretch and has no elasticity. The **Peerless No. 9** is neither soft or brittle, but has the strong elastic qualities a good fence requires.

You do not want a fence to bag or sag at the center. **Peerless Fence** is strong and springy. The upright wires are stiff and are held in position by the **Peerless Lock.** This

lock holds securely without damaging the wires, and while it holds the cross and horizontal wires firmly together, the fence is elastic and will readily conform to any land surface. **Peerless Fence** offers the most complete resistance to all kinds of stock and it is impossible for them to get over, under or through it.

Write for our printed matter, telling how to build fences and make concrete posts.

A Winner all the Way

That's what they all say. You know how keenly and carefully practical men scrutinize anything new in the heating line, and during the last two years the SOVEREIGN has had more than the ordinary share of observation. That was to be expected because

THE

"Sovereign" Boiler

has reduced the heating problem to an exact and simple science. Its economic devices, making for boiler perfection, swung it into popular favor at once. Then there is a **Profit Story** in connection with the "**SOVEREIGN**" which shrewd Dealers find peculiarly pleasing.

Forward your address on a post-card and we'll mail you interesting facts.

OTTAWA, ONT.

American Twin Freezer

Freezes two flavors of Ice Cream or an Ice or Sherbet and Ice Cream at one and same time, in one freezer.

SOMETHING ENTIRELY NEW —NEVER DONE BEFORE.

THE can is divided in two parts by a vertical partition. One flavor is placed in one, the other in opposite side of can, in each of which the scrapers, etc., operate. The can cannot be turned as in old style freezers, because of the partition. It is therefore swung to and fro by a rocking motion of the crank. This is a more comfortable and much easier movement. It is very much less tiresome than turning a crank. One can sit back in a chair with freezer alongside and rock the crank to and fro without discomfort or undue exertion and even read at same time. Although two flavors are frozen at once and with less exertion, no more time is required than in old style freezers.

The **Pails have electric welded wire hoops,** which are guaranteed not to break or fall off; Cans are of Heavy tinplate with **drawn steel bottoms** that are guaranteed not to fall out or break and do not leak, the strongest and most durable Freezer Can made; the **Automatic Twin Scrapers** by their positive action insure perfect scraping of frozen particles from side of can. All inside parts are heavily coated with pure block tin, and outside parts all thoroughly galvanized.

BUILDERS' HARDWARE

No. RW7503VR
STORE DOOR LOCK SET

The pretty design and low price of this store door lock set has made it one of our leaders.

No. 25
FRONT DOOR LOCK SET

This Front Door Set, and No. 30 inside lock set to match, are numbers that we have a very large sale for. We have this design in both cast-iron and solid bronze metal—old copper finish.

The demand for all lines of Builders' Hardware will doubtless be greater this year than ever before, and you will do well to see that your supplies are well provided for.

It has taken us some years to reach the position of **The Leading Builders' Hardware House in Canada**, and we intend to maintain it.

If you want Lock Sets, Front Door Sets, Plated Butts, or anything in this line, send us your list and we will fill it and price it in a way that will suit you.

We Have Worked Out Your Problem.

BUSINESS SYSTEMS LIMITED — SYSTEM THE SECRET OF SUCCESS — TORONTO

When you go home at five o'clock, there is no reason why you should have your after-dinner smoke spoiled with a lot of worries over little details of your business.

There is no need for you to jot down memoranda on the back of an envelope for to-morrow.

If your books were arranged on a proper system, they would shoulder all these petty details for you—to-morrow morning they would show you everything you want to know just at the moment you want to know it.

* * * * * *

Business Systems leave petty routine to your books.

Business Systems do the work but leave you time to think and plan and act.

Business Systems leave nothing to chance and allow no possibility of anything being forgotten.

Business Systems enable one clerk to do the work of two and to do it more accurately.

* * * * * *

We would like to go into this matter with you either in your office or in ours at your convenience.

A request to know more about Business Systems, will not obligate you.

The "WAYNE" CARPET BEATER

Handy, Useful and Durable Household Article. "Not a Seasonable Toy"

Is now made in three styles—to retail at popular prices.

Patented Sept. 8, 1903

The "WAYNE" is the best whip upon the market for beating clothes, carpets, rugs and furniture. Constructed of the best coppered steel wire obtainable and mounted on a seasoned hardwood handle.

The wire is fastened to the handle in such a manner that it is impossible to work it loose. A large ferule pressed over the handle prevents the latter from splitting.

The "WAYNE" beater being made of spring steel wire always retains its shape, also eliminates the danger of puncturing or tearing article being cleaned.

This beater is so well balanced that you get full stroke and best results with very little effort. The "WAYNE CARPET BEATER" is a trade winner. Its usefulness is recognized on sight and sells wherever shown. Place your order now.

Want Help?

If you are located in a small city or country town, a want ad. placed in the local papers means that possibly half-a-dozen young men will read it.

If you are located in even a big city, a want ad. in any metropolitan daily costs money. You are paying for a circulation of 100,000, and there is no possibility of more than 200 of the men you want to reach seeing that ad.

Doesn't that look like throwing money away? It does. Because you are paying for 99,800 of a circulation that is absolutely worthless as far as your wants are concerned.

Every Hardware clerk sufficiently interested in his business to pay you as an employee, reads

Hardware and Metal

When you want a man your ad. should appear in our Want columns. It certainly will pay you well to consider this.

Condensed advertisements in Hardware and Metal cost 2c. per word for first insertion, and 1c. a word for subsequent insertions. Box number, 5 cents extra. Write or phone our nearest office.

The best farm fence is one that **stays** after it is put up and doesn't require constant repairs. Strength and wear are sterling qualities in Peerless Woven Wire Fence. Because it demonstrates its ability to fulfill every purpose of a serviceable fence is the reason that so many miles of it are in use. Wind and weather do not effect it and stock can't go over, under, or break through it for it's made of all No. 9 hard drawn all-steel galvanized wire, locked with the famous

PEERLESS LOCK

the secret of strength in Peerless Fence. It keeps the fence firm and rigid, the wires in place and prevents any openings or breaks being made in it. It allows perfect adjustment to inequalities in ground surface, working equally well on hillsides or level land. The spring in the lateral wires gives it elasticity and there you have it—a perfect fence, no barbs to hurt, no bars to break—a **strong, simple, safe** fence. It's **economical** too—costs little more than plain wire and no expense for repairs. Write for our free fence book—it will interest you.

What To Do Next Month

Montreal merchants report the month of March as an off month this year due, no doubt, to the changeable weather experienced in most parts of Canada. The weather, of course, governs the time when the general spring clean-up shall start, for so long as the snow flies and the "cold north winds do blow" the good housewife considers it winter time, but as soon as Mr. Sun starts to thaw out the frozen world, and the soft breezes begin to travel up from the south, she also begins to throw off her winter inactivity and prepare for the annual renovation.

* * *

Most dealers have ordered and received their spring lines, such as housecleaning implements, by this time, and they should occupy a prominent place in the show window or store.

* * *

Paints will probably be the most in demand of any article during April. In the cities the exterior, as well as the interior, of most houses, stores, etc., has to receive a new coat of paint, in order to look bright and cheerful, after passing through their storm-swept experiences of the past three or four months. In the country, too, there is a tremendous demand for paints, varnishes and kindred lines, as that buggy must be fixed up and the barn, or house, repainted. You should handle a good, reliable line of paints if you want to get the lion's share of the trade, as poor paints will begin to blister and peel off shortly after the hot sun gets at them, and this does not tend to make the farmer feel like paying you compliments. You can obtain through your jobber all kinds of advertising matter, explaining the reasons why the paints he handles should be sold, and you should be able to prepare good copy from it for your town paper. Almost any old thing in the paint line will sell for a time, but the dealer who wants to make his paint department pay should handle guaranteed lines only.

* * *

After a woman gets her spring cleaning done, she begins to look round the house for old articles that should be replaced, and the wide-awake hardware merchant can remind her of many articles in her kitchen outfit by preparing a neat circular calling her attention to his line of pots, pans, cutlery, meat and food choppers, bread makers, coffee mills, and the host of things that find their way into every well-regulated household. If you wish to make a success of this scheme, however, you must name prices, as that's the surest way to make a woman sit up and take notice. You may talk all day about great bargains in this and that article without needing any extra help to handle the rush, but give more prices and less "hot air" and you'll get better results.

* * *

You should also watch the papers for notice of any spring weddings about to take place within your vicinity, and then make a bid to supply the happy couple with everything in the hardware of cutlery lines that will be required in the new home. The best way to do this is to make up various-sized lists of kitchen utensils and mark each one "$—— for the lot," but be sure that this price is below what the prices of these goods would total up were they bought separately.

In fact, you could make your list something like this:

PRIZES FOR SUGGESTIONS.

The editor of Hardware and Metal wants additional ideas to help make this department the most interesting and valuable feature in the paper. Travelers for hardware, paint and stove houses, or clerks in hardware stores, are invited to send suggestions for use in retailing the following month, and for every idea accepted for publication a prize of one dollar will be given.

The suggestions should be written on one side of the paper, they should contain from 100 to 200 words, and if sent before April 20 should contain ideas for May retailing, if before May 20, ideas for June retailing, and so on.

Send along the suggestions, help to make this department more interesting, and, incidentally, win one of the prizes.

	Price.	Total.
So many pots	0 00	0 00
So many pans	0 00	0 00
So many knives	0 00	0 00
Grand total	$0 00	$0 00

Show the total cost in good plain figures, and then offer the lot at a nice little reduction to young couples about to be married, and to no others. State the "no others" plainly, because if the bride thinks she is a privileged character she will be eager to accept your offer.

* * *

May first is moving day, and this gives the dealer an excellent opportunity to sell hammers, tacks, picture hooks and wire, step ladders, curtain stretchers, gas or electric fixtures, or anything in the line of goods that is needed by people taking up a new house.

A good idea would be for you to try and get a list of landlords who will have houses vacant soon and send them a letter making a bid to supply them with any goods they need in your line to fix the house up for their new tenants. This may seem a lot of bother to go to on the chance of getting an order, but business is business, and in these days of keen competition the merchant who gets after the orders is the merchant who retires first with a nice little bank account, and his competitors who wait for the orders to come to them envy him and think he's lucky. A retailer, to make a success of his business, must never let a chance slip to make a sale, no matter how small it may be.

* * *

As soon as the frost gets out of the ground people will be getting their gardens ready, and here is another opportunity to work off lawn mowers, hose and all kinds of garden tools. Advertise a package of flower seeds to be given away with every purchase of one dollar or over. It's only a small present, but some women would go a mile to save a few cents, and when they can get something free, no matter how small it is, they will go to the store that gives it, in seven cases out of ten.

Remember, it's not so much the actual sale of a certain article that you must look to in a case like this, but the ultimate outcome from bringing a number of new customers to your store. By treating a customer well and making her feel that it's a pleasure to have her call in at any time to look over your stock, you make a friend of her, and it all depends then on yourself whether you hold her or not.

* * *

Among goods that sell well in the dirty weather are door mats of all kinds, as the winter months generally leave them in pretty poor condition. Wire mats are far ahead of any other kind, as they don't hold the dirt; they also last longer.

* * *

If you have not already been after the secretaries of the sporting clubs in your vicinity you should lose no time in doing so, as we advised about a month ago. You should also make up a sporting goods window, just as soon as the snow begins to melt in the fields. Offer a present of some kind to the boy who buys the first baseball, bat, or any line you may choose. The habit of giving a small premium once in a while causes people to talk about your store, and it doesn't cost you very much, and is one of the very best modes of advertising that you could make use of.

SUCCESSFUL RETAIL CONVENTION

This issue of Hardware and Metal is delayed for a day in order to contain a report of the convention of the Ontario Retail Hardware & Stove Dealers' Association in Toronto on Good Friday. Part of the report has necessarily been held over until our next issue, but sufficient is given to show that the convention proceedings were exceptionally interesting, and any hardwareman who visited the convention was well re-paid by the opportunity of associating for a day or two with several score of the brightest and most up-to-date hardwaremen throughout the province. By a comparison of ideas and discussion of interesting trade topics much valuable information was made available for those in attendance, and several of the delegates were heard to say that the knowledge gained would more than repay them for the expense of attending the convention and payment of a year's membership fee to the association.

The banquet provided an opportunity for retailers and jobbers to discuss some matters of mutual interest, and the three or four hours of recreation in the midst of the convention was thoroughly appreciated. Were there more occasions of this kind the trade would benefit in every way. When men get together at social functions differences which have arisen are apt to be forgotten, and the more fraternal feeling developed is bound to result in more good.

We congratulate the officers and members of the association in the progress which has been made since the formation of the association less than a year ago and we bespeak for the officers elected to serve during the coming year the hearty support of the trade in all parts of the province.

RAILWAY NERVE.

The Grand Trunk Railway in Port Hope passes between the larger portion of the town and the lake front. The business section lies in a somewhat deep valley, and this valley the railway crosses on a high viaduct. The company, without consulting the town, have taken steps to fill in this viaduct and plan to have but two or three narrow archways as a means of communication with the harbor. Canadians everywhere have had ample opportunity to acquaint themselves with the highhandedness of railway corporations, but this is about the limit. Here is one of the prettiest towns in the Dominion—the prettiest, in the belief of every Port Hoper—and the Grand Trunk sets itself unceremoniously to erect an earth wall with a hole in it between the town and the lake. No wonder the town is in arms. It is up to the Railway Commission to stop the depredation.

RETAILER MUST PROTECT HIMSELF.

The retail merchant is the one indispensable link in the chain which connects maker and consumer. Other middlemen may come and go, but in this vast country where the average family wears and uses goods drawn from sources thousands of miles apart, the store near the people is sure to remain.

Yet many makers are deliberately striving to force their goods into the hands of the retailer by advertising direct to the consumer, and then asking the retailer to pay their advertising bills by cutting down his profit.

This is certainly not fair to the retailer, nor does it seem to us good business from the standpoint of the maker. Surely merchants who have the liking and respect of their several communities can do more to make or break a brand of goods so far as their towns are concerned than any other single factor not excepting advertising.

Butler Brothers' Drummer points out that other things being equal, the advertised article wi,l outsell the non-advertised article will outsell the non-adequal if the policy of the maker has furnished the retailer a motive for pushing something else and for keeping the advertised goods in the background.

There is no obligation, moral or legal, on the part of any merchant to handle any certain article. It is his duty to know the quality of his wares and to tell the truth about them. If there is something in the market as good as an advertised article which he can buy at a lower price, there is no reason why he should not cut out the one and handle the other; or, if he stocks both, why he should not put the one in the window and the other on the shelf, out of sight.

Retailers hold themselves too cheap who without protest permit makers to force goods on their shelves which do not pay them a just profit. It costs money to run a retail store, and it is not fair to ask you to handle any article on as thin a margin as 10 to 15 per cent. unless you yourself choose to do so in order to bring more business for yourself in wares that pay better profits.

BE PROGRESSIVE AND UNITED.

The mail order house builds up its business, and continues to extend its territory by being progressive in its ideas and organized in its work. It is thoroughly organized and works in perfect harmony. They are able to take business from the country, not so much because their goods are better in quality or that they fill orders so much more quickly, but because they do not meet with any organized opposition from the rural stores.

The merchant in town and country is self-centred and exclusive and very often not favorably disposed toward the competitors in their own community. Their own knowledge of business is so much further advanced over their competitors and they are so inspired with the idea that no one can teach them, that they are content to remain where they are, to oppose innovations and to defy all attempts at union and organization.

The moment an efficient organization is formed, and more unanimity of ideas is adopted then will the mail order houses meet with some powerful opposition and a damper on their strong rural trade. The purpose of associations is not to provide assemblies of the dealers for expression of goodwill for the time being and some social enjoyment. The great aim of a retail association is the providing of assemblies for the exchange of ideas and mutual education to enable the retail men in rural districts the more intelligently to cope with the growing power and influence of the mail order houses and make possible organized opposition, and do away with the weak and disunited front which the rural districts present.

Ontario Retail Hardware Convention

Best Gathering Since Organization a Year Ago—Large Representation Present—Splendid Set of Officers Elected—The "Question Box" a Decided Success.

"Better than all previous conventions," was the unanimous expression of opinion of the delegates to the Ontario Retail Hardware Convention in Toronto on Thursday and Friday of this week. The attendance was larger than any previous gatherings and the enthusiasm shown indicated the hold which trade organization has taken upon the hardwaremen in Ontario.

The reports of the officers and the doings of the convention, given on the succeeding pages, will show that great progress has been made during the past year, and the delegates who came to Toronto lost little time in dealing with the matters which came before them for action.

About 60 delegates were present and there were almost as many more who wrote, explaining their reasons for

W. G. SCOTT, MOUNT FOREST
Elected President.

their inability to be on hand. The discussions were participated in generally by the delegates and the officers must have been greatly encouraged by the unanimous support they received and for the commendations given them by the delegates for the work they had done during the past year. Great satisfaction was expressed at the progress made in many of the matters taken up and the opinion was repeatedly expressed that although the association had as yet failed to gain its point in several of the matters taken up with the Wholesale Hardware Association, that the fact of a strong organization being in existence was having its effect and there is a steady lessening of the evil complained of—jobbers selling to consumers. In fact, it was pointed out by one or two delegates that there was an increasing number of advertisers in Hardware and Metal who emphasized

BALANCE OF REPORT NEXT WEEK.

Owing to pressure of Space, the report of the Banquet on Thursday night and the Question Box discussion on Friday had to be held over until next week's issue.

Another feature which had to be held over was the correspondence between the Association and the Railway Commission on the Cartage Charges Question.

Watch for the balance of the Report next week.

the point that they were selling to the trade only.

The adoption of the recommendations made by the committee favoring the organization of a Dominion Association should meet with the approval of organized hardwaremen in all parts of Canada. The bringing into existence of such a national organization should result in much benefit to the trade, in the matter of adopting a better system of collecting accounts, the working out of mutual fire insurance and particularly in fighting Dominion and Provincial legislation injurious to the retail trade.

Strong Executive Elected.

The new executive elected is a very strong one and represents all of the older sections of the province, the executive beginning their labors with the prestige of a year's successful work behind them. The steadily growing membership should encourage them in their work of remedying existing trade evils, and it was exceedingly gratifying to see new members enrolled from Kingston, Ottawa, Owen Sound, and many other places, those enrolled being in many cases the strongest firms in the towns and cities represented. As was pointed out by Mr. Purvis of Sudbury, the executive must take up the work of organizing the New Ontario district during 1907. Already there are many members from that district, but there is yet much to be done in the way of enrolling members and taking up the trade evils which affect that large district. The executive also have the advantage of beginning their year with a substantial balance in the treasury. The treasurer's report, showing a balance on hand of $200, considering the heavy expense the association was under during its first year of existence, was a very satisfactory one.

Taken all round, the second annual convention will go down in history as one of the most important and successful gatherings of the retail hardware trade in Ontario. The Question Box discussion was a fitting finale to the gathering, the answers given to the questions asked being listened to with close interest by everyone in attendance. If the present convention could have been improved in any way it would have been by allowing longer time for discussions of this nature. Mention must also be made of the banquet on Thursday evening, every hardwareman present enjoying himself to the limit, and all voted this social feature a decided success.

THURSDAY SESSION.

The convention was called to order at 2.15 p.m., with about half a hundred delegates in attendance, the list of those enrolled being as follows:

The Membership Roll.

(Revised to March 28, 1907.)

The first order of business was the reading of the president's address and the secretary's and executive committee's reports, these being reproduced in full as follows :

President's Address.

Gentlemen,—It affords me great pleasure to stand before you to-day, as the retiring first president of this association. Only a year ago to-morrow, a handful of us gathered in one of the parlors of the Rossin House, and talked over the matter of organization. "To be or not to be" was the one important question, and after a plain statement of facts to the meeting, by the speaker,

J. WALTON PEART, ST. MARY'S
Elected Second Vice-President.

who had made the call through "Hardware and Metal," it was decided "to be."

However, just as we had nicely arranged things to have a real association of our own, a change came over the spirit of our dreams, for Messrs. Trowern and Brubacher, of the Retail Merchants Association, made the claim that we should become a branch of their association, and as we did not feel that we should speak for the large number of retail hardware and stove dealers of Ontario, we decided to call another meeting, when Mr. Trowern was to be on hand with about 500 hardwaremen who were supposed to be members of his association. Before separating, however, officers were elected temporarily.

On the day appointed, May 16, the meeting was held, when behold, only one man appeared with Mr. Trowern, while a large number were on hand on our side; after considerable discussion, and the wasting of much precious time, a vote was taken, when it was decided, almost unanimously, that we should "go it alone." I have yet to hear of anyone who is sorry for that decision, and the one man who voted against us told me, before leaving the city, that he was sorry he had opposed us, but that he had not fully understood the case as it was later shown to him, or he would not have voted as he did. The officers who had been temporarily elected at the Good Friday meeting, were confirmed at this time.

We had a good meeting that day in St. George's Hall, many matters were brought up for discussion and almost all who were there expressed themselves as being well pleased at having been present. Another good meeting was held at the time of the Exhibition, though that is a hard time to hold a convention; business men who come to buy goods and "see the show" will not attend the meetings. The talk we had from Mr. Lariviere, of Montreal, at this time fully repaid anyone for coming. Now, what have we done between times of meetings? Perhaps a short review of this will not be out of place here.

Your committee having in hand the insurance question, with Mr. Peart as chairman, has made excellent progress, and will have a good report to make. The committee on unjust cartage charges met the Wholesale Association, and talked the matter over with them, but got very little satisfaction. Since that time the committee has been at work on higher ground and will be able to report something more satisfactory at this meeting.

The Postmaster General announced his intention of introducing a bill, with a c.o.d. clause attached, permitting large parcels to be sent by post at a very cheap rate. I need not go into our plans of defeating this bill, but might just say that as president of this association, I sent out a letter to every hardware and stove dealer in Ontario, asking them to see their member of Parliament personally if possible, and if unable to do that, to write him to interview the Postmaster General and protest against the passing of such an unfair measure. This, with the flood of letters which the Postmaster General received regarding the matter about February the 1st, caused him to withdraw his bill, saying that "he could not fight against windmills." So much for the c.o.d. parcel post delivery.

We found that another very prominent daily newspaper was quoting, every Saturday, the wholesale prices of our goods. My attention was called to this by our energetic and efficient secretary, whereupon I wrote the editor of the daily, asking him to call his commercial editor's attention to the matter, as it could do them no good and us much harm. I may say that the quotations have not been published since.

You must not, right at the first, expect too much of us as an association. We are young, we have had to begin to feel our way, but we have done the best we could. If we have not accomplished as much as you expected, we ask you to bear with us and, during the coming year, to go ahead and improve on our past year's work. You will have our experience to build upon and we will be delighted to assist in any way

we can, for I feel sure that we have only laid the foundation of our work.

I am anxious to see accomplished this year among other things, a garnishee clause for amounts of $5 and over, allowed in law by the Provincial Legislature; a special rate of express for parcels coming through the express companies into our hands; abolition of the cartage charges at shippers' ends, (I would not object to the abolition of boxing charges, too); the establishment of a mutual fire insurance plan, and jobbers prohibited from selling to any but retailers.

Canada is prosperous. Business is booming. Ontario is getting her share, but we must watch our interests and stop the leaks if we hope to make a success of our lines of trade.

Apart from this official and business view of the year's work I wish personally to thank the officers and members of the association for the support they have given me as president, and for the hearty co-operation they have evinced in strengthening the hands of the chief officers. The growth of membership has been most encouraging and there seems to be no doubt but that we shall soon have all the hardware and stove dealers of consequence in the province upon our membership roll.

Good feeling and good fellowship have been strongly marked in our gatherings, and this spirit will serve to wonderfully increase our strength. When we all shove together we should be able to remove large obstacles.

A debt of almost more than gratitude is certainly due to Mr. Wrigley, our secretary, who has been the mainspring and moving spirit of the executive. To him is due the credit for the splendid arrangements for these convention meetings, and for the interesting programmes laid before us.

My most earnest hope and desire is that my successor may be accorded this same warm and encouraging support, and, following my humble efforts, he may lead the association on to better and greater ends. "Keeping everlastingly at it" is sure to bring success.

A. W. HUMPHRIES.

Secretary's Report.

In presenting my report to the second annual convention of the Ontario Retail Hardware Association it is very pleasant to be able to call your attention to the splendid progress made since the first organization meeting was held about eleven months ago. In view of the fact that the association has not had an organizer in the field for more than one month, good work has been done in enrolling upwards of 160 members prior to the date of the convention, and this number is likely to be increased close to the 200 mark before the convention adjourns. During the year expenses of organizing have been heavy, as a large sum has been spent in sending circulars to the trade regarding the parcels post question, notices of conventions and general organization work. No salaries, however, have been paid to any officer, and the executive has freely given its time in attending several special executive meetings held in Toronto. The report of the treasurer should show a substantial balance to the credit of the association.

Progress of Organization Work.

As we are passing the first mile-post in the history of the association it is well to analyze the results of the year's work. First of all it must be admitted that the work of organizing has been well commenced, members being enrolled from Windsor and Kenora in the western portion of the province, to the Ottawa district in the east, as well as from Niagara Falls in the south to Sudbury and New Liskeard in the north. As yet, however, the organization is scattered over too broad a field and there is much work to be done toward filling in the gaps. If a capable organizer could take the field for a couple of months following this convention I feel certain that the province could be thoroughly organized. Already good work has been done by the organization of district associations at Barrie, London and in Middlesex and Lambton districts, while another district association has been proposed for the Niagara Falls vicinity. The London district association has not yet, however, accepted our invitation to join the provincial association in a body. These district associations should be organized in all parts of the province. Another feature of the organization work is the progress which has been made towards bringing into existence a Dominion association, which will unite all hardwaremen in the different provinces into one organization.

WESTON WRIGLEY, TORONTO
Re-elected Secretary.

A Good Year's Work.

The greatest success so far secured by our association is in the matter of the parcels post c.o.d. agitation. Our association was the first to take up this matter and in spite of the refusal of the Retail Merchants' Association to co-operate, we conducted the campaign so vigorously that the Postmaster-General was forced to withdraw the legislation aimed to benefit the mail order houses at the expense of the retail trade throughout the country. If for no other reason this work has been sufficient warrant for the existence of the association, as it can safely be said that had the retail hardwaremen in Ontario not organized a year ago the parcels post c.o.d. legislation would now be in force.

The work of the committees on mutual fire insurance and account collections has also been of considerable value to the trade and satisfactory results should follow from the work very shortly. In fighting trade evils the association has also proved the necessity of its existence. The cartage charges question was thrashed out with the wholesale association, and on the jobbers refusing to remedy the evil complained of the association took the matter up with the Railway Commission. The correspondence which will be read to the convention shows that the association is making progress in securing a satisfactory solution of the matter.

Numerous complaints have been made of jobbers selling to consumers and the association has taken up this question with the Wholesale Hardware Association, recommending that they take action to protect the retail trade by adopting a different scale of prices to be used when goods are sold to persons who do not buy them to b? sold again. This matter has not yet been dealt with by the Wholesale Association, and it is one which should receive considerable attention from this convention.

The recommendation of the September convention that enamelware seconds be marked as such in large letters has not yet been adopted by the manufacturers of enamelware. They have, however, assured us that they will give no further cause for complaint in this matter.

We have also taken up the matter of abolition of exemptions from garnishment so as to make it harder for "dead beats" to operate, and the question of securing proper classification on hardware freight has also received some attention.

Takes Time to Produce Results.

The above shows that the association has led an active existence during the past year. It must be remembered, of course, that it takes time to produce results, and I am sure the members of the association realize that the officers have done well in the face of many obstacles. In view of the progress made it would be suicidal for the retail trade to hesitate now. There should be no hanging back as every member added to the fold makes it easier to secure satisfactory results on any work taken up. Our association must secure at least 300 to 400 members in order to be sufficiently strong to command respect from those with whom we have to deal in order to better the retail trade conditions.

What is the most important work for the coming year? During the past twelve months the greatest attention has been given to the cartage charges and parcels post question. The cartage charges question should be pushed to a satisfactory conclusion, but in the secretary's opinion it is far over-shadowed in importance by the greater evil of jobbers and manufacturers selling to consumers. During the coming year this should be the all-important subject under consideration. Until the criminal code is changed there can be no price agreement adopted by our association. There is, however, no reason why arrangements cannot be made to have wholesalers' and jobbers' list dealers adopt a special scale of prices for sell-

ing goods to contractors and others who buy to use and not to sell again. Consumers who buy in large quantities are undoubtedly entitled to closer prices than ordinary buyers, but the retail trade should be protected and the existing evil of consumers buying as cheaply as retail dealers should be ended if the retail trade is to continue a factor in commercial life.

Relations With Jobbers.

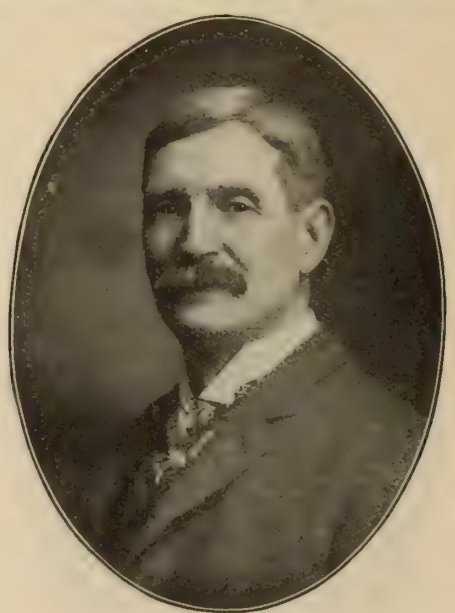
Our relations with jobbers have been friendly during the past year, although matters of controversy were taken up at the very inception of the retail association. This has probably been the reason why the traveling salesmen have not aided our organization as much as the travelers have aided the retail hardware associations in the United States and western Canada. Jobbers, however, are far-seeing business men and undoubtedly realize that anything the Retail Hardware Association does to better the conditions of the retail trade is bound to have its effect in improving the field for business operations of the wholesale houses. As has been pointed out before, retailers and wholesalers should co-operate together in checking the present tendency of jobbers selling to consumers and retailers buying from manufacturers.

The executive committee are making recommendations on various matters referred to in this report, and it is, therefore, unnecessary to go further into detail than has already been done. The work of the executive has been handicapped somewhat by lack of definite details being furnished with the complaints received regarding jobbers selling to consumers. It is urgent that when a retailer has a specific case that he send full details in order that the association may take definite action.

The question box discussion arranged for at this convention should provide a splendid opportunity to talk over any matters which are injuring the trade throughout the province, as well as making possible any expressions of opinion as to methods whereby the business operations of the members can be improved upon.

In closing this report reference might be made to two suggestions recently made by members of the association. The first one is that the annual convention be held about the end of February, at the time when the annual horse show takes place in Toronto, single fare rates being available for a period covering an entire week. Previous conventions have shown that it is not satisfactory to try and crowd the business of the convention into one or two days. The members would receive better results if the convention occupied at least three days, and ample time was given for the discussion of trade matters through the question box. The second suggestion is that arrangements be made at future conventions for the entertainment of the wives and lady friends of the delegates. These matters should receive the attention of next year's executive committee in arranging for the annual convention, in 1908.

WESTON WRIGLEY,
Secretary.



Toronto, March 28, 1907.

Report of the Executive.

The executive committee of the Ontario Retail Hardware Association beg to report as follows:

1. That the campaign outlined at our December 31 meeting against the proposed parcels' post c.o.d. legislation was successful in withdrawal of the same. We acknowledge the co-operation of the Western Canada Retail Hardware Association, and of Hardware and Metal as through its aid the trade in all parts of Canada was encourged to join the campaign.

2. That the Canadian Wholesale Hardware Association have declined to abolish cartage charges at point of shipment and that we have laid the matter before the railway commission, the correspondence herewith submitted showing that the railway companies have no right to refuse to accept shipments delivered by jobbers, and that the matter

JOHN CASLOR, TORONTO
Re-elected Treasurer.

is one for adjustment between shipper and consignee.

3. That the Canadian Wholesale Hardware Association has not yet dealt with our recommendation, "That whenever manufacturers or jobbers sell to buyers outside the trade that sales be made at a price sufficient to protect legitimate hardware dealers. A letter from a member of the association is submitted with the correspondence regarding this matter.

4. That the enamelware manufacturers have not yet complied with our recommendation that "all seconds be stamped as such in plain letters of large size." They have assurred us verbally, however, that we shall have no further cause for complaint in this matter. Correspondence from the Western Canada Retail Hardware Association is submitted showing that the western trade has a similar grievance in that firsts are sold to departmental stores to be sold to consumers at cut prices.

5. That our recommendation that the Division Court Act be amended has not been adopted by the Attorney-General, he stating that no action can be taken at this session of the legislature.

6. That our recommendation that a temporary executive be formed for the proposed Canadian Retail Hardware Association by constituting the presidents and secretaries of the different provincial organizations as the said executive has been adopted by the Western Canada Retail Hardware Association. They have appointed their president and secretary as their representatives and it devolves upon this convention to take such action as will further the organization of the National Association. In this connection we would recommend:

(a) That our newly elected president and secretary be the Ontario representatives on the temporary executive of the national body.

(b) That we suggest that Toronto be the headquarters of the proposed Canadian Retail Hardware Association.

(c) That we suggest that each province be entitled to two representatives.

(d) That we suggest that the national body be financed by an assessment of 25 or 50 cents per member in order to carry on its business and oppose all injurious legislation.

(e) That the proposed temporary executive endeavor to organize a retail hardware association in each province in Canada and by an interchange of experiences strengthen the existing associations.

A. W. HUMPHRIES, Chairman.
WESTON WRIGLEY, Secretary.

Parcels Post Agitation.

The secretary suggested that the report of the executive committee's work should be taken up clause by clause and this was done.

In regard to the parcel posts' matter, the president said that he felt he must say something on this matter. The battle had been won by the secretary and Col. MacLean in the office of Hardware and Metal. He realized that the Colonel was a bashful man, therefore, he (the president) had to speak of the matter. He then went on to tell what his representative in Parliament had said to him regarding what occurred during the fight. This member went to Mr. Lemieux, several times, telling him that a friend of his in the Retail Hardware Association had asked him to aid in the movement for the withdrawal of the measure, and presented various arguments. While he was thus engaged, a dozen others were also trying to secure interviews. Finally Mr. Lemieux asked those present to give him some chance for his life at least. But the next day the same thing happened—not only hardwaremen, but grocers and dry goods dealers. By Feb. 1st, when the hardware dealers' letters poured in by thousands Mr. Lemieux was about beside himself. His usually capacious office was crammed—wagon loads of mail were coming in. "What makes all this rush of mail?" he asked, and the re-

ply was, "Protests." As Mr. Lemieux stated to the House, "he couldn't fight against windmills," and the motion was withdrawn. As president of the association, Mr. Humphries believed that this was the direct work of the MacLean trade journals, and called for an expression of approval from the members. The response was most unanimous.

Discussion on Cartage Charges.

Regarding the addition of cartage charges to the consignee's expenses in shipments, correspondence was read by the secretary from the Wholesale Hardware Association. A letter written to Chairman Killam, of the railway commission, and his reply was then read. As it seemed that the commission had not a clear view of the case, another letter written, was also read to the members. Replying to this, Mr. Cartwright, secretary of the commission, wrote, outlining the agreement between the railways and cartage agents. The secretary said that the executive would make no recommendations, but would leave the matter for the members of the asosciation to deal with as they thought best.

Correspondence on this matter will be published later on the association page in Hardware and Metal.

The president asked for an expression of opinion from the members.

Mr. Noble (Dundalk) thought that the committee had done good work, and had now got to know what is necessary. The matter should, therefore, be left with the committee.

The president explained that the committee was now looking for advice. It wished to know the feeling of the dealers. It would be strengthened by advice and discussion of the members.

Mr. Noble said that the charge was certainly an unjust one. "The matter should be arranged between us and the wholesalers."

The president remarked that he had noticed on one firm's billhead f.o.b. had given place to "ex warehouse." Evidently the jobbers had begun to sit up and take notice.

Mr. Jeffery (Midland) agreed with Mr. Noble.

Mr. Peart (St. Marys) stated that it had been his idea originally to take up the matter with the railway commission. The association had now got the commission to say that the matter is one between them and the shippers. He made the following motion, seconded by Mr. Finkbeiner (Milverton):

Resolution Adopted.

"Be it resolved: that this association being still of the opinion that the sending forward, on the bill of expense of the consignee, of the cartage at shipping point is a gross injustice to the retailer, reaffirm our intention to oppose this unjust condition and authorize the executive to carry the matter again before the railway commission and to take whatever action they deem advisable."

Mr. Taylor (Carleton Place) said that from the correspondence read, the decision given by the Railway Commission appeared to be final. When goods had been delivered to the retailer, there was nothing to prevent his refusing to pay this charge. Let them all stick together and refuse to pay. Inside of six months, he believed, the continual worry and cost of additional correspondence necessitated by this step would tire shippers into compliance with the association's demands.

Mr. Jeffrey (Midland) endorsed Mr. Taylor's position. He said that it was of no use going back to Railway Commission. "If we send back the drafts as fast as they are forwarded, we can soon kill the cartage business."

Mr. Clifton (Alliston) said he had been fighting with a Guelph firm. They told him to go to the Railway Commission. If we stand shoulder to shoulder we can force them to change this. Toronto merchants have goods delivered free of cartage expenses; why shouldn't other dealers throughout the country?

J. S. Hall, (Toronto),—Do Toronto

A. W. HUMPHRIES, PARKHILL
Retiring President—Elected Member of Executive.

dealers buy goods any cheaper than the rural dealers because of not having to pay cartage charges? Will not the outside merchants have to pay more if the charges are done away with?

This question was answered by several members saying they had no objection to paying the full cost of the goods, but the association was fighting for a principle and they wanted the charge made in the proper manner so that it could be included in their costs and figured on in marking the selling price.

J. S. Moir (Arnprior), expressed the opinion that the only way to stop the imposition of cartage charges is to go at the wholesalers. The retailers have no right to pay cartage charges.

"I understand that Montreal houses will deliver goods in Toronto with cartage and boxes free. It is an injustice. In the case of lamp chimneys, for instance, there is an extra charge of 40c. for boxing, which was too often not figured on, the tendency being for dealers to figure their selling price from the cost price given on the invoice."

John Caslor (Toronto) said that wholesalers in the city delivered goods to retailers free of cartage charges.

F. Taylor (Carleton Place)—"Just what we want is to get the charge placed directly on the cost of the goods, so that the retailers may be enabled to arrange their prices to cover such expenses. Then we can get our percentage of profit on the cartage charges the same as on all other costs.

W. G. Scott (Mount Forest) expressed his concurrence with Mr Taylor in the matter of cartage charges being made. In the matter of boxes the charge should be put on goods so that we can charge accordingly. He spoke of concerns which have switches into warehouses and the retailers have to pay cartage charges just the same. This is graft of the railway companies at our expense.

Mr. Brocklebank (Arthur) spoke regarding the motion of Mr. Peart. It doesn't make any difference whether we be charged directly or indirectly on the goods delivered so that the merchants could mark their goods at a sufficient advance to defray such expense.

D. A. McNab (Orillia) said that the railways used to pay the cartage themselves. There is no doubt that when we paid cartage in an indirect way we did not feel so sore about it, because we did not know how much we were paying.

Mr. Brocklebank, Jr., (Arthur) expressed the opinion that while the association appreciated very much the work done by the executive committee, he thought that all their efforts were in vain because they were fighting against the winds. He thought it would be well if the association knew what retail firms are paying charges and who are not. A show of hands indicated that about a quarter of those present were not paying cartage charges, either in whole or in part. Continuing, he said: "I've never taken up the matter with wholesalers because I thought it not worth while scrapping about it until we take it up in a body. A good many retailers can't afford to fight the wholesalers and run chances of being turned down.

D. F. McNab (Orillia) expressed his desire that Mr. Peart's motion include the provision that the executive negotiate with the jobbers again.

E. S. Hubbell (Thamesville) expressed his appreciation of the executive's work and favored allowing them to continue their efforts.

F. W. Otton (Barrie) suggested that the question of cartage rates be brought before the wholesale association.

The resolution, as moved by J. W. Peart, was adopted.

Jobbers Selling to Consumers.

The president stated that a certain fence company which had been selling to consumers had realized the error of their way and had fully apologized to the retail trade, and stated that such action would never be repeated.

This brought up the question of the building trade, contractors and others who buy in large quantities. Mr. Howell (Goderich) claimed that this trade was of practically no use to the retailer, for all the orders simply went to retailer-jobbers, such as existed in all the larger cities.

The members were reminded that it

was agreed last year that all complaints of this kind were to be forwarded to the secretary to be dealt with by the executive.

Mr. [illegible] of Gravenhurst, told how building in his town had been boycotted in Toronto, and was corroborated by Mr. Jeffrey. Other members showed how other districts suffered in the same way.

The trading companies were great offenders in this way, and one member told how all their leaders to the consumer were made uniformly a certain amount lower than the retailer could make it. He suggested that complaints should be written to the secretary to be supplied to all the members after he had written to those complained of.

Mr. Scott (Mt. Forest) suggested that one way to get hold of the contractor was to go after him in a friendly way, explain the situation to him, and show him just what you can do for him and the advantages of his supporting his own town. His orders with the jobbing retailer will gradually grow smaller, while his little repeat orders will grow larger with you.

The president told how a man from a wholesale house had come to his town, and had been taken by him to a large factory needing tacks in quantity. The salesman took a large order, but he (the president) got no commission out of it. Later on the wholesaler began selling straight to the factory, and still there was no commission. "But since then I have bought nothing from the firm referred to," continued the president, "and now the factory is out of business, so they've lost two customers."

Mr. Scott then moved that all complaints should be sent to the secretary, and that he should notify the members by circular regarding houses complained of the matter then to be dealt with by the executive. This was seconded by Mr. Caslor.

Mr. Scott also referred to the metal shingle companies, one of which had asked him to be its agent, but when an order had been worked up by him, the manufacturers had covered the barn themselves and allowed no commission.

Another member told him how a large jobbing house had quoted him a price and had then beaten him by five cents a dozen on a tender for several dozen shears for the school board. Later on the jobber secured an opening order for a new store but on having the circumstances explained to him the new dealer promptly turned the order in the way of another firm, and the first firm was told why he had done so.

Mr. Scott's motion was then carried.

Enamelware Seconds.

On the question of the stamping of enamelware seconds as such, the secretary read a letter from the Stamped Metalware Association, and said that he had received a verbal promise that no more trouble would be given.

Mr. Scott believed that perhaps one-half the rural dealers were being shipped seconds—chipped or badly colored stuff, etc., as firsts. He asked that every dealer send back everything about which he had cause to complain. This was what he was doing himself, and it was at least better than doing nothing.

Mr. Brocklebank moved that the question be left with the executive, and that they press for better quality of firsts and the marking of seconds. The motion was seconded by Mr. Hambly, of Barrie, and carried.

National Organization Recommendations

The convention endorced their former action re the amendment of the Division Court Act, and after adopting the recommendations of the executive in the matter of the proposed Dominion association adopted the report of the executive as a whole.

The convention adjourned shortly after 5 o'clock.

FRIDAY MORNING SESSION.

The convention was called to order at 10 o'clock by the president.

The first subject taken up in the morning session was the report of the accounts collection committee report.

The committee favored the adoption of a similar system of collecting accounts to that in use by the Western Canada Retail Hardware Association, where blank letter forms are supplied

D. BROCKLEBANK, ARTHUR
Re-elected Member of Executive.

the members by the secretary of the association and where necessary additional letters are forwarded to delinquents from the secretary's office. The committee considered, however, that this work could not be undertaken without a paid secretary and the present membership is not large enough to engage such an official, although the members would gain enormously by the establishment of a definite plan of following up delinquents who moved from one place to another or from Ontario to the Western Provinces. It was considered that this matter should be taken up by the National Association when it gets into working order. In the meantime the committee recommended:

Collecting Accounts.

"We consider the best method of collecting accounts is to render them in detail and if not promptly collected to call with another statement, securing the cash, a note or a promise to pay at a certain time. In the latter case the call should be promptly made and if not fully collected an installment secured and the matter followed up personally."

The committee urged all hardwaremen to join the association in order that the membership could be increased sufficient to warrant the adoption of the plan proposed.

The report was signed by C.E. Noble (Dundalk) and W. B. Clifton (Allliston) and on motion was adopted.

Mutual Insurance Report.

Following this came the report of the mutual insurance committee, read by J. Walton Peart, the chairman.

"The mutual insurance committee begs to report, having pursued inquiries as instructed at last convention. The replies received from members show great interest and a willingness to carry insurance in a mutual organization. We regret to report, however, that the present insurance laws of our province make it quite impossible at present to organize as we would wish, the law requiring that a joint stock company be formed with a subscribed capital of $300,000 of which 10 per cent. must be paid up before charter will be granted.

"As for the proposed preferential arrangement we have made some inquiries and are informed that in justice to local agents an arrangement only as we suggest is impracticable.

"We suggest that a new mutual insurance committee be appointed; that the trade be requested to join the association and increase our members to such an extent that we will be able to organize a joint stock company, which would be possible were we to have a membership of 500 or 600.

"J. WALTON PEART, Chairman."

The report was followed by the reading of the following letters to the secretary from Lindsay, Lawrence & Wadsworth, Toronto, the solicitors consulted for legal advice in this matter.

Weston Wrigley, Esq., Toronto:

Sir,—I beg to acknowledge your favor of the 25th instant, asking to advise as to organizing a mutual insurance company. To confirm my views I have conferred with Dr. Hunter, Registrar of Insurance Companies, in reference thereto. His statements accord with my own view, that such an insurance company would not be incorporated under the Ontario laws, as they stand at present. The ability of obtaining licenses to carry on mutual fire insurance has been very much curtailed, the law being in a different position now in that regard than it was some years ago, the Government refusing to issue licenses the same as they used to. The only way, therefore, to accomplish your object would be by obtaining incorporation under the Insurance Act as a joint stock company. We presume this would be of no assistance to you, in view of the business you desire to do, being restricted to your own line of business.

A. G. F. LAWRENCE.

Toronto, Jan. 30, 1907.

Weston Wrigley, Toronto:

Sir,—I beg to acknowledge your favor of the 25th inst., asking for information as to the requirements of organizing a joint stock insurance company. In reply I would say that the requirements in effect are as follows:

1. At least five persons must be the applicants, and the application has to receive the written recommendation of the Inspector of Insurance, and the approval of the Minister.

2. Notice has to be published in four consecutive issues of The Ontario Gazette of the intention to apply for incorporation, and in such other papers as may be required. The notice to set out the full names and additions of the applicants, their residences and occupations, the proposed corporate name of the company, the kind of insurance proposed to be transacted, location of head office, the amount of capital stock, number of shares, and the amount of each share.

3. The applicants shall also deliver copies of the proposed by-laws of the corporation.

4. Each director has to be the bona fide holder in his own right to his own use of shares in the capital stock of the company to the amount at least of $1,000 upon which all calls have been duly paid.

5. The capital stock shall not be less than $500,000, and before applying for a license the company shall furnish to the inspector satisfactory evidence that at least $300,000 has been subscribed for and taken up bona fide, and that $30,000 of the said subscribed stock has been paid into some chartered bank of Canada.

These are the chief requirements leading up to the formation of a company. I do not see anywhere in our acts that a subscriber has to be worth a certain amount of capital. He must, of course, pay all calls upon his stock, and at least 10 per cent. of this has to be called up.

I trust the foregoing information will cover the requirements of your association.

A. G. F. LAWRENCE.

Toronto, March 27, 1907.

Various members of the association discussed the subject, the general opinion arrived at being that it would be well nigh impossible to form an insurance company until a larger number of members be enrolled.

A resolution was passed to the effect that the report be laid on the table for further consideration. Messrs. Peart, Brocklebank and Caslor were elected as a committee to act on insurance matters during 1907.

Treasurer's Report.

Treasurer Caslor then gave his report showing receipts $446,71. and expenses for the year $235.71, leaving a balance on hand of $211.

It was moved by E. S. Hubbell and seconded by J. W. Peacock, that the report be accepted. The auditors' report will be published next week.

Great satisfaction was expressed by the delegates at the splendid report made by Mr. Caslor.

Travelers' Affiliation.

A notice of motion, made by W. G. Scott (Mt. Forest), was taken up and discussed. Mr. Scott moved that travelers be admitted as associate members of the association, this being seconded by Mr. Clifton (Alliston). An amendment was made by Messrs. Hambly (Barrie) and Caslor (Toronto), that only retail hardware and stove dealers be admitted.

An interesting discussion was participated in by several members, the preponderance of opinion being that the travelers would prefer to be left alone and that if the doors were opened it would look as though the retailers were trying to enrich their treasury by collecting fees from the travelling salesmen. By a vote of about three to one the amendment was carried and the original motion lost.

Election of Officers.

For president, W. G. Scott was nominated by Mr. Caslor, in a brief speech.

Retiring President A. W. Humphries was nominated for re-election by J. S. Hall, the nomination being seconded by several delegates. Mr. Humphries expressed his regret that circumstances prevented him continuing in the office, and Mr. Scott was elected amidst enthusiasm.

Mr. Coffey nominated Mr. Peart for first vice-president, but Mr. Peart declined in favor of Mr. Hambly, who had ably filled the office of second vice-president during the past year. Mr. Hambly was elected by acclamation.

Mr. Coffey again nominated Mr. Peart as second vice-president, and the election was put through with applause.

For secretary, Mr. Wrigley was re-elected unanimously, Mr. Peart proposing three cheers, which were heartily given.

Mr. Caslor was again made treasurer for next year at the same salary as last year—nothing.

Messrs. Peart, Moorehouse and other members suggested that the retiring president be made one of the executive for the coming year and the election of the executive was then proceeded with. Those elected to the executive committee are as follows: A. W. Humphries, Parkhill; D. Brocklebank, Arthur; G. A. Binns, Newmarket; Frank Taylor, Carleton Place; H. Becker, New Hamburg, and W. A. Mitchell, Kingston.

The new president was escorted to the chair by retiring president Humphries, and in a brief address Mr. Scott thanked the members for electing him, expressing confidence that by this time next year the association will have doubled its membership.

Trade Press Commended.

On motion of J. W. Peart (St. Marys) and J. S. Hall, Toronto, the following resolution was carried amidst much hand-clapping:

"That we wish to place upon record our grateful appreciation of the kindness of Lieut.-Col. J. B. MacLean in providing social entertainment for the members of the association and in permitting association matters to occupy such a large and prominent position in his trade paper, Hardware and Metal. Whatever degree of success we have attained is due in no small degree to Lieut-Col. MacLean and we tender him our heartiest thanks."

Col. MacLean replied briefly, stating that it was his aim to employ specialists to look after every department of the paper in order to make it of value to the subscribers. It had given him great pleasure to hear one member say that he wished his business could be run on the same standard as attained by Hardware and Metal. The manager and editor of the paper were entitled to the credit for the high standard attained and he was sure they would continue to make the paper of increasing value to its readers.

Notice of Motion.

A notice of motion was made by M. W. Howell (Goderich) that the executive have power to change the date of the annual convention. A further suggestion was made by C. F. Moorehouse (Toronto) that the executive revise the whole constitution.

On motion of Messrs. MacNab (Orillia) and Purvis (Sudbury) the sum of $50 was placed in the hands of the executive to provide some suitable souvenir to be tendered the secretary for his active work during the year, the motion being carried in spite of the secretary's protests.

The Question Box.

The business of the convention being concluded about 11.45 a.m. the "Question Box" was opened by J. W. Walton Peart (St. Marys) replying to a query regarding bookkeeping. Mr. Peart was for many years one of the office staff of the D. Maxwell Co., St. Marys, and his talk excited keen interest.

A group photo of delegates was taken at the close of the morning session, copies of the photo being obtainable from the Galbraith Photo Co., 239 Yonge street, Toronto.

Executive Meeting.

The convention adjourned about four o'clock, the members of the executive being then called together by President Scott. It was decided to offer M. W. Howell, of Goderich, the position of organizer of the association, he to commence work at once if he accepts.

While not desiring to establish a precedent, the executive instructed the secretary and treasurer to procure a suitably engraved gold-headed cane to be presented to Retiring President Humphries, as a reminder of the honor he enjoyed in being the first president of the association, and of the executive's appreciation of his work in behalf of the retail trade.

CONVENTION GOSSIP.

Retiring President Humphries had to leave the convention to catch the 4 p.m. train on Friday. The delegates were in the midst of a red hot discussion about oil tanks, but when Mr. Humphries excused himself they interrupted the talk by a hearty chorus of, "He's a jolly good fellow." Mr. Humphries made an exceedingly capable president and in years to come the honor he enjoyed will be even more appreciated than it is to-day.

Markets and Market Notes

THE WEEK'S MARKETS IN BRIEF.

MONTREAL.

COIL CHAIN—Advanced 10c. per 100 lbs.
LINSEED OIL—Advanced 2c. per gal.
TURPENTINE—Advanced 2c. per gal.
SHELLAC VARNISH—Shows advances.

TORONTO.

TURPENTINE—An advance of 2c.
LINSEED OIL—An advance of 1c
OLD MATERIAL—Several declines.

Montreal Hardware Markets

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, March 28, 1907

The hardwaremen's rush season is now on here in full swing, and it's a case of "everybody put his shoulder to the wheel and push." Jobbing houses resemble busy bee hives more than anything else, and it's not a good time for anybody to show his face around, if his sole object is to simply view the scenery. Some houses are doing night-work, while others have cut out all concessions such as early closing and Saturday afternoon holidays until further notice. With the prosperous condition of the country, it would be only reasonable to suppose that money should be flowing pretty freely, but reports are to the contrary. Collections are pretty hard to get.

Recent severe snow storms have put the roads here into deplorable condition, and it's impossible to load teams to their full capacity. This naturally has delayed both out-going and in-coming freight to a greater degree than might be expected by the uninitiated. To give some idea of the great volume of business which is being done, one jobber informed our representative that he shipped out four large truck loads of goods the other day before eleven o'clock in the morning. This averages about a team an hour from the time the house opened for business.

Manufacturers of wire nails, wire, etc., report great difficulty in keeping their orders up to date, although they are gradually increasing their plants, and working up to full capacity. No matter what size a plant may be, an order for several thousand kegs of one size of wire nails, such as was received by one Montreal firm last week, makes a fairly large-sized hole in the stock, and naturally makes a shortage in that size that is extremely hard to catch up with, seeing that orders are placed for some time ahead, which test the plant to the utmost.

Market conditions this week show very few changes, the only advance to record being one of 10 cents per 100 lbs. on coil chain. Bolts and nuts remain practically unchanged, with the shortage just as marked as ever. Rivets and burrs, hay wire and wire nails are in good demand at the same old prices, while though cut nails show no change in prices the demand is not exceedingly strong.

A very good business is being done in building paper, but the manufacturers of this line are about the only people we visit who are not rushed to death.

Shot is not in good demand just now, but ammunition is waking up and some orders are now coming in.

Horse nails are moving well at the old prices, but some jobbers are now charging slightly more for their cheaper lines of horse shoes. The advance, however, is not enough to warrant any change in our quotations.

Poultry netting is also in good demand at steady prices.

Orders for binder twine, lawn mowers and green wire cloth are mostly booked for the season, but a few stragglers keep coming in from time to time.

Toronto Hardware Markets

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, March 28, 1907.

Hardware trade conditions are good, the demand being brisk, with active prices. The few weeks of mild weather have improved the business very much. The demand in a number of lines greatly exceeds the supply, manufacturers repeatedly having to turn down oeders owing to their inability to fill them.

The situation in screens remains the same, with a good demand and limited stocks. The situation is not yet so acute as to warrant an advance in the prices.

The scarcity of wire nails continues, with heavy demand and unsteady prices. The last advance was 5c., making the base price now $2,45. Orders are large, and supply houses find it difficult in some cases to fill them.

Orders for binder twine continue to come in, but have eased off as they have nearly all been booked up. Prices remain firm and unchanged. The price on 500-ft. twine is, if anything, a little weaker.

The demand for mechanics' tools, extension and step-ladders continues strong with firm and unchanged prices. Those who have ordered building paper, washers, wringers, carpet sweepers, lawn mowers and house-cleaning utensils for April 1st are asking for earlier shipment, in anticipation of earlier commencement on house-cleaning operations. Harvest and garden tools have experienced an earlier demand than last year.

The demand for poultry netting continues good.

Bolts, nuts, rivets and burrs are experiencing a strong demand, the supply being limited. Prices continue firm and unchanged. Business in oiled and uncaled wire is good, with strong demand and firm and unchanged prices.

The demand for horseshoes and horse nails continues strong. Prices have not yet been affected by the spring demand from new districts and remain firm and unchanged.

Shot is not in much demand now, most of the orders being booked up.

The spring demand for sporting goods is strong, fishing tackle and rifles being particularly active owing to the early opening up of the bay and the approach of the spring shooting season.

Owing to a break-down, the Dominion Iron and Steel Co., Sydney, had to suspend operations for a couple of weeks. This has affected the supply of rods, thus aggravating the scarcity of wire nails. The supply of rods has been limited owing to the delay of the Intercolonial Railway in delivering its shipments to western firms. The damages done at the Sydney works have now been repaired, and the rod, nail and billet mills are now running with full force.

Montreal Metal Markets

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, March 28, 1907

There is what might be termed a kind of an uneasy atmosphere in metal circles this week, but so far, dealers have not changed their prices. Copper and tin have the honor to be in the spot light as the disturbers of the peace, both these metals having eased off unexpectedly.

Dealers do not expect any great change from present prices in any lines within the near future, unless further fluctuations take place in financial circles.

Copper and tin are both extremely short and no heavy stocks are to be found any place in the city. Dealers report that pig iron is also very scarce and that there is hardly any to be had in town for love or money—it's a case of beg, borrow or steal what you can lay your hands on, and the man with the biggest hand gets the biggest share. This state of affairs is, no doubt, brought about by the severe floods at Pittsburg and along the Ohio River, which have caused the shut-down of some of the busiest mills, the result of which will be to delay still further, shipment of many long overdue orders. If these furnaces have to remain out for any length of time, it will accentuate the situation still more, but it is thought that a week or ten days will again place them in normal condition, but meanwhile, the damage has been done, and the loss of production cannot be made up when it is most needed. It is also said that shipments of Middlesborough irons will not be as great as they have been during the past several months. This state of affairs does not tend to make the outlook for immediate relief very promising.

The copper and tin situation in New York seems to be practically the same as it is here, with the exception that the decline in prices was more marked.

Zinc spelter is about the same as last week, prices remaining firm and unchanged.

Some dealers state that pig lead also weakened slightly during the week, while others report it unchanged.

Antimony shows no special features at present, prices remaining firm and

unchanged. The heavy demand for galvanized iron still prevails, and an exceedingly good business is being done in this line.

All other lines, such as boiler tubes, tool steel, cold rolled shafting, etc., remain unchanged. For prices on all lines, see current market quotations at the back of the book.

Toronto Metal Markets

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, March 28, 1907

Last week closed with sensational declines in the foreign markets, the reduced figures being due to speculation in tin and copper, although other metals such as iron and lead were affected by the general weakness which has followed the serious conditions existing in the stock and money markets. Fluctuations have been entirely due to the tightness in the money market and it is not expected that the decline will hold for any length of time, in fact at the time of writing the market has largely recovered. Factories are as busy as ever and mills are booked ahead for the balance of the year.

The great scarcity of copper is the reason for its extraordinary strength and regardless of the price of stocks it seems assured that the price of the metal itself will hold firm. Under normal circumstances a slump in the value of securities such as recently has taken place would have had a very bad effect upon the copper market. Little excitement has been manifested, however, owing to the general knowledge that the production is not keeping pace with the demand.

Pig iron has fallen off slightly in the Old Country but recent transactions in the American market indicate clearly that there will be no slow down for several months yet. Two months ago there was much talk of canceling booked orders for iron and steel, but there is none of this heard now. Practically all the mills are choked with orders for which specifications have been supplied. The floods in the Pittsburg district have placed many mills and furnaces out of business, and it is probable many orders for pig iron and steel will be considerably delayed in being fulfilled, and dealers who are looking for supplies from this source have this complication to add to previous difficulties in securing shipments. Advices from Great Britain indicate that iron is likely to come forward more slowly than in recent months, and it is interesting to note that stocks of pig iron in Great Britain are a little more than half what they were a year ago, for instance, at Middlesborough a year ago there were about 750,000 tons in stock where today there is considerably less than 500,000 tons.

Business locally is being continued at the high pressure which has been the feature of the market for several weeks past, there being a good volume of trade all through the list of metals. In galvanized iron, tin plates and tinned iron there is a much larger business being done than in any previous year, the call for these goods from dairymen, builders, manufacturers and other consumers being very active. Hoop iron is also in keen demand just now and sheet copper is being bought liberally. All ingot metals are moving freely and despite the fluctuations of outside markets prices on all finished metals are holding firm locally.

Lead, antimony, zinc and spelter are all strong, no weakness having been developed in any of these lines.

The only changes which have taken place are in old material, copper, iron and lead being all subject to slightly reduced quotations. Old rubbers have dropped a cent and they are now subject to new conditions governing the packing. All rubbers will have to be graded better in future, buckles, overshoe tops, etc., being detached before weighing. The quotations are: Copper and wire, 20c. per lb.; light copper, 17½c. per lb.; heavy red brass, 18c. per per lb.; heavy yellow brass, 15c. per lb.; light brass, 11½c. per lb.; tea lead, $4 per 100 lbs.; heavy lead, $4.40 per 100 lbs.; scrap zinc, 4½c. per lb.; No. 1 wrought iron, $12.50; No. 2 wrought, $7.50; machinery cast scrap, $17.50; stove plate, $11.50; malleable and steel, $8.50; old rubbers, 10c. per lb.; country mixed rags, $1 to $1.25 per 100 lbs., according to quality.

London, Eng., Metal Markets

From Metal Market Report, March 26, 1907.

PIG IRON—Cleveland warrants are quoted at 52s. 10½d., and Glasgow standard warrants at 52s., making prices as compared with last week on Cleveland warrants 1s. 1½d. lower; on Glasgow standard warrants, 1s. 3d. lower.

TIN—Spot tin opened weak at £180 10s., futures at £178 10s., and after sales of 260 tons of spot, and 650 tons of futures, closed firm at £181 12s. 6d. for spot, £179 12s. 6d. for futures, making price, compared with last week £6 12s. 6d. lower on spot, and £6 7s. 6d. lower on futures.

COPPER—Spot copper opened weak at £95 10s., futures £97, and after sales of 800 tons of spot and 1,600 tons of futures, closed firm at £97 for spot, and £99 for futures, making price, compared with last week £8 10s. lower on spot, and £7 15s. lower on futures.

LEAD—The market closed at £19 6s. 3d., making price as compared with last week 7s. 6d. lower.

SPELTER—The market closed at £25 15s., making price as compared with last week 10s. lower.

United States Metal Markets

From the Iron Age, March 28, 1907.

On the whole the buying of pig iron has been rather light, and in at least one case an important inquiry for foundry iron was withdrawn. About 8,000 tons of the foundry iron reported last week to have been sold to a large melter turns out to have been Middlesborough. We understand that during the last week a cargo of close to 5,000 tons of Scotch iron was purchased abroad by an American importer to cover sales here previously made. The Middlesborough market has declined to 53 shillings, 3 pence.

A very curious incident is the offering, for shipment from Shanghai, of a lot of 5,000 tons of basic pig iron made in China. The analysis is a very good one, the iron being guaranteed under 0.05 in sulphur, 0.70 in silicon and 0.30 in phosphorus. It is offered for shipment to arrive here, 2,500 tons in June and 2,500 tons for the third quarter. The price is at a figure which may prove attractive.

In the Central West the scarcity of steel continues. One large steel interest in the Pittsburg district is now in the market for important quantities to cover a shortage in supplies for April and May delivery.

Quite a large tonnage of structural material is in sight. Thus Salt Lake City has work in hand aggregating over 15,000 tons, of which about 3,000 tons has already been contracted for. There is good work coming up, too, from nearly every important Pacific Coast city, and Chicago is expected to call for considerable quantities soon.

Chicago opens bids this week for 12,000 tons of cast iron water pipe. Detroit has just placed 6,000 tons and minor quantities have been sold at Ohio points.

From the Iron Trade Review, March 28, 1907.

New tonnages in iron and steel are not conspicuously active, but there is unmistakable evidence of strength in those materials that were inclined to weakness. This change is most clearly shown in pig iron. It is becoming increasingly difficult to secure spot shipments either from southern or northern furnaces, a fact which has aided in strengthening the market on all deliveries. No price changes have yet appeared other than a firm refusal to shade $23 Birmingham for spot southern No. 2, and an indisposition to go less than $18.50 Birmingham for the last half. Manufacturers of sheets are overwhelmed with orders and specifications, one producer having nothing to offer for the next four to five months, while the best delivery obtainable from many mills is 15 weeks. The movement in structural steel improves with the approach of warm weather, and mills are rapidly filling with specifications. Cast iron pipe was active this week, contracts closed aggregating 7,500 tons. A round tonnage of steel bars has been placed with mills for delivery in the second half. Scrap shows an upward trend.

The movement of wire products continues of an unprecedented nature. Every section of the country is pressing for material, stocks being low and deliveries slow.

The scarcity of semi-finished material has seriously handicaped many of the mills and it will be some time before they can return to their average maximum production. The Humbert, Anderson and Morewood plants of the American Sheet & Tin Plate Co. are closed on account of lack of steel.

British Columbia News

By G. S. B. Perry.

Vancouver, B.C., March 20, 1907.

Application for a water record for 75,000 inches has been made by the Stave Lake Power Co., the record to apply to the Stave River just below the point at which they are now erecting their big power generating station. This application practically means the using over again of the water in the stream and flowing from the lake, after it has passed through the turbines of the power house now being built. As an inch of water—meaning a miner's inch—indicates in British Columbia law, 1.68 cubic feet per minute passing through a pipe or flume, the quantity now being applied for suggests an enormous power development. The Stave Lake Company of which John Hendry, president of the V. W. & Y. Ry. is head, is preparing to enter the field in the coast cities for supply of power to manufacturing plants, and all industries likely to be users of electric energy. The only company now in the field is the B. C. Electric Co., with its subsidiary company, the Vancouver Power Co.

* * *

The day of electric generation from water power seems to have come in British Columbia. The developments on the mainland are but foreshadowing what is to come on Vancouver Island. There the B. C. Electric Railway Company is at present making an effort to secure large additions to present available water power, to provide for expected expansion both in the electrifying of railways on the island and for expansion of many industries. Experts are now out in behalf of the B. C. Electric Company making examinations and reports on every stream available for water power generation. It is persistently asserted that the E. & N. Railway, now owned by the C.P.R., is to be electrified. If this were so, it would be through an arrangement between the C.P.R. and B. C. Electric Railway Co.

* * *

The first carload of coal from the Nicola Valley has been received in Vancouver. The coal was shipped over the new branch line from Coutlee to Spence's bridge, on the C.P.R. main line. The Nicola Valley Coal & Coke Co. shipped the car from their Middlesboro colliery, which has been well developed in anticipation of the railway being completed. It is of excellent quality, and suitable for coking as well as for ordinary steaming and heating purposes. It is asserted that the tests have shown this coal capable of being used for smelting iron ores, and that in this respect it is ahead of other coal mined in the province.

When the C.P.R. extends this Nicola branch to Midway, connecting there with the C. & W. branch and thus reaching the smelters of the boundary district, the haul will be 125 miles shorter than from the Crow's Nest Pass. The comparatively short distance to the coast will also make it possible for Nicola coal to get into the coast market in competition with Vancouver Island mines.

Another marine railway is to be built in Vancouver, to handle vessels of the coasting fleet. Capt. Watts of the Vancouver Shipyards, is preparing plans for a marine railway with three tracks to dock vessels up to fifteen feet draught.

* * *

A Vancouver firm, Evans, Coleman & Evans, secured from the Winnipeg city council recently a large order for cast iron pipe, amounting to some 6,000 tons. This large contract, the largest expected to be open for competition in Canada this year, was secured against competitors representing nearly all the makers of cast iron pipe in Britain as well as the three Canadian pipe foundries. Cast iron has advanced seriously in price and competition has therefore been keen and close.

* * *

Some forty new saw and shingle mills are estimated to be under construction, or contemplated, in the Fraser River district of the lower mainland alone, this year. Of this number about 25 are shingle mills, and of the saw mills many are small portable or semi-portable plants. These are in many cases put in on limits of small area with the expectation of moving them in a few years after cutting out the berth on which they are located. The extreme activity in the lumber market is responsible for the unprecedented development, which is likely to keep up as demand for lumber in the Northwest is keener than ever. Prices, too, show an upward tendency and the report given publicity some time ago that prices would go up another $2 per thousand at April 1st, has not been contradicted, but has really been reaffirmed. The lumber inquiry at Ottawa, now being heard, does not seem to disturb the lumbermen, who claim to be able, if necessary, to amply justify their present price list, as well as to refute the assertions that they have an unlawful combine.

* * *

Included in the cargo of the Canadian-New Zealand liner Bucentaur when she sailed from Vancouver a few days ago, was a consignment of 30 tons of pig lead from the Trail smelter, for New Zealand. This product is refined at the smelter from the silver lead ores of the Slocan. Other consignments in the Bucentaur's cargo were paper, some 200 tons from Eastern Canadian mills, and about a million feet of lumber. The vessels of this line are at present carrying large quantities of lumber and will continue to do so until the general freight offerings increase.

The freight offerings and inquiries for space in the first steamer of the Canadian-Mexican line, which is expected to be sailing from Vancouver in a month, are very encouraging to the promoters of the enterprise. When trade openings in Mexico are exploited by B. C. business houses there is every assurance that the new line of steamers will have all the cargo they can handle. The addition, within twelve months, of two new ocean lines to the shipping of B. C. ports is an indication of growth which is being marked by students of commerce.

N.B. Hardware Trade News

St. John, N.B., March 25.

The hardware dealers here are anticipating a large spring trade. Travelers now on the road are sending in orders for spring lines and the outlook is extremely bright. One prominent merchant told your correspondent that the past three months had been very successful and it was expected that there would be a continuance of good business. There has been practically no change in prices, all lines of goods remaining firm.

* * *

John Young, sales manager of the Canadian Rubber Company, of Montreal, is in the city. He is looking after the Maritime Provinces agencies.

* * *

The quarterly meeting of the Maritime Wholesale Hardware Association will be held in Halifax on Tuesday of this week. The delegates from St. John will be John Keefe, vice-president; T. Carlton Lee, F. W. Murray, W. H. Smith and George A. Lockhart, secretary.

* * *

A. M. Bell, of A. M. Bell & Co., Halifax, was in the city on Tuesday last to attend the funeral of his brother-in-law, the late Dr. A. A. Stockton, M.P.

* * *

The Murchie Lumber Co. has disposed of extensive crown land holdings in the Tobique regions to Stetson-Cutler Co. at a price approximating $108,000. It is said the Murchie Co. will go out of business on the Tobique. The price paid for the property some years ago by the Murchie Co. is said to have been about $80,000, and they have been cutting every year at a good profit and now clear about $28,000 on the deal.

The property comprises about 260 square miles, and is thickly covered by spruce. The purchasers will probably start a pulp mill there.

* * *

A. B. Wetmore, of Chipman, will open a branch of his carriage and farm implement business in Sussex.

* * *

The machinery at the new factory of the Sussex Manufacturing Company's plant is being installed as rapidly as possible. The foundry commenced work last week and the first castings for some time were made.

* * *

William H Stirling's brass fitting establishment on Water street, was visited by fire on Wednesday night last. It is thought the blaze started in the floor of the second storey, at the furnace flue. Very little damage was done. Mr. Stirling had $2,000 insurance.

* * *

There is considerable interest in the announcement made by Premier Pugsley in the House last week that Mackenzie & Mann may build a railway down the St. John valley, from Woodstock through to St. John. It is believed that this is a part of the scheme for a transcontinental system which this concern is working toward.

Arthur E. Jubien, of Halifax, accountant with the Sydney Cement Company at Sydney, was married in this city on March 12th to Miss Alice M Armstrong, daughter of Lt.-Col. A. J. Armstrong, of this city.

* * *

The Portland Rolling Mills were troubled somewhat last week by a strike among the teamsters. After being out for three or four days the men decided to go back to work, as the company had announced that they would purchase teams if the strikers did not give in.

* * *

Robert W. Graves, Lydia C. Graves, William Miller, of Elizabeth, (N.J.); Frederick A. Young, of St. John, N.B., and Samuel Holt, of Jersey City, are seeking incorporation as the Canadian Mineral Company. The chief place of business will be St. John, and the proposed capital stock is to be $20,000.

MORRISBURG'S NEW INDUSTRY.

Reference was made last week to the progress being made at the Canada Tin Plate and Sheet Steel Company's works at Morrisburg. The company is expecting to commence operations late in April, their machinery being now nearly ready for installation.

Seen by a representative of Hardware and Metal, President Meldrum stated that his company had suffered considerably from local opposition but they were going ahead, and, having failed to secure the duty asked for, would branch out in other fields of manufacture. Mr. Meldrum said: "The delay in getting started is entirely beyond the company's control, and is due to the failure of the manufacturers of the large driving wheels ordered by the company in June last, to make delivery. These wheels are the largest ever cast in Canada, weighing 75 tons each and measuring 30 feet in diameter, and, because of their unusual size, the contractor miscalculated the time in which they could be turned out. Delivery is promised in two or three weeks' time, however, and very shortly thereafter the wheels will be turning in the most modern and well laid out tin plate sheet mills to be found anywhere, and we believe the first to be electrically driven throughout.

"The company's plant is situated just east of Morrisburg, and is connected by a switch with the main line of the Grand Trunk Railway between Toronto and Montreal. It is also intended to run a spur to the river St. Lawrence, about half a mile distant, so that shipments can be handled by water as well as by rail.

"The main building is one of the largest continuous structures in Canada, being about 800 feet in length with an average width of about 90 feet, and is most substantially constructed of steel and stone. When installed the equipment will consist of five hot and four cold mills in the tin plate department; two finishing, one roughing and two cold mills in the sheet steel department: giving a total equipment of 14 mills, with the necessary heating and annealing ovens, pickling and tinning machines, bar and trimming shears, etc. It is the intention to turn out a full line of tin and terne plates, block plates, Canada plates, steel sheets, galvanized sheets, etc., and the mills will have a capacity of about 8,000 boxes per week. There is a large and growing demand for these commodities in Canada at the present time and as under the new tariff the company is permitted to bring in all its machinery and everything entering into the manufacture of its goods free of duty, it should prove an important factor in this trade in the country.

"The municipality of Morrisburg has now completed, at a cost of about $100,000, the power plant for supplying the company with electrical energy, and is under contract to deliver 700 horse power into the company's works free for 24 hours each day. The other concessions the company are to receive include free water and light and exemption from taxation (except for school purposes).

"The ponderous machinery, including the 20-ton electric crane now in operation, will be driven by some 10 or 12 electric motors, the largest of which are two of 650 horse power each for propelling the immense driving wheels coupled with the hot mills. The company will employ about 350 men, most of them skilled mechanics from the U. S., who will be a welcome addition to the population of this country.

"As soon as the present plant is in operation it is the intention to proceed with the erection of three open hearth steel furnaces for producing a supply of steel bars for the tin plate and sheet mills, and an enamelling and stamping plant for making the finished goods will also be added."

A GROWING BUSINESS

The National Hardware Co. was established at Orillia in August, 1905. Employment is given to 70 hands, and to-day orders for goods press in upon the company with such speed that every department is continually taxed to its full capacity. They manufacture a great variety of locks, door knobs and hardware specialties in steel and iron, light castings in iron and brass, and electro-plating in silver, nickel and brass, making a specialty of locks and builders' hardware. So much attention has been given to the perfecting of the company's business in these lines since its establishment that the company is confident that it possesses one of the finest plants for the manufacture of all kinds of fancy brass and iron work in the Dominion.

The machinery and the facilities are of the most modern type, the management being determined to have the best that inventive genius can produce. The officers and directors of the company are: Thos. Venner, president; R. J. Sanderson, vice-president; H. A. Croxall, secretary-treasurer and manager; R. D. Gunn, K.C., R. H. Montgomery, D. C. Thomson.

It would be difficult to find a more certain index of the substantial progress of the country and of her rapidly increasing wealth than is afforded by the rise to sudden prominence of concerns manufacturing along the lines of the National Hardware Company.

LONDON STATIST ON AMERICAN AFFAIRS.

The London Statist says of the American situation: "At such a time as this it would need a bold man indeed who would offer any definite opinion as to the level to which prices are likely to fall. But there is one thing that can be said, there is a general consensus of opinion among the well-informed that trade next year will merely halt in order that capital may accumulate, and if this view be correct, and it certainly coincides with our own view, the companies will not experience much difficulty in maintaining their dividends. The difficulties may arise with companies engaged in considerable construction works which they intend to finance out of capital and who now find difficulty in raising the capital for the purpose. These companies may find it necessary temporarily to reduce their dividends in order to devote a larger portion of their profits to the work of construction."

DEATH OF ALFRED BUEHLER.

In the death last week of Alfred Buehler, vice-president and general manager of the J. H. Ashdown Hardware Co., Winnipeg loses one of her most substantial and most widely respected business men. While the news of Mr. Buehler's death will be learned with sorrow by the hardware trade of Canada it will not occasion any surprise, as it has been known for some time that his days were numbered. Three years ago a prominent physician gave Mr. Buehler two years to live, but he preferred to die in harness and he remained in active management of the business until a very short time before his death.

Mr. Buehler came west in 1879, and after a short experience in a boot and shoe warehouse entered the employ of Mr. Ashdown. He started at the bottom of the ladder and by hard work and first-class ability reached the highest position in the gift of the company.

Personally Mr. Buehler was popular among a wide circle of acquaintances in Winnipeg and the west and his loss is widely mourned.

BUILDING AND INDUSTRIAL.

An American company has bought the Beatty Estate property in Toronto at the corner of Queen and Parliament streets, and will erect there a five-storey departmental store.

The Asbestos Mfg. Co., of London, Ont., has been incorporated with a capital of $25,000 to manufacture and deal in asbestos. The promoters are H. V. Everham, R. Van Z. Mattison, jr., and R. Van Z. Mattison, sr., all of London.

WINDOW GLASS — 16-oz. O.G., single, in 50-ft. boxes — 16 to 25 united inches, $2.25; 26 to 40, $2.40, 16-oz. O.G., single, in 100-ft. cases — 16 to 25 united inches, $4; 26 to 40, $4.52; 41 to 50, $4.75; 50 to 60, $5.25; 61 to 70, $5.75. 21-oz. C.S., double, in 100-ft. cases—26 to 40 united inches, $7.35; 41 to 50, $8.40; 51 to 60, $9.45; 61 to 70, $10.50; 71 to 80, $11.55; 81 to $17.30.

No matter where the store is situated, care of the show windows pays. Anything that pays is worth thought. The show window question cannot be neglected. If a good window makes trade, a poor one drives it away. There is nothing negative about a window ; it has an active influence one way or another. If you have not taken up window dressing as a regular feature of your business do it now !

HARDWARE TRADE GOSSIP

Ontario.

F. Bennett, of Lynden, was in Toronto this week.

J. S. Allan, hardware merchant, Burlington, has sold out.

A. Henry, of Henry & Son, Orono, was in Toronto this week.

W. Conn, reported to have assigned, is still doing business at Aylmer.

W. Hudson, Dufferin street, Toronto, is putting in a stock of hardware.

M. Ballantyne, of Ballantyne Bros., Kincardine, was in Toronto this week.

Rice & Barnes, hardware merchants, Whitby, have dissolved, Mr. Barnes retiring.

R. Jackson and J. Yorke have opened up a hardware and tinsmith business at Parkhill.

The first annual at-home of the Canada Screw Co.'s employees was held last week at Hamilton.

W. Wickerson, an employee of the steel plant at Hamilton, was killed by a crane last week.

R. J. Walkem, hardware merchant at Tottenham, has recovered from a recent attack of la grippe.

F. J. Taylor has severed his connection with the Western Foundry Co., Wingham, and will be succeeded by M. E. Robson as manager.

J. Cotie, of the Canada Turpentine Co., at Barry's Bay, was caught in some machinery and instantly killed last week.

F. Howe, an employee of the McClary Mfg. Co., London, met with a fatal accident last week, being caught in a belt and killed instantly.

Hardware merchants of Ottawa have petitioned the city council to repeal the early closing by-law, objecting that it is too restrictive upon business.

J. R. Myers, Stratford, whose store was burnt out last December, has again opened up his hardware business. M. Carfield, of Brantford, will take charge of hardware department, Mr. Myers continuing to look after the plumbing and tinsmith department.

J. B. Reade was presented with a Morris chair and several pieces of cut glass on March 16 by the managers and travelers of H. S. Howland, Sons & Co., Toronto, with which company he was connected for about twenty years. He recently accepted the position of buyer for the Kennedy Hardware Co., Toronto.

McKelvey & Birch, hardware merchants, Kingston, whose premises were destroyed by fire last week, have called for tenders for a new building four stories high on the old site. Their net loss will be about $7,000 or $8,000 by the fire. Two stores have been secured near the old stand, in which they will carry on business temporarily. Some twenty-five years ago the firm suffered from a fire even more disastrous than this one. They have been in partnership for over forty years.

Quebec.

A. Huot, Sorel, was in Montreal this week on business.

F. X. Paradis, St. Denis, called on the Montreal jobbers last week.

C. O. Gervais, St. Johns, Que., was in Montreal this week on business.

Morency & Cote, hardware merchants, Montreal, are registered.

P. Cote, Quebec, visited the metropolis this week on business bent.

A. R. Wilson, Sherbrooke, was in Montreal this week on business.

E. Chevalier, Joliette, was in Montreal this week purchasing supplies.

W. C. Webster, Coaticook, was in Montreal this week purchasing supplies.

H. Alguire, Maxville, was in Montreal last week placing orders for spring goods.

J. A. Paquin, St. Eustache, visited some of the Montreal wholesalers during the week.

J. W. Harris, of the J. W. Harris Co., Montreal, has just returned from a trip to Winnipeg.

D. Lavalle, St. Gabriél de Brandon, visited some of the wholesale houses during the week.

Harold G. Eadie, Montreal, is registered as chief agent of the White Fireproof Construction Co.

Mr. Haskell, of the Haskell Lumber Co., Fassett, was among the busy men in Montreal this week.

E. Crepin, Chateaguay, called on the Montreal jobbing houses this week to purchase spring supplies.

Alex. Gibb, one of Montreal's leading manufacturers' agents, has gone south for a holiday, and will visit Atlantic City and ather points.

Mr. McCubbin, New Glasgow, Que., was in Montreal this week on business.

J. H. Ashdown, Mayor of Winnipeg, is on a trip east, and was in Montreal during the week.

F. H. Scott, Montreal, representing several large cutlery and silverware houses of Sheffield, Eng., will move shortly from his present premises in the Temple building to the Coristine building on St. Paul Street.

Jas. Mitchell, Sherbrooke, is putting up a new wholesale warehouse, 125x60 feet, next door to his present store on Wellington street, which will be used in future entirely for retail trade, while the old warehouse down near the tracks will be used exclusively for heavy goods.

Western Canada.

A meeting of the creditors of F. G. Elliott,, hardware merchant, Gainsboro, Sask., was held.

Coade & Hughes, hardware merchants at Carievale, Sask., have dissolved, J. Hughes continuing.

H. Anderson has bought out the tinsmith department of the hardware business of A. V. Gerry, Indian Head.

CATALOGUES AND BOOKLETS

When sending catalogues for review, manufacturers would confer a favor by pointing out the new articles that they contain. It would assist the editor in writing the review.

By mentioning HARDWARE and METAL to show that the writer is in the trade, a copy of these catalogues or other printed matter will be sent by the firms whose addresses are given.

Pedlar's Roofing.

The Pedlar People, Oshawa, have just issued a 128-page booklet which "cancels all previous roofing catalogues," and contains "quotations for immediate acceptance." At the top of every page is the statement "Keeping everlastingly at it brings success." The fifth page contains the terms and conditions of business of the Pedlar people; and the sixth contains some useful items "of mutual interest." The rest of the booklet contains pricel and cuts of the various lines of goods manufactured at their factory. Copies can be had by anyone in the trade who mentions this paper.

Marine Engines.

The Canadian Fairbanks Co., Toronto, have just issued their marine engines catalogue. It is a nicely gotten up booklet of 12 pages containing cuts of their steam and motor engines. Anyone wishing a copy of this catalogue may get one by applying at any of the company's branch offices.

Cooking by Gas.

The Gurney Foundry Co., Toronto, have just issued a splendid booklet, "Cooking by Gas, the Oxford Way." It is is 26-page booklet containing illustrations of their Oxford gas stoves, along with some valuable information regarding the summer evil and how to remedy it. The company states that a special catalogue of these stoves may be had on application and mentioning this paper.

Farm Fences.

The farm fence is one of the most important things about the farm. Except in those districts where neighbors are few and far between and where stock is allowed to roam at will, a good fence is indispensable.

In most cases economy is a factor which forms an important consideration with the farmer. With fences, as well as with other articles, the best economy is to erect a good fence at the start. The cheapest article may have all the appearance of answering the purpose, but when the time and expense necessary for repairs is taken into account, it will be found that it is cheaper in the long run to erect a more serviceable fence and one which stands the wear and tear without so much looking after.

Probably the most practical farm fence yet erected is of the woven wire type. There are a number of different patterns and styles on the market at the present time, and it is well in selecting a fence of this type to be posted in regard to the points of superiority in which a fence of this character should excel, in order to prove of the greatest advantage in farm use, To give the best service a wire fence should possess the qualities of elasticity, tensile strength,

firmness and rigidity. It should be so constructed that the upright and lateral wires are securely locked in such a way that they cannot be rooted up from below, shoved down from above or spread sidewise. The wire should be sufficiently heavy and well galvanized, hard enough to give the proper resistance to strain and pressure, but not sufficiently brittle to break under a quick blow. The lock should be of such a character as to allow the fence to be properly erected on uneven as well as level ground, and at the same time hold the wires securely and in their proper relative position.

The Banwell Hoxie Company publish an interesting little folder on the subject of fence erection, which gives valuable information on this important subject, and also gives instructions on the method of making concrete fence posts. A copy may be obtained by addressing the Banwell Hoxie Wire Fence Company, Hamilton, and mentioning this paper.

Original Calendar Design.

The Dominion Cartridge Co., of Montreal, are sending out to their patrons an interesting calendar picture. It represents the Northwest Mounted Police using their cartridges on the prairie in target practice. It is a striking picture and could be used to good advantage for wall or window displays. Anyone wishing a picture will do well to apply to the company.

Bowser's Business Boomer.

S. F. Bowser & Co., Fort Wayne, Ind., and Toronto, issue a neat little fortnightly for their salesmen, the Feb. 20 issue containing a novel primer for Bowser salesmen in alphabetical form. The same issue contained the following reference to one of their Canadian travelers: "Our Thos. Cragg encountered a great deal of trouble in getting over the ground in his Saskatchewan territory during January and February. Nevertheless he is making a very creditable showing. Blizzards have no terror for him, although in order to get out of the way of one he worked a hand-car seven miles one day lately, with the thermometer registering 40 degrees below. It does seem as though there is nothing Bowser salesmen will not do that is honorable to get business. The hand-car racket is the newest one we have heard of."

Morrison's Calendar.

The James Morrison Brass Co., Toronto, have supplied to their customers a large poster-size calendar, and copies will be sent to anyone in the trade on application.

STAR IRON CO.'S CHANGE.

The Maison Jean Paquette, hardware dealers, Montreal, have purchased for a number of years, the right to sell the output of the Star Iron Co., of Montreal, manufacturers of the "Star" boiler.

This was brought about by G. N. Ducharme, the proprietor of the Star Iron Co., wishing to devote more of his time to the manufacturing end of the business, in order to have a more complete line to meet the growing demand for this boiler, and in looking about for somebody to look after the selling end of the business, he hit on Mr. Paquette, as being one of the leading dealers in this line. The proficiency to which Mr. Paquette had brought his own business, showed that he was a competent manager, and this made Mr. Ducharme all the more anxious to close the deal with him.

Mr. Ducharme has lately invested a large amount of capital in the iron industry, and hopes that he will in the near future, be able to give Canada a manufacturing plant that will be a credit to the country at large.

The "Star" boiler is built on a design which is supposed to give the maximum of heat, with the minimum of coal consumption. The sections, instead of being flat, are oval, thereby giving the flame larger surface to cover. This is claimed to have the advantage of heating the water in a great deal less time than it could be accomplished in a flat section boiler.

The clerk who always remembers that he represents the store to the customer is the who who always has a job.

The clerk who passes things to his patrons makes friends for the store, while those that throw or tumble them out drive trade away.

HAMILTON ONT,

FOUNDRY AND METAL INDUSTRIES

[illegible] Co., Vancouver, have erected a new foundry in that city to manufacture marine engines and boats.

A number of claims are being staked in the township of Dunnett, west of Sturgeon Falls, where discoveries of copper have been made.

The Hamilton Steel & Iron Co. have secured permits to build new factory buildings and a blast furnace, to cost $300,000, and additions to the open hearth furnaces to cost $50,000.

J. Fogg, who runs a brass foundry on King Street East, Toronto, was sentenced to the Central for three months for receiving brass and lead stolen by his employes from the Gas Works.

Sheet metal shades for automobile storage—that is, sheet metal garages—are becoming a factor in the trade of some sheet metal workers. This material is not only cheap, but it makes a non-inflammable house that can be easily enlarged or removed.

The Gurry Patents Co., Hamilton, has been incorporated with a capital of $40,000, to purchase and use the patent of Edward Gurry for a new pig iron moulding machine. The provisional directors are W. D. Long, P. D. Crerar, and E. Gurry, all of Hamilton.

A patent on a new blast furnace has been secured by H. W. Hixon, Victoria Mines, Ont. The main features of the furnace comprise a lining of refractory material, and an air-jacket, constituting a sunstitute for the water-jacket formerly used, and through which the air passes on its way to the twyers.

The strike of moulders and coremakers which started at the foundry of the Canadian Iron & Foundry Company, Hamilton, on August 29, 1906, has been called off. Only two or three out of 45 strikers have as yet secured positions. At St. Thomas the local union of moulders and coremakers has given up its charter.

Ordinary corrugated iron receives one coat of paint at the rolling mill, the paint usually employed being red oxide of iron thoroughly ground in pure linseed oil, with enough drier mixed in to give it proper drying quality. The first coat of paint is applied by machine, and likely to be imperfect, wherefore the sheets should be painted again after putting them on the building.

NEW METHOD OF TINNING.

The Meaker Company, Chicago, has just perfected a new process for coating iron, steel, copper, and other metals, with tin.

The method is an electric one, and by it an even, bright coat of tin is obtained which retains its lustre and is silvery in appearance. Irregular shaped articles and those that have been machine tooled, are coated without affecting the shape of the article or filling crevices or threads with the metal. Grey iron castings which have not been successfully tinned by the ordinary process, are successfully and economically covered by this method.

Brighten Up

ADOPT the "Brighten Up" slogan for spring business. Our agents and dealers all over the Dominion know its value. We adopted the expression in our advertising last year and there never was so much "brightening up" done. People all over the country "caught on" and bought

THE SHERWIN-WILLIAMS PAINTS AND VARNISHES,

the real "brighten up" line. The result was greatly increased business for those who handled our goods. We make a paint or varnish for every purpose, and there is nothing that some one of our products will not "brighten up," from a kitchen shelf to the largest building.

The dealer who handles ***Sherwin-Williams Products*** has the advantages of the highest quality, the widest reputation, and the most effective advertising. Have you as much now? Then you owe it to yourself to get our proposition. Write us today.

THE SHERWIN-WILLIAMS CO.

LARGEST PAINT AND VARNISH MAKERS IN THE WORLD.

20

Finely perforated brass, copper or steel sheets are now tinned before being perforated. This crude method is necessary, because the tin would fill in the holes were the sheets perforated and then dipped by the hot process. We successfully tin these sheets after they are perforated. The cut edges are also tinned so that on steel sheets no corrosion takes place, and on brass and copper sheets, such as are used in sugar refineries and brewery supply houses, the cut edges being tinned, sulphuric and other acids do not readily attack the metal underneath.

ALZEN, A GERMAN METAL.

The founders of Frankfort, Germany, have, after many experiments, turned out a new metal composed of one part zinc and two parts aluminum, which they have named "alzen." Among the superior qualities claimed for it are that it equals cast iron in strength, is much more elastic, takes a high polish, and does not rust as easily as iron. In casting, the new metal fills out the most minute lines and figures in the forms and molds.

WANTED

TINSMITH WANTED — Hardwareman offers shop rent free to tinsmith who furnishes his own tools. Man can run his own business and make good profit. Twenty miles from Toronto. Good opening. Box 606 HARDWARE AND METAL.

OUR LETTER BOX

Correspondence on matters of interest to the hardware trade is solicited. Manufacturers, jobbers, commercial travellers are urged to express their opinions on matters under discussion.

Any inquiries dealing with the trade will be promptly answered. If you want to buy anything, want some shelving, or want information about any special line of goods, anything in connection with the hardware trade, write us. We will be glad to supply the necessary information.

Baby Carriage Manufacturers.

A Brantford merchant writes: "Kindly inform us through your journal the names of makers of go-carts and baby carriages in Ontario and Quebec."

Answer.—Manufacturers of the above in Ontario are: American Rattan Co., Walkerton; Anderson Furniture Co., Woodstock; Gendron Mfg. Co., Toronto, and Semmens & Son, Hamilton. In Quebec: H. & F. Giddings & Co., Granby.

U. S. Wringer Manufacturers.

of 500 lbs., $6; ditto, in kegs of 100 lbs., Tweeddale & Co., Fredericton, write: "Would you kindly send me some names of wringer manufacturers in the United States?"

Answer.—The following manufacture wringers in the United States: American Wringer Co., New York City; the Boss Washing Machine Co., Cincinnatti, Ohio.

Grinding Machines.

Cameron & Leacock, of Smith's Falls, write: "Can you tell us where we can procure a machine that will grind squaring shear blades, skates and lawn mowers?"

Answer.—The only firm that we know of is Root Bros., Plymouth, Ohio.

The Problem in Discounts.

L. R. Allen, of Bruce, McKay & Co., Summerside, P.E.I., writes: "In reply to your question in your paper, dated March 9th, I beg to submit the following"—

A buys goods at 70 and 10 off list, which is equal to 73 straight discount or net 27 on the dollar.

B buys goods at 60 and 10 off list, which is equal to 64 straight discount or net 36 on the dollar.

From the above A would buy his goods 25 per cent. cheaper than B, and B would pay 33 1-3 per cent. more than A would.

Another Answer to Problem.

A Simcoe, Ont., clerk writes: "I enclose herewith my solution of discount problem in this week's journal."

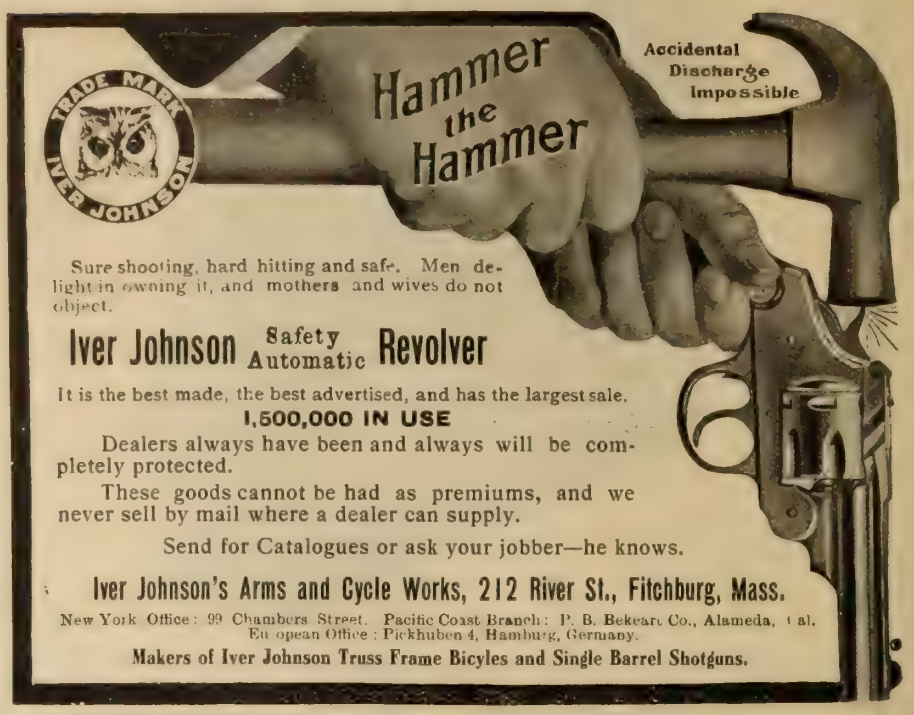
Suppose, for example, that A and B both buy goods listed at $3.50 per doz.

A buys them at 70 per cent. and 10 per cent. off.

B buys them at 60 per cent. and 10 per cent. off.

A's goods will cost him $3.50 less 70 per cent. plus 10 per cent., which is 94½ cents.

B's goods will cost him $3.50, less 60 per cent. plus 10 per cent., which is $1.26.



Now A will gain on every 94½c. outlay 31½c. more than B, and 31½c. is gain of 1-3 on 94½c., or 33 1-3 per cent.

A therefore buys his goods 33 1-3 per cent. cheaper than B.

Police Goods.

A. J. Walker & Son, Truro, N.S., write: "Would you kindly give us the address of the makers of 'up-to-date' police goods, such as handcuffs, twisters, etc.?"

Answer.—We do not know the address of any such firm, and we would ask any subscriber who knows the address to inform us.

VALUE OF A SHOW WINDOW.

Perhaps the best way to realize the full value of a show window is to hire a few. That which we are accustomed to use daily has a tendency to seem of smaller account than it really is. The show window is of value in several ways; to admit light, as a place to display wares, as a power to draw custom into the store. It should not be forgotten, also, that the merchant is paying part of his rent for it all of the time. Never treat it lightly.

G. S. Simard Co., plumbers, Quebec, have been registered.

CONDENSED OR "WANT" ADVERTISEMENTS.

Advertisements under this heading 2c. a word first nsertion ; 1c. a word each subsequent insertion.

Contractions count as one word, but five figures (as $1,000) are allowed as one word.

Cash remittances to cover cost **must** accompany all advertisements. **In no case** can this rule be overlooked. Advertisements received without remittance cannot be acknowledged.

Where replies come to our care to be forwarded, five cents must be added to cost to cover postage, etc.

Paint, Oil and Brush Trades

HOW TO INCREASE PAINT AND VARNISH SALES THIS SPRING.

There has never been a time in retail paint selling when the merchant with a good line of reputable paints and varnishes had such an opportunity to do a record-breaking business. The prosperity of last year and the prevalent "good times" has put plenty of money in circulation, a great deal of building is going on and the people are becoming educated to a more extensive use of painting materials. The result is a greater demand and a far larger field of output. The business is in evidence; it all depends upon the dealer whether he gets it or not.

In the first place, a certain part of his store should be reserved for his paint stock, and, if possible, be a special department. This will enable him to display the goods to better advantage and to attract more attention to his lines of paints and varnishes. If his shelving is neatly arranged and he has made good and liberal use of the display cards, hangers, posters, color cards, and other store advertising, such as the larger paint manufacturers supply, he will create a good impression when the customer enters the store that will do much toward making sales. A stock slovenly arranged, making it difficult for the clerk to find any particular product, color or package, will not sell goods.

Displaying Paints.

A good feature for store use where the paint stock is not in a prominent place, is a display rack for the aisle, where gallon cans of paint can be shown, or a smaller one that can be set on the counter. Such racks, when rightly used, have proved splendid silent salesmen. They suggest the need of a product to the customer in the store and bring an inquiry about the goods and their prices.

Windows play an important part in bringing trade into the merchant's store, and too much care cannot be exercised in having attractive displays. One company give an eight-page book of window trims well worked-out for the use of their agents. These offer suggestions that can be followed inexpensively, and enable the merchant to change his windows without trouble. One clerk should be delegated to care for the windows, and in the spring two or three paint or varnish displays a week will not be too many. The suggestions you offer through your windows bear fruit in orders later on, and you can well afford to take a little trouble to have good displays. Window display features are also supplied by some paint manufacturers, and advantage can be taken of this to get more distinctive arrangements. These features include "cut-outs," display cards of all kinds, and other handsome advertising matter that secures attention and brings trade.

Newspaper Advertising.

In connection with inside store arrangement and display and window trims, a liberal use should be made of newspaper space. This reaches the majority of people and brings you to their attention. You can secure electros of advertisements ready made up for use from the manufacturer whose line you handle, if he is among the large ones, and thus secure the best kind of display and strong advertisements. If you want to advertise some of your other lines at the same time, however, there are special electros that you can get that will enable you to embody your paint ad. without detracting from the general display. In the spring it is advisable to advertise paint and varnish liberally, as that is the natural painting season and the time to make the strongest bid for business.

The more prominent manufacturers give their agents the advantage of a personal letter service, writing letters to prospective paint buyers for them. One company even provides an extensive spring campaign that includes the mailing of calendars, personal letters to property owners, and follow-up mailing cards. It is an established fact that so strong is this campaign that it seldom fails to land the prospect for the agent. The features are sent out to a list of property owners in his town and vicinity that he believes expect to paint or ought to paint, and which he compiles every year. This service costs him absolutely nothing, except the time necessary to prepare a list of names.

(Continued on page 54.)

Sole Distributors for Western Canada

Paint and Oil Markets

MONTREAL.

Office of Hardware and Metal,
232 McGill Street,
Montreal, March 28, 1907

A buoyant feeling prevails in paint and varnish circles, and the cry now is for teams and cars to haul the manufactured product away.

Shipments have been somewhat hampered by the state of the roads, this being the transitory time in Montreal between sleighs and wheels.

Prices on all classes of painting material may be classed as being firm, and there is little tendency to recede from quotations, even for round lots, simply because the manufacturers seem all pretty busy.

LINSEED OIL—In good request. There is some see-sawing going on for round lots for importation, but on the whole, jobbing figures are well maintained, at an advance of 2 cents per gallon over last quotations. Prices now are: Raw, 1 to 4 barrels, 62c.; 5 to 9 barrels, 61c.; boiled, 1 to 4 barrels, 65c.; 5 to 9 barrels, 64c.

TURPENTINE—Being shipped very freely, and in view of the high figures now prevailing, stocks are kept as light as possible. There has been an advance of two cents per gallon, and we are now quoting: Single barrel, $1 per gal.; for smaller quantities than barrels, 5c extra per gal. is charged. Standard gallon is 8.40 lbs., f.o.b. point of shipment, net 30 days.

GROUND WHITE LEAD—Bad roads have impeded shipments to some extent, but orders for April and May delivery are of generous proportion. Prices remain: Best brands, Government standard, $7.25 to $7.50; No. 1, $6.90 to $7.15; No. 2, $6.55 to $6.90; No. 3, $6.30 to $6.55; all f.o.b. Montreal.

DRY WHITE ZINC—In fair demand only, with no change in prices, which remain: V.M. Red Seal, 7½c. to 8c.; Red Seal, 7c. to 8c.; French V.M., 6c. to 7c.; Lehigh, 5c. to 6c.

WHITE ZINC GROUND IN OIL—Is inquired for quite freely for decorative purposes. Prices remain as last quoted: Pure, 8½c. to 9½c.; No. 1, 7c. to 8c.; No. 2, 5⅜c. to 6¾c.

PUTTY—The demand is a little stronger this week at the following prices: Pure linseed oil, $1.75 1-5 to $1.85 1-5; bulk in bbls., $1.50 1-5; in 25-lb irons, $1.80 1-5; in tins, $1.90 1-5; bladder putty in bbls., $1.75 1-5.

ORANGE MINERAL—Sluggish without feature. Quoted at: Casks, 8c.; 100 lb. kegs, 8½c.

RED LEAD — Now in active demand, with only light stocks to draw from until navigation opens: Genuine red lead, in casks, $6: in 100-lb. kegs, $6.25; in less quantities at the rate of $7 per 100 lbs.; No. 1 red lead, casks, $5.75; kegs, $6, and smaller quantities, $6.75.

PARIS GREEN—Quiet at present, and it is not thought that there will be much excitement until navigation opens. Quotations remain as follows: In barrels, about 600 lbs., 25½c per lb.; in arsenic kegs, 250 lbs., 25¾c; in 50-lb. drums, 26¼c; in 25-lb. drums, 26¾c; in 1-lb. packets, 100 lbs. in case, 27¼c; in 1-lb. packets, 50 lbs. in case, 27¾c; in ½-lb. packets, 100 lbs. in case, 29¼c; in 1-lb. tins, 28¼c f.o.b. Montreal. Terms, three months net or 2 per cent. 30 days.

SHELLAC GUMS—In consumptive demand, with prices exceedingly steady at the following figures: Bleached, in bars or ground, 46c. per lb., f.o.b. Eastern Canadian points; bone dry. 57c. per lb., f.o.b. Eastern Canadian points; T. N. orange, etc., 48c. per lb., f.o.b. New York.

SHELLAC VARNISH—There is a good call for the various grades of shellac, at somewhat slightly higher figures. Prices now are: Pure white bleached shellac, $3 to $3.25; pure orange, $2.80 to $3; No. 1, orange, $2.60 to $2.80.

PETROLEUM — American prime white coal, 15½c per gallon; American water, 17c per gallon; Pratt's Astral, 19½c per gallon.

WINDOW GLASS—First break, 50 feet, $1.85; second break, 50 feet, $1.95: first break, 100 feet, $3.20; second break, 100 feet, $3.40; third break, 100 feet, $3.95; fourth break, 100 feet. $4.15; fifth break, 100 feet, $4.40; sixth break, 100 feet, $4.95. Diamond Star: First break, 50 feet, $2.30; second break. 50 feet, $2.50; first break, 100 feet. $4.40; second break, $4.80; third break. 100 feet, $5.75; fourth break, 100 feet, $6.50; fifth break, 100 feet, $7.50; sixth break, 100 feet, $7.50; seventh break, 100 feet, $8; eight break, 100 feet, $9. Double Diamond: First break, 50 feet, $3.45; second break, 50 feet, $3.75; first break, 100 feet, $6.75; second break, 100 feet, $7.25; third break, 100 feet, $8.75; fourth break, 100 feet, $10; fifth break, 100 feet, $11.50; sixth break, 100 feet, $12.50; seventh break, 100 feet, $14; eighth break, 100 feet, $16.50; ninth break, 100 feet, $18; tenth break, 100 feet, $20; eleventh break, 100 feet, $24; twelfth break, 100 feet, $28.50. Discount on Diamond Star, 20 per cent.; on Double Diamond, 40 per cent.

TORONTO.

Office of Hardware and Metal,
10 Front Street East,
Toronto, March 23, 1906.

The paint and oil trade has been quiet but should enliven with a few days of mild weather. The demand for all lines is steady, but not particularly strong. Leads have experienced a little demand. Good demand for varnishes, oils and turpentine obtains. It is reported that prices on refined oil in United States have advanced ½c. This advance has not yet affected Canadian prices, but in all probability it will. Prices on linseed oil and turpentine have advanced owing to the scarcity of raw material. South American seed is scarce, the Canadian supply being diverted to other

Are you ready for your spring paint trade?

Are you ready for your spring paint trade? Ready for the painter when he asks for a paint that will do its work honestly? Ready for the consumer who looks to you for guidance and advice? Have you the right paint? Have you the right assortment? Have you seen a color card of Ramsay's Paints? Let us help you to get ready, and to take advantage of spring business and spring advertising planned in progressive style for the sale of Ramsay's Paints. Write us.

A. RAMSAY & SON COMPANY

Est. 1842 MONTREAL PAINT MAKERS

Just try some ordinary green paint on a panel of wood, see how hard it works,—don't cover, lacks body. Then try on another panel

LUCAS IMPERIAL FRENCH GREEN

notice how easy it spreads, how well it covers,—that's body. Makes the cost less for this reason alone, and stays fresh and brilliant. It preserves the wood, keeps the weather out and the color in. It is the **ONE** Green that is free from arsenic or verdigris.

purposes. Scarcity of labor and a severe drought in Georgia are the causes of the scarcity and high prices of turpentine.

WHITE LEAD — The demand is steady with firm and unchanged prices. We continue to quote: Pure white, $7.40; No. 1, $6.65; No. 2, $6.25; No. 3, $5.90; No. 4, $5.65 in packages of 25 lbs. and upwards; ½c. per lb. will be charged extra for 12½ lbs. packages; genuine dry white lead in casks, $7.

RED LEAD—We continue to quote: Genuine in casks of 500 lbs., $6; ditto, in kegs of 100 lbs., $6.50; No. 1, in casks of 500 lbs., $5.75; ditto, in kegs of 100 lbs., $6.25.

DRY WHITE ZINC — There is a little demand for this line. Prices remain firm and unchanged. We continue to quote: In casks, 7½c.; in 100 lbs., 8c., No. 1, in casks, 6½c., in 100 lbs., 7c. Ground in oil—In 25 lb. irons, 8c.; in 12½ lbs., 8½c.

SHELLAC VARNISH — Prices are unchanged with increasing demand: Pure orange, in barrels, $2.70; white, $2.82½ per barrel; No. 1 (orange) $2.50; gum shellac, dry bone, 63c. Toronto. T. N. (orange) 51c. net Toronto.

LINSEED OIL — Another advance has been made in the prices of both raw and boiled oil of 1c. We quote: Raw, 1 to 3 barrels, 65c.; 4 to 7 barrels, 64c.; 8 barrels and over, 63c. Add 3c. to this price for boiled oil, f.o.b. Toronto, Hamilton, London and Guelph, 30 days.

TURPENTINE.—Prices continue variable, the tendency being upward. Another advance of 2 cents has been made. We quote: Single barrels at $1.04, f.o.b. point of shipment, net 30 days; less than barrels, $1.09 per gallon.

PARIS GREEN — There is a little trade in paris green, most of the orders being booked up. Price continues firm and unchanged. We continue to quote English and Canadian at 27½c. base.

PETROLEUM — Trade is improving with increased demand. American prices on the refined products have advanced 1c. Canadian prices have not yet been affected. We continue to quote: Prime white, 13c.; water white, 14½c.; Pratt's astral, 18c.

For additional figures see current quotations at back of paper.

THE BLANCHITE PROCESS.

J. C. B. Blanch, a New York scientist and chemist, discovered in 1901 a new base for paint manufacture which he considered superior to white lead, then in common use. This new essential was white zinc (oxide of zinc.) It is claimed to be a better carrier of oils, more durable, more penetrable, and a non-conductor of electrical currents, which are destroyers of any paints.

On the strength of these points of superiority claimed over white lead in paints, a new process of paint manufacture has developed, called the Blanchite process, after the discoverer. A large factory has been in operation in New York City for five or six years, and in January of this year a plant was opened up on King street west, Toronto. The Blanchite Company are meeting with success in Canada, the demand for their manufactures increasing every week.

There are two special features in the new process of paint manufacture — the oxydization of all oils before going into the mixtures, and the double-grinding of all bases—thereby making the paint finer and more adhesive, for it has been noticed that when the outer coating has been scraped off particles of the paint can be seen filling up the minute cavities of the surface to which it has been applied. The Blanchite paints possess very superior sanitary qualities, being absolutely free from taint and odor.

The Toronto plant, though not as yet very extensive, is very complete, the greater part of the work being done by machinery. In the basement of the plant the power is generated, and the raw material stored. The Blanchite mixes stored here are forced to the upper flats by rotary power pumps, as they are needed. On the main floor is situated the drying kiln at the back, the stock and shipment and labeling rooms, with the offices, at the front. Most of the mills are situated on the second floor—the large double mill mixer, the double, triple and base mixers—and the canning and labeling rooms. The third flat contains the rest of the mixers and triple mill. At the rear of this building is the storehouse for oils.

Great care is taken in thoroughly oxydizing all oils and extracting all acid fats, to purify, as much as possible, all ingredients so as to permit of perfect mixture. The present daily capacity of the Toronto plant is 1,200 gallons.

HOW TO INCREASE PAINT AND VARNISH SALES.

(Continued from page 50.)

In addition to these means of getting business, there is out-door advertising, such as large display posters for boards and walls—supplied by the manufacturer—and special features, including circulars, cards, handbills, folders, etc., which the dealer can readily prepare for himself.

The main point to be brought out, however, is this—to increase his paint and varnish sales this spring the merchant must give his heartiest co-operation to the manufacturer, take advantage of all the advertising that he can secure with his line, and then hustle early and late to see that not one possible customer escapes him and that he takes care of the paint needs of his vicinity.

MOVING LINSEED OIL MILL.

The Dominion Linseed Oil Co., Toronto, have decided to move their mill from Elora to Winnipeg, so that they may be more able to supply the demand of the western provinces.

THE SURVIVAL OF THE FITTEST

Selling whiting, glue and color separately for kalsomined walls is a thing of the past. The more modern method of selling whiting, glue and color ready mixed, in packages labelled different names, is **ALSO** a thing of the past, or fast becoming so.

Any compound which can be kept over night or several days without spoiling is simply a preparation of glue and whiting or some other inert base, which depends on the glue in it to hold it to the surface, and in time decomposes, becomes diseased, rubs off and has to be washed off.

The ever-growing public demand is for a pure and sanitary wall coating that will not rub off and is ready for use with cold water.

ALABASTINE

fulfils the public demand. Made from crystaline Alabaster Rock, it is a cement that sets and hardens on the wall and improves with age. It is pure, permanent and sanitary, and as such

HAS NO COMPETITOR

ALABASTINE is being more and more fully appreciated by the public, and the orders are coming in by leaps and bounds.

Fortunately, we have opened a new mine, and hope to fill all orders promptly and on time; but we advise you to order **NOW**.

The ALABASTINE CO., Limited, PARIS, Ont.

Ready for Business

There will be plenty of it, Mr. Dealer, if your store is headquarters for **Martin-Senour Paint.** Cleaning-up time is fast approaching and spring cleaning and painting will be in full blast almost before you know it. It would be a good plan to sit down at once and write for terms and particulars concerning **Martin-Senour Paint** so as to have a stock ready for the demand.

Don't Wait

until the season is on before getting ready. You might as well get all the profits as to lose the benefit of the early rush—remember first orders for **Martin-Senour Paint** are going to bring paint buyers back for more—Pure White Lead, Zinc and Linseed Oil—No adulteration that's what does it. Handle the paint of **quality,** Mr. Dealer, and make money. Write today for full information about **Martin-Senour Paint** 100 per cent pure and our money-making proposition to dealers. Address

WATERFRONT EXPLOSION AT PICTON.

The accompanying photos show the damage done by the explosion of the water front of a range in the Hotel Tecumseth at Picton recently. The lids of the stove were blown through the ceiling and broken to pieces, and the coal was thrown out over the floor. The explosion happened about 4 a.m., waking everyone in the hotel, and the building was saved from destruction only by hard work.

The following description of how the accident was caused and how the repairs were made, written by Arthur Desmarchais, of Picton, Ont., will be read with interest:

"The water front had 133 square inches of heating surface in actual con-

Damage Done by Explosion of Water Front.

tact with the fire, having sufficient capacity to give good results with a 50-gallon boiler attached to it. But it only had one 30-gallon boiler attached and only one half-inch hot water tap connected to it for the supply of hot water for the hotel and no safety valve attached to the boiler. The grate surface of the range was 165 square inches.

"Owing to the small size of the boiler attached to the big water front exposed to the big fire surface it did not take very long for the water to boil in the boiler and this was the only way for the hot water to travel back in the cold water main.

"One cold night the cold water main froze and the hot water having no place to expand something had to go and the water front burst. The water front can be seen on the left of the stove in an "L" shape.

"I have overhauled the job and have reduced the water front one-half the quantity of the old one, and also installed a safety valve on the boiler, and am satisfied that the stove is safe now.

"These photos were taken especially for your paper, and if I have made any mistakes I will appreciate it if other readers will write in your columns and rectify them."

PUBLIC BATHS AT HAWAII.

The following interesting data is quoted from the report on Hawaii of the Commissioner of Labor:

"Upon all the larger plantations public baths are conducted for the use of employes. Sometimes they are partly supported by the employers, and sometimes they are entirely private enterprises, except that the bath house is usually supplied by the plantation. On some plantations hot water as well as the building is provided. Other planters supply free the fuel for heating the water. In other instances the bath house is leased to a contractor, who supplies his own fuel and charges the employes from 26 to 35 cents a month for bathing privileges. The Japanese bathe daily. On some plantations the Koreans have adopted Japanese customs in this respect. Hot water is used and a single large tub—in which both sexes bathe together indiscriminately—suffices for the needs of a number of laborers. Private bath houses, conducted in much the same manner, are common in the Oriental quarters of Honolulu."

A report has been issued as to the hours and wages of the men employed in the public comfort stations in Toronto. There are two men at the corner of Cottingham and Yonge, one working from 6 a.m. to 5 p.m., receiving $12 a week, and the other working from 5 p.m. to midnight, and receiving $8 per week. At Spadina and Queen there are two men working the same hours and receiving the same pay. At Adelaide and Toronto streets there is only one caretaker. He works from 8 a.m. to 6 p.m. week days only, and receives $8.50 per week. On Sundays the men at the Cottingham and Spadina lavatories work from 9 a.m. to 3.30 p.m., and f 3.30 to 10 p.m., two shifts.

FUNNY STORY FROM WALKERTON.

Thawing out a water pipe is about as exasperating a piece of business as putting up stove pipes, under the most favorable circumstances, and under certain other circumstances it is even worse, says a Walkerton, Ont., paper. Sam Hawthorne struck the very worst case of a frozen pipe the other night, and he lost a whole night's sleep over it. He had been out a little late that night, and when he went to get a drink there was no water. Concluding that it was a case of too much frost, he filled the kettle with water from the cistern and soon had it boiling hot. Then he poured it on the pipe, with no result. There was nothing for it but to fill up the

How the Back of the Range was Smashed.

kettle again and give the pipe another dose. This he did, but it still refused to run. This process was kept up steadily till five o'clock the next morning, and at last the water came gushing out. But what made Sam mad was that he learned later on in the day that the frost had nothing to do with the matter. The water had been turned off by the town constable, so as to increase the supply in the reservoir, and he had been operating on the empty pipe.

A. R. Dundas and J. D. Skidmore, of Cobourg, were in Toronto last week.

The employees of W. Mashinter, Adelaide street west, Toronto, returned to work on March 25, agreeing to work for the same wages as they were for-

DISPOSAL OF SEWAGE BY SEPTIC TANKS.

[illegible] W. S. [illegible] annual convention of the National Association of Master Plumbers, Atlantic City, [illegible]

The best authorities of to-day predict that, wherever possible to supplant them, common cesspools, of whatever nature, will in due time be things of the past. The septic tank process is the means which will be employed, even in small private installations.

The septic treatment of sewage may be considered a biological rather than a chemical process as its success is dependent upon presenting conditions which favor the rapid growth of certain bacteria. In the complete reduction of sewage by the septic method, bringing it to a harmless state, in the form of nitrates which plant life can take up, two forms of bacteria are employed—anaerobic and aerobic. Air and light retard the multiplication of the first of these. The second requires oxygen and multiplies readily in the open air. The tank or receiver proper is a sort of catch basin, made in form to favor the requirement for the propagation of anaerobic bacteria which reduce the sewage to simple compounds. The tank should be large enough to hold the output of about one day's use of the fixtures discharging into it. Light and air should be excluded. Warmth to a degree is essential, such heat as is common to a pit in the earth, closed at the top, with no unnecessary exposure, together with the heat of waste water and that generated by the action taking place in the sewage itself being sufficient to favor the process in winter weather of quite severe climates. Fifty-four degrees Fahrenheit has been stated to be the minimum temperature permissible in this tank, for little or no septic action can take place at lower temperatures. The waste water of baths and lavatories are not turned into the septic tank alone for the heat they bring, but also to secure dilution of the excrement and matter from other sources, which not infrequently carry too little water to favor the best interests of the process. Both the inlet and outlet of the tank should be arranged to be below the surface of the contents when the tank is full, so that the scum which generally forms on the surface will not be disturbed by entry or exit of matter. This scum, resembling wet ashes, helps to retain the heat and excludes light and air from the mass, all favoring the accomplishment of the purpose. The scum may be from a few inches to fifteen to twenty in thickness, according to conditions and nature of the plant.

The contents leaving this initial receptacle having, in it, been brought down from its complex nature to one of simple chemical compounds, principally nitrites, the completion of the reduction process and the change from nitrites to nitrates, is brought about by exposure of the matter to light and air, giving the aerobic micro-organisms a chance to get in their work. This would be accomplished by simply discharging directly into a stream, but a more rapid action is obtained by interposing an open shallow bed of broken stone or slag for the liquid to first flow through so as to break up and bring into contact with the air as large an amount of surface as possible before piping to a stream or otherwise. In this way a more complete reduction is certain before the matter reaches any final source of disposal.

The bacteria necessary to the process are always present in abundance in fresh sewage and no preliminaries are necessary to the operation as described. The resulting product is described as a harmless, colorless and odorless liquid. In this process, admission of air to the tank or lack of sufficient heat or dilution may result in a putrescent state of matter, as found in the common cesspool. As previously indicated, the septic process is not yet widely used, except for town sewage where it is rapidly gaining in favor. Here elaborate methods are adopted to favor the aerobic or oxidizing end of the operation, mostly through filters of special design, all aiming to secure absolute stability and harmlessness of the final discharge from the sewage disposal plant. Better acquaintance will doubtless develop much data bearing on the latitude of conditions under which it will successfully operate. From eight to seventeen days are necessary to set up septic action, according to season and conditions.

SUPPLY MEN LOSE APPEAL.

The long drawn out appeal of the now defunct Central Supply Association against the conviction registered against the organization on the charge of conspiracy with the Master Plumbers' Association has at last been decided, the Court of Appeal upholding Judge Clute's decision.

The fine of $5,000 stands therefore; but as the organization is now out of existence it may never be paid unless the former individual members see fit to contribute to the court or the legal authorities take action to collect the amount.

In dismissing the appeal, Judges Moss, Garrow and MacLaren assent, and Judges Osler and Meredith dissent, they commenting as follows on the case:

A Close Decision.

Justice Garrow in his judgment said: "It is common knowledge that the majority of large operations in manufacturing and dealing in the articles and commodities of commerce are now carried on by joint stock companies. Can it be imputed to the Legislature that the intention in preparing the net was to catch only the small fry? Surely not. Then, again, the section expressly extends to prevent combinations in, among other things, insurance, both life and fire. These subject matters are always carried on by joint stock or mutual companies or corporations. Insurance corporations are not expressly named at all, and, therefore, unless included in the term 'corporation,' found in the first clause of the section, could not under the construction contended for be prosecuted or punished. The theory of the Crown, apparently concurred in by the judge, is that prior to the incorporation there had been such a criminal agreement, first between the individuals comprising both associations before the incorporation of the Plumbers' Association in April, 1905, continued down to the incorporation in September, 1905, of the Supply Association."

Incidentally, Chief Justice Moss asks: "What were the motives that led to the incorporation? The association has no stock in trade, and carries on no business, nor does it buy or sell commodities. It does not profess to be an association formed for general benevolent purposes, and it can scarcely be regarded as a social club."

Justice MacLaren agreed, orally, with the Chief Justice, who said that but for the opinions of his two dissenting brethren he would have experienced little difficulty in coming to the conclusion that the judgment should be affirmed. He, however, sustained Justice Clute's judgment.

Dissenting Opinions.

Justice Osler, who dissents, says: "It cannot be too strongly insisted upon, nor too clearly borne in mind, that the applicants are not responsible, criminally or otherwise, for anything which took place before their incorporation on September 9, 1905. They are not heirs of the sins, or answerable for the misdeeds of their incorporated predecessors. For all these the members of the incorporated association are liable, and have, as we are given to understand, been prosecuted. The Crown had the right to prove the object of the incorporation, and acts done after the incorporation, as tending to prove a conspiracy between the two corporations, but the fact of incorporation alone would not be enough. The prosecution, however, went very far afield, introducing evidence which comprises the bulk of the record of unlawful acts and conspiracy committed by individuals, members of the old incorporated association years before these appellants came into existence. This, in my opinion, was absolutely wrong. In my opinion, the evidence of anything finally done or completed by these defendants after their incorporation is of so slight and flimsy a nature, if any evidence of that kind there be, that the learned trial judge, dealing with a criminal charge of so grave a character, ought to have held that the case was not made out, and should have acquitted the defendants."

For Sins of Others.

Justice Meredith, the other dissenting judge, says: "Bearing in mind the cardinal fact that the appellants were not incorporated until September 6, 1905, it seems to me impossible to avoid the conclusion that they were tried, convicted and sentenced, in a substantial measure at least, for the offences of others, committed long before the appellants had any sort of legal existence, and so were wholly incompetent to commit any crime or do any unlawful act. This is not only apparent from the whole course of the trial, but crops up throughout the reasons given by the trial judge for finding the defendants guilty, and, indeed, it is almost, if not quite, explicitly so stated."

PLUMBING MARKETS

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East.
Toronto, March 28, 1907

The feature of the Toronto plumbing markets at present is the low prices of radiation. At present radiation is being sold at prices the lowest in history. Trade on the whole has been quiet, owing to the weather, but is now improving with the continued mild weather and prospects point toward a very busy season. With an unprecedented season in the amount of buildings erected there should be a large volume of plumbing business done.

LEAD PIPE—We continue to quote: 5 per cent. off the list price of 7c. per lb. Lead waste, 8c. per lb., with 5 off. Caulking lead, 5¾c. to 6¾c. per lb. Traps and bends, 40 per cent. off.

IRON PIPE—The scarcity in iron pipe continues, with no immediate prospects of repletion. We continue to quote: 1-in. black pipe, $5.12 ; 1-inch galvanized, $6.-77.

IRON PIPE FITTINGS — Prices remain unchanged. We continue to quote: Cast iron fittings, 57½ per cent.; cast iron plugs and bushings, 60 per cent.; flange unions, 60 per cent.; nipples, 70 and 10 per cent.; iron cocks, 55 and 5 per cent.; Canadian malleable, 30 per cent.; malleable unions, 55 and 5 per cent.; malleable bushings, 55 per cent.; cast iron ceiling plates, plain, 65 per cent.; cast iron floor, 70 per cent.; hook plates, 60 per cent.; expansion plates, 65 per cent.; headers, 60 per cent.; hangers, 65 per cent.; standard list.

SOIL PIPE FITTINGS—Demand for these continues to be good. Prices remain unchanged: Medium and extra heavy pipe and fittings, 60 per cent.; light pipe, 50 per cent.; light fittings, 50 and 10 cent.; 7 and 8 in pipe, 40 and 5 per cent.

RANGE BOILERS—Prices remain firm and unchanged. We continue to quote: Galvanized iron, 30-gal., standard, $5 ; extra heavy, $7.75 ; 35-gal. standard, $6; extra heavy, $8.75; 40-gal., standard, $7 ; 40 gallon, extra heavy, $9.75, net list. Copper range boilers—New lists quote: 30 gallon, $33; 35 gallon, $38; 40 gallon $43. Discounts 5 to 15 per cent.

RADIATORS—The demand continues brisk with firm and unchanged prices. We continue to quote: Hot water, 47½ per cent.; steam, 50 per cent.; wall radiators, 45 per cent.; specials, 45 per cent. Hot water boilers are subject to an open market.

SOLDER—Bar solder, half-and-half, guaranteed, 27c.; wiping, 23c.

ENAMELWARE— Some price-cutting continues in this line. We continue to quote January prices ; Lavatories, first quality, 20 and 5 to 20 and 10 off ; special, 20 and 10 to 30 and 2½ per cent. discount. Kitchen sinks, plate, 300, firsts, 60 and 10 off ; specials, 65 and 5 per cent. Urinals and range closets, 15 off. Fittings extra.

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, March 28, 1907

There is a decided activity noticed just now in plumbing circles, more so in fact than is generally the case at this early season. Wholesalers are having all they can do to keep their work up to date without working overtime, and report that they don't know what they'll do when the real rush comes. This is generally some time in May, when navigation is in full swing, and the railroad and steamship companies give out their new rates. Dealers wishing to get their goods in time, should not delay too long in placing their orders. This refers to almost every line the plumber handles, and in view of the fact that this unusual activity has prevailed since the year started, it goes to show that it is not only spasmodic.

Prices on all lines are very firm, with no changes to report this week.

RANGE BOILERS—Figures on the raw material seem to have reached the high-water mark, as no advances have taken place in this line for some time now. Iron clad, 30-gal., $5 ; 40-gal., $6.50 net list. Copper, 30 gal., $33; 35 gal., $38; 40 gal., $43.

LEAD PIPE—Business is exceedingly brisk with prices firm: Discount is: 5 p.c. f.o.b. Montreal, Toronto, St. John, N.B., Halifax; f.o.b. London, 15c per hundred lbs. extra; f.o.b. Hamilton, 10c per hundred lbs. extra.

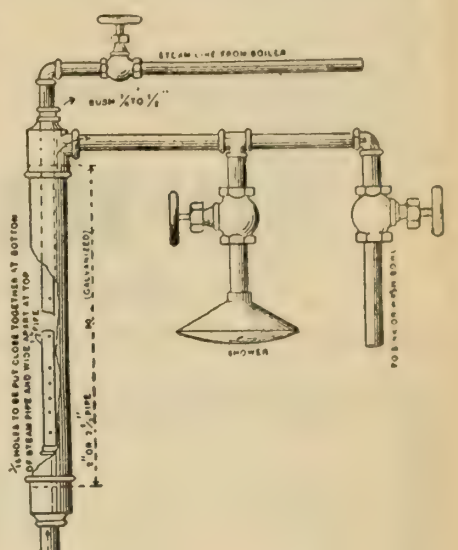
IRON PIPE FITTINGS — A marked shortage still prevails in some lines. Manufacturers are running their plants full speed, but as they are well stocked up with orders for future shipment there does not seem to be much hope for the present at least, of any relief from the shortage. Discounts on nipples, ¼-inch to 3-inch, 65 per cent.; 3½ to 2 inch, 67½ per cent.

IRON PIPE—Last week's advance of about 4 per cent. on the list is well maintained.

SOIL PIPE AND FITTINGS. —No special features to report. Prices remain: Standard soil pipe, 50 p.c. off list. Standard fittings, 50 and 10 per cent. off list; medium and extra heavy soil pipe, 60 per cent. off. Fittings, 60 per cent. off.

SOLDER—Remains unchanged. Bar solder, half-and-half, guaranteed, 25c.; No. 2 wiping solder, 22c.

ENAMELWARE — We quote: Canadian baths, see Jan. 3, 1907, list. Lavatories, discounts, 1st quality, 30 per cent.; special, 30 and 10 per cent. Sinks, 18x30 inch, flat rim, 1st quality, $2.60; special, $2.45.



The Canadian Brass Mfg. Co., of Galt, has been incorporated, with a capital of $40,000, to manufacture and deal in brass goods. The provisional directors are: W. L. Lefavor, F. E. Brown, and L. J. Osborn.

WARMING WATER FOR SHOWER BATHS.

There are many establishments where steam is available in which a shower bath can be used with advantage by the employes of the plant, for their refreshment in the summer season and for purely bathing purposes at the end of the day's work all the year round.

The device shown in the accompanying illustration was prepared for men working in gas manufacturing establishments.

It is made with a piece of 2-inch or 2½-inch pipe 2½ feet long. At the lower end it is reduced to ¾-inch. Where the cold water enters at the upper end there is a reducing T to ¾-inch. The side opening is where the hot water is taken

To Warm Water for Shower Baths.

off to the shower or basin. At the top of the T there is inserted a perforated tube of 1½-inch pipe with cap on the lower end. This tube is connected with the live steam line. The user can get the desired temperature of water by adjusting the valves on the cold water and steam inlets. This will be found very handy and a cheap shower for use at the works, or any place where steam is to be had.

Purdy & Mansell Co., Toronto, are moving from their present location on Adelaide street to Bay street.

A plumber inspecting the gas pipes at the Collegiate Institute, Chatham, held a lighted match near a big leak resulting in an explosion, in which he was severely burned.

A COMMON SENSE TALK.

AIR IS CHEAP. You do not pay rates for air like you do for water, yet a big fuss is made over the impurity of water and very often no thought is taken of the impurity of the air breathed from day to day and night to night.

Crowded rooms, whether in public places, schools, opera houses or factories, require ventilation as well as the private dwellings.

HOUSE BUILDING IS A SCIENCE NOWADAYS AND NO BUILDING IS COMPLETE WITHOUT ONE OF OUR AEOLIAN VENTILATORS.

THE VENTILATOR ITSELF IS AN ORNAMENT and can be made to suit the character of the building either as to size or as to quality of material.

Ottawa, May 30th, 1901.
Ottawa University,
Messrs. J. W. Harris Co., Limited, Montreal.
Dear Sirs: - Your "Aeolian" Ventilators placed on our University since three years have given us entire satisfaction. Brother Normand.

Dealers everywhere will find a double profit in handling this ventilator. Write direct for catalogue and booklet to-day.

Learn about our system of ventilating. A pleasure to send books.
